- Educate residents and their family about the dangers associated use of antibiotics in bacteriuria when not needed, using generally accepted industry education pamphlets.

EVIDENCE-BASED GUIDELINES

Each Health center will utilize evidence-based guidelines for the best approaches for optimal use of antibiotics. The Medical Director and Director of Nursing communicate with the contract laboratory supervisor or manager regarding the need for real-time, rapid diagnostics such as rapid pathogen identification assays for influenza, VRSA and MRSA and consideration of biomarkers to improve appropriate antibiotic use. In addition, the contract lab will be utilized for guidance on appropriate culture collection and: 1) timely transport, 2) timely communication regarding identified pathogens in resident blood and body fluid samples and cultures, and 3) timely communication regarding pathogen sensitivity to antibiotics.

QUALITY IMPROVEMENT ACTIVITIES

The Health Center Infection Prevention and Control Committee will oversee and hold Health Center management responsible for conducting the following quality improvement activities:

- Engage administrative and clinical leadership to champion the antibiotic stewardship effort
Involve the infection Preventionist and clinical providers as champions and thought leaders about appropriate antibiotic use.
- Include all disciplines to improve communication and collaboration about improving antibiotic use including: Infection Preventionists, infectious disease experts, physicians, pharmacist, laboratory services and the community licensed nurses.
- Perform ongoing analysis of antimicrobial use at the community, and at a minimum, perform an annual analysis of antimicrobial utilization and outcomes to identify priority areas of improvement.
- Determine at least one process measure of antibiotic use annually and track outcomes for this measure
- Monitor performance measures and provide reports on outcomes.

PROCESS MEASURES AND TRACKING

Monitoring of specific activities including process measures and outcomes will be performed by the Health Center's Infection Control nurse. The following activities may be monitored based on recommendations from the Infection Prevention and Control Committee and needs of the community:

1. Audits of completeness of antibiotic documentation and prescriptions regardless of whether the antibiotic was initiated at the health center or prior to transfer. The following elements should be addressed and recorded in the resident record:
 - Dose- including route of administration
 - Duration- start and stop date, planned days of therapy
 - Indication-rationale or reason for treatment and target site
2. Surveillance documentation by the infection Preventionist or designated nurse that criteria for prescription has been met and antibiotic selection is appropriate based on culture or lab results.
 - This documentation may be completed on paper or within the E.H.R system (see APPENDIX C: how to complete an infection control surveillance form in MyUnity)
3. Measures of antibiotic use
 - a. Point prevalence of antibiotic use- Tracks the proportion of residents receiving an antibiotic during a specific time period (monthly or quarterly). Point prevalence provides a snap shot of the burden of antibiotic use and may include information on those residents receiving antibiotics prescribed in house and prior to transfer in.
 - i. Examples of point prevalence calculations:

1. Percent of residents receiving antibiotics: $(\text{Number of residents on antibiotic} / \text{total residents in the facility}) \times 100$
 2. Prevalence data can be stratified by specific resident characteristics, for example percent of residents receiving antibiotics among short-stay versus long-stay residents
 3. Percent of new admissions receiving antibiotics: $(\text{Number of residents admitted to nursing home receiving antibiotics} / \text{total number of new admissions}) \times 100$
- b. Antibiotic starts- Infection control and prevention programs generally track new antibiotic starts occurring in the facility as part of their infection surveillance activity. Rates of antibiotic starts are based on the prescriptions written after the resident has been admitted to the facility. Data on antibiotic starts can be calculated and reported in the following ways:
- i. Rate of new antibiotic starts initiated in nursing home (per 1,000 resident-days): $(\text{Number of new antibiotic prescriptions} / \text{total number of resident-days}) \times 1,000$
 - ii. Rate of antibiotic starts can be calculated by indication, for example: $(\text{Number of new antibiotic starts for urinary tract infection} / \text{total number of resident-days}) \times 1,000$
 - iii. Rates of antibiotic starts could also be calculated for individual prescribers in the nursing home to compare prescribing patterns among different providers practicing in the facility. However, prescriber-specific rates must consider differences in the total number of residents cared for by each provider.
- c. Antibiotic days of therapy (DOT)-Tracking antibiotic DOTs requires more effort than tracking antibiotic starts, but may provide a better measure to monitor changes in antibiotic use over time. The ratio of antibiotic DOT to total resident days has been referred to as the antibiotic utilization ratio (AUR). Below are the steps for calculating monthly rates of antibiotic DOT and AUR.
- i. An antibiotic day: each day that a resident receives a single antibiotic. For example, if a resident is prescribed a 7-day course of amoxicillin, that course equals 7 antibiotic days. However, if a resident is prescribed a 7-day course of ceftriaxone plus azithromycin, then that course equals 14 antibiotic days.
 - ii. Antibiotic DOT: the sum of all antibiotic days for all residents in the facility during a given time frame (e.g., 1 month or 1 quarter) • Rate of antibiotic DOT (per 1,000 resident-days): $(\text{Total monthly DOT} / \text{total$

monthly resident-days) X 1,000 • Antibiotic utilization ratio: Total monthly DOT/total monthly resident-days

The data for these process and outcome measures may be gathered from various sources including:

- The Electronic Health Record, and reports generated from the record
- Pharmacy consultant or contracted pharmacy
- Manual Chart review

EDUCATION

Education of Nurses, clinicians, residents and their family members can drive and sustain improvement.

The Director of Staff Development in each Health Center arranges or provides nursing education related to this Program so that each licensed nurse is an active participant in antibiotic stewardship. This education will be at least annually, with periodic updates provided in team member meetings as necessary. The Medical Director and lab and pharmacy resources will participate in this education as appropriate and necessary.

Nurses may be educated on appropriate communication with the physician to provide information to support antibiotic use.

Engaging residents and their families in education regarding use and expected outcomes may increase compliance and remove barriers to improving antibiotic use decisions and outcomes.

PROGRAM SUMMARY

A lot of information is now known about antibiotic resistance, and alarm has been raised in the health care community about the major threat to human health, and particularly to the senior population which has been the population most heavily impacted by overuse of antibiotics since the production of penicillin in the 1950's. The state and federal governments have identified the need to protect welfare of people by implementing a more judicious and appropriate usage of antibiotics in health care. This program reflects our commitment to optimize clinical outcomes of antibiotic usage in our Health Centers while minimizing the unintended consequences of antibiotic use. All licensed nurses and Health Center Medical Directors are encouraged and expected to participate in this Program to the fullest extent. As additional information and the results of further study into antibiotic resistance becomes available, this Program will be updated and redistributed, with continuing education for nurses, attending physicians, residents and their families.

APPENDIX B- How to Complete an Infection Control Surveillance Form in MyUnity

Antibiotic Stewardship/ Infection Control Surveillance

STEP 1-OPEN RISK MANAGEMENT TAB, CLICK ON “ADD INFECTION CONTROL FORM”

The screenshot shows the MyUnity interface with the 'Risk Mgmt' tab selected in the top navigation bar. Below the navigation bar, there are two sections: 'Incidents' and 'Infection Control'. Both sections have a table with columns: Form, Reason, Author, Date, Status, Created, and E-Signed. The 'Incidents' section has a red box around the 'Add Incident Form' button and a red text box that says 'To start new surveillance form for every antibiotic order'. The 'Infection Control' section has a red box around the 'Add Infection Control Form' button.

Step 2: SELECT HG HC INFECTION CONTROL DATA COLLECTION TOOL V1.2, ENTER THE REASON (TYPE OF INFECTION), CLICK OK

The screenshot shows the 'Create New Infection Control Form' dialog box. At the top right, it displays 'Resident: Seaman, Richard', 'Resident ID: 21675', and 'Admission ID: TLA-HC-12011'. The 'Infection Control Form Date' is set to 01/27/2022. The 'Infection Control Form to Create' dropdown is set to 'HG HC Infection Control Data Collection Tool V1.2'. The 'Add Options' dropdown is set to 'Create Blank Infection Control Form'. The 'Reason' text field contains 'HEMATURIA'. The 'Discipline Type Responsible' dropdown is empty. The 'Scheduled Event' list includes: 'Non-Scheduled Event', '4/19/2022 - OBRA - OBRA 1st Quarterly', '7/20/2022 - OBRA - OBRA 2nd Quarterly', '10/20/2022 - OBRA - OBRA 3rd Quarterly', and '1/18/2023 - OBRA - OBRA Annual'. At the bottom, there are 'OK' and 'Cancel' buttons.

SCROLL DOWN TO SELECT THE INFECTION TYPE

PPS Calc Validate Print Lock & Sign Adjust Text Size A A

Date Admitted
Room #

Date of onset of symptoms

U1111212122

Assessment to be locked by Infection Preventionist Nurse or Designee only

Location/Type of Infection

UTI without presence of foley

Acute dysuria or pain, swelling or tenderness of testes, epididymis or prostate.

Fever equal to or greater than 100 degrees F or single temperature 2 degrees F over baseline from any site (oral, tympanic or axillary)

Leukocytosis

MUST HAVE:

Positive Urine Culture >100,000

In the absence of fever or leukocytosis, then 2 or more of the following localizing urinary tract sub-criteria:

Burning pain on urination, frequency or urgency

Flank or suprapubic pain or tenderness

Change in character of urine (Hematuria or purulent)

Worsening of mental or functional status (may be new or increased incontinence)

UTI with presence of foley

MUST HAVE 1 of the following:

Acute dysuria or pain, swelling or tenderness of testes, epididymis or prostate

Fever equal to or greater than 100 degrees F or single temperature 2 degrees F over baseline from any site (oral, tympanic or axillary)

Leukocytosis

MUST HAVE:

Positive Urine Culture > 100,000 with catheter

Urinalysis showing >100,000 bacterial colonies/ml

MUST HAVE 1 of the following:

Hypotension

Flank or suprapubic pain or tenderness

Change in character of urine (Hematuria or purulent)

Worsening of mental or functional status

Lower Respiratory Tract Infections

PNEUMONIA

MUST HAVE:

Chest x-ray demonstrating pneumonia, probable pneumonia or infiltrate.

MUST HAVE at least 1 of the following:

CHECK OFF AND COMPLETE APPROPRIATE INFORMATION

INCIDENT- CCRC REPORTABLE EVENTS	Effective Date	11/9/2016
	Revision Dates	3/1/2019
		5/4/22
	Departments Approving	Legal/Risk and Quality
Departments Affected	CCRC Operations	

Introduction and Background

It is critical to HumanGood’s risk management efforts that reportable incidents and occurrences at HumanGood be reported properly and timely. The reasons are many:

- To assist a community in resolution of the issue.
- To communicate required notice to insurers or other vendors who may be able to assist.
- To gather information and communicate with other communities which may face the same issue.
- To communicate best practices in care quality and/or safety which are a result of the process of investigation and resolution.

All incidents are reported within the community internal incident reporting system. Most CCRC’s use RiskWatch, a few may still use the Risk Management tab within the community Electronic Health Record for incidents involving residents, with a paper form for visitor or contract employee incidents. (See Appendix B, Community Visitor Incident Report.) Still other serious incidents must be reported to regulatory, state or federal agencies based on type of incident

This policy serves as guidance for HumanGood Continuing Care Retirement Community (CCRC) team members on who, what, and how to report serious incidents.

Summary of Policy and Procedure

The guidance in the chart below will assist in decision making of who/ which roles to report to depending on the type of incident. Operations and Risk Management Staff are available as a resource to receive information and provide advice on occurrences.

Type of Occurrence	Report To:
Electronic and Technology related	Risk Management Team (RiskManagementTeam@HumanGood.org) CIO or VP of Community IT Assigned VP of Operations for Community
Employee/Human Resources as it relates to workplace violence or harassment issues	Risk Management Team (RiskManagementTeam@HumanGood.org) Assigned VP of Operations for Community SVP of Human Resources or General Counsel
Employee Death	Risk Management Team (RiskManagementTeam@HumanGood.org) Assigned VP of Operations for Community Benefits Director or SVP of Human Resources
Legal or Regulatory	Risk Management Team (RiskManagementTeam@HumanGood.org) Assigned VP of Operations for Community If a subpoena for medical records is involved, contact MedicalRecordsTeam@humangood.org
Media Attention	Risk Management Team (RiskManagementTeam@HumanGood.org) Assigned VP of Operations for Community SVP Communications
Physical Plant, Natural Disasters	Risk Management Team (RiskManagementTeam@HumanGood.org) Regional Director Buildings and Grounds Corporate Safety Officer Assigned VP of Operations for Community Risk Analyst, Senior Director of Financial Compliance
Resident Care or Service	Risk Management Team (RiskManagementTeam@HumanGood.org) Assigned VP of Operations for Community If a request for medical records is involved, contact MedicalRecordsTeam@humangood.org
Vehicle Incidents	Risk Analyst Senior Director of Financial Compliance and Fleet Manager Community HR Director <u>If there are injuries/ fatalities contact the</u> Risk Management Team (RiskManagementTeam@HumanGood.org)
Any or all Incidents in which a claim may be filed with any line of insurance such as Liability, Property, EPL, etc., or for advice and assistance in reporting to insurance	Risk Analyst Senior Director of Financial Compliance

Policy

HumanGood endorses and supports a culture of safety and views incident reporting as a means of improving systems and processes. Incident reporting is nonpunitive and all employees are encouraged to report all incidents.

The Executive Director at each community, or his or her designee, is the Community-Based Risk Manager. This policy identifies what incidents are reportable to the Community Support Centers and Caring Communities, our general liability insurance carrier. Each community must have, at a minimum, four individuals trained in reporting to Caring Communities. Having multiple reporters will decrease the chance of an interruption in the ability to report due to staffing changes, illness or vacation. The reporters should include the Executive Director, H.S.A, DON and DOW. Others may be trained in reporting at the community's discretion.

Procedure

When an incident occurs, the first responder is to report the incident to their immediate supervisor as soon as practicable, but in any event by the end of their shift.

The supervisor will report the incident to the Executive Director or other appropriate person at the community as soon as practicable, but in any event, no later than the end of business day in which they learn of the incident.

The supervisor, Executive Director, or other appropriate person will report the incident to the people identified on the summary table above no later than the end of business day in which they learn of the incident.

What to Report:

Serious incidents must be reported to the professional and general liability carrier, Caring Communities. (See Appendix A for a list of what incidents are reportable to Caring Communities.) Other serious events must be reported to the appropriate CSC team members. (See Appendix A and chart above.)

How to Report:

If any of the incidents listed in Appendix A occur, in any level of living, and whether it happens to a resident or a guest, report to Caring Communities via either the RiskWatch CCRC Incident Report link, or the RiskWatch link found in "MyApps"

When to Report:

These incidents need to be reported as soon as possible and must be reported to Caring Communities within 7 days of the incident, or when the community first becomes aware of the incident.

If unsure whether or not an incident is reportable, please contact Risk Management or the appropriate CSC team member per the chart above for advice.

Notifications:

Prepare an email to the appropriate parties at HumanGood based on the incident type. See the chart above or additional information below for incident types and for individuals/groups to which to report.

HumanGood has established an email workgroup entitled "Risk Management Team" to facilitate notification of the Community Support Center (CSC) team of any incident immediately. This will allow the appropriate

point person at the CSC to address the issue, and assure that someone else will respond if the primary person is unavailable. Use the “Risk Management Team” email (RiskManagementTeam@HumanGood.org) to notify the CSC of incidents and any risk management issue.

All emails regarding incidents should contain “Confidential” in the Subject Line, and a confidentiality statement (listed below) regardless of whether the incident/claim has a pending lawsuit.

California Communities:

CONFIDENTIAL
Protected by CA H&S Code Section 1370 and
CA Evidence Code, 1157.
Documented in Anticipation of Litigation

National Communities:

CONFIDENTIAL
Documented in Anticipation of Litigation

Because of HIPAA and other privacy concerns, see below what should and should **NOT** be included in the email to the appropriate parties and Risk Management Team.

- Describe the facts of the incident. Be as brief as possible yet fully explain the incident.
- Describe any action taken by team members since the incident, and state the current situation, including the reaction of the family.
- Do NOT include opinions, editorial comments, theories, investigation notes or analyses.
- Do NOT include any identifying personal identification of residents or team members (correct example – “Resident Y fell, was assisted by team member B”).
- Do NOT include any signed or unsigned witness statements.

Responsibilities:

It is the responsibility of all HumanGood team members to comply with the reporting obligations set forth in this policy. Operations and Risk Management Staff are available as a resource to receive information and advice on occurrences.

The Risk Analyst or Senior Director of Financial Compliance is responsible for maintaining records on all Reportable Incidents, whether submitted to Caring Communities or not. The composite data you submit helps us spot risk trends and satisfies one of HumanGood’s record-keeping requirements with Caring Communities.

Reporting incidents to Caring Communities and CSC does **NOT** take the place of other legally required notices. Some serious incidents must be reported to external agencies as well. The community must also notify the appropriate agencies within the statutorily required periods.

The community administrator, community risk manager or designee, or corporate risk manager will notify external regulatory or accrediting agencies of the event as required in accordance with state and federal statutes and regulations. Examples of external reporting requirements

include reporting to the Department of Social Services, Local Departments of Public Health, the Centers for Medicare and Medicaid Services (CMS), the U.S. Food and Drug Administration under the Safe Medical Devices Act, and other state or federal agencies.

In compliance with the requirements of the Elder Justice Act (EJA), any crime or suspicion of a crime, as defined by state and local law, must be reported to local law enforcement within two hours of forming a suspicion of serious bodily injury and within 24 hours of forming a suspicion if there is no bodily injury.

Retaliation against anyone who reports an occurrence in good faith, pursuant to this policy will not be tolerated.

All HumanGood health care centers shall display a poster regarding the EJA related to responsibilities of employees and other covered individuals to report the suspicion of a crime, and the right an employee and other covered individuals have to file a complaint if they believe they have been retaliated against for reporting the suspicion of a crime.

Each HumanGood community will insert site-specific information, such as the community's name and the telephone numbers for the State Survey Agency and local law enforcement to report the suspicion of a crime. Communities must also enter the State Survey Agency telephone number for an employee to file a comp because the employee believes he/she has been retaliated against for reporting the suspicion of a crime.

Definitions

Incident Types:

- Electronic and Technology Issues. Types of electronic and technology incidents that must be reported to the Chief Information Officer or Vice President for Community Technology, the appropriate VP Operations and the Risk Management Team include, but are not limited to, the following:
 - Failure of elopement detection equipment
 - Failure of main server
 - Failure of Personal Emergency Response (pendant) systems or EHR
 - Facility telephone equipment failure in excess of two hours
- Legal or Regulatory. The below incidents are to be reported to the appropriate VP Operations and the Risk Management Team.
 - Licensing visits (annual survey, complaint survey, audits – health department, assisted living, continuing care, etc.)
 - Subpoena for records or written request for records from an attorney; if it is a subpoena or request for a resident's medical records, report to MedicalRecordsTeam@humangood.org
 - Notice of intent to file lawsuit or summons and complaint
 - Attorney inquiry
- Media incidents or inquiries. Media incidents or inquiries including incidents or situations that might result in either favorable or unfavorable media attention should be reported to VP Operations, SVP Communications, and Risk Management Specialist.

- Physical Plant or Disaster Issues. The incidents that are to be reported to the Corporate Director, Building and Grounds, and Corporate Safety Director, the appropriate VP Operations and the Risk Management Team include, but are not limited to, the following:
 - Large structural damage, inoperability (e.g. building cannot be occupied because of failure of structural support system, or significant physical damage occurred such as might result from an equipment or vehicle accident) and/or mandatory evacuation as dictated by any authorities having jurisdiction.
 - Fires, floods, earthquakes, etc. that might or have damaged the facility.
 - Widespread or significant mechanical plant failures (e.g. a/c failure in the summer, boiler failure creating inability to produce hot water or space heating, elevator system failure, major plumbing failure that prevents plumbing systems, water or sewage from flowing into/out of buildings).
 - Fire and life safety systems failure (e.g. inoperative main control panel, alarm sounds but signal not detected at monitoring company or fire department, generator failure).
 - Facility infrastructure events (e.g. disruption/problems with utilities).
 - Community disaster alerts or evacuations.
 - Local or community-wide civil unrest.
 - Local or community-wide hazardous chemical event.

- Employee (Team Member) Incidents: Employee-related incidents are to be reported immediately to a member of the HR team (described below), the appropriate VP Operations and the Risk Management Team. The incidents to report include:
 - Employee death – Benefits Director or SVP Human Resources.
 - Threatened or actual violence - SVP Human Resources and General Counsel.
 - Threatened or actual receipt of employment related lawsuit, including California Labor Commissioner complaints - SVP Human Resources or General Counsel.
 - Harassment or discrimination complaints - SVP Human Resources.
 - Request for employee records- email to SVP Human Resources

- Vehicle Incidents – Incidents involving auto accidents with residents, team members (in company vehicles or during work hours) or fleet vehicles should be submitted to the Community HR Director , Risk Analyst, Senior Director of Financial Compliance, and Fleet Manager. If there are any fatalities or injuries, include an email to the Risk Management Team.

Other Definitions

Elopement- Refers to a situation in which a resident with impaired cognition and / or demonstrated lack of / poor safety awareness or judgment successfully leaves the “secured area” either unseen or if the incident is seen and redirected.

Fall- An unintentional coming to rest on the ground, floor, or other lower level, but not as a result of an overwhelming external force (such as from an individual pushing another individual). An episode where a resident lost his/her balance and would have fallen, if not for staff intervention, is considered a fall. A fall without injury is still a fall. Unless there is evidence suggesting

otherwise, when a resident is found on the floor, a fall is considered to have occurred. (CMS “State Operations Manual”: Appendix PP).

Hazardous Wandering- An act where a resident wanders, either walking or locomotion in a wheelchair, from place to place with or without a specified course or known direction. Hazardous or unsafe wandering represents the above behavior by a resident who may be oblivious to his or her physical or safety needs and the wandering places the resident at significant risk of getting to a dangerous place (e.g., wandering outside the community where there is heavy traffic) or encountering a dangerous situation (e.g. wandering into the room of another resident with dementia who is known to become physically aggressive toward intruders.).

Incident- An adverse event, unusual occurrence or incident is an undesired outcome or occurrence, not expected within the normal course of care or treatment, disease process, condition of the resident, or delivery of services. An adverse incident may or may not result in injury, and may or not have resulted from a medical or healthcare error. Unexpected incidents that occur in a community that may or may not result in injury but suggest a need for quality improvement review to try to prevent the same or similar situation from arising in the future.

Serious Incident- An unexpected occurrence involving death or serious physical or psychological injury, or the risk thereof that may result in legal action against HumanGood and definitely requires quality improvement action to try to prevent the same or similar situation from arising in the future or harming anyone else.

Claim- All unusual events are incidents, but not all incidents become actual claims. For the purposes of reporting to Caring Communities, all serious events must be reported. (See Appendix A for the listing.) However, for insurance coverage purposes serious incidents are further classified by Caring communities as follows:

- Class 1 Incidents- An unusual occurrence or a serious incident that satisfies the Caring Communities reporting requirements or incidents that in the member’s judgment could result in a claim.
- Class 2 Claim- Written or verbal notice of a demand for compensation. This includes a Notice of Intent (NOI) or other statutorily required/jurisdictionally permitted “pre-suit” notice of a potential claim. All attorney requests for resident medical records are deemed a Class 2 claim.
- Class 3 Claim- Any matter for which litigation is initiated and the member is served with a Summons & Complaint.

Appendix A: Reportable Incidents

There are **two types** of serious reportable incidents, with separate guidelines. One set is required by Caring Communities; a second set is for internal reporting purposes to specific individuals. **Incidents can overlap. Read carefully before deciding where to report.**

1. Incidents that must be reported to Caring Communities:

- Medication incident resulting in serious injury or death
- Elopement (see definition above) or disappearance of a resident from a secure environment
- Falls, resulting in fracture/serious injury/illness or death, of residents, patients, clients, visitors or contractors. Employee falls should not be reported to Caring Communities.
- Suspected assault, homicide, rape or other crime
 - Inclusive of resident-on-resident assaults or crimes
 - Low-value thefts not likely to lead to a claim do not need to be reported
- Suicide or suspected suicide of a resident
- Stage 3 or 4 pressure ulcer acquired on site, or worsening from stage 1 or 2.
 - A stage 3 or 4 pressure injury that was present upon admission does not need to be reported
- Other incident or occurrence resulting in serious injury, illness or death unrelated to the natural course of a resident's underlying condition or disease process.
- Other unexpected incident or unusual occurrence (see Incident definition above) which could become an incident with potential compensation
- Accident or injury involving a visitor or contract employee in which medical treatment is required.
- A resident is injured in one of above listed ways while not in our community.
- Regulatory agency report citing clinical care or service-related deficiency level F or higher.
- Request from family or an attorney for resident medical records addressing the care or treatment of a resident.
- An accident with injury involving a visitor or contract employee in which medical treatment is required.
- COVID-19 residents resulting in serious injury/illness or death as well as any outbreak of 2 or more residents on the same unit, floor or hallway as being diagnosed as having COVID-19.
- A verbal or written demand for compensation received from a resident, resident's family or a visitor.
- A lawsuit

2. Other Reportable Incidents. The following items must also be reported to the appropriate CSC team members. See the chart on the first page of the policy for who should be notified for each of these reportable incidents. If sending by email, please include the confidentiality statement and avoid disclosing any personal health information (PHI).

- Attorney involvement in an incident, including a dispute with a team member
- A contract dispute involving damages
- Environmental issues involving potential harm to people
- Fire or other disaster
- Outages of systems or tools like EHR that effect residents or team members
- Hostile family with unresolved receivables
- Negative or hostile family feedback from a particular incident
- Media or news inquiries that could be negative
- Service of process on the community of any summons or complaint
- Recurring self-inflicted injuries by a resident or team member
- Severe unresolved dehydration issues
- Suspected abuse (emotional, financial or physical)
- Community termination of a residential contract with a resident
- Auto accidents that involve residents, team members or fleet vehicles.

BACKGROUND INFORMATION

Influenza (flu) is a contagious respiratory illness caused by influenza viruses; it can cause mild to severe illness. The influenza virus attacks occur most frequently during the months of January through April of each year, and those at greatest risk of severe illness and death are the very young and the elderly.

The burden of influenza on the United States can vary widely from season to season and is affected by a number of factors including the characteristics of circulating viruses, the timing of the season, population immunity to circulating viruses, how well influenza vaccines are working, and how many people have gotten vaccinated. While the impact of influenza varies from season to season, it places a substantial burden on the health of people in the United States each year.

In 2020, the emergence of coronavirus disease (COVID-19) caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) has affected people all across the world, forcing everyone to rapidly adapt and change personal and professional ways of life. Based on observations to date, the forthcoming 2020-21 influenza season is also likely to be different from what we might usually expect.

There are two main types of influenza (flu) virus: Types A and B. The influenza A and B viruses that routinely spread in people (human influenza viruses) are responsible for seasonal flu epidemics each year.

The Centers for Disease Control and Prevention (CDC) uses mathematical modeling in combination with data from traditional flu surveillance systems to estimate the numbers of flu illnesses in the United States.

It has been recognized for many years that people 65 years and older are at high risk of developing serious complications from flu compared with young, healthy adults. This risk is due in part to changes in immune defenses with increasing age. While flu seasons vary in severity, during most seasons, people 65 years old and older bear the greatest burden of severe flu disease. In recent years, for example, it is estimated that between 70 percent and 85 percent of seasonal flu-related deaths have occurred in people 65 years old and older, and between 50 percent and 70 percent of seasonal flu-related hospitalizations have occurred among people in this age group.

Long term care facilities are at risk of influenza outbreaks due to the large number of elderly individuals in residence at any one time.

TYPES OF INFLUENZA

Influenza types are seasonal, pandemic, avian, swine, and influenza in animals.

- **Seasonal**: Seasonal influenza, often called 'the flu', is an infectious disease of the respiratory tract caused by an influenza virus and spread efficiently from person to person. Outbreaks of seasonal flu follow largely predictable seasonal patterns and occur annually.
- **Pandemic**: A pandemic is a global outbreak of a new influenza A or other virus. Pandemics happen when new (novel) influenza A or other viruses emerge which are able to infect people easily and spread from person to person in an efficient and sustained way.
- **Avian**: Avian influenza refers to the disease caused by infection with avian (bird) influenza (flu) Type A viruses. Although avian influenza A viruses usually do not infect people, rare cases of human infection with these viruses have been reported.

- Swine: The H1N1 flu, commonly known as swine flu, is primarily caused by the H1N1 strain of the flu (influenza) virus. H1N1 is a type of influenza A virus, and is one of several flu virus strains that can cause the seasonal flu. Symptoms of the H1N1 flu are the same as those of the seasonal flu.

In the United States, “flu season” occurs in the fall and winter. While influenza viruses circulate year-round, most of the time flu activity peaks between December and February, but activity can last as late as May. The overall health impact (e.g., infections, hospitalizations, and deaths) of a flu season varies from season to season. In humans, the three viruses causing seasonal flu are:

- **Type A influenza**: responsible for the majority of seasonal flu cases, spread from person to person by those already infected by touching doorknobs, faucets, phones, or even being in the same room as a person who is coughing or sneezing. Type A is subclassified as H and N, which are the particular types of proteins attached to the virus. There are 16 different types of hemagglutinin (H) proteins and 9 different types of neuraminidase (N) proteins, from which we get the names “H1N1” or “H3N2”.
- **Influenza B** also causes seasonal illness. Although it has the potential to be very dangerous, typically it is less severe than influenza A and it does not cause pandemics. There are different strains of influenza B, but they are not sub-typed like influenza A viruses.
- **Influenza C** is much milder than the first two, typically resulting in mild respiratory illness. It is not associated with seasonal flu but instead, can occur any time. Symptoms are similar to the common cold.

The typical incubation period of influenza is 1 – 4 days, with an average of 2 days. Most healthy adults may be able to infect others beginning 1 day before their symptoms develop and up to 5 – 7 days after symptoms manifest. In addition, the virus sheds from the infected person after symptoms resolve. It is often difficult for individuals to differentiate between a virus which causes a “common cold” and influenza (see Table 1). What influenza A does NOT cause is symptoms such as vomiting and diarrhea, sometimes referred to as the “GI flu” or “stomach flu”, but which is essentially gastroenteritis.

Most persons who become ill recover without serious complications. However, influenza can be associated with serious illnesses, hospitalizations, and deaths, particularly among older adults, very young children, pregnant women, and persons of all ages with certain chronic medical conditions.

It is not possible to clearly identify the clinical differences between influenza viruses such as the ones that cause seasonal flu and the ones that can produce pandemic outbreaks. What is known is that all viruses have the capacity to mutate and thus, fall below the radar screen of vaccines developed to fight them, or entirely new organisms may develop to cause illness worldwide.

The newer a virus, the more impact it may have on a population. For this reason, it is important to monitor the CDC web site to maintain awareness of the viruses being seen

in the population in any particular year. Additionally, there are differences in cause and effect of pandemic virus. (See Table 2 below).

TABLE 1.

Cold vs Flu

Signs and Symptoms	Cold	Influenza (Flu)
Symptom onset	Gradual	Abrupt
Fever	Rare	Usual; lasts 3-4 days
Aches	Slight	Usual; often severe
Chills	Uncommon	Fairly common
Fatigue, weakness	Sometimes	Usual
Sneezing	Common	Sometimes
Chest discomfort, cough	Mild to moderate; hacking cough	Common; can be severe
Stuffy nose	Common	Sometimes
Sore throat	Common	Sometimes
Headache	Rare	Common

TABLE 2.

Seasonal Flu	Pandemic Flu
Occurs every year, typically from mid-October until the February.	Occurs three to four times a century and can occur in any season. May come in “waves” of flu activity that could be separated by months.
Affects 5-20 % of the U.S. population.	Experts predict an infection rate of 25-50% of the U.S. population.
Kills 500,000 to 1 million people each year worldwide; 36,000-40,000 die from flu in the U.S. annually.	The 2020-21 COVID-19 pandemic has killed more than 575,000 people and infected more than 32,000,000 in the U.S. alone as of April 2021. The most recent historical pandemic in 1918, killed more than 500,000 people in the U.S. (at a time when the population was much smaller than now) and 50 million worldwide.
Most people recover in a week or two.	Usually associated with a higher severity of illness and consequently a higher risk of death or disability and complications, especially post-influenza pneumonia.

Death is generally confined to defined risk groups such as the elderly, the young, and those who are immunocompromised.	All age groups affected, not just high-risk groups. Otherwise fit adults could be at relatively greater risk based on pattern of previous pandemics.
Vaccination is effective if the viral strain can be reliably predicted and there is time for the vaccine to be prepared.	A vaccine against pandemic flu will not be available until 6-8 months after the strain is identified and once available, it will be in limited supply.
Antiviral drugs are generally available for those at greatest risk of serious complications of viral illness.	Antivirals may have limited effect on sequelae. The U.S. Department of Health and Human Services has ranked long term care facilities as 6 th out of 11 priorities to receive stockpiled antiviral meds for post-prophylaxis and treatment.

Unless a complication occurs, influenza does not require hospitalization in most humans. The exception is, of course, in the elderly and particularly, those with chronic conditions and co-morbidities such as cancer, asthma, and chronic obstructive lung disease.

GOAL

This Plan is intended as a guide to preventing an outbreak and responding appropriately if an outbreak occurs.

The guidance in this Plan includes recommended techniques for prevention, surveillance and monitoring, and transmission prevention. Additionally, appendices found at the end of this Plan are updated with specific guidance as emergent viruses occur.

Flu prevention is the obvious primary goal. Prevention will require HumanGood to use a multi-faceted approach that includes:

- Infection Prevention
 - Surveillance
 - Monitoring
 - Detection
 - Vaccination
 - Education
- Infection Control

INFECTION PREVENTION

Vaccination

According to the CDC, the best way to prevent flu is to get vaccinated each year. In late 2019, a novel coronavirus, SARS-CoV-2, emerged as a cause of severe respiratory illness. In March 2020, the World Health Organization (WHO) declared coronavirus disease 2019 (COVID-19) a global pandemic. The common signs and symptoms of COVID-19 (e.g., fever, cough, and dyspnea) can also occur with influenza illness. As of May 2021, the SARS-CoV-2 continues to circulate and cause severe illness in the United States and worldwide. The extent to which SARS-CoV-2 will circulate over the course of

the 2021-2022 influenza season is unknown. However, during the continued or recurrent circulation of SARS-CoV-2 concurrently with influenza viruses during the upcoming fall and winter, influenza vaccination can reduce prevalence of illness caused by influenza, and can also reduce symptoms that might be confused with those of COVID-19.

Flu vaccines are updated annually to better match viruses expected to be circulating in the United States.

On February 26, 2021, the WHO recommended that quadrivalent vaccines for use in the 2021 - 2022 northern hemisphere influenza season contain the following:

Cell- or recombinant-based Vaccines:

- an A/Wisconsin/588/2019 (H1N1)pdm09-like virus
- an A/Cambodia/e0826360/2020 (H3N2)-like virus
- a B/Washington/02/2019 (B/Victoria lineage)-like virus
- a B/Phuket/3073/2013 (B/Yamagata lineage)-like virus

It is recommended that trivalent influenza vaccines for use in the 2021 - 2022 Northern Hemisphere influenza season contain the following:

Cell- or recombinant-based Vaccines

- an A/Wisconsin/588/2019 (H1N1)pdm09-like virus
- an A/Cambodia/e0826360/2020 (H3N2)-like virus
- a B/Washington/02/2019 (B/Victoria lineage)-like virus

The Centers for Medicare and Medicaid Services (CMS) has required that all nursing homes participating in Medicare and Medicaid programs offer each resident the influenza and pneumococcal vaccines. According to the requirements, as amended in November 2016, each resident is to be vaccinated unless contraindicated medically, the resident or legal representative refuses vaccination, or the vaccine is not available. This information is to be reported as part of the CMS Minimum Data Set for skilled nursing communities.

Each community has a process for ensuring vaccination of residents with pneumococcal vaccination on admission and the annual influenza vaccination.

*****Informed consent is required to implement a standing order for vaccination*****

In the event that a resident is admitted to the Life Plan or skilled nursing community after the influenza vaccination program has concluded, the benefits of vaccination should still be discussed, educational materials provided (available for download at the CDC website), and an opportunity for vaccination should be offered to the new resident as soon as possible after admission to the community.

The vaccine will be provided at no cost to team members, although in times of shortage of the vaccine, it will be given to residents first. Those team members who decline vaccination will be required to sign a statement of declination, which will be kept in their personnel file in Human Resources, and must wear a face mask when providing resident care.

Surveillance and monitoring:

- The Executive Director/Health Services Administrator or designee will monitor Federal and State public health advisories and the CDC website for information updates on the type of flu virus being identified during the season.
- The Executive Director/Health Services Administrator or designee will also provide weekly updates to the management team, on the status of any county, state or national pandemic flu outbreak and if known, will identify the number of persons in the local geographic area infected to date and the type of virus identified.
- Residents requesting meal trays will be assessed by a licensed nurse to determine whether they are experiencing flu-like signs and symptoms and whether they have been vaccinated for this season. In communities where a licensed nurse is not available, a team member will interview the resident and report signs and symptoms to the resident's physician for a determination of whether or not to test for influenza.
- Likewise, residents who come to the Wellness Office/Clinic or in need of health service will be assessed for flu-like signs and symptoms.
- Team members are to report any resident who has signs and symptoms of influenza including fever, headache, muscle aches, sore throat, chills, fatigue, runny or stuffy nose, cough, and/or mental status changes occurring in residents.
- Initiate the use of a daily active Flu Surveillance Line Listing (Appendix A) and collect data on all newly symptomatic residents until at least one week after the last influenza case occurs. Monitor team member absenteeism due to respiratory symptoms in order to track community influenza activity.
- Residents in the skilled nursing, memory care, and assisted living units will be assessed daily for signs and symptoms of flu. The resident's physician will be contacted for any resident exhibiting signs and symptoms of flu so that the physician can determine if testing is necessary.

Detection:

Team members are required to report any *suspected and confirmed* outbreaks. An outbreak is more than 2 residents exhibiting symptoms. A confirmed outbreak should also be reported to the Health Services Administrator, SNF medical director (if appropriate to the location), and the Risk Management Team.

Reporting to the local department of public health or licensing regulatory body may also be required depending on the type of outbreak and local rules and requirements.

The signs and symptoms of influenza are generally evolving within a few hours, generally with an onset of one symptom before the rest begin to manifest. These symptoms are as follows:

- Fever (temperature of 100°F or above) with at least 3 of the following sub-criteria:
 - Chills
 - NEW headache or eye pain

- Myalgia or body aches
- Malaise or loss of appetite
- Sore throat
- NEW or INCREASED dry cough

Note: seasonality is no longer required to meet the criteria for Influenza or Influenza-like Illness.

If a resident, family member or team member develops any of these signs and symptoms during flu season, the entire unit needs to be monitored carefully to ensure that the response and intervention portion of this plan is initiated.

Prevention of Transmission

The following additional prevention actions will be taken by managers:

- The Executive Director/Health Services Administrator announces via message to all residential, assisted living and/or memory care residents to remain in their units if they feel ill or become symptomatic of the flu, to wash their hands before and after meals, to cover their nose and mouth when sneezing, and to wear a face mask if they have to leave their unit for any reason.
- Symptomatic residential, assisted living and/or memory care residents will be given meal trays in their room.
- Necessary supplies will be ordered, such as extra Kleenex and antibacterial hand solution, gowns, masks and gloves so that the community can respond to an influenza A outbreak. Do not wait until after an outbreak is declared.
- Distribute a notice to all residents that influenza A illness has been identified in the facility and post the Flu Notice on entrance doors so that visitors are advised. Sample notice to be posted during an outbreak:

**THIS COMMUNITY IS CURRENTLY EXPERIENCING AN
OUTBREAK OF INFLUENZA. DO NOT BRING CHILDREN INTO
THE FACILITY TO VISIT. YOU MAY NOT VISIT IF YOU
CURRENTLY HAVE SYMPTOMS OF THE FLU.
IF YOU HAVE NOT BEEN VACCINATED AGAINST THE FLU THIS
SEASON, YOU WILL BE REQUIRED TO WEAR A MASK TO
AVOID BECOMING INFECTED, AND YOU WILL BE ASKED TO
WASH YOUR HANDS BEFORE ENTERING AND AFTER LEAVING
YOUR LOVED ONE'S ROOM.**

- Limit the number of large group activities in the community and consider serving all meals in resident rooms if possible when the outbreak is widespread (involving multiple units of the community).

- Avoid new admissions of individuals into the skilled nursing unit if they are symptomatic of or have been diagnosed with influenza A.
- Limit visitation and exclude ill persons from visiting the community via posted notices. Consider restricting visitation by children during community outbreaks of influenza.
- Monitor personnel absenteeism due to respiratory symptoms and exclude those with influenza-like symptoms from work until at least 24 hours after they no longer have a fever.
- Restrict personnel movement from areas of the community having illness to areas not affected by the outbreak.
- Consider closing dining rooms and group activities when an outbreak occurs.
- Initiate meal tray delivery with disposable dining ware and utensils to affected residents until the outbreak is resolved.

Education

Education for all residents, visitors, and team members concerning the importance of vaccination, recognizing symptoms of infection, community policies regarding work restrictions when ill, visitor restrictions, appropriate respiratory precautions, and hygiene cough etiquette. The community Infection Preventionist and skilled nursing director of staff development play a key role in developing and presenting information.

Prior to the influenza season, each community will undertake a campaign to encourage team members to vaccinate their family members, and to encourage visitors to be vaccinated.

All nursing team members must be very familiar with infectious diseases and in particular, the most frequently occurring infectious disease, influenza. Education at each community is to include, but not necessarily be limited to:

- **Flu signs and symptoms**, and seriousness of infection spread.
- **Basic hygiene:** It is better for people to get used to modifying their behavior (i.e. washing their hands more regularly, coughing and sneezing into a tissue or into their sleeve, etc.) *before* there is an infectious disease outbreak, and these simple steps can greatly reduce the likelihood of having an infectious disease outbreak.
- **Standard precautions:** hand hygiene is THE most important element in preventing the spread of viruses. Use of alcohol based hand rub is preferred, Frequent, thorough handwashing with soap and water should be routinely followed by all team members.
- **Respiratory etiquette:** use of tissues to blow the nose, discarding each one into a trash receptacle, is the essential part of respiratory etiquette, along with handwashing after blowing the nose. Encourage coughing persons to remain at least 3 feet away from others, if possible. Exclude health care practitioners and visitors with symptoms of respiratory infection. Ensure that hand hygiene supplies are available where sinks are located and/or providing dispensers of alcohol-based hand rubs. If a resident is

coughing, an assessment is needed to determine the cause. Team members are taught how to recognize bacterial versus viral nasal and cough discharge, and the nurses are taught how to be alert for the possibility of influenza, along with other reasons and assessment findings for non-flu related coughing. Visitors who have a cough or evidence of a respiratory illness are asked to stay away until their symptoms are resolved. Team members who have evidence of respiratory illness are asked to stay at home until symptoms resolve.

- **Use of Personal Protective Equipment** as barriers to infection: when and how to use gowns, masks, and gloves, and when and how to use the N95 respirator.
- **Post visual alerts:** For residents, team members, visitors and volunteers with instructions to
 - o Report symptoms of respiratory infection to a designated person;
 - o Stay home or avoid visiting if you are sick; and
 - o Follow appropriate respiratory etiquette (and information about respiratory etiquette).
- **Visitor Precautions and Restrictions:**
 - o Post signs notifying visitors that adults with respiratory symptoms should not visit for 5 days and children with symptoms should not visit for 10 days following the onset of illness.
 - o Provide written information about influenza-like infections and seasonal influenza to visitors and why the infection control precautions are necessary.
 - o Provide visitors with written instructions (respiratory hygiene/cough etiquette) about the precautions implemented by the facility.
 - o Encourage visitors to get vaccinated for influenza.
 - o Ensure that hand hygiene supplies, tissues and masks are readily available. If visitation during an outbreak is necessary (e.g., compassionate care visitation of a dying resident), instruct symptomatic visitors to:
 - (1) wear a surgical or procedure mask over their mouth and nose while in the resident's room;
 - (2) cough and sneeze into a tissue and discard contaminated tissues in a waste receptacle; and
 - (3) perform hand hygiene before entering the resident's room, before and after resident contact and upon leaving the resident's room.
 - (4) Consider restricting all children from visiting during an outbreak.

- **Signage:** During flu season, signs are posted on the front access door to the unit and the community. Examples below may be used, or those dictated by local health authorities. Sample wording for signage:

IT IS FLU SEASON AGAIN

HELP US AVOID AN OUTBREAK

If you have a fever, a cough, or a runny nose, please do not visit until your symptoms are completely gone.

If you have no symptoms, please wash your hands with warm water and soap before going into a resident room and before you leave the facility.

If you have any questions, please call our administrative office at

_____.

The notice to be posted during an outbreak:

THIS COMMUNITY IS CURRENTLY EXPERIENCING AN OUTBREAK OF INFLUENZA. DO NOT BRING CHILDREN INTO THE FACILITY TO VISIT. YOU MAY NOT VISIT IF YOU CURRENTLY HAVE SYMPTOMS OF THE FLU.

IF YOU HAVE NOT BEEN VACCINATED AGAINST THE FLU THIS SEASON, YOU WILL BE REQUIRED TO WEAR A MASK TO AVOID BECOMING INFECTED, AND YOU WILL BE ASKED TO WASH YOUR HANDS BEFORE ENTERING AND AFTER LEAVING YOUR LOVED ONE'S ROOM.

INFECTION CONTROL

General infection control measures are some of the most important steps to take. These measures include education of team members, surveillance and monitoring, and early response.

Environment

Basic unit cleanliness must be an on-going endeavor. Each unit manager is expected to implement and maintain good infection control strategies including, but not limited to, the following:

- Keep common areas clean and vacuumed; and
- Frequently touched areas should be wiped down, on at least a daily basis during flu season, with the appropriate EPA approved surface disinfectant.

Personal Protective Equipment (PPE)

- A supply of personal protective equipment such as gowns, gloves, surgical and N-95 masks, face shields or goggles should be kept at all times.
- The supply manager is responsible for monitoring stock levels and ordering PPE as needed from approved vendors.
- The supply manager should establish and check minimum levels of personal protective equipment on at least a monthly basis.
- If, in the case of a large outbreak, sufficient supplies are not delivered, the supply manager may reach out to the HumanGood procurement team to coordinate emergency delivery of critically needed supplies.
- A quantity of PPE and other supplies such as hand sanitizer, disposable plates, cups and equipment should be readily available to team members in the event an infection is identified.
- Team members on each shift should be trained and fit tested for use of N-95 or higher masks. (See Respiratory Protection Plan).

Specific infection control processes in flu season include:

Maintaining **Standard Precautions** constitutes the primary strategy for prevention of healthcare-associated transmission of infectious agents among residents and team members.

Examples of standard precautions include:

- **Hand hygiene with alcohol-based hand rub (ABHR) and/or soap and running water** when arriving at work, before and after providing care or services for a resident, and prior to leaving work for lunch and at the end of the work shift.
- **Handwashing** after touching the resident's respiratory secretions, whether or not gloves are worn. Gloves do not replace the need for performing hand hygiene.
- **Wearing gloves** if hand contact with respiratory secretions or potentially contaminated surfaces is anticipated.
- **Wearing a gown** if soiling of clothes with a resident's respiratory secretions is anticipated.
- **Changing gloves and gowns** after each resident encounter and performing hand hygiene.

Droplet precautions are used to prevent transmission of pathogens through close respiratory or mucus membrane contact. Droplet precautions are implemented as soon as a resident is suspected or confirmed to have influenza, and this continues for 7 days after illness onset or until 24 hours after resolution of fever and respiratory symptoms, whichever is longer.

Examples of Droplet Precautions include:

- Placing ill residents in a private room. If a private room is not available, place (cohort) residents suspected of having influenza residents with one another.
- Wear a facemask (e.g., surgical or procedure mask) upon entering the resident's room. Remove the facemask when leaving the resident's room and dispose of the facemask in a waste container.
- If resident movement or transport is necessary, have the resident wear a facemask (e.g., surgical or procedure mask), if possible.
- Communicate information about patients with suspected, probable, or confirmed influenza to appropriate personnel before transferring them to other departments.

These precautions are part of the overall infection control strategy to protect against influenza and should be used along with other infection control measures, such as isolation or “co-horting” of ill residents, screening team members and visitors for illness, sending team members back to their home if they have flu symptoms, and discouraging ill visitors from entering the facility.

Because residents with influenza may continue to shed influenza viruses while on antiviral treatment, infection control measures to reduce transmission, including following Standard and Droplet Precautions, should continue while the resident is taking antiviral therapy. This will also reduce transmission of viruses that may have become resistant to antiviral drugs during therapy.

RESPONSE & INTERVENTION

Team Member Illness

- Flu signs and symptoms that develop in any team member must be reported by that individual to their immediate supervisor as soon as possible.
The supervisor sends the team member home and reports the event to the department manager, Human Resources and the Executive Director/Health Services Administrator or designee.
- All team members will be advised that a team member with flu symptoms has been identified, and they are asked to report any flu signs and symptoms that they might develop to their immediate supervisor as soon as possible.
- Team members may be required to furnish a doctor's note or fitness-for-duty certification in order to return to work.
- If the team member had direct resident contact of any type, those residents are quickly identified, and to the extent possible, assessed daily over a 7-day period for the development of flu signs and symptoms.
- An Infection Control Log (Line Listing) will be started to identify all affected team members as their illness develops, the date of onset of signs and symptoms, any

test results, physician name, and disposition. This will be maintained by the Director of Nursing or designee.

- When in an outbreak (2 or more confirmed cases) daily updates on new and existing team member flu cases will be provided to the Risk Management team and Healthcare Services and Quality support team.
- Human Resources will coordinate the payment of sick leave, vacation and / or other applicable compensation or benefits (if any) during the team member's absence from work. Additionally, the team member may be entitled to protected leave under state and / or federal law, including, by way of example, the Family and Medical Leave Act (FMLA) and California Family Rights Act (CFRA).

Resident Illness

Following is a list of all the health and age factors that are known to increase a person's risk of getting serious complications from flu:

- Adults 65 years and older
- Asthma
- Neurologic and neurodevelopment conditions
- Blood disorders
- Chronic lung disease
- Diabetes
- Heart disease, including congestive heart failure and coronary artery disease
- Kidney disorders
- Liver disorders
- People in nursing homes and other long-term care facilities
- People who are obese with a body mass index [BMI] of 40 or higher
- People with a weakened immune system due to disease (HIV or AIDS, or some cancers such as leukemia) or medications (chemotherapy or radiation treatment for cancer, or persons with chronic conditions requiring chronic corticosteroids or other drugs that suppress the immune system)

Interventions

- Symptoms of flu that develop in any resident are reported as soon as practicable to the unit supervisor by the team member who identifies them.
- When 2 or more residents develop signs and symptoms, they will be added to the Infection Control Log (Line Listing) for residents and team members, and the appropriate regulatory bodies (Department of Public Health, licensing division, etc.) are notified.
- Residents will be assessed for flu-like signs and symptoms by a licensed nurse, and their physician contacted if symptoms exist.

The appropriate team member notifies the resident's physician and provides assessment results. If the physician agrees that the resident is experiencing the flu, he/she orders **isolation** to the degree possible in the facility and in addition, orders any testing or treatment believed necessary.

Isolation Precautions

- Skilled nursing residents will be placed on isolation precautions in groups (cohorts) of those who are symptomatic, even if this means changing rooms around so that those with the flu are all located in the same wing of the unit.
- If the residents are in independent living, they are asked to self-isolate until their symptoms are gone.
- If the residents are in Assisted Living, they are isolated in their apartment or room.
- If in memory care, symptomatic residents are considered for admission to the skilled nursing facility (SNF) if symptoms warrant and space is available. If not, memory care residents are isolated in their room.
- Isolation gowns, and masks and gloves are set outside the rooms of isolated residents. A trash can is placed in each isolation room,
- The appropriate team member notifies Dietary to provide trays with disposable utensils and dishware.

Once an outbreak has been identified, transmission control actions are to be activated.

Testing

Even if it's not influenza season, influenza testing should occur when any resident has signs and symptoms that could be due to influenza, and especially when two residents or more residents develop respiratory illness within 72 hours of each other. If there is one laboratory-confirmed influenza positive case along with other cases of respiratory infection in a unit, an influenza outbreak might be occurring. While unusual, an influenza outbreak can occur outside of the normal influenza season; therefore, testing for influenza should be added to testing for other respiratory pathogens during non-influenza season periods.

- Determine if influenza virus is the causative agent by performing influenza testing per lab instructions of ill residents with recent onset of signs and symptoms suggestive of influenza.
- Because of the possibility of false negative results during influenza season, if influenza is suspected and immunofluorescence or rapid influenza diagnostic test results are negative, the attending physician should order confirmatory testing using RT-PCR or viral culture.
- Viral culture should be performed if additional information on influenza viruses, such as influenza A virus subtype, antigenic characterization to compare with vaccine strains, or antiviral resistance data, are needed. Additionally, viral culture can be

used to confirm results from rapid diagnostic testing (as mentioned above) Determining influenza virus type or subtype of influenza A virus can help inform antiviral therapy decisions. The attending physician may want to test for other respiratory pathogens as well if it isn't influenza season.

Treatment

According to the National Institutes of Health antiviral treatment is an important tool in both controlling influenza and helping to prevent severe illness that can result from flu such as bacterial pneumonia.

The CDC recommends a prescribed medication for residents and team members works best when started soon after flu illness begins (within 48 hours of onset of flu symptoms) without waiting for laboratory confirmation; however, starting antiviral treatment can still be beneficial if started later than 48 hours after symptoms manifest.

Additionally, the use of antiviral drugs is a key component of influenza outbreak control in Life Plan Communities due to the advanced age of many residents who are at higher risk of influenza complications.

When a long-term care community is experiencing an outbreak, antiviral chemoprophylaxis may be given to residents who are not showing flu symptoms, regardless of their influenza vaccination status,. This recommendation has been issued so that these communities can prevent wide transmission of the virus.

Therefore, if two or more residents evidence flu symptoms within 72 hours of each other and at least one resident has laboratory-confirmed influenza, an order for antiviral chemoprophylaxis should be requested from the primary care physician.

Priority will be given to residents living in the same unit or floor as the resident who is already sick; however, since team members and residents may spread influenza to residents on other units, floors, or buildings of the same facility, all non-ill residents are recommended to receive antiviral chemoprophylaxis to control influenza outbreaks.

- The Director of Nursing, Medical Director, Director of Wellness, and Executive Director/Health Services Administrator are expected to discuss the need for testing of and antiviral chemoprophylaxis for team members with symptoms of flu who were exposed to residents with suspected or confirmed infection with laboratory-confirmed diagnosis of influenza infection.
- At the least, unvaccinated team members who have occupational exposure should be counseled about the early signs and symptoms of influenza and advised to contact their private doctor right away for evaluation and possible early treatment.
- Individuals receiving antiviral chemoprophylaxis should not receive live attenuated influenza virus vaccine (LAIV), and persons receiving LAIV should not receive antiviral treatment or chemoprophylaxis until 14 days after LAIV administration.

Residents whose symptoms progress in severity, who are becoming dehydrated, and/or those who have complicating co-morbidities such as cardiac and/or respiratory disease, should be monitored carefully, and transferred to an acute care facility, if complications of the flu are noted.

INFECTION CONTROL LOG (LINE LISTING) FOR RESIDENTS AND TEAM MEMBERS:

The Director of Nursing or designee as the Situation Commander maintains the Infection Control Log (Line Listing). See Appendix A for a sample line listing. Communities may use a form or format dictated by local regulatory bodies.

The log in each location must contain the following information:

- Resident or Team Member Name
- Resident or Team Member Age
- Resident or Team Member Gender
- Building/Floor/Level of Care
- Resident Room/Bed # or Primary assignment for team members
- Date of Symptom Onset
- Type of Symptoms
- Chest X-Ray Date/Results
- Influenza test date
- Result of test (pathogen identified)
- Symptom resolution date
- Disposition
- Outcome

This log will be retained in unit infection control files for a period of seven (7) years, after which it may be destroyed by shredding.

The HIPAA Privacy Rule permits us to provide a copy of this log to the department of public health (DPH) representative without written authorization of the residents and team members who are listed on the log.

INCIDENT REPORTING

Following established policy/procedure, complete an incident report for any resident who is transferred to an acute care hospital as a result of influenza symptoms or significant changes in condition that result from influenza.

The outbreak is reportable to regulatory bodies and local departments of health. An outbreak should be reported to Caring Communities via the Trinisys system, or the RiskWatch system.

DOCUMENTATION OF THE OUTBREAK

The Director of Nursing/Wellness, considered the “Situation Commander” as per our Emergency Preparedness and Response Plan, maintains the documented event narrative and timeline, and the Infection Control Log (Line Listing). This documentation is reviewed by the community QAPI Committee and submitted to the Risk Management team at the meeting following the end of the outbreak.

RESOLUTION AND RECOVERY

- When the outbreak is resolved, the Director of Nursing/Wellness notifies the Executive Director/Health Services Administrator, Medical Director, Risk Management team, the Department of Public Health, and the licensing division.
- The manager of each unit conducts daily active surveillance until at least 1 week after the last confirmed influenza case was identified.
- Residents may be returned to their regular rooms or released from quarantine or isolation and the dining rooms can be reopened and common activities restarted.
- Visitors can again come to the unit regardless of age.
- Per CDC recommendations, the flu season signs must remain on the access doors to the facility until the flu season is over.
- Caring Communities is notified that the outbreak is over.

Sore throat	Common	Sometimes
Headache	Rare	Common

#FIGHT FLU

APPENDIX B: ZIKA VIRUS

Background:

Prior to 2014, very few travel-associated cases of Zika virus disease were identified in the United States. In 2015 and 2016, large outbreaks of Zika virus occurred in the Americas, resulting in an increase in travel-associated cases in US states, widespread transmission in Puerto Rico and the US Virgin Islands, and limited local transmission in Florida and Texas. In 2017, the number of reported Zika virus disease cases in the United States started to decline. In 2018 and 2019, there were no reports of Zika virus transmission by mosquitoes in the continental United States, but in 2018 there were 41 deaths in the U.S. that were related to Zika and, in 2019, there were 10 cases reported, all from travelers returning from affected areas.

New cases are to be reported to the CDC by state and local health departments.

Genus and transmission:

The Zika virus is a member of the virus family Flaviviridae and the genus Flavivirus. It is spread by the bite of active Aedes mosquitoes, such as *A. aegypti* and *A. albopictus*. These are the same mosquitos that spread dengue and chikungunya viruses. The name of the virus comes from the Zika Forest of Uganda, where the virus was first isolated in 1947. Zika virus is related to the dengue, yellow fever, Japanese encephalitis, and West Nile virus.

The mosquitoes typically lay eggs in and near standing water in things like buckets, bowls, animal dishes, flower pots and vases. They prefer to bite humans and live indoors and outdoors near people. They become infected when they feed on a person already infected with the virus. Infected mosquitoes can then spread the virus to other people through bites.

TEAM MEMBERS IN CONTINUING CARE RETIREMENT COMMUNITIES SHOULD:

1. Know the clinical manifestation of Zika virus infection and how to access information about areas with active transmission.
2. Be capable of assessing for risk factors and exposure to Zika virus.
3. Be aware that people with Zika virus infection can be asymptomatic or mildly symptomatic and therefore, consider Zika virus disease in the differential diagnosis for residents with appropriate risk factors.
4. Discuss preventive measures with residents and families. Provide materials with information about risk factors to encourage the use of mosquito bite prevention actions.
5. Follow Standard Precautions when providing clinical services for residents
6. CDC Zika virus resources can be found here:

<https://www.cdc.gov/zika/index.html>

Signs and symptoms:

The illness is most often mild, with symptoms lasting from a few days to a week. Since afflicted individuals do not usually get sick enough to go the hospital, they may not even

realize they are infected. However, a Zika infection during pregnancy is believed to produce fetal defects such as microcephaly, hearing deficits, defects of the eye, and impaired growth.

Zika infection may result fever, rash, joint pain, and conjunctivitis. In some cases, an eye infection called uveitis might develop, which can lead to loss of vision.

In rare cases, infection with the Zika virus has been associated with Guillain-Barre syndrome, which includes temporary muscle weakness and paralysis. Death in humans is rare.

If Zika viral infection is suspected:

- Isolate the resident and implement strict isolation procedures.
- Do not allow visitors into the infected person's room.
- Instruct all team members providing care that the blood and body fluids of the resident will be contagious. Immediately remove clothing and gowns that are contaminated with blood or other body fluids. These should be bagged and washed with regular laundry soap; bleach is not necessary.
- Contaminated surfaces are to be washed by gloved individuals with household cleaner and disinfectants.
- The sick person's room is to be washed down daily with household cleaners.
- Contact the Department of Public Health to report the suspicion or, if diagnosed, the date of diagnosis.
- Collect and document the names of all team members who were in close contact with the resident.
- Follow the directions of the Public Health Department epidemiologists.

Testing:

There is currently no commercially available test to detect Zika infection. The CDC has given emergency use authorization for 10 tests to be used only by Public Health officials until a test with more specificity is developed.

According to the CDC, Zika antibodies show up in the blood four to five days after the onset of illness and can last 12 weeks or longer. The CDC's test looks for immunoglobulin M, or IgM, antibodies that show up relatively early in an infection. Processing of these tests takes time because the specimens must be shipped to specifically designated labs. In addition, there are concerns about accuracy for these tests. One of them has been plagued by false – positives and is no longer being used.

Treatment:

The only known treatment is symptomatic treatment, with rest, fluids, acetaminophen to reduce fever and/or pain, and avoidance of aspirin and other non-steroidal anti-inflammatory drugs (NSAIDS).

APPENDIX C: “SWINE FLU”

In the spring of 2009, a novel influenza A (H1N1) virus emerged. It was detected first in the United States and spread quickly across the United States and the world. This new H1N1 virus contained a unique combination of influenza genes not previously identified in animals or people. This virus was designated as influenza A (H1N1)pdm09 virus. Ten years later, work continues to better understand influenza, prevent disease, and prepare for the next pandemic.

Though the 2009 flu pandemic primarily affected children and young and middle-aged adults, the impact of the (H1N1)pdm09 virus on the global population during the first year was less severe than that of previous pandemics. Estimates of pandemic influenza mortality ranged from 0.03 percent of the world’s population during the 1968 H3N2 pandemic to 1 percent to 3 percent of the world’s population during the 1918 H1N1 pandemic. It is estimated that 0.001 percent to 0.007 percent of the world’s population died of respiratory complications associated with (H1N1)pdm09 virus infection during the first 12 months the virus circulated.

Signs and symptoms of swine influenza infection in humans are similar to those of uncomplicated seasonal influenza and include:

- Fever
- Cough
- Pharyngitis
- Rhinorrhea
- Myalgia
- Headache

Mild illness is similar in duration to that of uncomplicated seasonal influenza, (3-5 days) and may be managed on an outpatient basis, with close monitoring for clinical progression and development of complications.

Hospitalization may be required for severe complications or clinical progression to severe illness.

On August 10, 2010, WHO declared an end to the global 2009 H1N1 influenza pandemic. However, (H1N1)pdm09 virus continues to circulate as a seasonal flu virus, and cause illness, hospitalization, and deaths worldwide every year.

TESTING, SURVEILLANCE AND TREATMENT

At this time, the Swine Flu virus is treated similarly to seasonal Influenza. Communities should follow recommendations for Influenza.

APPENDIX D: AVIAN OR “BIRD” FLU

Avian influenza is the disease caused by infection with the avian influenza Type A viruses, which occur naturally among wild aquatic birds worldwide and can infect domestic poultry and other bird and animal species. Avian flu viruses do not normally infect humans, but sporadic human infections have occurred.

H5N1 has heretofore been the viral strain known as “bird”, or avian, flu, but newly detected H5 viruses include H5N2, H5N8, and the new reassortant H5N1 viruses. The H5N1 virus isolated in the United States in January 2015 is the new mixed-origin virus (“reassortant”) that is genetically different from the H5N1 virus found in several other countries (notably countries in Asia and Africa), which has caused human infections with high mortality. Although it is related to the H5N1 virus that has caused human infections with high mortality, the ability of this new reassortant H5N1 virus to cause severe disease is currently unknown.

Typically transmitted from infected birds to humans, avian flu does not spread from human to human. When it does infect humans, it is associated with very serious illness, multiorgan failure, and a high death rate.

The strain has potential to mutate much like other virus strains, and if this happens with H5N1, it could cause a very serious and difficult to control pandemic outbreak.

Clinicians and public health personnel should consider the following recommendations for surveillance and testing: consider the possibility of infection with novel influenza A viruses with the potential to cause severe disease in humans in patients with medically-attended influenza-like illness (ILI) and acute respiratory infection (ARI) who have had recent contact (<10 days prior to illness onset) with **sick or dead birds** in any of the following categories:

- Domestic poultry (e.g., chickens, turkeys, ducks)
- Wild aquatic birds (e.g., ducks, geese, swans)
- Captive birds of prey (e.g., falcons) that have had contact with wild aquatic birds

Testing

The duration of shedding of novel influenza A viruses in humans is largely unknown, and there are currently limited data describing prolonged shedding of people infected with these viruses. Therefore, the estimated duration of viral shedding is based upon seasonal influenza virus infection.

Specimens should be obtained for novel influenza A virus testing as soon as possible after illness onset, ideally within 7 days of illness onset. However, as some persons who are infected with seasonal influenza viruses are known to shed virus for longer periods (e.g., children and immunocompromised persons), specimens should be tested for novel influenza A virus even if obtained after 7 days from illness onset. Prolonged shedding of influenza virus in the lower respiratory tract has been documented for critically ill patients

with highly-pathogenic avian influenza A H5N1 virus and avian influenza A H7N9 virus infections.

If the community has residents in independent living who have traveled out of the country to a location that has an outbreak of avian flu, such as the Middle East and Asia are prone to have, they may have no symptoms or may exhibit symptoms of shortness of breath, fever, and persistent cough. In addition, those who might contract avian flu include:

- Direct contact with birds (e.g., handling, slaughtering, defeathering, butchering, preparation for consumption); or
- Direct contact with surfaces contaminated with feces or bird parts (carcasses, internal organs, etc.); or,
- Prolonged exposure to birds in a confined space.

Team members are to take extra precautions when providing care and services to these individuals until all symptoms resolve and, unfortunately, these residents must be quarantined in their living quarters until all symptoms resolve. A “care plan” is to be posted in their room that instructs them to wash their hands with running water and soap frequently, to avoid touching their nose or mouth with their bare hands, and to regularly clean the surfaces of their unit with a bleach-containing cleaning solution.

Standard, contact, and airborne precautions are recommended for patient management; this includes collection of respiratory specimens.

Use infection control and universal precautions with masks, gowns and gloves when providing care and services to infected residents.

APPENDIX E: Corona Virus-Novel 19 (COVID-19)

HumanGood is dedicated to providing the latest information and resident care guidelines to team members regarding coronavirus (COVID-19). The best way to combat infection, and fear is with information.

COVID-19 was identified in Wuhan, China in December 2019. COVID-19 is caused by the virus severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), a new virus in humans causing respiratory illness which can be spread from person-to-person. Early in the outbreak, many patients were reported to have a link to a large seafood and live animal market, however, later cases with no link to the market confirmed person-to-person transmission of the disease. Additionally, travel-related exportation of cases has occurred. In early 2020, the World Health Organization (WHO) declared COVID-19 as a global pandemic.

Corona viruses are a large family of viruses. 30-40% of individuals with a cold have a corona virus. Some of the types of these viruses are MERS-CoV, SARS-CoV and this newly identified virus, COVID-19. U.S. public health authorities are closely monitoring the outbreak of this virus, and the U.S Centers for Disease Control (CDC) is coordinating efforts with the WHO and other global partners, and with state and local health departments. This is a novel or “new” type of corona virus and as more is learned about it, additional information will become available. It is recommended that our Life Plan/CCRC communities check the CDC website frequently for updated information until the pandemic has been declared ended.

Transmission

Person-to-person spread of COVID-19 appears to be through respiratory droplets. These droplets are released when someone with COVID-19 sneezes, coughs, or talks. Infectious droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs. CDC recommends maintaining a physical distance of at least 6 feet between persons.

Respiratory droplets can land on hands, objects or surfaces around the person when they cough or talk, and people can then become infected with COVID-19 from touching hands, objects or surfaces with droplets and then touching their eyes, nose, or mouth. Recent data suggest that there can be transmission of COVID-19 through droplets of those with mild symptoms or those who do not feel ill. Current data do not support long range aerosol transmission of SARS-CoV-2, such as seen with measles or tuberculosis. Short-range inhalation of aerosols is a possibility for COVID-19, as with many respiratory pathogens. However, this cannot easily be distinguished from “droplet” transmission based on epidemiologic patterns. Short-range transmission is a possibility particularly in crowded medical wards and inadequately ventilated spaces.

The CDC updated signs and symptoms of COVID-19 in February of 2021. People with COVID-19 have had a wide range of symptoms reported – ranging from mild symptoms to severe illness. Symptoms may appear 2-14 days after exposure to the virus. Anyone can have mild to severe symptoms. People with these symptoms may have COVID-19:

- Fever or chills
- Cough
- Shortness of breath or difficulty breathing

- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

This list does not include all possible symptoms. CDC will continue to update its list as more is learned about COVID-19. Older adults and people who have severe underlying medical conditions like heart or lung disease or diabetes seem to be at higher risk for developing more serious complications from COVID-19 illness.

Current data indicates all ages can be affected, even healthy young adults can become severely ill with complications. The elderly and those with underlying health conditions are at higher risk of complications and death.

Prevention

Current guidelines for prevention of transmission include everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Maintain hand hygiene and thorough hand washing.
- Keep your environment clean
- Disinfect high touch surfaces with an EPA approved disinfectant
 - Find the listing of approved disinfectants here:
<https://www.epa.gov/pesticide-registration/list-n-disinfectants-use-against-sars-cov-2>
- Avoid close contact with people who have cough, sneezing, fever, shortness of breath.
- Avoid touching your eyes, nose, and mouth.
- Stay home if you have fever, cough, sneezing, shortness of breath.
- Cover your trash cans with plastic trash can bags.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Wear a face covering when out in public, wear appropriate PPE when working in the Life Plan Community.

Early recognition of those with potential infection is key to reducing the possibility of transmission. Symptom screening of all residents and team members should be performed.

According to the CDC, infection prevention priorities are:

1. Rapid identification of suspect cases
 - a. Screening/Triage at initial healthcare facility encounter and rapid implementation of source control
 - b. Limiting the entry of healthcare workers and/or visitors with suspected or confirmed COVID-19

2. Immediate isolation and referral for testing
 - a. Group patients with suspected or confirmed COVID-19 separately
 - b. Test all suspected patients for COVID-19
3. Safe clinical management
 - a. Immediate identification of inpatients and healthcare workers with suspected COVID-19
4. Adherence to IPC practices
 - a. Appropriate use of Personal Protective Equipment (PPE)

Guidelines for each Life Plan/CCRC Community

- Self-isolation for suspected or confirmed positive cases of COVID-19 in residential or assisted living.
- Cohort residents in skilled nursing separating those with symptoms from well residents, as is done in Influenza A or other viral outbreaks.
- Use appropriate personal protective equipment, including eye protection, when caring for residents with symptoms consistent with COVID-19.
- All team members and health care personnel (per CDC definitions) in the LPC should wear a surgical type mask while working in the community. One mask per shift will be provided.
- Have persons suspected of being ill with COVID-19 tested as directed by the Local Public Health Department.
- Clean and disinfect frequently touched objects and surfaces such as tables and chairs and door knobs and cupboard knobs using an EPA-registered disinfectant appropriate for COVID-19, following the directions on the product label (See link above (under Prevention section) for further information on disinfectants).
- Follow CDC's recommendations for using a facemask; cotton procedure masks will not be sufficient; rather, use filtration masks (N-95 masks).
 - **CDC recommends** use of a face covering while in public spaces to protect against asymptomatic individuals from transmitting the virus.
 - Use of an N95 facemask is important for health workers who are taking care of someone who has been confirmed or is suspected of having COVID-19.
 - Use alcohol-based hand rub or wash your hands often with soap and water for at least 20 seconds, especially after going to the bathroom; before eating and after blowing your nose, coughing, or sneezing.
 - Always wash hands with soap and water if hands are visibly dirty.
 - Ask residents to cover their mouth and nose with a tissue, hand or cloth face covering when care is provided.

Testing for COVID-19

Testing of residents, team members and other health care personnel should be performed at the cadence directed by local departments of public health. When considering testing of persons with possible COVID-19, communities should reach out to the resident's primary physician and work with their local and state health departments to coordinate testing through public health laboratories, or use COVID-19 diagnostic testing through

contracted clinical laboratories or rapid testing per community protocol to determine possible infection.

Clinical team members in conjunction with the resident's primary physician and/or the Medical Director should use their judgment to determine if a patient has signs and symptoms compatible with COVID-19 and whether the patient should be tested. Most patients with confirmed COVID-19 have developed fever and/or symptoms of acute respiratory illness (e.g., cough, difficulty breathing).

Other considerations that may guide testing are epidemiologic factors such as the occurrence of local community transmission of COVID-19 infections in a jurisdiction. Clinicians are strongly encouraged to test for other causes of respiratory illness such as influenza.

Community Actions

One **confirmed** case of COVID-19 infection, or three or more residents or team members with new-onset of respiratory symptoms that occur within 72 hours will trigger the following actions:

- Within 12 hours of becoming aware of the infection, distribute a notice to all residents, team members and responsible parties that Coronavirus (COVID-19) has been identified in the facility. Include mitigation and prevention strategies.
- Provide updates at least weekly or within 12 hours if new cases develop.
- If the community has separate buildings, and the outbreak is limited to one building or area, the manager, in consultation with public health (if applicable) may decide to restrict only the area affected. For example, if there is a separate building for the healthcare center, restrictions apply only to where the outbreak occurs.
- Notify appropriate personnel according to the following policies: CCRC Incident Reporting, Notifications Required Upon Identification of Suspected COVID-19 Case at Life Plan Communities.
- Consider discontinuing large group activities in the community and serving all meals in resident rooms based on the location of the outbreak and public health recommendations.
- Avoid new admissions of individuals if they are symptomatic of or have been diagnosed with COVID-19, if possible. If not possible, use current CDC and local or state department of health guidelines for admission and isolation.
- If cases are confirmed, discontinue admissions to the building or area affected. If widespread, discontinue all admissions.
- Monitor personnel absenteeism for symptoms consistent with COVID-19, HumanGood policy requires that each team member exhibiting symptoms of communicable diseases, including COVID-19, to be excluded from work as follows:
 - Confirmed positive COVID diagnosis via testing and symptomatic individuals should be excluded from work, per current CDC guidelines. See CDC's "return to work criteria" for healthcare workers in Resources section.
 - Confirmed positive COVID diagnosis via testing but asymptomatic individuals should be excluded from work, per CDC, until 10 days have passed since the date of their first positive COVID-19 diagnostic test

assuming they have not subsequently developed symptoms since their positive test.

- Test based option: stay home until confirmed diagnosis via testing that the individual does not have COVID-19 infection. Two negative tests performed at least 24 hours apart indicate negative for COVID-19 infection.
- Restrict personnel movement from areas of the community having illness to areas not affected by the outbreak.
- Initiate meal tray delivery with disposable dining ware and utensils until the outbreak is resolved.

Education

Educate all residents, visitors, and team members concerning the importance of recognizing symptoms of infection, infection control practices, HumanGood policies regarding work restrictions when ill, visitor restrictions, and appropriate respiratory precautions (as applicable).

If applicable, utilize the expertise and personnel in the health center (e.g., Nursing, DSD, Infection Preventionist) for training and consultation for the residential team.

All nursing team members must be very familiar with infectious diseases and in particular, the most frequently occurring infectious disease, influenza. Education at each facility is to include, but not necessarily be limited to:

- **COVID-19 signs and symptoms**, and seriousness of infection spread.
- **Basic hygiene:** It is better for people to get used to modifying their behavior (i.e. washing their hands more regularly, coughing and sneezing into a tissue or into their sleeve, etc.) *before* there is an infectious disease outbreak, and these simple steps can greatly reduce the likelihood of having an infectious disease outbreak.
- **Standard precautions:** hand washing is THE most important element in preventing the spread of viruses. Use of antibacterial solutions in lieu of handwashing is NOT a way to prevent spread of a virus; in fact, use of these solutions on a routine basis will allow viruses to spread. Frequent, thorough handwashing with soap and water is the best practice and should be routinely followed by all team members.
- **Respiratory etiquette:** General guidelines for non-COVID-19 infections; use of tissues to blow the nose, discarding each one into a trash receptacle, is the essential part of respiratory etiquette, along with handwashing after blowing the nose. Encourage coughing persons to remain at least 3 feet away from others, if possible. Exclude health care practitioners and visitors with symptoms of infection. Ensure that hand hygiene supplies are available where sinks are located and/or providing dispensers of alcohol-based hand rubs.
- **Use of protective clothing** as barriers to infection: when and how to use gowns, masks, eye protection and gloves, and when and how to use the N95 respirator.
- **Post visual alerts:** instructing residents, team members, visitors and volunteers to report symptoms of respiratory infection to a designated person.
- **Visitor Precautions and Restrictions:**
 - Post signs notifying visitors of signs and symptoms that may indicate infection, and that they should not visit until symptoms are resolved.

- o Provide visitors with written instructions about the precautions implemented by the facility.
- o In the event of discontinuation of visitation during an outbreak, promote remote/virtual communication (phone, video, etc.) to the greatest extent possible.
- o If visitation during an outbreak is necessary (e.g., compassionate care visitation of a dying resident) the community should instruct visitors to:
 - wear all appropriate PPE such as a mask and gown while in the resident's room;
 - sanitize their hands before entering the resident's room, before and after resident contact and upon leaving the resident's room. No children are allowed to visit during an outbreak
- During an outbreak, signs are posted notifying all who enter or exit of current restrictions/practices at entry and exits.

Vaccination

Early protection of all health care partners is critical in order for team members to continue taking care of residents in the community. Team members are on the front lines and risk being exposed to COVID-19 each day on the job. The decision to be vaccinated can protect more than the team member's health. It also protects colleagues, residents, families and the surrounding community.

Residents who receive COVID-19 vaccination will help save the lives of those at highest risk for infection and severe illness from COVID-19. Because residents live in group settings and are older adults often with underlying chronic health conditions, they are most at risk of severe disease from COVID-19.

Therefore, HumanGood encourages all team members and residents to become fully vaccinated against COVID-19.

Community leadership team is responsible for working with vendors and scheduling resident and team member vaccination clinics, and directing team members where to receive vaccinations from other sources.

Restrictions and limitations designed to prevent transmission may be changed or lessened based on vaccination status and community transmission rates, in accordance with applicable regulatory guidance (if any). Community leadership should consult current local and CDC guidance to determine any criteria for changing restrictions.

WANDERING (ELOPEMENT) SYSTEM TEST POLICY	Effective Date	8/23/18
	Revision / Review Dates	8/16/18
		06/21/21
	Departments Approving	LEGAL - OPERATIONS
	Departments Affected	LIFE PLAN COMMUNITIES

Introduction and Background

It is the expectation of HumanGood that each of its Life Plan Communities, to the extent possible, maintains a safe and secure environment for all residents. Each community has an Elopement Management Plan (EMP) that includes equipment monitoring protocols. The Executive Director (ED) or designee is responsible for maintaining an updated EMP, and for periodically testing the equipment used to prevent elopements. Wandering is a term sometimes used in place of elopement.

Policy

On a weekly basis, as well as following any report of a resident elopement, maintenance will test and document the elopement prevention system devices, including the door controller monitors, display panels, the computer and any other system components listed in the system operator’s manual.

Communities may have different systems. If the procedures below do not pertain to your system, please follow testing instructions per the owner’s manual of the system in your community, and modify the attached Resident Security System Weekly Test Form accordingly.

Procedures

The Resident Security System Weekly Test Form shall be used to document the performance of the elopement prevention system devices.

1. Each door shall be tested to ensure the electromagnet prevents the door from opening against force. This test is documented on the form.
2. Each door’s electromagnet and armature shall be inspected to ensure proper alignment and the absence of foreign material on the electromagnet that might prevent the door from locking properly.
3. Each door shall be tested to verify that it triggers the nurse alert alarm and that the alarm activates. This test is documented on the form.

4. Each door shall be tested to verify the full system alarm activates if a resident leaves the area. This test is documented on the form.
5. Each transponder must have a unique identifier. If possible within the system, the transponder (transmitter) for the resident should identify the resident by name/ room number.
6. Spare transponders shall be tested on a door to verify its reliability. This test is documented on the form.
7. Problems with the system shall be corrected as soon as possible. Any problems found require interim security measures until repairs have been completed.
8. When team members notice a problem with any aspect of the elopement technology (some examples include, but are not limited to, excessive or erroneous beeping, failure to beep, battery failure), the problem should be reported to maintenance immediately. A work order will also be written for maintenance, and the Executive Director, Assistant Administrator of Resident Services, Nurse Manager and appropriate department heads will be notified as soon as possible.
9. If it is determined that the problem in the system may compromise the system's ability to detect elopements, all relevant team members will be informed of the situation as soon as possible and an elopement prevention management alert will be initiated immediately.
10. Maintenance team members will immediately respond to repair the equipment and work together with the designated department head to determine a plan for fixing the equipment.
11. Risk Management team will be notified by email.
12. Results of weekly performance tests of the elopement prevention system devices are to be reported at the Safety Committee on a quarterly basis.

HAZARDOUS WANDERING AND ELOPEMENT- QAPI PLAN	Effective Date:	June 22, 2021
	Revision Dates:	
	Departments Approving	Clinical, Operations
	Departments Affected	Operations, all Levels of Living

Introduction and Background

It is the policy of HumanGood that each of its communities, to the extent possible, maintain a safe and secure environment for all residents/clients. This policy is intended to identify a quality improvement strategy for eliminating or mitigating the risk of elopement.

Policy

All communities shall develop an Elopement Management Plan that at a minimum includes the following elements:

Prevention

1. Each community shall plan elopement prevention measures based on the outlay of the property.
2. The most appropriate technological system(s), both internal and external, shall be determined based on the type of community, the configuration of the property, and population served.
3. Each community will conduct routine elopement drills including all shifts and all days.

Elopement Response and Communications

Each community shall have a written plan for responding to elopements that is to include:

1. Directions for conducting a missing resident search;
2. Assessment of the resident/client and disposition upon recovery;
3. Completion and filing of the Clinical Incident Report;
4. Telephone notification of appropriate parties (family, the physician, CSC risk management, regulatory agencies as required, local law enforcement, etc.);
5. Transfer to appropriate level of care, additional caregiver coverage, etc.;
6. Elopements shall be reported to CSC risk management; and
7. Following any elopement, Maintenance will test and document any wandering/elopement technology, including personal monitors, display panels, antennae, computerized notification and any other system components.
8. Complete a comprehensive care plan review of the resident and implement all necessary interventions related to elopement event within 24 hours of return.

Post-Elopement/Wandering Procedure:

After an elopement event, the community shall have a written plan to meet the resident needs including, but not limited to; the following components:

Upon return to the facility, the Director of Nursing or Wellness or designee shall:

1. Examine the resident for injuries, provide first aid, or transfer to a medical facility;
2. Determine the need for safety provisions such as wander technology, close observation, or other interventions;
3. Notify search team that the resident has been located;
4. Contact the Attending Physician, report findings and conditions and obtain orders, if any;
5. Notify the resident's family or emergency contact;
6. Complete incident reporting; and
7. Document relevant information in the resident record.

Root Cause Analysis

Post-elopement or hazardous wandering episode, each community shall conduct a root cause investigation process identifying, at a minimum:

1. Team member coverage at the time of any elopement/near miss incident;
2. Any precipitating events/circumstances;
3. The presence of any trends;
4. Procedures to improve monitoring and assessment; and
5. Establish resident specific procedures and update care plan to prevent future occurrence.

Definitions

Hazardous Wandering: The act of moving (walking or locomotion in a wheelchair) from place to place with or without a specified course or known direction. Hazardous or unsafe wandering represents the aforementioned behavior by a resident who may be oblivious to his or her physical or safety needs, and the wandering places the resident at significant risk of getting to a dangerous place (e.g., wandering outside the facility where there is heavy traffic) or encountering a dangerous situation (e.g., wandering into the room of another resident with dementia who is known to become physically aggressive toward intruders). (CMS's RAI Version 3.0 Manual; Section E; October 2015)

Elopement: A situation in which a resident with impaired cognition and/or demonstrated lack of safety awareness or judgment successfully leaves the organization or a secured area as defined by the organization, undetected or unsupervised by staff.

ECRI Institute. Ask CCRM: Strategies to evaluate wandering and elopement events. 2017 Aug 21 [cited 2018 Sep 13]. <https://www.ecri.org/components/CCRM/Pages/AskECRI082117.aspx>

Resident Name:

Date:

Time:

TIME	ELOPEMENT EVENT CHECKLIST
	Team member who is aware of possible missing resident will notify the nurse supervisor/or department director.
	The nurse supervisor will immediately gather the team (assigned CNA, nurse, caregiver or other available team members) and determine if the team members know the exact location of the resident right now. If EXACT whereabouts are not known, the resident is now missing
	The nurse supervisor/department director becomes search commander.
	When the director, administrator, or higher authority team member enter the scene, they will assume role of search commander.
	Search Commander initiates an immediate search of the unit or area where resident was last seen or should be.
	Search commander alerts appropriate team members in the community to the missing resident.
	Insert community specific steps to alert all community team members. (Example: Call front desk, or use radio to issue alert, or call a specific number, etc.)
	When notified, each department will send available team members to the effected unit to assist in the search effort
	While awaiting arrival of search team, print copies will be made of the resident's medical record face sheet and photo, and community maps for distribution to the search team.
	The search commander assigns search areas and provides photo and campus map to all responding team members:
	a. last known resident location;
	b. unit rooms and common areas;
	c. next closest units and beyond, with all internal areas covered; and
	d. external search by multiple team members / members going in opposite directions
	Search commander will assign a team member to remain as contact center and provide searchers with the number to call or location to report to for reporting back/ receiving new assignments/information.
	Searchers will list their name and contact information on the search team contact list
	Searchers will take the resident information and search their assigned areas.
	Searchers will report back to the communication center with the results of their search, and may receive new area assignment
	If the resident is not found before the search is expanded to other departments, buildings or grounds, <u>or 15 minutes has passed</u> in searching for the resident, the search commander will notify appropriate parties. (Search commander may notify law enforcement and community leadership at any time prior based on concerns or circumstances)
	On Call supervisor (if event occurs after hours, weekend or holiday)
	Director of Nursing/ Director of Wellness
	Administrator/ Executive Director
	Contact the resident's family/emergency contact to alert them to the situation. Search Commander may use the following script : 1. This is what has happened 2. This is what we are doing about it 3. This is what we need you to do 4. More information will be communicated to you as it becomes available
	Resident's attending physician will be notified of the search and asked to provide any information useful in the search regarding the resident's health status.
	The medical director will be notified of the incident.
	Local hospitals will be notified of the missing resident and search (Team member assigned will also send or take over a face sheet and photo to each hospital).
	Contact off-duty team members to come to the scene and assist with the search.
	Community executive leadership will alert Risk Management, VPO

Resident Name:

Date:

Time:

	Community executive leadership will alert communications and request assistance with media if necessary
	The search commander or designee will update resident's family/emergency contact hourly as the search progresses or at agreed upon times if the search goes on for more than a few hours.
	Resident Located
	Notify all searchers, law enforcement, family/ emergency contact and others who were notified that the resident has been found.
	Complete a comprehensive nursing systems assessment of the resident, including providing necessary first aid, related treatment, and emergency department assessment.
	Contact Primary / Attending Physician for orders, request resident be examined by the next day
	The search commander and high authorities will determine if the resident requires immediate 1:1 or other level of supervision.
	Complete a comprehensive care plan review of the resident and implement all necessary interventions related to elopement event within 24 hours of return.

SEARCH COMMANDER NOTES:

SEARCH TEAM CONTACT LIST

HAZARDOUS WANDERING AND ELOPEMENT- MISSING RESIDENT	Effective Date:	June 2016
	Revision / Review Dates:	June 2021
	Departments Approving	Clinical, Operations
Departments Affected	Operations, all Levels of Living	

Introduction and Background

It is the policy of HumanGood that each of its communities, to the extent possible, maintain a safe and secure environment for all residents/clients. This policy is intended to identify a plan in the event of resident elopement.

Policy

This policy is intended to provide an outline of how to organize a search and provide timely notification to leadership, families and law enforcement.

Procedure

When a resident is reported missing:

1. When a team member identifies a missing resident, the team member will alert the nurse supervisor.
2. The nurse supervisor will determine if the resident is “signed out” or otherwise out of the facility for a reason such as family visit, appointment, vacation or other valid reasons. If the resident does not have a scheduled reason to be away from the community, a search will be initiated.
3. The nurse supervisor assumes responsibilities of the “search commander” and locates the missing-resident manual.
 - a. The immediate action of the search commander is to designate available personnel to search the resident room and nearby common rooms, halls, closets, stairwells, elevators, and other locations near where the resident was last seen or should be.
 - b. The search commander will alert team members of the missing resident and share identity of the resident and direct designated team members to participate in the search.
 - i. The members of the search team may include the following:
 1. During Business hours: Department Heads, Directors, Supervisors, Security, and any other available personnel as directed by their supervisor.

2. After hours, holidays, etc.: All available nursing and supervisory personnel, Security, other available personnel such as maintenance, housekeeping, and dietary.
 - c. The search commander will assign one team member to the role of communication and provide contact information to searchers who may communicate results of their search or receive new search assignments. A phone number should be provided to searchers for the sole purpose of communicating back to the team.
 - d. Depending on the resident, scene, and situation, the search commander can opt to confirm if the resident is out of the facility on authorized leave and/or determine if the resident's family should be called (potentially, the family did not follow sign-out procedures).
 4. If the resident is not located within 15 minutes, during the initial search, and/or the team expands the search to other departments, outside, the surrounding neighborhood, etc. the search commander will notify appropriate parties:
 - a. The director of nursing (DON) or wellness (DOW), Health Services Administrator (H.S.A)
 - b. Executive Director,
 - c. Law enforcement officials,
 - d. The resident's family/ emergency contact
 - i. Consider using the following script:
 1. This is what has happened
 2. This is what we are doing about it
 3. This is what we need you to do
 4. More information will be communicated to you as it becomes available.
 - e. Resident's physician- ask for any information which will aid in the search.
 - f. When a higher team member authority (such as the DON, ED or H.S.A.) arrives on the scene, he/she will assume search commander responsibilities.
 5. Initiate an expanded search of the facility and premises by assigning team members to look in various areas.
 - a. Utilize Facility and Campus maps to designate area to be searched.
 6. The search commander (and law enforcement when they arrive) will designate search team members to execute an extensive grounds search, which should include all parking lots and parked vehicles, immediate wooded areas, building roofs, etc.

Off campus activities

1. Staff, family, and volunteers escorting residents outside of the unit and/or facility for various activities will verify that the community and resident's department supervisor (SNF, MC, AL) are notified that the resident will be off site. This may be accomplished by community "sign out" or other community procedure.
2. If a community sponsored event with at risk resident(s), team members will maintain continuous, protective, oversight line-of-sight monitoring of residents during outside-of-facility

activities. The recreation therapy manager or the manager of clinical services is responsible for designating sufficient team members to ensure this protective oversight monitoring is in effect.

3. A roster of residents should be checked when leaving the community, exiting or returning to transportation, and during the event.
4. Team members will intervene when a resident exhibits wandering and/or elopement behavior outside of the facility:
 - i. Remain with the resident and notify other team members present that the resident requires escort.
 - ii. Attempt to redirect the resident back to the activity, request assistance from any available team member to assist with redirection.
 - iii. If the resident behavior becomes dangerous to self or others, enlist the assistance of police or paramedics as needed.
 - iv. Transport the resident back to the community as soon as possible.

Missing resident at an off-campus activity

When a resident is identified as missing, the team member will alert the most senior team member.

1. The senior team member assumes responsibilities of the “search commander.”
2. The immediate action of the search commander is to designate available personnel to search the locations near where the resident was last seen or should be.
3. If other residents are present, search commander will determine which team members will monitor the residents and if there is a safe place to escort them while the search is conducted.
4. The search commander will alert the community and department supervisor or nurse supervisor that the resident is missing.
 - a. Nurse supervisor will alert appropriate community team members (DON/DOW, ED, H.S.A., Directors) of the missing resident and community team will dispatch available staff to assist in the search.
 - b. The Department or Nurse Supervisor will assist the onsite search commander in determining the need for notifying law enforcement to aid in the search.
 - c. Department/ nurse supervisor will notify family/ responsible party and physician of the event, and update as needed.
5. Search commander will notify individuals at the activity (venue staff, volunteers, etc.) of the missing resident and share identity and description of the resident to aid in the search.
6. If necessary, the search commander will contact emergency services (911) to aid in the search.
7. When a higher team member authority (such as the department supervisor, DON, ED or H.S.A.) arrives on the scene, he/she will assume search commander responsibilities

When a resident who was missing is found:

1. Notify all previously contacted persons and organizations of the resident's return.
 2. The nurse supervisor will examine the resident for possible injuries.
 3. Notify the resident's physician for consultation, if possible, arrange for the resident to be seen by the physician within 24 hours.
 4. The search commander and high authorities will determine if the resident requires immediate 1:1 or other level of supervision.
 5. The nurse supervisor will complete all elopement event documentation including:
 - a. Times/timeline of events;
 - b. persons contacted and approximate time of contact;
 - c. condition of the resident upon return to the facility;
 - d. physician notification;
 - e. any physician's orders or if none were given;
 - f. treatment indicated; and
 - g. any other pertinent information.
 - a. If the resident uses an electronic device, such as a wander alert or pendant with tracking, the nurse supervisor will:
 - i. determine if the device is present on resident's person;
 - ii. test the device and all associated alarm points, i.e., doorways, exits; and
 - iii. alert the maintenance director if a mechanical problem is suspected or identified.
 1. Within 12 hours of the event, maintenance personnel will check to ensure all alarms are operational.
 - iv. If there is a doorway device malfunction, supervision of that area will be provided based on the number of residents at risk.
 - b. Reassess the resident for elopement risk, regardless of whether this event may constitute an elopement or not.
6. Complete a comprehensive care plan review of the resident and implement all necessary interventions related to elopement event within 24 hours of return.

Definitions

Hazardous Wandering: The act of moving (walking or locomotion in a wheelchair) from place to place with or without a specified course or known direction. Hazardous or unsafe wandering represents the aforementioned behavior by a resident who may be oblivious to his or her physical or safety needs, and the wandering places the resident at significant risk of getting to a dangerous place (e.g., wandering outside the facility where there is heavy traffic) or encountering a dangerous situation (e.g., wandering into the room of another resident with dementia who is known to become physically aggressive toward intruders). (CMS's RAI Version 3.0 Manual; Section E; October 2015)

Elopement: A situation in which a resident with impaired cognition and/or demonstrated lack of safety awareness or judgment successfully leaves the organization or a secured area as defined by the organization, undetected or unsupervised by staff.

	Departments Approving	Legal
	Departments Affected	LPC; Health plan functions

I. POLICY

It is HumanGood’s policy to comply with the HIPAA and HITECH Act (as defined below) regulations and to establish written policies and procedures to assist its team members in doing so. All team members will take reasonable steps to safeguard Protected Health Information (as defined below) and to limit any use, disclosure, or request for PHI to the Minimum Necessary (as defined below) to accomplish the intended purpose.

II. SUMMARY DEFINITIONS

- A. Covered Entity: Individuals or entities that are required to comply with the HIPAA regulations, including: health plans, healthcare clearinghouses, and healthcare providers who transmit any health information in electronic form. HumanGood is a Covered Entity and as such, must comply with all applicable HIPAA and HITECH Act requirements.
- B. Business Associate: An individual who, or an entity that, on behalf of a Covered Entity: (i) performs or assists in the performance of a function or activity involving the use or disclosure of Protected Health Information; or, (ii) provides management, administrative, accreditation, billing or financial services to or for a Covered Entity where the provision of the service involves the disclosure of Protected Health Information from the Covered Entity, or from another Business Associate of such Covered Entity.
- C. HIPAA and HITECH Act: The Health Insurance Portability and Accountability Act of 1996 (“HIPAA”) created national standards to protect an individual’s medical records and other personal health information. The Health Information Technology for Economic and Clinical Health Act (“HITECH Act”) amended the Privacy and Security Rules (as defined below), which requires Covered Entities to (1) implement appropriate administrative, technical, and physical safeguards to reasonably safeguard Protected Health Information (“PHI”) (as defined below) from any intentional or unintentional use or disclosure that violates the Rules (defined below); and (2) ensure the confidentiality, integrity and availability of PHI in electronic form.
- D. Minimum Necessary: The amount of information reasonably required for the performance of a given task or service, and no more. The Minimum Necessary standard is not intended to impede essential treatment, payment, or healthcare operations activities of Covered Entities. The standard is intended to be consistent with, and not override, professional judgment and standards.
- E. Privacy and Security Rules (the “Rules”): The regulations that set forth the federal standards for privacy and security of individually identifiable information and provide a “floor” of privacy

protection.

- F. Protected Health Information (“PHI”): Any information created or received by a Covered Entity (e.g., HumanGood) that relates to the past, present, or future physical or mental health or condition of an individual; the provision of healthcare to an individual; or, the past, present, or future payment for the provision of healthcare to an individual, which identifies the individual or, with respect to which, there is a reasonable basis to believe the information can be used to identify the individual. See Exhibit A for Examples of PHI and Practical Guidance for Protecting PHI.

III. PROCEDURE

A. Uses and Disclosures of PHI

1. General Uses and Disclosures of PHI

HumanGood may use or disclose a resident’s PHI to (a) treat the resident; (b) run the company; (c) bill for its services; (d) help with public health and safety issues; (e) do research; (f) comply with the law; (g) respond to organ and tissue donation requests; (h) work with a medical examiner or funeral director; (i) address workers’ compensation, law enforcement, and other government requests; and (j) respond to lawsuits and legal actions. For further details, see the *Permitted and Required Uses and Disclosures of PHI Policy and Disclosures of PHI - Authorization, Fee and Accounting Table*.

2. Minimum Necessary

- a. When using or disclosing PHI or when requesting PHI from another Covered Entity, HumanGood team members must make reasonable efforts to limit PHI to the Minimum Necessary to accomplish the intended use, disclosure, or request.
- b. The Privacy Rule permits a Covered Entity to make its own assessment of what the Minimum Necessary PHI is for a particular purpose, given the characteristics of its business and workforce. All HumanGood disclosures of or requests for PHI for payment or operations will be limited to the Minimum Necessary amount of PHI needed to accomplish the purpose of the disclosure or request. In addition, disclosure by HumanGood team members will be limited to those with “a need to know” to carry out their duties.
- c. A Covered Entity is permitted to reasonably rely on the request of another Covered Entity for PHI because the requesting Covered Entity is itself subject to the Minimum Necessary standard, and, therefore, required to limit the request to only that information that is reasonably necessary for the intended purpose. In addition, HumanGood team members may reasonably rely on a requested use or disclosure as the Minimum Necessary when the information is requested by a HumanGood Business Associate.
- d. The Minimum Necessary rule does not apply when disclosures are made to or requested by a healthcare provider for treatment.

e. For further details, see the *Minimum Necessary Rule Policy*.

3. Disclosure Accounting

HumanGood will track all PHI disclosures that must be accounted for under the Rules and provide an accounting to the appropriate individual upon their request. For further details, see the *Accounting of PHI Disclosures Policy*.

4. Authorization and Verification

It is HumanGood's policy that a valid authorization will be obtained for PHI disclosures by HumanGood, as required by law. Exceptions to the need for an authorization include disclosures made: (a) for treatment, payment, or healthcare operations; or (b) to Business Associates in performance of their legitimate duties. Any authorization requests that are generated outside of HumanGood must be reviewed by the Legal Department to ensure they contain the core elements and statements required under HIPAA and other applicable law. The individual providing an authorization may revoke the authorization, in writing, except to the extent that HumanGood has taken action in reliance on the authorization. For further details, see the *Medical Records Requests Policy*, the *Authorization for Release Protected Health Information Form*, and the *Verification of Identity Before Release of PHI Policy*.

5. Marketing Activities

Where applicable and required, HumanGood obtains authorization from the resident or individual before using or disclosing PHI in its marketing activities. HumanGood does not consider the communication of alternate forms of treatment or the use of products and services in treatment to be marketing. For further details, see the *Use and Disclosure of PHI in Marketing Activities Policy*.

6. Sale of PHI

HumanGood does not disclose PHI in exchange for financial remuneration, except as specifically allowed by law (e.g., when collecting a fee for providing copies of medical records). For further details, see the *Sale of PHI Policy*.

7. Fundraising Activities

HumanGood may contact residents in connection with its fundraising efforts, but the resident has the right to opt-out of receiving further fundraising communications. Once the resident has opted out, HumanGood will not make fundraising communications to that resident, unless the resident opts back in to receiving fundraising communications. For further details, see the *Use and Disclosure of PHI for Fundraising Activities Policy*.

8. Judicial and Administrative Proceedings

HumanGood discloses PHI for the purposes of a judicial or governmental administrative proceeding only when: (a) requested pursuant to a court or administrative order or grand jury subpoena; (b) requested pursuant to a subpoena or discovery request; or, (c) pursuant to a qualified protective order issued by a court. Further, it is HumanGood's policy that PHI be disclosed only when requested by any of the above-listed means, if such request includes either: (i) the authorization of the individual to whom the information applies; (ii) documented assurances that good faith effort has been made to adequately notify the individual of the request for their information; (iii) the applicable time for objection to such request for PHI has reasonably expired; or, (iv) as otherwise required or permitted under applicable law. For further details, see the *Medical Records Request Policy*.

B. Notice of Privacy Practices

HumanGood maintains a Notice of Privacy Practices ("NPP") that describes the way in which it uses and discloses PHI. The NPP is provided to residents upon request (except as otherwise required by law) and may be changed in accordance with the *Notice of Privacy Practices Policy*. A copy of the NPP is posted on the HumanGood website. A copy of the NPP is enclosed with this Policy, but team members should always check the HumanGood website or intranet for the latest version of the HumanGood NPP.

C. Individual Access to PHI, Restrictions on Disclosure, Communication by Alternate Means and Request for Amendment

1. Access by Individual / Authorized Representative

It is HumanGood's policy to timely review and respond to requests for access or electronic or paper copies of a resident's medical records, whether from the resident, authorized representative or third party. Residents may give someone medical power of attorney or someone may be their legal guardian and that person can exercise the resident's privacy rights and make choices about the resident's PHI. Those individuals are considered the resident's authorized representative. For further details, see the *Access to PHI – Resident or Authorized Representative Policy*, the *Medical Records Requests Policy*, and the *Access to Electronic Health Records – Regulatory Agencies Policy*.

2. Restrictions on Disclosure

- a. Restriction on Uses and Disclosures of PHI. The Privacy Rule grants each individual the right to request restriction of the uses and disclosures of his or her PHI to carry out treatment, payment, or healthcare operations, but HumanGood is not required to grant this request. If HumanGood agrees to a restriction, the restriction must be appropriately documented and communicated to those whose functions may be impacted by the restriction. For further details, see the *Requests for Restriction of PHI Disclosure Policy*.)

- b. Restriction on Uses and Disclosures of PHI (Out-of-Pocket Paid Items and Services). The Privacy Rule requires that a Covered Entity restrict disclosures of PHI to an individual's health plan if: (i) the disclosure is for the purpose of carrying out payment or healthcare operations (and is not otherwise required by law); and, (b) the information pertains only to a healthcare item or service for which the individual (or a person other than the health plan) paid the Covered Entity in full. HumanGood team members will document such requests and communicate them to those whose functions may be impacted by the restriction. For further details, see the *Requests for Restriction of PHI Disclosure Policy*.)
- c. Communications of PHI by Alternate Means. The Privacy Rule grants individuals the right to request communication of PHI by alternative means or to an alternative location. HumanGood will accommodate reasonable requests for alternative communications and will make good faith efforts to abide by the request, unless unable to do so in case of emergency. HumanGood team members should document any requests agreed to and communicate the same to those whose functions may be impacted by the restriction. For further details, see the *Request for Communication of PHI by Alternate Means Policy*.

3. Requests for Amendment of PHI

The Privacy Rule permits individuals to request the amendment of incorrect PHI. If the patient's request pertains to the amendment of a record or document owned and under the control of HumanGood, then HumanGood will review and respond to the request within sixty (60) days and make revisions to the applicable record or document, as and if appropriate. For further details, see the *Request for Amendment of PHI Policy*.

4. PHI of Deceased Individuals

HumanGood team members are permitted to disclose a decedent's PHI under the following circumstances: (a) to alert law enforcement to the death of the individual, when there is a suspicion that death resulted from criminal conduct; (b) to coroners or medical examiners and funeral directors; (c) for research that is solely on the protected health information of decedents; and, (d) to organ procurement organizations or other entities engaged in the procurement, banking or transplantation of cadaveric organs, eyes, or tissue, for the purpose of facilitating organ, eye, or tissue donation and transplantation. For further details, see the *Release of PHI of Deceased Resident/Client Policy*.

5. Breach Notification

If a HumanGood team member knows of any intentional or unintentional use or disclosure of PHI or electronic PHI ("e-PHI") that is in violation of this Policy, any other HumanGood policy, or the Rules, s/he must immediately take appropriate steps to mitigate the situation, including contact the appropriate manager, supervisor, and/or Privacy Officer or Security Officer. For further details, see the *Breach Notification Policy*.

D. HumanGood Operations

1. Administrative, Technical and Physical Safeguards

HumanGood ensures that appropriate administrative, technical and physical safeguards are in place to (a) reasonably safeguard PHI from any intentional or unintentional use or disclosure that is in violation of the Privacy Rule; (b) ensure the confidentiality, integrity and availability of e-PHI it creates, receives, maintains or transmits; (c) protect against reasonably anticipated uses or disclosures that violate the Rules; and (d) limit incidental uses and disclosures resulting from otherwise permitted or required uses or disclosures.

2. Team Member Use and Disclosure of PHI

HumanGood team members' authority to use and disclosure PHI, for operations, treatment or payment purposes, is granted to each team member based on the assigned job functions of the individual. These use and disclosure privileges will not exceed those necessary for the job function or task. For further details, see the *Use and Disclosure of PHI by Workforce Members Policy*.

3. Training and Awareness

HumanGood requires all its team members to complete annual HIPAA compliance training. Team members who fail to fulfill this training requirement may be subject to discipline, up to and including termination of employment. New HumanGood team members receive HIPAA training as a component of their initial onboarding. Additional training may be required in response to changes in law or operations or as otherwise needed. For further details, see the *Workforce Privacy Education Policy*.

4. De-Identification (and Re-Identification)

PHI may be considered de-identified if it does not identify an individual, and there is no reasonable basis to believe that the information can be used to identify an individual. HumanGood's policy is that any de-identification of PHI must be performed only by qualified individuals. HumanGood team members should contact the Legal Department regarding de-identification of PHI. The Legal Department will work with the Information Technology Department (and other qualified individuals) regarding de-identification of PHI. De-identified PHI may not be re-identified, unless the Legal and IT Departments have been consulted. For further details, see the *De-Identification of Protected Health Information (PHI) Policy*.

5. Complaint and Non-Retaliation Policy

Residents have the right to file a privacy complaint if they believe their HIPAA privacy rights have been violated. HumanGood does not require residents to waive their right to file a HIPAA privacy complaint as a condition of receiving treatment or otherwise. HIPAA privacy complaints may also be filed by a resident's authorized representative or HumanGood team members or business associates. For further details, see the *Process for Handling HIPAA Privacy Violation*

Complaints Policy.

HumanGood team members are prohibited from engaging in any intimidating or retaliatory acts against persons who file complaints or otherwise exercise their rights under HIPAA regulations or participate in any HIPAA complaint or investigative process. For further details, see the *Violations of HIPAA Privacy Practices Enforcement Policy*.

6. Document Retention and Destruction

HumanGood documents its policies and procedures adopted to protect the privacy and security of PHI. HumanGood has established a record retention policy that addresses the retention period(s) for these policies and procedures. HumanGood destroys documents and electronic media containing PHI through shredding or other secure means. For further details, see the Record Retention, Storage and Destruction Policy.

7. Business Associates

HumanGood requires its Business Associates to be contractually bound to safeguard PHI. HumanGood's Business Associates are permitted to use and disclose PHI only as provided in their service agreement with HumanGood. Where HumanGood knows of a pattern of activity or practice that constitutes a material breach or violation of a Business Associate's obligations under its business associate agreement with HumanGood, it will require the Business Associate to take steps to cure the breach or end the violation. If the Business Associate is unable to cure the breach or end the violation, HumanGood will terminate the agreement (if feasible) and report the breach to the Office for Civil Rights. For further details, see the *Business Associate Agreements Policy*.

8. Cooperation with Privacy Oversight Authorities

It is HumanGood's policy to cooperate with oversight authorities, such as the Office for Civil Rights. HumanGood team members will cooperate with all privacy compliance reviews and investigations, which should be directed to HumanGood's Privacy Officer.

9. Sanctions

HumanGood may impose disciplinary action, up to and including termination, upon any team member who intentionally or unintentionally violates the requirements outlined in this or any of HumanGood's related policies. For further details, see the *Violations of HIPAA Privacy Practices Enforcement Policy*.

10. Privacy Officer

HumanGood has designated one of its team members as its Privacy Officer. The Privacy Officer is responsible for the development and implementation of HumanGood's HIPAA privacy policies and procedures as well as receiving HIPAA privacy complaints.

11. Audits

As a Covered Entity, HumanGood may be subject to a HIPAA audit by the Secretary of the Department of Health and Human Services (or his/her designee). It is HumanGood's policy to cooperate with such HIPAA audits. HumanGood team members should immediately report receipt of any documents related to a HIPAA audit of HumanGood to the Privacy Officer.

IV. EXCEPTIONS / SPECIAL CIRCUMSTANCES

- A. A Covered Entity may disclose PHI to a family member or other person involved in the individual's care. Where the individual is present during a disclosure, the Covered Entity may disclose PHI if it is reasonable to infer from the circumstances that the individual does not object to the disclosure.
- B. The Privacy Rule permits certain incidental uses and disclosures that occur as a result of a use or disclosure otherwise permitted by the Rules. The incidental use or disclosure is permissible only to the extent that the Covered Entity has applied reasonable safeguards to PHI, and implemented Minimum Necessary standards. For example, two nurses who are conferring about a resident at a nurses' station do not have to fear violating the Privacy Rule if they are overheard by a passerby, as long as the nurses make reasonable efforts to avoid being overheard and reasonably limit the information shared.
- C. State laws that are more stringent than the Privacy Rule take precedence over the federal regulations. Team members should contact the Legal Department with questions regarding the interpretation of state and federal privacy laws.
- D. The Privacy Rule does not apply to the employment functions of Covered Entities, namely, when they are acting in their role as employers. Employment records are exempt from the definition of PHI. For example, information in a HumanGood team member's personnel file about a leave of absence due to illness is not PHI under the Rules. Similarly, drug-screening test results sent to HumanGood and placed in the team member's personnel file are not considered PHI.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on changes in law, risk, industry threats and identified vulnerabilities.

Exhibit A

Examples of Protected Health Information (PHI)

1. Conversations about a resident's health
2. Patient dictation on tape
3. Healthcare claim/bill
4. Medical record
5. Emails with resident name (or other identifiers, such as date of birth, address, phone number or email) and health information
6. Electronic equipment or digital media (if resident health data is stored). Some examples include, cell phones, laptops, tablets, thumb drives and recordable discs.

Practical Guidance for Protecting PHI

1. Disclose only the minimum necessary information for people to do their jobs.
2. Avoid discussions about resident's health in public places.
3. Avoid placing PHI in view of other residents or family members.
4. Password protect your mobile electronic devices, laptops, and home computers if PHI is stored there.
5. Don't leave PHI visible on your computer screen.
6. Be certain that your papers and computer equipment are physically secure in your home, car, or other "off-site" locations. Do not leave your briefcase in plain sight within your car; secure it in the trunk of the car and remove it from the car (to a more secure location) as soon as possible.
7. Don't send emails with PHI, unless they are encrypted.
8. Don't put PHI in trash or recycle bins; use only shredding or other document destruction receptacles.
9. Verify fax numbers and email address before you send faxes or emails with PHI. Verify mailing address before mailing or shipping documents or devices with PHI.
10. Report any potential privacy or security breaches by team members or business associates to HumanGood's Compliance Officer, Security Officer and/or Privacy Officer.

ACCESS TO ELECTRONIC HEALTH RECORD- REGULATORY AGENCIES	Effective Date	April 20, 2020
	Revision Dates	9/18/20
	Departments Approving	Legal
Departments Affected	All	

Introduction and Background

HumanGood is committed to cooperating and providing regulators with requested information necessary to perform their role.

Policy

HumanGood will provide access to resident records to regulators as required by statute, regulation, or other applicable law.

The form of access will vary depending upon regulator need or request. This form may consist of:

- Printed copies of records
- Faxed copies of records
- On site access to paper documents
- On site access to HumanGood Electronic Health Record System hardware with appropriate login information
- Encrypted email
- Encrypted devices such as thumb drives or other hardware sent to regulator

HumanGood strives to maintain the safety of highly sensitive information under HIPAA guidelines, therefore, access by regulators to the medical record via the internet or on an unencrypted device will only be allowed if other forms of access are unsuitable. This access will only exist temporarily during the pandemic emergency.

If such access is required by regulation or statute, HumanGood IT department will assist in setting up a secure temporary connection protecting the data transmission.

Definitions

Regulator: individuals properly identified as working for a local, state or federal regulatory agency (such as CMS, Public Health, State Department of Health, State Department of Social Services) or other regulating bodies who by regulation, statute, or other applicable law are required to be given access to medical records in the course of their work conducting a survey or investigation.

ACCESS TO PHI - RESIDENT OR AUTHORIZED REPRESENTATIVE	Effective Date	05/2003
	Revision Dates	07/2013
		01/01/21
	Departments Approving	Legal
Departments Affected	CCRC Operations – Medical Records	

I. POLICY

Individuals have a right to access their protected health information (PHI) in a designated record set (as defined below). HumanGood team members grant individuals access to PHI in a designated record set when required or permitted by law or with the written authorization of the individual who is the subject of the records, as outlined in this policy, which must be read in conjunction with the Medical Records Requests Policy.

II. SUMMARY DEFINITIONS

- A. “Authorized representative” means a personal representative and includes a person that has the authority to act on behalf of a resident on matters related to healthcare and could be a court-assigned conservator, the person holding a durable power of attorney for healthcare or attorney-in-fact; or, if the resident is in skilled nursing, the person who is a next-of-kin that has been previously authorized by the resident to access or receive a copy of the resident’s records. An authorized representative is treated as the individual for purposes of this and HumanGood’s other applicable HIPAA policies.
- B. “Covered entity” means a healthcare provider, healthcare clearinghouse, or health plan.
- C. “Designated record set” means a group of records maintained by or for a covered entity that comprises the (a) medical and billing records about individuals maintained by or for a covered healthcare provider; (b) enrollment, payment, claims adjudication, and case or medical management record systems maintained by or for a health plan; or (c) other records that are used, in whole or in part, by or for the covered entity to make decisions about individuals. This last category includes records that are used to make decisions about any individuals, whether or not the records have been used to make a decision about the particular individual requesting access.
- D. “Psychotherapy notes” means notes recorded (in any medium) by a health care provider who is a mental health professional documenting or analyzing the contents of conversation during a private counseling session or a group, joint, or family counseling session and that are separated from the rest of the individual’s medical record. Psychotherapy notes do not include medication prescription and monitoring, counseling session start and stop times, the modalities and frequencies of treatment furnished, results of clinical tests, and any summary of the following items: Diagnosis, functional status, the treatment plan, symptoms, prognosis, and progress to date.
- E. “Record” means any item, collection, or grouping of information that includes PHI and is maintained, collected, used, or disseminated by or for a covered entity.

III. PROCEDURE

- A. Request for Access. If a resident or authorized representative makes a verbal request for access to PHI in a designated record set, the requestor should be instructed to complete, sign and return the Authorization for Release of Protected Health Information form. Once the completed and signed form has been received, the Executive Director and/or Health Services Administrator or his/her designee must verify the identity of the party requesting the medical records. See Verification of Identity Before Release of PHI Policy.
- B. Request for Copy. If the individual is requesting access by receiving a copy of PHI (whether paper or electronic) in a designated record set or having a copy sent to a third party, process the request under the Medical Records Requests Policy and include documents within the definition of a designated record set in the production. The resident/client may designate another person or entity to be the recipient of the copy of his/her PHI (whether paper or electronic). If an individual's request is for an electronic form or format that is not readily producible, HumanGood shall offer other electronic formats that are available on its system or provide a summary of documents on file. In the event the individual declines to accept any of the electronic formats that are readily producible, they shall be provided with a hard copy.
- C. Summary of PHI: If the resident/client or their authorized representative agrees, we may provide a summary of the health information requested in lieu of providing a copy of the designated record set. If the resident/client or authorized representative agrees to receive a summary, a reasonable cost-based fee for preparing the summary may be charged and collected before the summary is released.
- D. Response Timing.
 - 1. Skilled Nursing Timing. Access must be provided within two (2) working days of the request.
 - 2. General Timing. Access must be provided within thirty (30) days of receipt of the request.
- E. Providing Access to Inspect. Any on-site inspection must be coordinated with the Executive Director and/or Health Services Administrator or his/her designee and supervised by a designated staff member. Verification of the individual's identity (and authority, where applicable) must be done prior to allowing access to inspect the resident/client's health record.
- F. Basis for Denial of Access.
 - 1. HumanGood is permitted to refuse access to PHI in the following circumstances: (1) the designated record set requested was given to us in confidence by someone other than a healthcare provider, biller, or payer of services; (2) to the extent that the requested designated record set contains within it PHI that belongs to another individual such as a family member, a licensed healthcare professional has to determine whether, in the exercise of his/her professional judgment, access to that specific PHI by the resident or authorized representative is reasonably likely to cause substantial harm to that other person or to the resident/client. In these instances, access to or a copy of the specific PHI involved may be denied; (3) to the extent that the requested designated record set contains "sensitive information" (as defined below), this information must be specifically requested and signed for by the resident, or it cannot be accessed. **All denials of a resident's or authorized representative's**

request access to PHI must be coordinated with the Privacy Officer or other Legal Department.

2. HumanGood may deny access to the resident's authorized representative if a designated licensed professional, in their exercise of professional judgment, believes that such access is reasonably likely to cause substantial harm to the resident/client or to another person. This decision may not be appealed.

IV. EXCEPTIONS / SPECIAL CIRCUMSTANCE

- A. Exceptions from Production and Access. Do not produce or permit access to quality assurance/improvement documents, risk management reports, notes from any internal investigation into an incident, lawsuit information (including, documents prepared in anticipation of litigation), or documents regarding research activities and results.
- B. Sensitive Records: Access to PHI concerning psychiatric evaluation and treatment or psychotherapeutic counseling, alcohol or drug abuse evaluation and treatment, and evaluation/treatment of sexual abuse or venereal disease, including HIV/AIDS will be denied, unless specifically identified in an Authorization to Release Protected Health Information form signed and initialed in each category by the resident. For access to psychotherapy notes, contact the Legal Department and see the Permitted and Required Uses and Disclosures of PHI Policy. When such access is denied, we will provide the individual with a written denial and the reason(s) for it, and will inform them of their right to have their physician, psychiatrist, clinical psychologist, licensed clinical social worker, or family therapist of their choice review the record on the resident's/client's behalf. Although any professional so chosen, is not permitted by law to enable the resident/client to inspect or receive a copy of the information, that professional is permitted to provide HumanGood with their determination so that we can make the decision related to access.
- C. Deceased Individuals. If the resident is deceased, access may only be granted to the executor or administrator of the resident's estate or a beneficiary named in the resident's Last Will and Testament. See also Release of PHI of Deceased Resident/Client Policy.
- D. Hyperlinks in Designated Record Set. If the designated record set contains electronic links to images or other data, the images or other data that are linked to the designated record set must be included in the electronic copy provided to the individual *only if*, HumanGood created the documents in the record set. If HumanGood did not create the documents, those documents are not included in the designated record set, and the links must be deactivated by the Information Technology Department before release.
- E. Accounting of Disclosures. Communities must maintain a system(s) for logging and tracking requests for inspection, access and copies of medical records that have been disclosed without the resident's written authorization or for other than for treatment, payment or healthcare operations, as outlined in the Accounting for Disclosures of PHI Policy.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

ACCOUNTING OF PHI DISCLOSURES	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
Departments Affected	LPC; Health Plan functions	

I. POLICY

It is HumanGood’s policy to appropriately account to residents/clients for disclosures of protected health information (PHI) made without their written authorization, except disclosures made to resident/clients themselves. HumanGood documents and tracks the applicable PHI disclosures in order to account for them when requested.

II. DEFINITIONS

- A. **Accounting of Disclosures** means a listing of disclosures of PHI made to any person or entity other than the resident/client without their written authorization, unless excluded as described in this policy.
- B. **Disclosure** means release, transfer, provision of access to, or divulging in any manner of PHI outside of HumanGood or the business associate that maintains the PHI on HumanGood’s behalf.
- C. **Electronic PHI** means individually-identifiable health information that is transmitted by or maintained in electronic form.
- D. **PHI** means **protected health information**, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.

III. PROCEDURE

- 1. Lookback Period. The timeframe requirement for an accounting of disclosures by hard copy is limited to six (6) years prior to the date of the written request for an accounting or the timeframe the resident/client identifies in the request, whichever is shorter.
- 2. Receipt and Acknowledgement of Request. Each written request for an accounting of disclosures is date and time stamped by the medical records team member upon receipt. The medical records team member then sends the resident/client an Acknowledgement of Receipt of Request for Accounting of Disclosures of PHI Form, which includes the fee that is to be assessed to the requestor for the accounting, if any. The accounting must be provided within sixty (60) days of receipt of the request. The medical records team member should work with the Information Technology Department if an accounting of disclosures of e-PHI must be produced. If the 60-day timeframe cannot be met for any reason, the community will provide the resident/client with an interim letter explaining the need for an extension. Only one such extension is permitted under the Privacy Rule.

3. **Content of the Accounting:** At a minimum, the accounting of disclosures must include, **for each disclosure**, the following information:
 - Date of the disclosure made during the timeframe on the written request.
 - Name, address and telephone number of the entity or individual who received the PHI.
 - A brief description of the PHI disclosed.
 - A brief statement of the purpose of the disclosure that reasonably informs the resident of the basis for it or, in lieu thereof, a copy of the entity or individual request for a disclosure, if available.
4. **Accounting Exceptions:** An accounting is not required for the following disclosures:
 - Disclosure for the purpose of treatment, payment for services and health care operations.
 - Disclosures made between members of the HumanGood workforce as part of their function in delivering health care services.
 - Any disclosure made pursuant to a written authorization from the resident/client or their authorized representative.
 - Disclosure of a limited data set to a person involved in the resident/client's care, payment for services, or other notification purposes.
 - Discussion with family regarding resident changes in condition.
 - Disclosures to law enforcement for the purpose of locating the resident when s/he is missing, reporting an incident of suspected or actual elder abuse, or reporting a crime involving a resident.
 - Reports of elder abuse to the local LTC Ombudsman.
 - Disclosures to organ and tissue organizations relative to a resident's wish to donate.
 - Disclosures made as part of a limited data set.
 - Disclosures to the Department of Defense or the FBI for the purposes of conducting lawful intelligence, counter-intelligence and other national security activities.
 - Disclosure necessary in litigation in which HumanGood is a defendant.
 - Disclosures of de-identified PHI.
 - Posting of a resident's name on the wall outside their residence in the community, for which only verbal agreement is required.
 - Disclosure of a resident information in the community's directory, for which only verbal agreement is required.
5. **Multiple Disclosures to the Same Entity or Person:** Where multiple disclosures were made to the same entity or individual for a single purpose or pursuant to a single authorization during the time period in the accounting request, the accounting shall include the information as set forth above for the first disclosure, followed by a description of the frequency of times the same or different disclosure was made during the accounting period, and the date of the last disclosure during the accounting period.
6. **Disclosures to Public Health Authorities:** HumanGood may disclose or allow access to resident/client's PHI to a public health authority that is legally permitted to collect or receive it for public health surveillance or related activities. Such disclosure and/or access must be included in the accounting, if it occurs during a time period within a resident/client's request for an accounting. Such access should be documented on the Log (described below) and include the date of access, the identity and address of the public

health authority to which access was provided, the medical record numbers accessed, the PHI within each one that was accessed, and the purpose for the access.

7. Disclosures for Research Purposes: Disclosures made for research purposes, unless authorization was either waived by an Institutional Review Board or is not otherwise required by law, must be included in the accounting of disclosure, unless the resident/client has specifically authorized use and disclosure of their PHI for the research project. This is not the same as written consent to participate in the research project. For additional information regarding the accounting for research-related disclosures, please contact the Privacy Officer.
8. Business Associate Accounting of Disclosures: HumanGood business associates that use, transmit, maintain and disclose PHI on our behalf must also provide an accounting of disclosures to a resident/client who requests one. The resident/client can make that request directly of the business associate, and should be provided the contact information for the applicable business associate(s), including, but not limited, mailing address, phone number, and email address.
9. Accounting of Disclosures Log. As disclosures of PHI are made, each disclosure that is subject to an accounting, should be recorded on the Accounting of Disclosures of PHI Log.
10. Fee. There is no charge for the first accounting to an individual in any 12-month period. A reasonable, cost-based fee may be charged for each subsequent request for an accounting by the same individual within the 12-month period; provided that, the individual is given advance written notice of the fee and an opportunity to withdraw or modify the request in order to avoid or reduce the fee.

IV. EXCEPTIONS

1. Withdrawal/Modification of Request. Each person requesting an accounting shall be provided with the opportunity to withdraw or modify their request for an accounting for any reason.
2. Suspension of Right to Accounting. The community must temporarily suspend an individual's accounting of disclosures that are made to a health oversight agency or law enforcement official, where the agency or official submits a written statement that inclusion of this disclosure in the accounting is reasonably likely to impede the activity for which the PHI is need. In that case, the suspension is to last only as long as the time specified in the written statement. If the agency or official statement is made verbally to the community, a medical records team member must: document the statement, including the identity of the agency or official making the statement; and, limit the temporary suspension to no longer than 30 days from the date of the verbal statement.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on changes in law, risk, industry threats and identified vulnerabilities.

**ACKNOWLEDGEMENT OF RECEIPT OF REQUEST
FOR ACCOUNTING OF DISCLOSURES OF PHI**

Resident/Client Name _____

Date of Request: _____

We have received your request for an accounting of disclosures of your protected health information (PHI) from the dates of _____ to _____.

Please allow up to sixty (60) days to prepare the accounting for you. If we need more time, we will notify you.

- You have no requests for an accounting on file for 12 months prior to this request; and, therefore, there will be no fee charged for the preparation of the accounting.
- You have ____ prior request(s) for an accounting in the 12 months prior to your current request. Therefore, we are permitted to charge a cost-based fee for the accounting. Please pay the fee of _____ by _____, and we will begin the preparation. Alternatively, you may withdraw or modify your request to eliminate or reduce the cost. Please send us your withdrawal or modification in writing.

If you have any questions after receiving this information, please call _____.

Thank you,

Medical Records Department

(All references on this form to "us", "we" and "our" means HumanGood and _____.

[Insert Community Name]

CHARGES: The requestor may be responsible for payment of a reasonable, cost-based processing fee. The fee covers clerical costs as well as any/all costs associated with copying of the information. Unless stated otherwise, only amounts above \$25 or higher will require fee-approval before copying.

THIRD-PARTY RECORDS: We can only release records that we created. Please contact your third-party provider for copies of third-party records.

1. **Authorization:** I authorize disclosure of medical information and health records as described below:

Patient Name: _____

Date of Birth: ____/____/____ Telephone: (____) _____ Last 4 of SSN: ____

Email Address: _____

Record Holder's (Community's) Name: _____

Address: _____ City: _____ State: _____ Zip: _____

Records Released To: _____ Address: _____

_____ City: _____ State: _____ Zip: _____

2. **Information to be Released for these Dates of Service:** From _____ To _____

3. **Information to Release:** Place your initials next to each category of information to be released.

BREACH NOTIFICATION	Effective Date	06/03
	Revision Dates	07/13
		01/01/21
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan functions

I. POLICY

It is HumanGood’s policy that its team members report any suspected or known breach of protected health information (“PHI”), whether in paper or electronic form, to the Privacy Officer and/or Security Officer.

II. SUMMARY DEFINITIONS

- A. “PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.
- B. “Breach” means the impermissible acquisition, access, use or disclosure of PHI that compromises the security or privacy of the PHI, which may include, by way of example, unexpected loss or damage to PHI (e.g., a lost laptop, thumb drive, or paper copy), theft or improper disposal of PHI (e.g., placing PHI in a trash can, instead of shredding it), accidental release to unauthorized people (e.g., misdirected email or fax) and unauthorized acquisition, access, use, or disclosure (e.g., hacking or giving your EHR password to an unauthorized person).
- C. “Unauthorized access” means a person who is not authorized to have access to PHI or to use or disclose it, has accessed, used or disclosed that PHI.
- D. “Unsecured PHI” means: (1) paper PHI that is left unattended, in a place that it might be seen, read, or taken by an unauthorized person; (2) electronic PHI that has been sent via unencrypted email and/or to the wrong person; or, (3) paper or electronic PHI that is not rendered unreadable, unusable, or indecipherable to unauthorized individuals or entities.

III. PROCEDURE

- A. Any team member who discovers that PHI has been left in an area that is exposed to unauthorized viewing, such as on a fax machine, or PHI has been lost or stolen, or that PHI has been accessed by unauthorized individuals, immediately notifies his or her shift supervisor and describes the situation to him/her.
 - 1. If the situation involves lost PHI, the supervisor and team member begin an immediate search for it, including searching waste receptacles. If the PHI cannot

BUSINESS ASSOCIATE AGREEMENTS	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
	Departments Affected	All

I. POLICY

It is HumanGood’s policy to obtain satisfactory assurances in the form of a written contract from each business associate that will create, receive, maintain, or transmit protected health information (PHI) from or on behalf of HumanGood. Each business associate must in turn do the same with regard to each subcontractor that handles PHI on its behalf.

II. SUMMARY DEFINITIONS

- A. “Business associate” means an entity or person that creates, receives, maintains, or transmits PHI in performing a function, activity, or service for or on HumanGood’s behalf under a signed service contract and also includes Health Information Organizations, vendors of personal health records, and other businesses that facilitate data transmission.
- B. “PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident. PHI may be in any form or medium; for example, oral, electronic, on paper, or in photographs or videos.
- C. “Subcontractor” means an entity or person (other than a workforce member of a business associate) to whom a business associate delegates a function, activity, or service of such business associate.

III. PROCEDURE

- A. Any service contract that involves the creation, receipt, maintenance, or transmission of PHI in performing the service for or on behalf of HumanGood must either have an accompanying business associate agreement (BAA) (if the other party is a business associate) or PHI protection terms incorporated into the service contract (if the other party is not a business associate).
- B. Business associate agreements and PHI protection terms should be reviewed by the Legal Department by sending the contract to contracts@humangood.org (or other specified email address or team member).
- C. Whether the BAA is HumanGood’s form or the other party’s form, it must include, at a minimum, the following elements:
 - 1. Specify permitted and required uses and disclosures of PHI;

2. Prohibit other uses and disclosures, unless each use and disclosure is required by law;
3. Require appropriate safeguards to prevent unauthorized use and disclosure, loss, damage, or elimination of PHI
4. Require notification(s) of use or disclosure not permitted under the BAA and any breaches of PHI
5. Require compliance with PHI access requirements
6. Require maintenance of a log accounting for PHI uses and disclosures without the written authorization of the person who is the subject of the PHI
7. Make and incorporate amendments to the PHI, as appropriate
8. Make internal practices, books and records available to the Secretary of DHS
9. Provide for HumanGood's right to terminate contract for material breach if not cured
10. Require post-contract termination return or destruction of PHI; and
11. Require subcontractors and agents to agree to the same restrictions and conditions as business associate with regard to PHI

If using the other party's BAA, the following provisions should be proposed:

1. Exclude damages related to a breach of PHI from any limitation of liability in the services contract;
2. Indemnification against losses attributable to business associate's breach of PHI; and
3. Require business associate's applicable employees to complete HIPAA privacy, security and breach notification training and training on HumanGood's business associate requirements .

IV. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

DE-IDENTIFICATION OF PROTECTED HEALTH INFORMATION (PHI)	Effective Date	02/02/18
	Revision Dates	01/01/21
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan

I. POLICY

It is HumanGood’s policy that where practicable and appropriate, HumanGood and its business associates shall de-identify protected health information (PHI) and electronic protected health information (ePHI) prior to use and disclosure. Where necessary and appropriate to de-identify PHI, HumanGood will use the “safe harbor” method of de-identifying PHI prior to use and disclosure where practicable and necessary.

II. DEFINITIONS

- A. “PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident/client; the provision of healthcare to a resident/client; or, the past, present, or future payment for the provision of healthcare to a resident/client, which identifies the resident/client or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident/client.
- B. “Individual Identifiers” is PHI that includes many common identifiers, such as name, address, birth date, age, health plan number, medical record number, and social security number. These identifiers both in and of themselves or in combination with other identifiers can produce a risk to the privacy of the individual who is the subject of the data. The process of de-identification, by which identifiers are removed from the health information, reasonably removes the risk of violating the individual’s privacy and confidentiality and thereby, supports the secondary use of this data for comparative effectiveness studies, policy assessment, research, and other endeavors.
- C. “De-Identified PHI” means PHI from which all elements that would or could associate a specific individual with the information has been removed. For example, a health plan report that only presented that the average age of health plan members was 45 years would not be PHI because that information, although developed by aggregating information from individual plan member records, does not identify any individual, and there is no reasonable basis to believe that it could be used to identify an individual.

III. PROCEDURE

- A. **The “Safe Harbor” method:** Removal of specified identifiers, such as name of the individual who is the subject of the information and his/her social security number, medical record number, health plan beneficiary number, street address, state, and zip code, and removal of the names and location of all of his/her relatives that are documented in the information, and other identifiers as follows:

1. All geographic subdivisions smaller than a state, including street address, city, county, precinct, zip code, and their equivalent geocodes, except for the initial three digits of the zip code if, according to the current publicly available data from the Bureau of the Census: (i) the geographic unit formed by combining all ZIP codes with the same three initial digits contains more than 20,000 people; and (ii) the initial three digits of a ZIP code for all such geographic units containing 20,000 or fewer people is changed to 000.
 2. All elements of dates (except year) for dates that are directly related to an individual, including birth date, admission date, discharge date, death date; and all ages over 89 and all elements of dates (including year) indicative of such age, except that such ages and elements may be aggregated into a single category of age 90 or older.
 3. Telephone and facsimile numbers and email addresses.
 4. Account numbers.
 5. Certificate/license numbers.
 6. Vehicle identifiers and serial numbers, including license plate numbers.
 7. Device identifiers and serial numbers, such as hip replacement device.
 8. Web Universal Resource Locators (URLs) and Internet Protocol (IP) addresses.
 9. Biometric identifiers, including finger and voice prints.
 10. Full-face photographs and any comparable images.
- B. A designated manager, medical records team member and/or IT team member pulls necessary and appropriate identifiers out of the PHI and assigns the applicable code. The method used and the type and amount of identifiers to be removed depends on the nature of the request for information. To remove all identifiers might render the information useless for the purpose intended; however, leaving too many identifiers increases the risk that the privacy and protection of the information might be breached. Codes may be applied to the de-identified PHI for reporting quality improvement projects or reporting quality deficiencies in Quality Improvement Committee for example, but the code cannot be the medical record number nor shall it be selected from any of the 18 identifiers recognized in the Privacy Rule (see sections A and A(1)-(10) above).
- C. The de-identified information is reviewed by an administrator prior to release to assure that the information cannot reasonably be used by anyone to identify the resident/client, but that it still meets the requester's need for data reliability.

IV. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

DISCLOSURES OF PHI AUTHORIZATION, FEE AND ACCOUNTING TABLE

MEDICAL RECORDS REQUESTS	Effective Date	06/01/17
	Revision Dates	09/16/20
		01/01/21
	Departments Approving	Legal; IT Security
	Departments Affected	CCRC Operations – Medical Records

I. POLICY

HumanGood team members only release medical records when required or permitted by law or with the written authorization of the individual who is the subject of the records, as outlined in this policy.

II. SUMMARY DEFINITIONS

- A. **Medical Records** means the records, whether paper or electronic, of a resident’s medical information, such as history, care, treatments, test results, diagnoses, medications, and “notes” entered over time by health care professionals.
- B. **Resident** means an individual who resides or resided in a HumanGood Life Plan Community regardless of the level of care.
- C. **Psychotherapy notes** means notes recorded (in any medium) by a health care provider who is a mental health professional documenting or analyzing the contents of conversation during a private counseling session or a group, joint, or family counseling session and that are separated from the rest of the individual’s medical record. Psychotherapy notes do not include medication prescription and monitoring, counseling session start and stop times, the modalities and frequencies of treatment furnished, results of clinical tests, and any summary of the following items: diagnosis, functional status, the treatment plan, symptoms, prognosis, and progress to date.

III. PROCEDURE

- A. Request Type
 - 1. **Third Party Request.** When a subpoena, attorney letter or other written third party request for medical records is received, (a) the request should be date/time stamped and initialed by the receiving team member; and, (b) immediately scanned and emailed to the Executive Director and/or Health Services Administrator for the community.
 - 2. **Resident or Verbal Request.** If a resident requests a copy of their medical records or a verbal request for medical records is received, the requestor should be instructed to complete, sign and return the Authorization to Release Protected Health Information form. Once the completed and signed form has been received, (i) the request should be date/time stamped and initialed by the receiving team member; and, (b) immediately scanned and emailed to the Executive Director and/or Health Services Administrator for the community.
 - 3. **Send Request to Medical Records Team.** The Executive Director and/or Health Services Administrator (or his/her designee) sends the request to the email group “Medical Records Team.”
- B. Verification of Identity and Authority

The Executive Director and/or Health Services Administrator or his/her designee must verify the identity of the party requesting the medical records. For resident or legal representative requests, verification may be a state-issued identification card. For attorney requests, verification may be the attorney’s signed

letterhead. For public official requests, verification may be an agency identification badge or written request on appropriate government letterhead. For verification of authority (i.e. the requesting party's right to obtain the records), contact the Legal Department.

C. Claims Reporting / Clinical Review

Some medical record requests are also reportable events. HumanGood's insurer considers a request from family or an attorney for medical records "addressing the care or treatment of a resident" to be a reportable claim. The Executive Director and/or Health Services Administrator (or his/her designee) should report the request to the insurer, if it should be reported. The report should include the caption, "For Quality Improvement Discussion Only, Protected by CA H & S Code §1370 and CA Evidence Code §1167 and other state's laws."

If the medical records request is reportable, the Executive Director and/or Health Services Administrator (or his/her designee) should scan and email the request to the email group "Medical Records Team" with confirmation that the request has been reported to the insurer as well as an indication of whether a clinical review should be performed. The Legal Department will request that one of the corporate clinical services directors review the resident's chart.

D. Medical Records Production

1. Produce only those requested documents within our care, custody and control and that we have created. Do not produce hospital records or documentation by private physicians in the form of "office notes." Do not produce quality assurance/improvement documents, risk management reports, notes from any internal investigation into an incident, lawsuit information, or research activities and results. If the requestor asks about records created or maintained by others, the requestor should be advised to go to the source of those documents to obtain a copy.
2. If the same records are maintained in more than one location, HumanGood is only required by law to produce the information once in order to fulfill the particular request.
3. If the amount of records requested is very large, a summary of the records may be provided as long as the requestor agrees to receive a summary.
4. The production of the records should include a copy of the request. If the requestor also requests a signed declaration of the custodian of records (or other written verification regarding the records), please forward the proposed declaration or other written verification to the Legal Department for review before signing. The authorization and response letter are placed into and become part of the resident's record.

E. Response Timing

1. Skilled Nursing Timing. The copy of records must be made available within two (2) working days of the request.
2. General Timing. The copy of records must be provided within thirty (30) days of receipt of the request. If additional time is needed, a one-time thirty (30) day extension is permissible, and the requestor must be given notice of the delay, including the reason(s) for the delay. (Use the Release of Medical Records 30-Day Extension Notice form.)
3. Subpoena Timing. Note the due date on the face of the subpoena, and produce (mail) the records on that date, unless the Legal Department provides another production date. If additional time is needed, the community or Legal can call the attorney (or other party) that issued the subpoena to secure an extension of time.
4. Attorney Request (or Other) Timing. Where the requestor has requested the records by a specific date, a good faith effort should be made to produce the records by the requested date.

F. Fees. See Charges for Medical Records Policy.

IV. EXCEPTIONS/SPECIAL CIRCUMSTANCES

- A. Insurance Requests. If the medical record request is an insurance request for a current resident that needs immediate attention from a care manager, the request is forwarded to that team member for fulfillment; no need to email the “Medical Records Team.”
- B. Sensitive Information. If the resident’s medical records include documents related to chemical dependency diagnosis, treatment or counseling; alcoholism diagnosis, treatment or counseling; mental health diagnosis, treatment or counseling; sexually transmitted disease diagnosis, treatment or counseling; or, HIV/AIDS diagnosis, treatment or counseling, re-confirm that the resident’s authorization has been checked, initialed and signed specifically authorizing the release of that portion of the record.
- C. Psychotherapy Notes. If a resident requests copies of or access to their psychotherapy notes, contact the Legal Department. Also, see the Permitted and Required Uses and Disclosures of PHI Policy and Access to PHI – Resident and Authorized Representative Policy.
- D. Accounting of Disclosures. Communities must maintain a system(s) for logging and tracking requests for inspection, access and copies of medical records that have been disclosed without the resident’s written authorization or for other than for treatment, payment or healthcare operations. (See Accounting for Disclosures of PHI Policy.)
- E. Electronic Health Record. If the community uses or maintains an electronic health record, the resident may request a copy in an electronic format and direct the community to send the e-copy to a third party.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

AUTHORIZATION TO RELEASE PROTECTED HEALTH INFORMATION

Please read carefully and complete the reverse side of this form. All sections on the reverse side of this authorization must be completely filled out before we are permitted to disclose your protected health information (PHI).

EXPLANATION: This form authorizes the release of PHI in the manner described below and is voluntary. We cannot condition treatment, payment, enrollment or eligibility for benefits on your execution of this form, except in the limited circumstances described in our Notice of Privacy Practices (if any). Please be aware that once your information leaves us, we will no longer be able to protect that information, and the recipients of your information may not be legally required to protect your information.

AUTHORIZATION TO DISCLOSE SPECIFIC PROTECTED HEALTH INFORMATION (PHI): Federal and State laws require us to obtain specific authorization from patients to release especially sensitive information. Sensitive information is defined as treatment or documentation related to HIV/AIDS or sexually transmitted disease (STD) test results; psychiatric care, and treatment for alcohol or drug abuse. Be aware that we will automatically exclude these types of information unless you specifically identify them for release.

RECEIVING RECORDS ELECTRONICALLY: This option is available for resident/patient or resident/patient representative requests; not businesses, medical providers or third-parties. If you prefer this option, initial the appropriate line in number 3.

RESTRICTIONS: You understand that we may not further use or disclose the information described on the reverse side of this form unless another authorization is obtained from you or unless such use or disclosure is specifically required or permitted by law. You hereby release us from any/all liability that may arise from the release of this information to the party named on this form.

ADDITIONAL COPY: I further understand that I have a right to receive a copy of this authorization upon my request.

REVOCACTION: I understand that I may revoke this authorization in writing at any time (effective upon receipt), except for actions already taken in reliance upon this authorization.

DURATION: I understand that I may revoke this authorization in writing at any time, except to the extent that action has already been taken in reliance upon it. Unless otherwise noted, this authorization will expire one year from the date of my signature.

CHARGES: The requestor may be responsible for payment of a reasonable, cost-based processing fee. The fee covers clerical costs as well as any/all costs associated with copying of the information. Unless stated otherwise, only amounts above \$25 or higher will require fee-approval before copying.

THIRD-PARTY RECORDS: We can only release records that we created. Please contact your third-party provider for copies of third-party records.

1. **Authorization:** I authorize disclosure of medical information and health records as described below:

Patient Name: _____

Date of Birth: ____/____/____ Telephone: (____) _____ Last 4 of SSN: _____

Email Address: _____

Record Holder's (Community's) Name: _____

Address: _____ City: _____ State: _____ Zip: _____

Records Released To: _____ Address: _____

City: _____ State: _____ Zip: _____

2. **Information to be Released for these Dates of Service:** From _____ To _____

3. **Information to Release:** Place your initials next to each category of information to be released.

6. **Mailing Instructions:** Please mail both sides of this authorization form to: [insert community address]

**RELEASE OF MEDICAL RECORDS
NOTICE OF 30-DAY EXTENSION**

Date of Notice: _____

Name of Resident

We are unable to process your request for medical records within the thirty (30) day timeframe, due to the following reason(s):

The anticipated date of completion is: _____.

Please feel free to contact us at _____ if you have any questions about this Notice.

Sincerely,

Medical Records Department

MINIMUM NECESSARY RULE	Effective Date	02/22/19
	Revision Date:	01/01/21
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan functions

I. POLICY

It is HumanGood’s policy to take reasonable steps to limit use and disclosure of protected health information (PHI) to only that amount which is **minimally necessary** to achieve the purpose of the request for use or disclosure, regardless if the use or disclosure is to be made by hard copy or by electronic means. This is referred to as the “Minimum Necessary Rule”.

II. GUIDELINES, DEFINITION AND PROCEDURE

- A. The minimum necessary requirement does not apply to the following requests:
 1. Disclosure of a resident’s PHI to their health care provider for treatment purposes.
 2. Disclosure of a resident’s own PHI to a resident/client upon written request.
 3. Disclosures made to the Secretary of Health and Human Services, where such disclosure of PHI is requested for enforcement purposes.
 4. Disclosure required for compliance with the administrative simplification rules under the Health Insurance Portability and Accountability Act (HIPAA).
 5. Disclosures required by an administrative law judge in a Medicare appeal.
 6. Disclosure to a court of law pursuant to a subpoena.
 7. Use or disclosure that is required by state or federal law.
- B. “PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.
- C. Team members should only access or use the amount of PHI that is needed to do their job and no more. Team member access or use of PHI may also be controlled by the degree of access a team member has been given by HumanGood. For example, a team member who does not need access to PHI may not be given access codes or login information for physical locations or electronic systems containing PHI.
- D. For disclosure of PHI to others, the determination of “minimum necessary” may be made by a medical records team member who reviews the statement of purpose that has been checked on the authorization form. If there is any question about what information is required to fulfill a specific purpose, the medical records team member should contact the requesting party by phone or contact the Legal Department. See the Permitted and Required Uses and Disclosures of PHI Policy.

III. REVIEW AND REVISION HISTORY

Human Good reserves the right to revise this policy from time to time, including, without limitation, revisions based on changes in law, risk, industry threats and identified vulnerabilities.

NOTICE OF PRIVACY PRACTICES	Effective Date	02/20 04/28/20
	Revision Dates	01/01/21
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan

I. POLICY

HumanGood has developed its Notice of Privacy Practices to distribute to our residents/clients. Whenever a substantive change is made to our Privacy Practices, our Notice is revised and redistributed to residents/clients.

II. GUIDELINES

- A. The Privacy Rule requires that the content of the Notice is written in plain language, and describes how we may use and disclosure protected health information (PHI) about an individual, their rights with respect to this information and how to exercise those rights, how they may complain about our privacy practices, and our legal duties with respect to their PHI. The Notice shall include an effective date.
- B. All team members receive education, both on hire and annually thereafter, regarding the purpose for and content of our Notice, their individual role in addressing resident requests to exercise their privacy rights, and their role in distribution of our Notice to residents.
- C. The HumanGood Privacy Officer is responsible for oversight and management of content of the Notice, publishing the Notice, and archiving old Notices. The Privacy Officer also directs or conducts periodic audits to assess adherence with this policy.
- D. Directors, managers, and supervisors are responsible for communicating to team members the method of distribution within their units and how to answer resident questions about their privacy rights.

III. PROCEDURE

- A. Changes to our Notice of Privacy Practices
 - 1. The Privacy Officer reviews the Notice at least annually in concert with any amendments that have been made to the federal Privacy Rule in that year.
 - 2. The Privacy Officer makes or requests changes to the Notice when required by Privacy Rule revisions or additions or whenever HumanGood makes material changes to any of our privacy practices.
 - 3. Changes to the Notice are made by the Privacy Officer or designee, and become effective on the date published by HumanGood, and the Notice is distributed to residents by team members and given to newly admitted residents within sixty (60) days of the effective date on the Notice.
 - 4. The revised Notice is posted on the HumanGood website by Information Technology within sixty (60) days of the effective date.
 - 5. Team members are educated about the changes and how to answer questions from residents should questions arise.

B. Distribution of the Notice

1. As a covered entity, HumanGood is required by the Privacy Rule to provide a copy of our Notice to anyone who asks for a copy.
2. The Notice is required by law to be provided to residents prior to the first date of health care service delivery, and appropriate team members are advised of this requirement when the revised Notice is initially published.
3. A signature and acknowledgement of receipt of the Notice is obtained by a team member from each resident who is given the Notice; that signature and acknowledgement is maintained in the resident's health record.
4. Where the signature and acknowledgement cannot be obtained from the resident, team members document all reasonable efforts to follow up and obtain it and place it in the resident's health record.
5. For newly admitted RCFE residents, a Sales & Marketing team member reviews the Notice with new residents, gives a copy to them, and has the resident sign and date the acknowledgement and places it in the resident's new HumanGood health record.
6. For newly admitted Village residents and patients, an Admission team member follows the same process as in B.5. above.
7. Residents are also given a copy of our Notice at the following junctures:
 - a. Within sixty (60) days of material changes.
 - b. Upon verbal or written request from a resident.

C. Methods of distribution

1. The Notice is delivered in paper form and reviewed with each resident by a team member in person, and the team member obtains the acknowledgement signature and date and inserts it into the resident health record.
2. The document is placed on the HumanGood website and can be downloaded by residents, signed and dated, and the signature portion signed and given by the resident to their unit manager for placement in their health record.
3. The Notice is placed on bulletin boards in common areas of each Community and in the Community's library.
4. The Notice may be sent to a resident via e-mail if he or she verbally agrees to receive it electronically and in this situation, the resident is advised to provide his or her acknowledgement signature and date to their unit manager for placement in their health record. In the event this does not occur, team members will make good faith efforts to obtain it and place it in the resident's health record.
5. The Notice may be provided to a resident with other HumanGood or Plan documents as long as the Notice is reviewed with the resident and the signed and dated acknowledgement is retained by management and placed in the resident's health record.

D. Monitoring and Auditing Process, Distribution of Notice

1. The Privacy Officer or designee monitors the distribution process for newly admitted residents at least once every quarter.
2. The Privacy Officer or designee formally audits the process on a bi-annual basis and takes corrective action when any failure is identified.
3. Results of the distribution monitoring activities are reported to unit managers and the Chief Operating Officer upon completion of monitoring.
4. Results of formal audits of the distribution process and the corrective action plan are reported to unit managers and the Chief Operating Officer upon completion of the formal auditing.

III. EXCEPTION

During the COVID-19 public health emergency, monitoring, auditing and reporting timeframes may be altered.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on changes in law, risk, industry threats and identified vulnerabilities.

**Your Information.
Your Rights.
Our Responsibilities.**

This notice describes how medical information about you may be used and disclosed and how you can get access to this information. **Please review it carefully.**

Your Rights

You have the right to:

- Get a copy of your paper or electronic medical record
- Request amendment of your medical record
- Request confidential communication
- Ask us to limit the information we share
- Get a list of those with whom we've shared your information
- Get a copy of this privacy notice
- Choose someone to act for you
- File a complaint if you believe your privacy rights have been violated

➤ **See page 2** for more information on these rights and how to exercise them

Your Choices

You have some choices in the way that we use and share information as we:

- Tell family and friends about your condition
- Provide disaster relief
- Include you in a hospital directory
- Provide mental health care
- Market our services and sell your information
- Raise funds

➤ **See page 3** for more information on these choices and how to exercise them

Our Uses and Disclosures

We may use and share your information as we:

- Treat you
- Run our organization
- Bill for your services
- Help with public health and safety issues
- Do research
- Comply with the law
- Respond to organ and tissue donation requests
- Work with a medical examiner or funeral director
- Address workers' compensation, law enforcement, and other government requests
- Respond to lawsuits and legal actions

➤ **See pages 3 and 4** for more information on these uses and disclosures

Your Rights

When it comes to your health information, you have certain rights.

This section explains your rights and some of our responsibilities to help you.

Get an electronic or paper copy of your medical record

- You can ask to see or get an electronic or paper copy of your medical record and other health information we have about you. Ask us how to do this.
- We will provide a copy or a summary of your health information, usually within 30 days of your request. We may charge a reasonable, cost-based fee.

Ask us to amend your medical record

- You can ask us to amend health information about you that you think is incorrect or incomplete. Ask us how to do this.
- We may say “no” to your request, but we’ll tell you why in writing within 60 days.

Request confidential communications

- You can ask us to contact you in a specific way (for example, home or office phone) or to send mail to a different address.
- We will say “yes” to all reasonable requests.

Ask us to limit what we use or share

- You can ask us **not** to use or share certain health information for treatment, payment, or our operations. We are not required to agree to your request, and we may say “no” if it would affect your care.
- If you pay for a service or health care item out-of-pocket in full, you can ask us not to share that information for the purpose of payment or our operations with your health insurer. We will say “yes” unless a law requires us to share that information.

Get a list of those with whom we’ve shared information

- You can ask for a list (accounting) of the times we’ve shared your health information for six years prior to the date you ask, who we shared it with, and why.
- We will include all the disclosures except for those about treatment, payment, and health care operations, and certain other disclosures (such as any you asked us to make). We’ll provide one accounting a year for free but will charge a reasonable, cost-based fee if you ask for another one within 12 months.

Get a copy of this privacy notice

- You can ask for a paper copy of this notice at any time, even if you have agreed to receive the notice electronically. We will provide you with a paper copy promptly.

Choose someone to act for you

- If you have given someone medical power of attorney or if someone is your legal guardian, that person can exercise your rights and make choices about your health information.
- We will make sure the person has this authority and can act for you before we take any action.

File a complaint if you feel your rights are violated

- You can complain if you feel we have violated your rights by contacting us using the information on page 1.
- You can file a complaint with the U.S. Department of Health and Human Services Office for Civil Rights by sending a letter to 200 Independence Avenue, S.W., Washington, D.C. 20201, calling 1-877-696-6775, or visiting www.hhs.gov/ocr/privacy/hipaa/complaints/.
- We will not retaliate against you for filing a complaint.

Your Choices

For certain health information, you can tell us your choices about what we share. If you have a clear preference for how we share your information in the situations described below, talk to us. Tell us what you want us to do, and we will follow your instructions.

In these cases, you have both the right and choice to tell us to:

- Share information with your family, close friends, or others involved in your care
- Share information in a disaster relief situation
- Include your information in a hospital directory

If you are not able to tell us your preference, for example if you are unconscious, we may go ahead and share your information if we believe it is in your best interest. We may also share your information when needed to lessen a serious and imminent threat to health or safety.

In these cases, we *never* share your information unless you give us written permission:

- Marketing purposes
- Sale of your information
- Most sharing of psychotherapy notes

In the case of fundraising:

- We may contact you for fundraising efforts, but you can tell us not to contact you again.

Our Uses and Disclosures

How do we typically use or share your health information?

We typically use or share your health information in the following ways.

Treat you

- We can use your health information and share it with other professionals who are treating you.

Example: A doctor treating you for an injury asks another doctor about your overall health condition.

Run our organization

- We can use and share your health information to run our practice, improve your care, and contact you when necessary.

Example: We use health information about you to manage your treatment and services.

Bill for your services

- We can use and share your health information to bill and get payment from health plans or other entities.

Example: We give information about you to your health insurance plan so it will pay for your services.

continued on next page

How else can we use or share your health information? We are allowed or required to share your information in other ways – usually in ways that contribute to the public good, such as public health and research. We have to meet many conditions in the law before we can share your information for these purposes. For more information see: www.hhs.gov/ocr/privacy/hipaa/understanding/consumers/index.html.

Help with public health and safety issues

- We can share health information about you for certain situations such as:
 - Preventing disease
 - Helping with product recalls
 - Reporting adverse reactions to medications
 - Reporting suspected abuse, neglect, or domestic violence
 - Preventing or reducing a serious threat to anyone’s health or safety

Do research

- We can use or share your information for health research.

Comply with the law

- We will share information about you if state or federal laws require it, including with the Department of Health and Human Services if it wants to see that we’re complying with federal privacy law.

Respond to organ and tissue donation requests

- We can share health information about you with organ procurement organizations.

Work with a medical examiner or funeral director

- We can share health information with a coroner, medical examiner, or funeral director when an individual dies.

Address workers’ compensation, law enforcement, and other government requests

- We can use or share health information about you:
 - For workers’ compensation claims
 - For law enforcement purposes or with a law enforcement official
 - With health oversight agencies for activities authorized by law
 - For special government functions such as military, national security, and presidential protective services

Respond to lawsuits and legal actions

- We can share health information about you in response to a court or administrative order, or in response to a subpoena.
-

Our Responsibilities

- We are required by law to maintain the privacy and security of your protected health information.
- We are required by law to provide you with notice of our legal duties and privacy practices with respect to protected health information.
- We will let you know promptly if a breach occurs that may have compromised the privacy or security of your information.
- We must follow the duties and privacy practices described in this notice and give you a copy of it.
- We will not use or share your information other than as described here unless you tell us we can in writing. If you tell us we can, you may change your mind at any time. Let us know in writing if you change your mind.

For more information see: www.hhs.gov/ocr/privacy/hipaa/understanding/consumers/noticepp.html.

Changes to the Terms of this Notice

We can change the terms of this notice, and the changes will apply to all information we have about you. The new notice will be available upon request, in our office, and on our web site.

Effective Date of Notice: January 15, 2021

This Notice of Privacy Practices applies to the following organizations.

All life plan communities under HumanGood, including:

HumanGood Arizona, Inc., d/b/a The Terraces of Phoenix
HumanGood Washington, d/b/a Judson Park
HumanGood NorCal, d/b/a Grand Lake Gardens

PERMITTED AND REQUIRED USES AND DISCLOSURES OF PHI	Effective Date	02/20
	Revision Dates	01/01/21
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan

I. POLICY

It is HumanGood’s policy that its team members protect and secure the protected health information (PHI) of all residents/clients by complying with its established access, use and disclosure controls. Except as provided in this policy, HumanGood team members cannot disclose paper or electronic PHI (ePHI) outside of HumanGood without written authorization from the resident/client who is the subject of that information.

II. SUMMARY DEFINITIONS

- A. **“Disclose”** and **“disclosure”** mean the release, transfer, provision of access to, or divulging in any manner of PHI outside HumanGood.
- B. **“PHI”** means **“protected health information”**, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident. PHI may be in any form or medium; for example, oral, electronic, on paper, or in photographs or videos. Identifying information alone such as personal name, residential address or phone number, is not considered to be PHI if it is used in financial records, for example or if it is used in publicly accessible locations such as a phone book, it is not PHI because it is not related to health information as described.
- C. **“Use”** means the sharing, employment, application, utilization, examination, or analysis of PHI within HumanGood.

III. PROCEDURE

- A. ACCOUNTING OF DISCLOSURES OF PHI: Under the Privacy Rule and with certain exceptions, residents/clients have a right upon request to receive an accounting of disclosures of PHI we make. The instances where a covered entity is not required to account for disclosures, include disclosures for treatment, payment and health care operations, and disclosures authorized by the individual. See the Accounting of Disclosures of PHI Policy.
- B. DISCLOSURES REQUIRED BY LAW THAT DO NOT REQUIRE WRITTEN AUTHORIZATION:
 - 1. **State law or regulations that specifically authorize disclosure.**
 - 2. **To comply with a court order, court-ordered warrant, subpoena duces tecum or summons issued by a judicial officer.**
 - 3. **To comply with an administrative request**, such an Administrative Law Judge hearing in a Medicare appeal.

PERMITTED AND REQUIRED USES AND DISCLOSURES OF PHI	Effective Date	02/20
	Revision Dates	01/01/21
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan

I. POLICY

It is HumanGood’s policy that its team members protect and secure the protected health information (PHI) of all residents/clients by complying with its established access, use and disclosure controls. Except as provided in this policy, HumanGood team members cannot disclose paper or electronic PHI (ePHI) outside of HumanGood without written authorization from the resident/client who is the subject of that information.

II. SUMMARY DEFINITIONS

- A. **“Disclose”** and **“disclosure”** mean the release, transfer, provision of access to, or divulging in any manner of PHI outside HumanGood.
- B. **“PHI”** means **“protected health information”**, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident. PHI may be in any form or medium; for example, oral, electronic, on paper, or in photographs or videos. Identifying information alone such as personal name, residential address or phone number, is not considered to be PHI if it is used in financial records, for example or if it is used in publicly accessible locations such as a phone book, it is not PHI because it is not related to health information as described.
- C. **“Psychotherapy notes”** means notes recorded (in any medium) by a health care provider who is a mental health professional documenting or analyzing the contents of conversation during a private counseling session or a group, joint, or family counseling session and that are separated from the rest of the individual’s medical record. Psychotherapy notes excludes medication prescription and monitoring, counseling session start and stop times, the modalities and frequencies of treatment furnished, results of clinical tests, and any summary of the following items: diagnosis, functional status, the treatment plan, symptoms, prognosis, and progress to date.
- D. **“Use”** means the sharing, employment, application, utilization, examination, or analysis of PHI within HumanGood.

III. PROCEDURE

- A. ACCOUNTING OF DISCLOSURES OF PHI: Under the Privacy Rule and with certain exceptions, residents/clients have a right upon request to receive an accounting of disclosures of PHI we make. The instances where a covered entity is not required to account for disclosures, include disclosures for treatment, payment and health care operations, and disclosures authorized by the individual. See the Accounting of Disclosures of PHI Policy.

B. DISCLOSURES REQUIRED BY LAW THAT DO NOT REQUIRE WRITTEN AUTHORIZATION:

1. **State law or regulations that specifically authorize disclosure.**
2. **To comply with a court order, court-ordered warrant, subpoena duces tecum or summons issued by a judicial officer.**
3. **To comply with an administrative request**, such as an Administrative Law Judge hearing in a Medicare appeal.

C. PERMITTED USE & DISCLOSURE WITHOUT RESIDENT/CLIENT WRITTEN AUTHORIZATION: Our residents/clients receive information about the following permitted disclosures in our Notice of Privacy Practices. Each disclosure for these purposes is documented and that documentation is retained, tracked, reportable and auditable.

1. **To the resident/client** who is the subject of the PHI. **The minimum necessary requirement does not apply here**, and a HumanGood “Authorization to Release Protected Health Information” form is to be completed and signed by the resident/client and maintained in the resident/client’s health record or service record.
2. **To a medical health care provider**, hard copy information for the purpose of treatment for the resident/client. Treatment means the provision, coordination or management of health care and related services for an individual by one or more health care providers, including consultation between providers regarding a patient and referral of a patient by one provider to another. For release of electronic health information for this purpose, the disclosure must be documented on the Log of PHI Disclosures. **The minimum amount necessary requirement does not apply here.**
3. **To obtain or provide payment for health care services: in the minimum necessary amount**, in order to obtain reimbursement or payment for health care services provided to a resident/client in claims submissions to third party payers, including health plans, or to a resident’s authorized representative for payment of health care services.
4. **For Healthcare Operations: in the minimum necessary amount** for such activities as quality improvement activities, health plan credentialing activities, HumanGood legal services, general administrative activities, including the sharing of PHI with business associates to fulfill the purposes of their service contract with HumanGood. Disclosure to health department for health oversight and licensing activities (including audits and investigations), reporting of communicable disease, and emergency response in a disaster are to be tracked on the Accounting of Disclosures of PHI Log. Disclosures for quality improvement, HumanGood legal services, credentialing, and general administrative activities are not tracked on the Accounting of Disclosures of PHI Log.
5. **Workers compensation claims and case management** activities related to a HumanGood team member, **in the minimum amount necessary**, with disclosures tracked on the Accounting of Disclosures of PHI Log.
6. **For cadaveric Organ, Eye, or Tissue Donation in the minimum amount necessary.**
7. **To a coroner, medical examiner, or funeral director** after a resident/client expires. In relation to release to a coroner. The minimum amount necessary requirement does not apply.
8. **Release of a limited data set that has been de-identified**, which means that all individually-identifiable information has been removed. See also De-Identification of Protected Health Information Policy.

D. SPECIFIC WRITTEN AUTHORIZATION REQUIRED FOR PSYCHOTHERAPY NOTES: Disclosure of psychotherapy notes may not be performed without both the written authorization of the resident/client and the originator of the psychotherapy notes.

E. DISCLOSURE OF PHI FOR LAW ENFORCEMENT PURPOSES WITHOUT WRITTEN AUTHORIZATION: Under most circumstances, the Privacy Rule requires HumanGood to obtain verbal permission from persons who have been the victim of domestic violence or abuse before disclosing PHI to law enforcement. Where State law imposes additional restrictions on disclosure of PHI to law enforcement, those State laws apply. If the law enforcement official making the request for information is not known to the team member making the disclosure, that team member must verify the identity and authority of the officer by taking a business card from him/her prior to disclosing the information.

Otherwise, HumanGood may provide **the minimum necessary** PHI with no requirement to track such disclosures on the Accounting of Disclosures of PHI Log:

1. To enable law enforcement **to identify or locate a suspect, fugitive, or material witness.**
2. **To notify law enforcement of a missing resident/client** if the information is limited to the minimum necessary to search for the person.
3. **To comply with a Police Officer request for information about a victim or suspected victim of a crime.**
4. **To notify law enforcement of a resident/client's death** if it is suspected or known that criminal activity caused the death.
5. **To a coroner** when a resident/client is under a coroner's jurisdiction, or to a funeral director when a resident/client dies and the funeral home is to come retrieve the body.
6. **When we believe that PHI provides evidence of a crime**, including elder abuse and domestic violence where release of PHI is expressly authorized by law and where we, in good faith, believe that the event occurred on our premises.
7. **To federal officials authorized to conduct** intelligence, counter-intelligence and other national security activities under the National Security Act or to provide protective services to the President and others and conduct related investigations.

F. USE OR DISCLOSURE OF PHI REQUIRING WRITTEN AUTHORIZATION: Written authorization of the resident/client or if cognitively impaired, of the resident/client's authorized representative, **is required** for the following:

1. Disclosure of any PHI or other health information to a family member or friend of a resident/client who is not the resident/client's authorized representative. (But see Exhibit A to HIPAA Privacy Policy and Release of PHI of Deceased Resident/Client Policy.)
2. Disclosure of PHI to the media.
3. Taking photographs or videos of a resident/client and using it for internal or external publication and/or posting in the Community.
4. Publishing a resident/client's "story" (that contains PHI) in a HumanGood publication, which will be sent to potential candidates for residency or which will be used for

- fundraising or marketing purposes, both of which the resident/client can elect to “opt-out” of use of their information for such purposes.
5. Use for HumanGood marketing activities except where the purpose of the activity is only to provide a resident/client with information about products or services that we believe he or she might benefit from knowing about and purchasing on their own.
 6. Disclosure of psychotherapy notes, for which both the originator of the notes and the resident/client must specifically consent to release of this documentation.
 7. Disclosure of documentation regarding substance and/or alcohol abuse diagnosis, treatment, and counseling.
 8. Disclosure of documentation regarding venereal disease or sexual abuse diagnosis, treatment, and counseling, including HIV/AIDs.
 9. Disclosure of PHI to a researcher conducting an approved human research project.

G. DISCLOSURES THAT MAY BE MADE WITH VERBAL CONSENT

1. **Family or other persons designated by the resident/client:** To make verbal disclosures to family involved in a resident/client’s care or for notification purposes, or to other persons who the resident/client wants to be notified, verbal permission from the resident/client must be obtained and documented. If the resident/client did not object when given the opportunity to agree, acquiesce or object, it is then understood that he or she agrees. In an emergency situation or to notify the family that the resident/client had an unexpected change in condition, the minimum necessary information may be provided without obtaining verbal consent.
2. **Facility Directory:** Resident/client name, room number, and contact phone number, and e-mail address may be disclosed in the directory if the resident/client gives verbal permission.
3. **Signage at the resident/client’s front door:** Resident/client first and last name may be displayed on this sign with verbal consent.
4. **To a clergy person** for visitation with the resident/client. The information given may include resident location and condition in terms of good, fair, or serious.

III. INCIDENTAL DISCLOSURES

- A. An incidental disclosure is one that cannot reasonably be prevented, is limited in nature, and that occurs as the result of another, primary use or disclosure that is permitted by the Privacy Rule. The Privacy Rule as amended allows for certain incidental disclosures of PHI when the covered entity, in this case HumanGood, is maintaining all other elements of compliance with the Rule, including the use of necessary safeguards to protect against this type of disclosure.
- B. It is HumanGood’s practice to make good faith efforts to avoid incidental disclosures by, for example: speaking quietly when discussing a resident/client’s condition or needs with family members in a public area or in a two-person room; isolating or locking file cabinets and records rooms; and, turning computer screens away from public view, and logging out or turning them off when not using them or using a time-out screen.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats and identified vulnerabilities.

PROCESS FOR HANDLING HIPAA PRIVACY VIOLATION COMPLAINTS	Effective Date	02/02/18
	Revision Dates	01/01/21
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan functions

I. POLICY

HumanGood takes all alleged HIPAA privacy violation complaints seriously and attempts to address them in a fair and expeditious fashion. Complaints determined to be of merit are appropriately handled.

II. DEFINITION AND GUIDELINE

- A. “PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.
- B. Complaints may be filed by the resident (i.e., the person who is the subject of the PHI), the resident’s authorized representative, a HumanGood team member, a HumanGood business associate, and accrediting, health oversight or advocacy agencies or organizations (“Complainant”). This list is not exhaustive and HumanGood will accept all complaints that are filed in accordance with Section III.A. below.

III. PROCEDURE

- A. Process for filing a complaint. The process for filing a complaint is as follows:
 - 1. Except for complaints received via the compliance hotline, anyone lodging a verbal complaint should be instructed to file the complaint in writing, either electronically or on paper. The Complainant may file the complaint on the Privacy Practices Complaint form.
 - 2. The complaint should describe the acts or omissions believed to be in violation of the HIPAA privacy regulations.
 - 3. The complaint should be filed within 180 days of when the Complainant knew or should have known that the act or omission complained of occurred, although this timeframe may be waived if good cause is shown.
 - 4. The complaint should be sent to the Privacy Officer.
- B. Process for Handling a Complaint
 - 1. Within five (5) business days of receipt of the written complaint, the Privacy Officer or his/her designee (“Designee”) will attempt to contact the Complainant by telephone to

- acknowledge receipt of the complaint and to obtain any additional information that may be needed in order to investigate the complaint.
2. The Privacy Officer or Designee will review and conduct a preliminary investigation of the complaint.
 3. Complaints deemed to have merit will be discussed with the Privacy Officer (if the Designee conducted the preliminary investigation).
 - a. If indicated, the Designee, in conjunction with the Privacy Officer, will investigate the complaint further to determine if the Complainant's privacy was violated under the HIPAA regulations.
 - b. Based on the investigation findings, the Privacy Officer will take (or recommend to the appropriate department, team member or governing body) the indicated corrective actions necessary to mitigate the violation and prevent a future reoccurrence. Corrective action to prevent future privacy violations may include, for example, changes to policies and/or team member discipline.
 4. A response to the Complainant will be made as soon as possible, but no later than sixty (60) days from receipt of the written complaint.
 5. The complaint resolution can be documented on the HIPAA Privacy Concern Resolution form.

IV. DOCUMENTATION

Investigations are conducted under the Quality Improvement protection state statutes and are confidential. No copies of the Privacy Practices Complaint Form are kept in any operational department or otherwise outside the Legal Department.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

PRIVACY PRACTICES COMPLAINT FORM

RECORD RETENTION, STORAGE AND DESTRUCTION	Effective Date	September 2018
	Revision Dates	October 2019
		January 2021
	Departments Approving	Legal Information Security Risk Management Office of CIO
	Departments Affected	All

Policy:

All physical and electronic documents and records must be retained, stored and destroyed based on applicable legal, regulatory and business requirements. As a general rule, important records other than medical records should be retained and stored safely for **seven years** after they are no longer active or needed. Medical records should be retained for **ten years**, and personnel records may be destroyed after **five years**. There are exceptions to these rules, noted below. When the appropriate period has passed, records should be disposed of by shredding or other secure method.

For example:

- Accounting records should generally be retained for seven years after the ending date of the period they record.
- Contracts, including contracts with residents and vendors, should generally be retained for seven years after the later of their termination date or the end of the relationship (resident death or move-out, or vendor replacement contract).
- Personnel records should be retained for five years after a team member is no longer employed by HumanGood, with some exceptions (described in HR Personnel Records Policy and Procedure).
- Most medical records should be retained for ten years from the date of a patient’s last visit, prescription refill, telephone contact, test, other patient contact, or death, or for such longer time if required by law or contract.

HumanGood produces many kinds of records that do not need to be retained for seven years, for example, dining menus, petty cash vouchers, scheduling charts, news stories, and most emails.

Procedure:

1. Each department manager shall ensure that:
 - A. Each document, record, policy, generated information, reviewed agreement or contract

or any other work product generated by the department reflects the date initiated, revised, and is stored as an archive when it is retired or revised.

B. Archived documents are stored in secure onsite, offsite or electronic storage during the period between when they are no longer effective and the date they may be destroyed. If records are to be maintained permanently in accordance with the table below, they must be indexed in such a way that they can be found if or when needed.

C. Documents are properly shredded at the end of the retention period.

Medical Record Retention:

HumanGood will retain medical records for 10 years from the date of a patient’s last visit, prescription refill, telephone contact, test, other patient contact, or death.

This 10-year period is required by federal Medicaid rules governing managed care organizations, and federal laws for providers who contract with a Medicare Advantage or Medicare Part D plan. For other organizations and records, CMS defers to each state’s laws, which vary. However, for consistency and ease of recordkeeping, HumanGood will use 10 years as its standard for medical records.

If there are any problems with a patient’s care which we are aware may give rise to the patient or their family bringing a claim or litigation against HumanGood, we should retain those records until resolution of the claim or seven years after the statute of limitations has run.

Other Record Retention Exceptions:

As stated above, the standard period of time for retention of records other than medical records and personnel records is seven years. Below is a listing of certain types of records that must be held for a longer period than seven years, or may be destroyed prior to seven years. *If a record is not on the list below, the department manager shall retain the records for seven years or consult with the Legal Department if a shorter retention period is desired.*

ACCOUNTING	
Auditors’ reports and schedules	Permanently
Bank deposit slips	3 years
Cash disbursements journal	Permanently
Cash receipts journal	Permanently
Depreciation records	Permanently
Financial Statements, Annual	Permanently
Financial Statements, Interim/Internal	3 years
General journal/ledger and end-of-year trial balances	Permanently
Income tax returns	Permanently
Internal audit reports	Permanently

Medicare cost reports	5 years after the month that the Medicare cost report is filled with the intermediary
Property tax returns	Permanently

HR PERSONNEL RECORDS	
Personnel files. (For more information see HR-12 Personnel Records Policy and Procedure.)	Five years from the separation date for most records. Retention is shorter for a few documents, longer if there is a pending dispute. See the detailed HR policy.
CORPORATE RECORDS	
Affiliation agreements / contracts	Permanently
Annual reports	Permanently
Construction documents (contracts, change orders, completion certificates, etc.) for <u>major</u> projects	Permanently
Contracts relevant to bond-financed property (major capital expenditures contracts and contracts with for-profit vendors using bond-financed space)	Permanently
Deeds, mortgages and bills of sale	Permanently
Real estate property records and surveys	Permanently
Tax-exemption documents (determination of tax-exempt status)	Permanently

Disposal:

Dispose of hard copy paper records as follows:

- a. Documents containing non-sensitive, non-confidential records can generally be disposed of into company trash bins.
- b. Documents containing sensitive or confidential records should be shredded (at the end of the retention period) and disposed of securely.

The Information Technology Department will handle (or coordinate and oversee) the secure disposal of aged email and redundant, aged and unneeded unstructured content from the network. The Information Technology Department manages (or assists other departments in managing) all media and technology hardware/devices in an inventory and securely erasing/sanitizing prior to disposal.

Enforcement:

All records created and received by HumanGood and its agents are the property of HumanGood. No HumanGood team member, by virtue of his/her position, has any personal or property right to such records even though s/he may have developed or compiled them. The unauthorized destruction, removal or use of such records is prohibited. No one may falsify or

inappropriately alter information in any record or document. Information pertaining to unauthorized destruction, removal or use of HumanGood records, or falsifying or inappropriately altering information in a record or document, should be reported to the Compliance Officer.

Resources:

Federal law is found in the record-keeping rule applicable to Medicaid and Children’s Health Insurance Program (CHIP) Programs at 42 CFR 421, 433, 438, 440, and 457.

State laws around medical record retention.

a. In Washington, the Washington State Medical Association recommends that providers retain medical records for at least ten years.

b. Nevada law (NRS 629.051) permits a provider to destroy records five years after production.

c. Arizona law (12-2291) permits a provider to destroy records six years after the last contact.

d. Idaho law (IDAPA 16.0302.203.04) requires that a provider retain records for seven years.

e. California law, modified effective January 1, 2018, requires providers of health care services rendered under Medi-Cal or any other California Department of Health Care Services health care program to keep records for at least 10 years. Specifically, Assembly Bill 1688 (Chapter 511, Statutes of 2017) requires providers to keep a record of each service rendered, the beneficiary or person to whom rendered, the date of service and any additional information that the Department of Health Care Services may require. These records must be maintained for 10 years from the final date of the contract period between the plan and the provider (for Medi-Cal managed care enrollees), from the completion date of any audit or from the date the service was rendered, whichever is later.

Review and Revision History:

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

RELEASE OF PHI OF DECEASED RESIDENT/CLIENT	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan functions

I. POLICY

It is HumanGood’s policy to safeguard the protected health information (PHI) of deceased residents for a period of fifty (50) years following the resident’s date of death. After this 50-year period, the HIPAA Privacy Rule (the “Privacy Rule”) explicitly excludes from the definition of “protected health information” all individually identifiable health information of a decedent.

II. DEFINITION AND GUIDELINES

- A. “PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.
- B. Although permitted by the Privacy Rule, disclosures of a deceased person’s PHI to family members is not required by the Rule. We are not required to make this disclosure if (1) we cannot verify the relationship of the person to the decedent; (2) doing so is inconsistent with any prior expressed preference of the decedent; or (3) we determine that disclosure would be inappropriate.
- C. Any disclosure of a deceased resident’s PHI is to be limited to the minimum amount necessary. The Privacy Rule recognizes that the deceased resident’s PHI may be relevant to a surviving family member’s healthcare, and it therefore, permits disclosures of PHI for treatment purposes, even if that treatment is for a person other than the decedent. Otherwise, disclosures of a deceased resident’s PHI should only include that PHI which is related to the requestor’s involvement in the decedent’s care or in the payment for the decedent’s health care.
- D. During the 50-year period of protection, the personal representative of the decedent, who is the person under applicable law with authority to act on behalf of the decedent or the decedent’s estate, may exercise the decedent’s rights under the Privacy Rule with regard to the decedent’s PHI, such as authorizing certain uses and disclosures of and gaining access to, the information.

III. PROCEDURE

- A. Any person requesting access to or inspection or a copy of a deceased resident’s PHI must complete the Authorization to Release Protected Health Information form, and his/her identity and relationship to the decedent must be verified.
- B. Once the completed and signed form has been received, (i) the request should be date/time stamped and initialed by the receiving team member; and, (b) immediately

scanned and emailed to the Executive Director and/or Health Services Administrator (or his/her designee) for the community.

- C. The Executive Director and/or Health Services Administrator or his/her designee reviews and assesses sufficient details provided by the requestor to indicate (1) whether s/he was involved in the resident's healthcare or payment for the resident's healthcare before the resident's death; (2) whether s/he is requesting the decedent's PHI for the requestor's own treatment; (3) identifying any other purpose for the requested disclosure; and (4) verifying the requestor's identity. See the "Verification of Identity Before Release of PHI Policy."
- D. Contact the Privacy Officer, and send a copy of the requesting party's DPOA document signed by the resident before death or other documentation provided by the requestor to show their authority to request the decedent's PHI.
- E. Once the requesting person's identity is verified and their involvement with the resident's healthcare or payment for healthcare has reviewed and assessed (or the purpose for their request has been reviewed as outlined in section III.C. above), the Executive Director/Health Services Administrator or his/her designee sends the request and supporting documentation (including any DPOA document) to the email group "Medical Records Team."
- F. Where a person does not rise to the level of authorized representative, executor of the estate, or heir of the estate; was not involved in the resident's healthcare or payment for the resident's healthcare before the resident's death; is not requesting the decedent's PHI for the requestor's own treatment; has not identified any other purpose for the requested disclosure; or, we determine the disclosure would be inappropriate, written denial of access to, inspection of, or a copy of the decedent's PHI will be provided to the requestor, and the denial may not be appealed. Contact the Privacy Officer for assistance with processing such denial.

IV. EXCEPTIONS

- A. HumanGood may disclose a decedent's PHI under the following circumstances: (A) to alert law enforcement of the death of the resident, when there is a suspicion that the death resulted from criminal conduct; (B) to coroners or medical examiners, for purposes of identifying a deceased person, determining cause of death, or other duties authorized by law; (C) to funeral directors, as necessary to carry out their duties with respect to the decedent (including disclosing information prior to and in reasonable anticipation of the resident's death); and (D) to organ procurement organizations or other entities engaged in the procurement, banking or transplantation of cadaveric organs, eyes, or tissue, for the purpose of facilitating organ, eye, or tissue donation and transplantation.
- B. HumanGood may disclose a decedent's PHI for research that is solely on the PHI of the decedent; however, any requests for decedent PHI for research purposes should be forward to the Privacy Officer for review, before disclosure.
- C. A decedent's PHI may be disclosed to a public health department and to defend a lawsuit involving HumanGood.
- D. In most states, unless the information is relevant to payment for services or healthcare operations, a resident's communications with physicians, psychologists, psychiatrists and certain other health care providers are considered "sensitive" information that cannot be disclosed after death without either previous authorization from the decedent before death or the written authorization of their authorized representative. Contact the Privacy Officer for guidance, if such a request is received.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without

limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

REQUEST FOR AMENDMENT OF PHI	Effective Date:	01/01/21
	Revision Dates:	
	Departments Approving:	Legal
	Departments Affected:	LPC; Health Plan functions

I. POLICY

It is HumanGood’s policy to review and respond to resident/client requests for amendment of protected health information (“PHI”) in a timely manner.

II. DEFINITIONS AND GUIDELINES

- A. “Designated record set” means a group of records maintained by or for a covered entity that comprises the (a) medical and billing records about individuals maintained by or for a covered healthcare provider; (b) enrollment, payment, claims adjudication, and case or medical management record systems maintained by or for a health plan; or (c) other records that are used, in whole or in part, by or for the covered entity to make decisions about individuals. This last category includes records that are used to make decisions about any individuals, whether or not the records have been used to make a decision about the particular individual requesting access.
- B. “PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.
- C. HumanGood must permit a resident/client to request to amend part or all of their PHI that HumanGood created and maintains in a designated record set.
- D. If the PHI was not created by HumanGood, the resident/client should be referred to the healthcare provider(s) that created the documentation.
- E. The resident/client is to be advised of HumanGood’s acceptance or denial of the request for amendment in writing within sixty (60) days of receipt of the written request.
- F. The request may be denied, in whole or in part, if it is determined that the PHI subject to the request: (1) was not created by HumanGood; (2) is not part of the designated record set; (3) is accurate and complete; or (4) would not be available for inspection. See Access to PHI - Resident or Authorized Representative Policy.

III. PROCEDURE

- A. If a resident/client makes a verbal request to amend their PHI, s/he should be instructed to complete and sign the Request for Amendment of Protected Health Information form.
- B. The resident/client gives the completed and signed form to the Executive Director/Health Services Administrator (the “ED/HSA”) (or his/her designee) and is given a copy.

- C. The ED/HSA (or his/her designee) completes the date and time receipt and name and title portions of the form and forwards the request to the Privacy Officer for review and guidance.
- D. The Privacy Officer will work with the ED/HSA or his/her designee, the Security Officer and any other appropriate team member(s) to determine whether the request should be accepted or denied.
- E. Acceptance: If the request to amend the resident/client's PHI is granted, the following actions are to be taken:
 - 1. The ED/HSA or his/her designee will notify the resident/client of the acceptance of the request by sending him/her the Determination of Request for Amendment of Protected Health Information along with an Authorization to Release Protected Health Information form. A copy of the Determination form should be placed in the resident/client's health record. The Authorization form is provided so the ED/HSA or his/her designee can (a) obtain the identification of relevant persons, such as a health care provider, with whom to share the amendment; and (b) obtain the resident/client's written authorization to share the amendment with that person(s).
 - 2. The ED/HSA or his/her designee (or the Information Technology Department) makes the amendment to the PHI or record that is the subject of the request for amendment by, at a minimum, identifying the records in the designated record set that are affected by the amendment and appending or otherwise providing a link to the location of the amendment. The existing PHI itself is not changed.
 - 3. Within a reasonable time, the ED/HSA or his/her designee must make reasonable efforts to inform, and provide the amendment to, the person(s) identified by the resident/client on the Authorization form.
 - 4. The ED/HSA or his/her designee must inform others of the amendment where the community knows that other persons, including business associates, have the PHI that is being amended by the resident/client and that they have relied or could foreseeably rely, on such information to the detriment of the resident/client.
- F. Denial: If the request to amend the resident/client's PHI is denied, the following actions are to be taken:
 - 1. The ED/HSA or his/her designee will notify the resident/client of the denial of the request by sending him/her the Determination of Request for Amendment of Protected Health Information. A copy of the form should be placed in the resident/client's health record.
 - 2. If resident/client submits a statement of disagreement, any subsequent disclosure of the PHI to which the disagreement relates must include (a) the resident's request for an amendment, our denial of the request, the resident's statement of disagreement (if any), and our rebuttal (if any); or, (b) at our election, an accurate summary of any such information. Where the resident/client has not submitted a written statement of disagreement, and only if the resident/client requests that we do so, we are to include the resident/client's request for amendment and our denial, or an accurate summary of such information, with any subsequent disclosure of the related PHI.
- G. Recordkeeping. As appropriate, we must identify the PHI in the designated record set that is the subject of the disputed amendment and append or otherwise link the resident's

request for an amendment, our denial of the request, the resident's statement of disagreement (if any), and our rebuttal (if any) to the designated record set.

IV. EXCEPTIONS/OTHER INFORMATION

- A. Notice of Extension. If we are unable to act on the request for amendment within the required sixty (60) day timeframe, we must notify the resident/client that additional time, up to thirty (30) days, is needed. For that notification, the "Notice of 30-Day Extension" is provided to the resident/client. This Notice is to include the reason(s) for the delay and the date by which we will complete our action on the request, even if that action is to deny the amendment. Only one such extension is permitted by the Privacy Rule.
- B. Amended PHI when using a standard transaction. When a subsequent disclosure of the PHI document that we agreed to amend is to be disclosed by using a standard transaction under the HIPAA Administration Simplification Standard, and that transaction does not permit the additional material about the amendment to be included with the disclosure, we may separately transmit the material to the recipient of the standard transaction.
- C. Actions on notices of amendment. If another covered entity notifies HumanGood of an amendment to an individual's PHI, we must amend the PHI in a designated record set as indicated in the covered entity's notice.

V. REVIEW AND REVISION HISTORY

Human Good reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

REQUEST FOR AMENDMENT OF PROTECTED HEALTH INFORMATION

Name of Resident/Client (Please Print) Date of Birth: _____

Relationship to Resident/Client: Self Authorized Representative

(If completed by Authorized Representative, request must include proof of authority to make request (e.g. power of attorney).

I hereby request that HumanGood consider the attached amendment that I want to make to the following document in my health record:

Other: _____,
Date of service: _____.

NOTE: YOUR REQUEST MUST INCLUDE A REASON OR REASONS TO SUPPORT THE REQUESTED AMENDMENT.

I understand that HumanGood is not required by law to add this addendum into my health record.

I understand that HumanGood will notify me of their decision to accept or deny my request within sixty (60) days of receipt of this completed and signed form. I also understand that, in the event there are circumstances delaying response to my request, HumanGood will provide me with notice of the delay and an updated timeframe for response.

**DETERMINATION REGARDING
REQUEST FOR AMENDMENT OF PROTECTED HEALTH INFORMATION**

_____ Date: _____
Resident/Client Name

Dear _____:

This is to notify you that we received your Request for Amendment of Protected Health Information (PHI) dated _____.

Our decision is as follows:

- Agree.** We will make an amendment to the PHI.
- Deny.** Your request to amend the PHI is denied for the following reason(s):

If you disagree with our determination, you may submit a statement of disagreement to us for our further consideration. If you do not submit a statement of disagreement, you may request that we provide a copy of your request for amendment and our denial with any future disclosures of the PHI that is the subject to the requested amendment. Please send the statement of disagreement or your request to your Community’s Executive Director or Health Services Administrator.

If you disagree with our denial of your request for amendment, you may file a written complaint by writing to Privacy Officer, 6120 Stoneridge Mall Rd, Suite 100, Pleasanton, CA 94588 or calling (25) 924-7299. You may also file a complaint with the Office for Civil Rights at Centralized Case Management Operations, U.S. Department of Health and Human Services, 200 Independence Avenue, S.W., Room 509F HHH Bldg., Washington, D.C. 20201.

If we have agreed to make an amendment to your PHI, you must provide us with the identity of person(s) that you want to receive the amended PHI; and, your authorization to provide the amended PHI to him/her/them. Please complete and sign the attached Authorization to Release Protected Health Information form. Please return the completed and signed form to your Community’s Executive Director or Health Services Administrator.

NOTICE OF 30-DAY EXTENSION

Date of Notice: _____

Name of Resident/Client

We are unable to process your request for an amendment to protected health information (PHI) within the sixty (60) day timeframe, due to the following reason(s):

The anticipated date of completion is: _____.

Please feel free to contact us at _____ if you have any questions about this Notice.

Sincerely,

Medical Records Department

REQUESTS FOR COMMUNICATION OF PHI BY ALTERNATE MEANS	Effective Date:	01/01/21
	Revision Dates:	
	Departments Approving:	Legal
Departments Affected:	LPC; Health Plan	

I. POLICY

It is HumanGood’s policy to accommodate resident/client requests for communications of protected health information (PHI) by alternate means or at alternate locations, without determining the merits of the request. HumanGood may condition the provision of this accommodation on how payment, if any, will be handled and the provision of an alternative address or other method of contact.

II. DEFINITION

“PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.

III. PROCEDURE

1. If a resident/client makes a verbal request for communications of PHI by alternate means or at alternate locations, s/he should be instructed to complete and submit the Request for Communication of PHI by Alternate Means and/or at Alternate Locations form.
2. The completed Form should be date and time stamped and given to the Executive Director/Health Services Administrator (ED/HSA) or his/her designee.
3. The Form must be reviewed to determine if it is reasonable in context with the resident’s/client’s own unique circumstance and, if there is concern that it is not, the ED/HSA or his/her designee will speak directly with the resident/client to determine how best to move forward with the request. Note, we may not require an explanation from the resident/client as to the basis for the request as a condition of providing communications on a confidential basis.
4. With regard to HumanGood health plan operations, the plan must permit and accommodate requests for communications of PHI by alternate means and at alternate locations, if the resident/client clearly states that disclosure of all or part of the information could endanger him/her.
5. When this process is completed, the ED/HSA or his/her designee completes the “Action” section in the “For Office Use Only” space at the bottom of the Form and gives a copy of the completed Form back to the resident/client for their records.
6. The ED/HSA or his/her designee will oversee the correct placement of the completed Form in the resident’s/client’s health or service record to ensure that the request is

followed by all pertinent departments and send a copy of the completed Form to the affected departments and the Privacy Officer.

IV. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

REQUESTS FOR RESTRICTION OF PHI DISCLOSURE	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan

I. POLICY

It is HumanGood’s policy to review and respond to requests for restriction of disclosure of protected health information (“PHI”) in a timely manner.

II. DEFINITION AND GUIDELINES

- A. “PHI” means “protected health information”, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.
- B. HumanGood must permit a resident/patient to request that it restrict (1) uses or disclosures of their PHI to carry out treatment, payment, or health care operations; and (2) disclosures of their PHI to their family members, other relatives, close personal friends, or any other person they have identified, when the PHI is directly relevant to such person’s involvement with the resident/patient’s healthcare or payment related to their healthcare.
- C. HumanGood is not required to agree to a restriction (except as noted in section II.D below); however, if restricted PHI is disclosed to a healthcare provider for emergency treatment, we must request that such healthcare provider does not further use or disclose that PHI.
- D. HumanGood must agree to a resident’s/patient’s request to restrict disclosure of PHI about the resident/patient to a health plan if: (a) the disclosure is for the purpose of carrying out payment or health care operations and is not otherwise required by law; and, (b) the PHI pertains solely to a health care item or service for which the resident/patient or a person other than the health plan on behalf of the resident/patient, has paid in full (out of pocket).
- E. The resident/patient is to be advised of HumanGood’s acceptance or denial of the request for restriction in writing within thirty (60) days of receipt of the written request. Additionally, once a restriction is agreed to, we are required to notify other providers of services to the resident/patient of the restriction, so they can prevent disclosure of that PHI.
- F. Necessary steps to ensure that agreed-upon restrictions are honored are to be carefully followed, in particular those necessary to (1) identify where in the health record the specific restricted PHI exists and labeling it to avoid inadvertent disclosure to the restricted party; and, (2) ensure that team members who receive a written request for restriction of PHI disclosure know what to do with it and understand the limited timeframe for response.

III. PROCEDURE

- A. If a resident/patient makes a verbal request to restrict disclosure of their PHI to a health plan, physician, family member, or friend, they should be instructed to complete and sign the Request for Restriction of PHI Disclosure form. If the PHI at issue pertains solely to a healthcare item or service for which the resident/patient or a person on their behalf, paid out of pocket in full, a copy of the receipt for payment is to be included with the written request for restriction.
- B. The resident/patient gives the completed and signed form to the Executive Director/Health Services Administrator (the "ED/HSA") (or his/her designee) and is given a copy.
- C. The ED/HSA (or his/her designee) completes the date and time receipt and name and title portions of the form and forwards the request to the Privacy Officer for review and guidance.
- D. The Privacy Officer will work with the ED/HSA or his/her designee, the Security Officer and any other appropriate team member(s) to determine whether the request should be accepted or denied.
- E. The ED/HSA or his/her designee will notify the resident/patient of the acceptance or denial of the request by completing and sending him/her the Determination Regarding Request for Restriction of PHI Disclosure form. A copy of the form should be placed in the resident/patient's health or service record. If the restriction is agreed to, the appropriate departments are notified by ED/HSA or his/her designee.
- F. In the event it is necessary and appropriate to terminate the agreed-upon restriction, either at the resident/patient's written request or upon our determination to terminate the agreement, the resident is notified by completing and sending a Notice of Termination of Restriction of PHI Disclosure form. A copy of the notice should be placed in the resident/patient's health or service record, and appropriate departments are notified by ED/HSA or his/her designee.

IV. EXCEPTIONS

- A. If HumanGood agrees to the requested restriction, we must adhere to the restriction for all future disclosures, except where the specific PHI is needed to provide emergency treatment to the resident/patient by another healthcare provider. If the restricted PHI is disclosed for this purpose, HumanGood must notify the provider receiving the information that further use or disclosure of this PHI is prohibited.
- B. HumanGood is required to disclose PHI when required by the Secretary of the Department of Health and Human Services (or his/her designee) to investigate or determine HumanGood's compliance with the Privacy Rule.
- C. Any restriction HumanGood agrees to does not prevent our use or disclosure of the restricted PHI where disclosure is permitted or required by the Privacy Rule. See also Permitted and Required Uses and Disclosures of PHI Policy.

V. REVIEW AND REVISION HISTORY

Human Good reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

**DETERMINATION REGARDING
REQUEST FOR RESTRICTION OF PHI DISCLOSURE**

Date: _____

Resident/Patient Name

Dear _____:

This is to notify you that we received your Request for Restriction on Disclosure of protected health information (PHI) dated _____ to your: Health Plan Doctor Service Provider

Our decision is as follows:

- Agree.** We will take action to restrict disclosure of your PHI to this party.
- Deny.** Your request to restrict disclosure of your PHI is denied for the following reason(s):

If you disagree with our determination, you may submit a statement of disagreement to us for our further consideration. Please send the statement to your Community’s Executive Director or Health Services Administrator.

If we have agreed to restrict disclosure of your PHI, you understand that HumanGood reserves the right to terminate this agreement for the following reasons: (1) if you request or agree to the termination in writing; (2) if you verbally agree to the termination and we document this agreement; or, (3) if we determine, in our sole discretion, that continuing this restriction is no longer necessary or appropriate.

NOTICE OF TERMINATION OF RESTRICTION OF PHI DISCLOSURE

Name of Resident/Patient

Dear _____;

This Notice is to advise you that we are terminating the agreement to restrict disclosure of your PHI to your:

- Health Plan Doctor Health Plan Other: _____

The reason(s) for this termination:

- You requested or agreed in writing to terminate the restriction on _____.
 You verbally requested that we terminate the restriction on _____.
 We have determined that continuing this restriction is no longer necessary or appropriate.

If you have any questions about this Notice, please feel free to contact me at _____.

Sincerely,

[insert printed name and title]

SALE OF PHI	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
Departments Affected	All	

I. POLICY

It is HumanGood’s policy that it does not sell resident/patient protected health information (PHI) at any time in return for payment that is either direct or indirect or as a benefit-in-kind exchange, unless the resident/patient who is the subject of the PHI has signed a written authorization for release of the PHI that includes a clause advising the resident/patient that HumanGood may receive payment or benefit-in-kind for the disclosure. The disclosure must comply with the minimum necessary rule, limiting the PHI to only that which is necessary to accomplish the intended purpose of the use or disclosure.

II. DEFINITIONS

- A. **PHI** means **protected health information**, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.
- B. **Sale of PHI** means disclosure of protected health information by a covered entity, such as HumanGood, where it either directly or indirectly receives money from the recipient of the PHI in exchange for that information.

III. PROCEDURE

Any sale of PHI must be coordinated amongst several HumanGood departments; therefore, any third-party request to purchase PHI (other than a medical records request) must be forwarded to the Legal Department.

IV. EXCEPTIONS

HumanGood may receive payment in exchange for PHI without the resident/patient’s written authorization in the following circumstances: (A) in a merger, acquisition, or consolidation (and related due diligence) of all or part of HumanGood with a covered entity or where the resulting entity will become a covered entity following the transaction; (B) payment in the form of grants, contracts or other arrangements to perform programs or activities that require the use of PHI (e.g., a research study), and/or where necessary for processing and transmission of PHI for research purposes; and (C) payment receive from a resident/patient, authorized representative, attorney or other third-party when a request for medical records (including requests by subpoena) is received. Medical Records Requests Policy, and see Charges for Medical Records Policy.

IV. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

USE AND DISCLOSURE OF PHI BY WORKFORCE MEMBERS	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan functions

I. POLICY

It is HumanGood’s policy to permit its workforce members (as defined below) to use and disclose the minimum necessary protected health information (“PHI”), within the course and scope of their job function.

II. SUMMARY DEFINITIONS

- A. “Workforce member” means HumanGood employees and excludes contractors and vendors/suppliers. Although not considered HumanGood workforce members, there are occasions that contractors, vendors, suppliers, volunteers, trainees, rehabilitation therapists, laboratory technicians, pharmacists and students providing services within a community will be provided with the minimum necessary PHI to perform their functions. Where appropriate, HumanGood enters into business associate agreements with contractors, vendors, or suppliers who will create, receive, maintain, use or disclose PHI on HumanGood’s behalf. See Business Associate Agreements Policy.
- B. “Minimum necessary” means to limit use and disclosure of protected health information (PHI) to only that amount which is minimally necessary to achieve the purpose of the request for use or disclosure, regardless if the use or disclosure is to be made by hard copy or by electronic means. The minimum necessary rule does not apply when disclosures are made to or requested by a healthcare provider for treatment.
- C. “PHI” means “protected health information”, and is any information created or received by HumanGood that relates to the past, present, or future physical or mental health or condition of a resident/client; the provision of healthcare to a resident/client; or, the past, present, or future payment for the provision of healthcare to a resident/client, which identifies the resident/client or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident/client.
- D. “Use” means sharing, employment, application, utilization, examination, or analysis of PHI within HumanGood.
- E. “Disclose” and “disclosure” mean the release, transfer, provision of access to, or divulging in any manner of PHI outside HumanGood.

III. PROCEDURE

- A. Internal communications. Workforce members may communicate PHI to one another as necessary to perform their duties. Verbal communications containing PHI should be undertaken in a manner and place that reasonably safeguards confidentiality, including speaking quietly and, where possible, doing so in resident rooms or in the nursing station.
- B. External communications. Verbal disclosures of PHI to are allowed for payment, treatment or healthcare operations; otherwise, verbal disclosures are only allowed if the resident/client has provided written authorization for the disclosure. (See Permitted and Required Uses and

Disclosures of PHI Policy for additional guidance.) Before faxing, mailing or emailing PHI outside HumanGood, the recipient's fax number, mailing address or email address must be confirmed. Additionally, emailed PHI must be encrypted (i.e. sent in an encrypted or password-protected attachment and/or encrypted email).

C. Examples of appropriate PHI use by job category are as follows:

1. Licensed nurses, including agency nurses, and attending physicians may have access to the entire contents of a medical record of the resident/clients for whom they are providing care or services;
2. Certified nurse assistants may have access to that PHI which they need to assist the resident/client with activities of daily living and functional limitations;
3. Volunteers may not have access to resident/client PHI either manually or electronically, but may be given selected information by licensed nurses and certified nurse assistants to the extent necessary to perform their volunteer assignment, such as resident name and location;
4. Housekeeping/laundry/maintenance staff may have PHI communicated to them only to the extent that they must be aware of an infectious disease, fall risk, and wandering behavior;
5. Medical records team members may have access to residents/clients PHI for fulfilling record requests, requests for PHI amendments, and as otherwise required to fulfill their job duties.
6. Business office and accounting team members may have access to PHI that relates to billing and payment for healthcare and other services;
7. Dietary staff may have access to PHI as it relates to food intake, weight, diet, and hydration, and dietitians may have access to nursing notes, physician orders, and hydration/nutrition documentation;
8. Receptionists and telephone operators may have access to resident names and location within the community;
9. Information Technology staff may have access to electronic PHI to enable them to maintain the electronic health records and other electronic systems;
10. Management staff may have access to PHI as necessary to supervise service and care staff, properly place residents, and communicate with family; and
11. The HumanGood Board of Directors may have PHI provided to them by management or executive leadership as necessary for making policy or exceptions to policy.

IV. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

USE AND DISCLOSURE OF PHI FOR FUNDRAISING ACTIVITIES	Effective Date	08/2013
	Revision Dates	01/01/21
	Departments Approving	Legal
	Departments Affected	LPC

I. POLICY

It is HumanGood’s policy to obtain a resident/patient’s written authorization before using his/her diagnosis, nature of services, or treatment information to filter, target, use or disclose as part of it fundraising efforts. Additionally, HumanGood’s policy is to use the minimum necessary amount of protected health information (PHI) when using or disclosing PHI for its fundraising activities. See Minimum Necessary Rule Policy.

II. PROCEDURE

- A. Types of PHI That May be Used or Disclosed. The categories of PHI that can be used or disclosed in fundraising activities include: the resident’s/patient’s demographic information (including name, address, other contact information, age, gender, and date of birth); date(s) of healthcare provided; department of service information (e.g., skilled nursing, assisted living); treating physician; outcome information; and, health insurance status.
- B. Right to Opt-Out. With each fundraising communication made to our residents/patients, whether made in writing or over the phone, we must provide a clear and conspicuous opportunity to opt-out of receiving any further fundraising communications. The opt-out is applicable to HumanGood Life Plan Communities and our business associates who assist us with fundraising.
 - 1. Residents/patients may opt-out of future fundraising communications by completing our Opt-Out Form. A copy of the Opt-Out Form is attached to this policy.
 - 2. When a resident/patient completes an Opt-Out Form, they should be given the original and copies should be (a) placed in the resident/patient’s health or service record; and (b) given to the Privacy Officer (who will inform HumanGood fundraising managers and any applicable business associates of the resident’s/patient’s opt out.
 - 3. Residents/patients will not be subject to a penalty or retribution of any kind if they desire to opt-out of receiving fundraising communications and/or other fundraising activities.
- C. HumanGood may not make fundraising communications to a resident/patient that has opted out, but we can provide them with a method to opt back in, if they wish.

III. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

OPT-OUT FORM

(FUNDRAISING COMMUNICATIONS)

HumanGood Life Plan Communities may conduct fundraising activities. On occasion, HumanGood uses outside services to help with these activities. For our fundraising efforts, we communicate to our residents about our fundraising activities. We also send information to our residents and outside people about how to donate to a Human Good foundation, if they wish to do so. In addition, we may contact you if we believe a specific fundraising activity may be of interest to you. We would use your personal information to contact you, such as your e-mail address, your telephone number, or your apartment number.

If you wish to opt out of these communications so that we do NOT contact you about our fundraising activities, please sign, date, and return this form to the **Community Executive Director.**

After the date that we receive this form, we will not to use your personal information in any fundraising communications, unless we request and receive your specific written permission to do so. You may revoke this Opt-Out at any time, by submitting a written request to receive fundraising communications and information about out fundraising activities.

I do not want to receive fundraising communications from HumanGood, HumanGood life plan communities, affiliated foundation(s), or any outside business that is assisting any of these entities with fundraising activities.

USE AND DISCLOSURE OF PHI IN MARKETING ACTIVITIES	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
	Departments Affected	Marketing; LPC

I. POLICY

HumanGood team members do not use or disclose protected health information (PHI) for marketing purposes that will result in financial remuneration to HumanGood, unless the resident’s/patient’s written and signed authorization has been obtained.

II. SUMMARY DEFINITIONS

- A. **PHI** means **protected health information**, and is any information created or received by HumanGood (or its business associates) that relates to the past, present, or future physical or mental health or condition of a resident; the provision of healthcare to a resident; or, the past, present, or future payment for the provision of healthcare to a resident, which identifies the resident or, with respect to which, there is a reasonable basis to believe the information can be used to identify the resident.
- B. **Financial remuneration** means a direct or indirect payment from or on behalf of a third party whose product or service is being described. Direct or indirect payment does not include a payment for the treatment of an individual.
- C. **Marketing** means making a communication about a product or service that encourages recipients of the communication to purchase or use the product or service. The term also refers to an arrangement between a covered entity such as HumanGood and any other entity whereby we disclose PHI to the other entity in exchange for direct or indirect remuneration, or payment, so that the other entity can make communication between them and our residents/patients about its own product or services that is designed to encourage our residents/patients to buy or use that product or services. For this to be permitted under the HIPAA Privacy Rule, HumanGood must have a signed authorization from the resident/patient for that marketing.
- D. **Non-Marketing** means a communication made by HumanGood to describe to residents/patients a health-related product or service that is provided by or included in their Care and Residence Agreement or other contract under which such health-related products and services are provided.

III. PROCEDURE

- A. Authorization Requirement. An authorization to use or disclose PHI for marketing purposes must include (1) a statement about any direct or indirect remuneration HumanGood has received or will receive from a third party for making a marketing communication; and (2) the right to revoke the authorization in writing. Contact the Legal

Department for a marketing authorization. A copy of the signed authorization must be provided to the resident/patient.

- B. Authorization Conditions. HumanGood does not condition treatment or payment for services on whether or not a resident/patient signs a written authorization for marketing purposes or opts-out of marketing activities. However, in its capacity as a health plan, the HumanGood Benefits Plan may condition enrollment or benefit eligibility on a resident/patient signing an authorization.
- C. Marketing Communications. Marketing communications must identify HumanGood as the company that is making and distributing communications about products and services. Face-to-face marketing encounters must be limited, as must provision to residents/patients anything of nominal value, such as HumanGood pens and brochures about products and services.
- D. Opt-Out. Residents/patients must be given the opportunity to opt-out of receiving marketing information or communications from us and from any of our business associates.

IV. EXCEPTIONS

- A. An authorization is not required for any use or disclosure of PHI for marketing purposes, if the communication is in the form of: (a) a face-to-face communication made by a team member to a resident or patient; or (b) a promotional gift of nominal value provided by HumanGood to the resident or patient (for example, pens, brochures about HumanGood products or services, or coffee cups).
- B. The definition of “financial remuneration” in the context of marketing does not include non-financial benefits, such as in-kind benefits, which may be provided to a Covered Entity in exchange for making a communication about a product or service. Only payments made in exchange for making such communications are included within the definition.

V. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

VERIFICATION OF IDENTITY BEFORE RELEASE OF PHI	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
	Departments Affected	CCRC Operations – Medical Records

I. POLICY

It is Human Good’s policy to take reasonable steps to verify the identity of anyone who requests release of a resident/client’s PHI before release.

II. PROCEDURE

- A. Request. In each case, the requesting party must submit either (1) a written and signed HumanGood Authorization to Release Protected Health Information Form; or, (2) another written and signed request that complies with federal and applicable state law.
- B. Verification Documentation. The requestor should also submit documents that will be used to verify their identity and relationship to the resident/client (if applicable). The Executive Director and/or Health Services Administrator or his/her designee (for example, the medical records team member) must verify the identity of the party requesting medical records.
 - 1. For resident or legal representative requests, verification may be a state-issued identification card, comparison of signatures on the request with signatures on a power of attorney or residency contract, or other documentation in the resident’s medical or service record. If the resident/client is deceased, the requestor should also provide evidence that they are the beneficiary to the will or the heir of the estate. See also Release of PH of Deceased Resident/Client Policy.
 - 2. For attorney requests, verification may be the attorney’s signed letterhead. For public official requests, verification may be an agency identification badge or written request on appropriate government letterhead.
 - 3. Regardless what identity verification documents are provided, each medical records team member uses their judgment to determine the requestor’s identity to make the request. (For verification of authority (i.e. the requesting party’s right to obtain the records), contact the Privacy Officer.)
- C. Verbal Requests. If a verbal or e-mail medical record release request is received, the team member taking the call or receiving the e-mail will explain the need for a written and signed medical record release request and identity verification documentation and provide copy of the Authorization to Release Protected Health Information form.

III. REVIEW AND REVISION HISTORY

Human Good reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

VIOLATIONS OF HIPAA PRIVACY PRACTICES ENFORCEMENT	Effective Date	02/20
	Revision Dates	01/01/21
	Departments Approving	Legal
	Departments Affected	All Departments

I. POLICY

This Policy applies to all team members in HumanGood organizations and Communities where protected health information (PHI) is created, collected, accessed, maintained, used and/or disclosed, regardless of form. It is HumanGood’s policy to promptly investigate reported or suspected HIPAA privacy violations and take indicated corrective action. Team members may face discipline, up to and including, termination of employment for HIPAA privacy violations.

HumanGood enforces a non-retaliation policy, which prohibits any team member (regardless of job title) from intimidating, threatening, coercing, discriminating against, or taking any other type of retaliatory action against any individual who:

- A. Exercises his/her rights under our Notice of Privacy Practices or related policies.
- B. Participates in the HumanGood HIPAA privacy complaint process.
- C. Files a complaint with the Secretary of the Department of Health and Human Services, the Office for Civil Rights, or a HumanGood licensing agency.
- D. Testifies, assists or participates in an investigation, compliance review, proceeding or hearing regarding our HIPAA privacy practices.
- E. Opposes any act or practice unlawful under the HIPAA Privacy Rule; provided, the individual acted in good faith in the belief that the practice was unlawful, the manner of opposition is reasonable, and the opposition does not involve disclosure of PHI in violation of Privacy Rule regulations.

II. DISCIPLINARY ACTION/VIOLATION EXAMPLES

Disciplinary action will depend on the intent and severity of the violation. The following are examples of violations of HumanGood’s privacy policies:

- A. Improper and/or intentional disclosure of PHI in any form (e.g., releasing a resident’s PHI without authorization to do so);
- B. Access and/or use or disclosure of PHI by an unauthorized team member or any other individual;
- C. Access, use or disclosure of PHI for personal gain; and
- D. Destruction of PHI for the purpose of preventing discovery of an error or other untoward event.

III. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

WORKFORCE PRIVACY EDUCATION	Effective Date	01/01/21
	Revision Dates	
	Departments Approving	Legal
	Departments Affected	LPC; Health Plan functions

I. POLICY

It is HumanGood’s policy to provide its workforce members (as defined below) HIPAA privacy, security and breach notification training (“training”) that is appropriate for their job duties and functions.

II. DEFINITION AND PROCEDURE

- A. “Workforce member” means HumanGood employees (hereinafter, “team members’) and excludes contractors and vendors/suppliers. Although not considered HumanGood workforce members, there are occasions that contractors, vendors, suppliers, volunteers, trainees, or other non-employees may use or disclose PHI to perform their functions. Where appropriate, HumanGood will provide such non-employees with a copy of its Notice of Privacy Practices and/or appropriate training or contractually require them to conduct their own training and comply with applicable laws.
- B. Team Member Training. Newly hired team members receive training within thirty (30) days of hire. Current team members receive training on, at least, an annual basis. Team members will also receive periodic training, as needed and appropriate to job function, based on changes in our privacy practices, operational processes related to privacy, and/or changes in law. Team members who experience a material change in their employment status, such as promotion, may receive supplemental training appropriate to their new job functions. Any team member who desires additional training may contact his/her direct supervisor, the Privacy Officer, or Human Resources.
- C. Recordkeeping. Records of the training materials, course dates, and team member completion will be kept for not less than six (6) years from the later of the date of creation, completion or last use and will be maintained by Human Resources.

III. REVIEW AND REVISION HISTORY

HumanGood reserves the right to revise this policy from time to time, including, without limitation, revisions based on risk, industry threats, identified vulnerabilities, and changes in law.

INTRODUCTION

HumanGood recognizes the wide spread impact of falls and the resulting injuries to our residents, team members and the organization.

- For a frail older adult, the results of a fall can lead to a decrease in quality of life and the ability to function.
- Fear of falling may lead to self-imposed limitations on activity resulting in isolation and depression.
- Falls are a high risk, high cost challenge for the organization. Their impact on residents' lives, community operations and finances can be devastating.

For all of these reasons, Human Good has committed to the development and maintenance of a written, organization-wide, falls prevention and management program that includes evidence-based practices and extends across all levels of service and care as appropriate.

PROGRAM GOALS

This program offers risk identification, reporting recommendations, treatment options and team member guidance in its aim to prevent, to the fullest extent possible, and manage falls in all HumanGood Communities while continuing to provide individualized, person centered care and services.

DEFINITIONS

To assist our organization in fall-related incident reporting, the following definition of a fall and a description of fall-types are included in this written program. We request that anyone who experiences a fall or witnesses a fall or possible fall-related incident *report the occurrence immediately* to a supervisor or to nursing personnel. This includes situations where a resident is found on the floor or ground. While it may be unknown at that time if the resident fell, it is the practice of our organization to treat these situations as a fall-related incident so that proper measures are taken to respond to the resident's needs and investigate the incident.

Fall Definition

“The unintentional change in position coming to rest on the ground, floor or onto the next lower surface (e.g., onto a bed, chair, or bedside mat).

- The fall may be witnessed, reported by the resident or an observer or identified when the resident is found on the floor or ground.
- Falls include any fall, no matter whether it occurred at home, while out in the community, in an acute hospital or a nursing home.
- Falls are not a result of an overwhelming external force (e.g., a resident pushes another resident).
- An *intercepted fall* occurs when the resident would have fallen if he/she had not caught him/herself or had not been intercepted by another person-this is still considered a fall”

Other Definitions

- **Adverse event:** An undesired outcome or occurrence, not expected within the normal course of care or treatment, disease process, condition of the resident, or delivery of services.
- **Hazard/hazardous condition:** Any set of circumstances (exclusive of a resident's own disease process or condition) that significantly increases the likelihood of a serious adverse outcome or of a loss due to an accident or injury to a resident, visitor, employee, volunteer, or other individual.
- **Incident** is an event that could lead to loss of, or disruption to, an organization's operations, services or functions
- **Incident Management:** is a term describing the activities of an organization to identify, analyze, and correct hazards to prevent a future re-occurrence.
- **Intercepted fall** occurs when the resident would have fallen if he or she had not caught him/herself or had not been intercepted by another person
- **Intrinsic Risk Factors:**
 - a. Effects of aging on gait, balance and strength
 - b. Acute medical conditions
 - c. Chronic diseases
 - d. Deconditioning from inactivity
 - e. Behavioral symptoms and unsafe behaviors
 - f. Medication side effects
- **Extrinsic Risk Factors:**
 - Environmental hazards
 - Unsafe equipment
 - Unsafe personal care items
- **Near miss or close call:** An event or situation that could have resulted in an accident, injury or illness, but did not, either by chance or through timely intervention. For example, a procedure almost performed on the wrong resident due to lapse in verification of patient identification but caught at the last minute by chance. Close calls are opportunities for learning and afford the chance to develop preventive strategies and actions. Close calls receive the same level of scrutiny as adverse events that result in actual injury.
- **Proactive risk assessment:** Activities undertaken before an adverse event occurs in order to identify potential risks and hazardous conditions inherent in the organization or within targeted systems or processes.

- **Risk analysis:** Determining the causes, potential probability, and potential harm of an identified risk and alternatives for dealing with the risk. Examples of risk analysis techniques include failure mode and effects analysis, systems analysis, root cause analysis, tracking and trending of adverse occurrences and near misses, and other methods.

CULTURE OF SAFETY

The term “culture of safety” is used to describe how the behavior of team members and management affects the safety of residents. The development of a culture of safety is an important first step to ensure that the Fall Management Program is effective and integrated into the organizational system.

Developing a culture of safety requires changes in team member attitudes, beliefs and behaviors as well as changes in management style. This change process requires strong leadership, effective communication, new policy development, and the formation of multi-disciplinary teams to address areas for improvement. Empowered staff should be encouraged to participate in all levels of care. Finally, an environment of “no blame/no shame” will provide an open atmosphere where staff members can report errors and safety concerns without fear of punishment.

FALL ATTRIBUTES

- **Accidental Falls:** Falls associated with extrinsic environmental risk factors or hazards: spills on the floor, clutter, tubing / cords on the floor, etc., or errors in judgment, such as not paying attention
- **Anticipated Physiological Falls:** Falls associated with known fall risks, such as those indicated on the Morse Fall Scale or other screening scales, that are predictive of a fall occurring: loss of balance, impaired gait or mobility, impaired cognition/confusion, impaired vision. Falls that we anticipate will occur due to the patients’ existing physiological status, history of falls, and decreased mobility upon assessment.
- **Unanticipated Physiological Falls:** Falls associated with unknown fall risks that were not predicted (cannot be predicted) on a fall risk scale: syncope; extreme hypoglycemia; stroke; heart attack; seizure.
- **Assisted Fall:** A fall in which a team member is present and acts to keep the resident upright, sit on a bed, toilet, a chair, or assists the resident to the floor.
- **Unwitnessed Fall:** A fall that occurs unseen by team members or others. If a team member or other person are in close proximity to the resident, but do not see the resident fall, the fall is considered unwitnessed. Any injury related to an unwitnessed fall should be reviewed for possible resident abuse.
- **Witnessed Fall:** A fall in which team member or other persons observe the resident fall.

REPORTING FALLS

Any resident, visitor, team member or contractor who experiences a fall, witnesses a fall or what they believe is the outcome of a fall, who finds a resident on the floor, or who receives a report of a fall is to report the occurrence immediately to a community supervisor or to a nursing team member. This includes situations where a resident is found on the floor or ground and falls or suspected falls which occurred while off of the HumanGood property. While it may be unclear if a fall actually occurred, for the purposes of reporting, it is the practice of this organization to report these situations as a fall-related incident so that appropriate measures can be taken to investigate the incident and evaluate the resident's needs and implement interventions.

Documentation Responsibilities: Documentation of any actual or suspected fall is to be completed by the team member with the first best knowledge of the event in the area where the event is reported:

- Skilled Nursing –Nurse
- Senior Living - Assisted Living/Personal Care and Licensed Residential Living – Charge Nurse, Med Tech, or Aide
- Unlicensed Residential Living - Security Guard, Concierge or Community Supervisor as assigned.

Reporting - Hazardous Conditions:

Human Good encourages all team members, contract service providers, residents, families and visitors to immediately report hazardous conditions that contribute to fall-related incidents in an effort to prevent harm before it occurs. These conditions should be reported to a community supervisor or nursing team member based on the location of the event. Examples of these conditions include, but are not limited to:

- Trip hazards (e.g., electric cords, floor clutter, broken flooring, unsafe floor mats)
- Slip hazards (e.g., water or other liquids on the floor, untreated ice or snow)
- Broken equipment (e.g., chairs, walkers, wheelchairs, resident lifts, hand-holds in bathrooms)

TEAM MEMBER RESPONSIBILITIES

HumanGood recognizes that falls represent a major area of potential harm and risk for older adults. The prevention and management of falls is an organization wide organization wide initiative, from beside to boardroom and strives for participation and engagement from all stakeholders – team members, residents and Residents, families, and visitors.

All Team Members

- Respond to significant events and hazardous situations either addressing them immediately or notifying the appropriate team member/manager at the time they are identified and following up to ensure the situation is addressed.
- All are expected to maintain a safe working environment at all times.

Community Management Team

- Establish and maintain an organization-wide Culture of Safety with the engagement of governance that promotes timely reporting, risk management, continuous quality improvement, and safety within a Just Culture.
- Establish and maintain a Culture of Accountability that actively identifies risks, hazards, and opportunities for performance improvement – and acts on them to reduce risk, the potential for harm, improve quality and increase safety.
- Ensure all fall incident reports, regardless of presence and severity of injury, are complete and documentation includes identification and implementation of preventative interventions.
- Include risk, quality, and safety objectives in the organization’s regular strategic planning and operational planning efforts.
- Facilitate participation in educational programs in resident safety and risk management; ensuring resources are available to allow staff to participate.
- Allocate the necessary human, financial, and time resources to identify and mitigate risks in the organization.
- Create and maintain, as applicable, management positions that have the necessary authority to address risks.
- Participate fully in the organization’s risk management, quality, and safety efforts to prevent and manage falls, including environmental rounding and safety walk-throughs.
- Ensure the community budget provides adequate funding to provide a safe environment for resident’s and team members.

Medical Director (Skilled Nursing)

The Medical Director is responsible for ensuring the overall quality of care and that falls and fall-related injury prevention is:

- A high priority at the community
- Promoted across all community levels of care through education, direct care, administrative support and team member resources
- Included in Quality Assurance/Performance Improvement (QAPI) activities

Corporate Risk Manager

The Corporate Risk Manager is responsible for ensuring that falls policy, implementation, and investigation of falls and injury by:

- Chairing the Corporate Risk Management Committee and ensuring that falls are a key performance indicator
- Providing reports to CEO describing tracking and trending of falls and quality improvement work to prevent, reduce and manage falls
- Ensuring that a falls management policy is in place which addresses risk identification, assessment, the implementation of interventions and follow-up.

- Overseeing the collection and analysis of data used to monitor the performance of processes that involve risk or that may result in serious adverse events (e.g., medication processes, care of residents at risk of pressure ulcers, unsafe conditions, etc.)
- Proactively advises the organization on strategies to reduce hazards and improve the overall safety of residents, visitors, and team members.
- Facilitates the development and scheduling of educational programs related to safety and risk management.

Campus Risk Manager (Executive Director/Community Manager or designated individual)

- Ensures appropriate timely reporting (internal and external) of unusual occurrences
- Participates in high severity fall investigations and Root Cause Analyses (RCA)
- Facilitates the resolution of reported unsafe or hazardous conditions which contribute to falls
- Participates in the QAPI Committee and Performance Improvement Plans (PIPs) related to high risk events such as falls

Service Area/Level of Care Leader (Health Services Administrator, Director of Nursing or Wellness, Community Director, or other designee)

- Contributes to a Culture of Safety, setting a positive example for all persons within their service area
- Ensures timely reporting to internal and external parties
- Participates in the QAPI Committee and as appropriate in a Performance Improvement Plan (PIP) which addresses falls
- Ensures team members act in compliance with population-based fall and injury prevention programs in each care area/service level
- Utilizes assessment tools and interventions which are evidence-based when possible
- Emphasizes the importance of input from all disciplines as well as clinical expertise in determining and managing fall and injury risks
- Ensures equipment is working properly and scheduled maintenance is done in collaboration with maintenance and central supply team members
- Assures interdisciplinary involvement in all service areas, both internal and external providers, for fall and injury prevention programs.

Nurse Team Members (ADON, Nurse Managers/Charge Nurse, Nursing Supervisors/LPN/RN)

- Ensuring compliance of fall and fall-related injury interventions
- Assess factors that make Residents more or less at risk for falling, complete fall-risk screening on transfers, following a change in status, after a fall and quarterly.
- Respond, report and document resident falls.
 - Complete post-fall protocol and incident report

- Participate in post fall huddle/ falls committee meetings after a Resident fall
- Develop an individualized fall and injury prevention plan of care, review and revise care plan to include any additional fall interventions.
- Ensure that care plan interventions are implemented
- Collaborate with interdisciplinary team members for implementation and evaluation of the individualized plan of care
- Communicate Resident 's fall and injury history, risk factors, treatment plan during hand off processes
- Implement Resident education based on health literacy to assure Resident engagement as partner in care, along with family / caregiver as appropriate
- Ensuring that equipment and rooms are free of slip and trip hazards, assure a safe environment for the Resident to protect from injury should a fall occur
- Participate in quality improvement to evaluate Resident safety and quality of care

Admitting Nurse:

- Oversees the completion of the fall-risk assessment upon admission.
- Notifies team members of any resident admitted with a history of recent falls (in the last 3 months), who are prescribed an anticoagulant, who has had a post fall fracture or head injury and who may have triggered as “at risk” on the admission falls assessment.
- Initiates a baseline care plan/service plan on falls for those residents assessed as a fall risk.

Physicians/Physician Assistants/Advanced Practice Nurses:

- Ensure treatment plan and medications are current and address fall risk.
- Takes into consideration the recommendations of Interdisciplinary Team Members including the pharmacists regarding medications that increase the likelihood of falls.
- Document the presence of fall risk factors like osteoporosis.
- Screen residents for fall-risk as appropriate (Senior Living and Unlicensed Independent Living).
- Refer residents who have recently returned from the hospital due to a fall to the applicable ancillary care providers such as the pharmacist for medication review and to physical and/or occupational therapy for a more thorough assessment of fall risk and treatment.

Pharmacy consultant :

- Periodically review medications and supplements to evaluate their impact on fall risk and make recommendations for change as indicated.
- Communicates with the physician and appropriate members of the Interdisciplinary team if a drug interaction or medication level has the potential to increase the likelihood of falls.

Physical and Occupational Therapy:

- Conduct resident/Resident assessments of rehabilitation needs and falls risks.
- Evaluate resident/Resident mobility and safety in the environment to ensure safe transfers, mobility, and activities of daily living.
- Develop, implement and evaluate an intervention program for residents/Resident s to reduce their fall-risk and injury risk.
- Contribute to interdisciplinary care planning.
- Participate in clinical education of team members and program evaluation.
- Conduct clinical cross-training with nursing team member for mobility and training.
- Examine and enhance tools and products for fall and injury prevention (rolling seated walkers, w/c brake extenders, non-skid seating, etc.)

Certified Nursing Assistants/ Med Tech/Aides/Care Partners:

- Ensure that care plan/service plan interventions are implemented.
- Participate community fall prevention activities (such as purposeful rounding) as developed/ directed by QAPI or falls team.
- Notify charge nurse and/or nursing supervisor of changes in resident's condition/behavior.
- Respond to and report resident falls.
- Contribute to the interdisciplinary care planning/service plan completion process.
- Participate in clinical education.
- Maintain safety awareness, promptly report safety issues.

Ancillary Care Departments (Social Services, Dietary, Recreational Therapy)

- Recognize their role in a Culture of Safety.
- Understand that all team members have a role in preventing hazardous situations and falls.
- Maintain safety awareness, promptly report safety issues.

Building and Grounds/Maintenance/Housekeeping Team Members:

- Ensure a safe environment by conducting environmental assessments as part of the safety committee and every day responsibilities.
- Manage or participate in processes implementing interim measures to mitigate unsafe and hazardous conditions immediately upon identification or notification.
- Conduct timely repairs and replacement of equipment, furnishings, and other building elements that contribute to falls as indicated.
- Maintain safety precautions during daily activities.
- Put into place interim measures to mitigate unsafe and hazardous conditions immediately upon identification or notification

Education/Staff Development:

- Support fall prevention and management efforts as needed by the community, provides education, participate in fall prevention meetings, QAPI and post event follow-up.
- Address fall prevention during TM onboarding, annual inservices and fall prevention training as needed.
- Develop and implement competencies for team members of all departments related to the fall prevention program.
- Oversee resident and family education programs and periodically including fall and injury prevention and related topics in the training program.

FALL MANAGEMENT STRATEGIES- Skilled Nursing

Fall Management Team – Skilled Nursing

A Fall Management Team is essential in the skilled setting and Interdisciplinary Team work is needed for the success of any Fall Management Program. The selection of members for a Falls Team is an important step. The Falls Team functions in collaboration with or as part of a team that addresses residents at high risk for multiple conditions including falls. The following clinical and nonclinical team members should be included on the falls team:

- The Falls champion - This may be the nurse managing the Restorative program. It is estimated that 8 hours a week is need for falls management responsibilities. Having a second nurse as a backup coordinator helps ensure no gap in services if the primary nurse is unavailable.
- A nursing assistant, possibly a Restorative Aide, or a senior-level certified nursing assistant - This team member must be able to work well with peers and is recognized as a leader on his or her care area. Based on the size of the resident population served more than one aide may be beneficial.
- A physical or occupational therapist - able to assess resident transfer, mobility, and wheelchair seating.
- A member of the maintenance department - able to inspect, repair, and modify equipment and the environment.
- Director of nursing – ad hoc member.

Additional representatives from nursing (staff development, ADON), pharmacy, quality, central supply, recreation therapy, housekeeping and dietary may also be added to the falls team.

Assessments

In the skilled nursing setting fall assessments are completed as part of the admission/move in process and then:

- Following return from treatment in another level of care, such as the hospital
- Following a fall

- Following any change of status
- Quarterly, annually, and/or as required by regulations

Care Planning- Skilled Nursing

Baseline Care Plan for New Admissions

As residents are at the highest risk of falling in the first 48 hours then at a high risk for the first 2-3 weeks following admission to a community this time period is critical. However, it may take team members a significant portion of this period to develop a comprehensive, multidisciplinary care plan based on the resident's level of disability

For that reasons, a baseline fall risk plan of care is implemented for all new admissions regardless of risk level. This plan is based on results of fall assessments and team member observations. Besides fall assessment, during the first weeks following admission team members observe the resident and collect information about risk factors and behaviors which are used to develop a more comprehensive plan. If after the initial observation and the completion of a falls assessment the resident is found not to be at high risk for falls, some measures may be removed from the treatment plan.

Sample Interventions:

- Close observation and increased supervision
- Re-orientation to room, bathroom and community during care
- Medication review and adjustment
- Use of safe footwear
- Team member assistance to toilet or bedside commode
- Use of monitoring or sensor devices
- Use of protective clothing/devices: helmet, wrist guards or hip protectors
- Therapy evaluations and treatment

Comprehensive Care Plan Driven by Post Fall Assessment

A comprehensive falls care plan is developed using two steps:

1. Complete the fall assessment
 - a. Fall Assessment is completed by the assigned nurse team member.
 - b. The Interdisciplinary team, Primary Care Physician (PCP), and therapy make recommendations and when applicable obtain orders for fall prevention interventions which are then added to the care plan. These interventions may include additional testing, equipment or treatment changes such as lab tests, assistive devices and seating modifications. This step ensures multidisciplinary involvement. As interventions will be revised as treatment continues the care plan is a living document in a state of constant revision and update.
2. Select and individualize interventions

- a. Development of Fall Interventions are based on results of the Fall Assessment as well as investigation of all circumstances and related resident outcomes. In order to be specific during care plan development, the team must have the following information:
 - i. Input from direct care team member about effective and ineffective strategies tried in the past
 - ii. Input from direct care team member about resident's individual behaviors and needs
 - iii. Past fall history including as much detailed data as is available. This data should include trends such as time of day, antecedent activity, medications or medical conditions adding to fall risk
 - iv. Input from family and resident

Fall Management Interventions

To be effective, the Interdisciplinary Treatment team must use results of multidisciplinary assessments, creative problem solving, input from direct care team members and regular monitoring of interventions implemented and resident response.

Understanding that there will be adjustments to the care plan and a willingness to try both new and old interventions is needed.

This process is time consuming and labor intensive but residents will benefit from ongoing team efforts. General guidelines for managing residents at high risk for falls include careful investigation in the following areas:

1. **Toileting.** Often for recurrent fallers, toileting by team member must be individualized and more frequent. If it is determined that urgency, frequency or incontinence are reasons for unsafe transfer or ambulation, team member must develop a toileting plan that will minimize these symptoms. Strategies may include medication review, an individualized toileting plan and restorative care measures.
2. **Monitoring.** Recurrent fallers need more supervision than other residents either by team member, family, volunteers or through the use of equipment. Room sensors to detect resident movement; position or pressure alarms on the bed, chair or wheelchair; and alarms to prevent unsafe wandering can be helpful. Recurrent fallers should be placed in structured activities and exercise programs whenever possible so that observation by other residents and the activities team member occurs. As new models of care develop within the long-term care industry, new living space and staffing structures will enable increased interaction between residents and team member and therefore may improve observation.
3. **Bed safety.** Residents who try to get out of the bed unsafely when alone should be evaluated for a low bed and floor mat. Full side rails should not be used as a means to keep a resident in the bed when they are trying to exit. Trying to climb over bedrails may well result in a serious fall related injury. Cradle mattresses or perimeters are useful options.

4. **Individualized seating.** For residents who exhibit unsafe behavior while in a wheelchair, individualized seating modifications and equipment prescribed by an OT/PT experienced in functional seating can reduce fall risk. The Wheelchair Seating Assessment outlines specific solutions to seating problems and can be used by a qualified therapist to perform a detailed assessment.
5. **Environment.** Team member should work with residents and their families to eliminate all possible hazards in the resident's room and bathroom. Adequate lighting at night and safe footwear are crucial.
6. **Underlying medical conditions.** Every effort should be made to determine what health conditions may be increasing the resident's fall risk. Infections, uncontrolled blood sugar, stroke and other acute conditions should be treated promptly.
7. **Chronic conditions.** Ongoing management of risk for residents with chronic degenerative diseases is difficult. Team member must have a good picture of the resident's baseline function such as known periods of weakness during the day and side effects of the medications used to treat the disease. From this team member can determine routine measures and respond appropriately when the resident's condition worsens.
8. **Pain management.** Appropriate pain assessment and treatment may reduce unsafe behaviors stemming from pain or discomfort.
9. **Protective clothing.** For residents who are in danger of head injury, a helmet can provide protection. Wrist guards may also be used to protect the resident's wrists and forearms during a fall. Hip protectors should be used for all frail, ambulatory residents. Newer brands are easier to use during toileting and residents should be encouraged to wear them on a daily basis.
10. **Behavior management.** All direct care team member should be skilled in responding to behavioral symptoms in a way to minimize the resident's anxiety and agitation rather than fuel it through inappropriate team member attitudes and responses.

Intensive Care Planning for Residents with Recurrent Falls

Often in nursing facilities there are recurrent fallers, that is, residents who fall two or more times. Developing care plans for these residents is challenging, not only because of their high fall risk but also because staff may become discouraged and feel nothing will work. However, careful assessment and care planning can reduce risk of additional falls in most residents. These common risk factors include:

- Unsafe behaviors
- Acute illness such as delirium or UTI
- Chronic illness such as Parkinson's disease, Alzheimer's disease, and arthritis
- High-risk medication use

- Cognitive impairment
- Sensory impairment (visual, hearing or other neurological impairment)

Up and Coming Interventions

Newer technologies designed to enable elderly adults to live independently are emerging and are of interest to organizations like Human Good with unlicensed settings. For example, motion sensors can detect unusual activity, such as a fall to the floor, and relay that information to a central monitoring system, prompting staff to contact the resident to ask whether he or she is all right.

FALL MANAGEMENT STRATEGIES –Residential Living, AL/ MC, Personal Care

Fall Review /Assessment

The Assisted Living/Personal Care/Licensed Residential Living settings are less stringently regulated than skilled nursing. The regulations vary by state and community location. Fall assessments are completed at a minimum prior to or at the time of move in and then after a known fall.

The continuum of care to manage fall risk includes three areas of focus which need special consideration:

- Initial Service Plan for new admissions
- Service Plan development driven by the Falls Risk Assessment
- Updated Service Plan for residents with recurrent falls

Fall Prevention Team

In the Personal Care/Assisted Living/Licensed Residential setting a similar team structure is recommended for Fall Prevention with a few substitutions based on staff make-up. The Wellness Director or residential Nurse may oversee the program and training. Each community may review the program and substitute appropriate personnel.

Fall Interventions

- Increased observation/ check in
- Frequent orientation to room, bathroom and community
- Medication review by MD or Pharmacy
- Reminders to resident for use of mobility devices (walker, cane, etc.)
- Assistance or reminders to remove clutter in room
- Use of monitoring or sensor devices

Fall Assessment/ Risk Review Tools

Depending on the setting, either an assessment with a licensed health care professional such as an RN or physician or a review by trained community staff must be completed.

Most residents are at a higher risk of falling in the first 2-3 weeks following admission or re-admission to a community. For that reason an assessment is recommended either just before or at the time of move-in. For those with the greatest care needs, periodic reassessments/ reviews are recommended.

Despite diligent fall risk reviews and monitoring by internal and external care team members it may still be difficult to determine a resident's level of risk, especially early in their stay. Ideally this risk will decrease once adjustment to the community is made, but for many it will be a need that does not resolve.

The ability to complete a fall risk review or assessment, the format used, the party who completes the assessment, results and response all vary based on service area and licensing status. What is constant is the need to identify and address this area of risk.

There are a variety of tools available for use in all settings, Licensed and Unlicensed, to assess a resident's risk of falling. Assessment tools are available in the electronic health record. Frequently used examples of these tools are:

- Morse Fall Score
- Timed get-up-and-go test (TUG)

Care and Service Plans

Fall Risk Service/Care Plan should be implemented for all new residents, regardless of risk level due to the greater probability that a fall will occur in the 2-3 weeks post move-in. If at a later date a resident is found not to be at high risk the Service/Care Plan may be adjusted.

Besides the admission review, it is recommended that each care/service plan be periodically updated as per regulatory requirements and as determined necessary by team members.

Care Plans and Service Plans that incorporate Interdisciplinary input; Physician and physician extenders, Nursing, Therapy and other health care professionals, both internal and external providers, are more likely to address the multiple risk factors common in this population. Input from team members can provide the personal details necessary to target specific behaviors and personal situations of increased risk.

FALL MANAGEMENT STRATEGIES- Unlicensed Residential Living

Fall Risk Review/ Assessment

In the unlicensed residential living setting Human Good strives to balance the need for awareness and vigilance related to fall risks while maintaining respect for those individuals' autonomy. Unless specified in the resident's contract, residents in the unlicensed setting are not required to participate in fall assessments. Resident buy-in to the importance of assessing and treating fall risk issues and working in conjunction with internal and external care providers becomes a major part of the fall risk assessment and treatment program.

The time to discuss falls' risks and management is during preadmission conversations between representatives from the community and the incoming residents and their families. This is when expectations are discussed and established and the communities' commitment to high quality services is emphasized. Potential residents are asked to disclose any conditions that may predispose him or her to falls so that the community is able to provide assistance, set up services, if appropriate. The admissions coordinator reminds individuals about maintaining a safe living space free of hazards that could cause falls. Additionally, residents are encouraged to report falls when they occur so that the community is able to work with the resident to identify the cause of the fall and to eliminate any hazards. This discussion emphasizes the importance of reporting falls to ensure the well-being of the resident and to address residents' concerns that reporting falls might trigger a transfer to a more closely supervised setting.

At regular intervals the community is encouraged to present to residents the facts about falls: they do occur, they can cause injury, there are effective strategies to prevent falls, and residents' independence may place them at a higher risk for falls.

It may be difficult for each community, on its own, to implement a fall prevention program. By collaborating with other community organizations and professionals that specialize in different types of services for older adults, such as health care, exercise, home safety assessments, and education, you can make your program more comprehensive, effective, and possibly less costly. For example, a public health or health care organization may partner with a senior services or parks and recreation organization to offer a Tai Chi program. Collaborating with other community agencies can provide additional resources, outreach channels, or referral sources for your program. Because of its many benefits, collaboration can be essential to implementing your program and sustaining it over time.

Some specific interventions that can be done at the community level include:

- Review of Fall History with the resident.
- If applicable, assist the resident with the following:
 - a. request a pharmacist review of medications and supplements for any drug interactions or side effects that could increase the likelihood of falls.

- b. Request a fall assessment be completed by a care provider, physician, wellness nurse, home care nurse or licensed therapist.
- c. Request therapy evaluation and treatment

In the unlicensed setting, a written plan may not exist but team members are expected to be knowledgeable about activities and interventions in place to decrease fall and injury risk such as home health aides and mobility equipment

External Care Providers

These include the Physician or designee, who become primary participants in the falls management process. They may either review the fall risk assessment completed by another healthcare practitioner or screen various fall risk factors such as gait and balance, and then make referrals for at-risk residents to therapy for more in-depth balance and functional assessments. This is after the primary care provider has ruled out medical causes for the fall(s) such as syncope, brady/tachyarrhythmia, seizure, etc. Therapy provides fall management assistance through physical therapist interventions to restore function, the occupational therapist who evaluates fall risks associated with activities of daily living and the environment/equipment.

OTHER CONSIDERATIONS- All Levels of Care

Quality Assurance and Performance Improvement (QAPI)

As part of Human Good's fall prevention and management program, all fall-related data is collected and reported as part of the community's/service areas' QAPI process. This information serves as a source of performance improvement data and is used for tracking and trending. The information obtained is then used to identify specific opportunities for performance improvement and to charter performance improvement projects to reduce fall-related incidents and the harm that is associated with such incidents.

Each Life Plan community is required to (at a minimum) track and review falls monthly in all levels of care

Health Care (skilled nursing centers) are required to review falls data and trends during periodic QAPI meetings, and establish a falls committee.

Environmental Checklists and Rounds

While Intrinsic risk factors are addressed clinically, extrinsic factors are identified and managed by clinical and/or non-clinical community team members working together to identify and address potential environmental risks. Environmental rounds, often done in conjunction with the community safety committee, insurance consultants, etc. are a means to accomplish this responsibility.

Community management oversees the completion and effectiveness of environmental rounds. In licensed communities membership includes nursing team members as well as other disciplines. In non-licensed settings these rounds are often conducted by teams of building services and

administrative and management staff. In either setting an insurance consultant or other external specialist may participate in the rounds process.

Whatever the setting, an equipment safety checklist and an environmental rounds checklist, often combined, serve as a consistent format for these safety checks. These checklists record findings and allow for documentation of any corrective action needed. Depending on the communities licensing status and if applicable to level of care reviewed, results of rounds and corrective action may be included in QAPI and/or safety committee meeting reviews.

Organization Wide Falls Management Education

A critical component of any organization-wide risk, quality and safety program such as falls prevention and management includes the methods and curriculum necessary to communicate position-related expectations about fall prevention and response.

This education also addresses ongoing skill and competency development specific to each position so that duties and responsibilities are understood and can be carried out day-to-day. Falls prevention and response curriculum is an education and training need for all parties involved in the overall falls reduction and management program, whether they are internal or external stakeholders.

This education would include the following at minimum:

- New Employee Education
- Annual and Team member Education
- Resident and Family Education

In the unlicensed setting resident and family education is a priority as they interact with external care providers and so must be able to report their own weaknesses and strengths related to fall risk. The greater their understanding of fall risk and management the better they will be in the role of personal advocate.

POST-FALL RESPONSE AND MANAGEMENT

This Fall Management Program includes two primary approaches to the management of falls and injuries. The first is through the immediate response to a fall and the second, long term management. Up to this point this program has primarily focused on long term management, the screening for risk, implementation of interventions, monitoring and managing the response followed by plan revisions.

However, when a fall occurs, care evaluation and investigation along with immediate intervention during the first 24 hours can help identify risk and prevent future incidents.

There are two key elements of the post-fall response and management:

- Initial post-fall assessment
- Documentation and follow-up – including ongoing monitoring for resident changes in condition where medically indicated

Initial Post Fall Assessment/review:

First priority is to assess the faller for any obvious injuries and to then conduct an initial investigation to collect facts about the fall-related incident.

The post fall assessment/review may either be a form or documented in the electronic health record or risk management software. The internal incident report, unusual incident report, state required forms, and Root cause analysis forms are designed to prompt questions about the fall.

Examples of the information gathered

1. Date/time of fall-
 - a. when using electronic health records, the time stamp on documentation is the time written. It is important in the body of the document that actual time and date of fall is included.
2. Resident/Witnesses' description of fall (if possible)
 - a. What was the faller trying to accomplish at the time of the fall?
 - b. Where was the faller at the time of the fall (resident room, bathroom, common room, hallway etc.)?
3. Timely notification of provider and family/guardian, and state regulatory agency.
4. Vital signs (temperature, pulse, respiration, blood pressure, orthostatic pulse and blood pressure — lying, sitting and standing, blood sugar as applicable)
 - a. Is the resident experiencing a physical or mental change in condition that is contributing to a higher risk for falls?
5. Current medications
 - a. Were all medications taken/given as prescribed?
 - b. Was a medication taken/ given twice?
 - c. Is the resident currently on medications that could increase fall-related risks factors?
6. Resident assessment
 - a. Presence of Injury and reassessment for delayed injury identification
 - b. Immediate/root cause of fall
 - c. Comorbid conditions (e.g., Orthostasis, dementia, heart disease, neuropathy, etc.)
 - d. Intrinsic fall risk factors (e.g. incontinence, impaired vision, gait/balance disorders, weakness)
 - e. Extrinsic fall risk factors (e.g. medications, clothing/shoes, proper and accessible mobility aid, eye glasses on)
7. Environmental factors include, but are not limited to:
 - a. Bed in high or low position?
 - b. Bed wheels locked?
 - c. Wheelchair locked?
 - d. Floor wet?
 - e. Lighting appropriate?
 - f. Call light within reach?
 - g. Bedside table within reach?

- h. Area clear of clutter and other items?
 - i. Toilet environment? (too low, no safety rails, slip hazards)
8. Were care plan/ service plan interventions being followed? If not, why not?

Documentation and Follow-up:

Following the post-fall assessment/review and implementation of any immediate measures to protect the resident the following steps are recommended:

1. Determine the need for ongoing resident monitoring if there is a suspected head trauma or if the resident may have head trauma but it cannot be clearly determined
 - a. Immediately notify the attending physician and family or guardian of condition changes
 - b. Transfer the resident for further evaluation and treatment where medically indicated
 - c. Perform neuro-checks according to physician orders and community protocol
2. Complete written/ Electronic documentation:
 - a. Internal incident report
 - b. Post fall assessment
3. Complete internal and external notification and reporting requirements, including to applicable licensing agencies as applicable
4. As part of Human Good's fall prevention and management program, notify the QAPI/RM committee of a fall with serious or sentinel outcomes per Human Good's internal notification policy so that appropriate and protected secondary investigations and root cause analyses may be conducted in a timely manner.
5. A detailed progress note should be entered into the resident record including the results of the post-fall assessment
6. Refer the resident for further evaluation by physician to ensure other serious injuries have not occurred where medically indicated
7. Implement an ongoing communication plan with the resident and their family or guardian where indicated
8. Refer to the interdisciplinary treatment team to review fall prevention interventions and modify care-plans as appropriate
9. Communicate to all shifts that the resident has fallen and is at risk for recurrent falls
10. Director of Nursing/ Wellness or designee oversees the completion of a root cause analysis (RCA), investigation and documents findings (incident report- investigation notes, or RCA form).

How to Use the PDF Version of this Manual on Flash Drive

We highly recommend that you print these instructions and place them with your flash drive. This will provide you with a hard copy tutorial as you learn to use the flash drive version of this manual. To print these instructions, click on the printer icon  located on the horizontal toolbar at the top of your computer screen. When the “Print” prompt appears, select “Pages from” and enter the appropriate page numbers then press “Enter” on your keyboard. The selected pages will be printed.

This flash drive contains the Adobe Acrobat Reader 9 software only. These instructions pertain to the features available in the Acrobat Reader Software. For information on the advanced features available in the full version of Adobe Acrobat, please visit www.adobe.com.

The PDF version of this manual on flash drive is designed to allow the user to locate information quickly and easily using the “Search,” “Bookmarks” and “Hyperlinks” tools.

Browsing the Manual:

To enlarge the size of the page you are viewing, select the “Zoom In Tool” icon  located on the toolbar. (Note: If the “Zoom Out Tool”  is present on the toolbar, click on the “Zoom Out Tool” and continue to hold until the “Zoom In Tool” appears then select it.) Next, place the cursor on the page and click. Each click on the page will increase the viewing size of the text. You are encouraged to use this tool when viewing indexes or crosswalks.

To decrease the size of the page you are viewing, select the “Zoom Out Tool” icon  located on the toolbar. (Note: If the “Zoom In Tool”  is present on the toolbar, click on the “Zoom In Tool” and continue to hold until the “Zoom Out Tool” appears then select it.) Next, place the cursor on the page and click. Each click on the page will decrease the viewing size of the text.

To advance to the next page, click the “Next Page” icon  in the tool bar located at the top of your computer screen OR press the “Page Down” key on your keyboard.

To view a previous page click the “Previous Page” icon  in the tool bar located at the top of your computer screen OR press the “Page Up” key on your keyboard. Selecting the “Previous Page” icon will also allow you to retrace your viewing path.

To move down one line at a time, press the “Down Arrow” key on your keyboard. This will advance your cursor down one line at a time.

To move up one line at a time, press the “**Up Arrow**” key on your keyboard. This will advance your cursor up one line at a time.

To browse through this manual using the “**Page Counter**” at the bottom of the computer screen, place the cursor inside the page counter and double click to highlight. Next, enter the page number you wish to view and press “**Enter**” on your keyboard. The page you selected will appear on your computer screen. You may also browse through this manual using the “**Arrow**” icons located on either side of the “**Page Counter**”.

Locating Specific Information:

1. Selecting “Search” from the “Edit” Menu –

NOTE: The “**Search**” feature can be utilized using the Adobe Acrobat Reader 9.0 software that is included on this flash drive.

Select “**Edit**” from the tool bar at the top of your screen. Under this directory select “**Search**”; this will produce a prompt box on your screen. In the prompt box enter the word or phrase you wish to search and press “**Enter**” on your keyboard. The program will locate all occasions of the word or phrase throughout the manual and display the results. If more than one result is found you can advance to the next reference by clicking the next item in the results display, or by using the “**Down Arrow**” key on your keyboard.

2. Bookmarks –

The “**Bookmarks**” directory appears on the left portion of your computer screen when the program is open. “**Bookmarks**” is a directory of files contained on the flash drive. Directories are identified by a plus symbol  located to the left of the file name. The plus symbol  indicates that the directory contains additional files.

To access information from the “**Bookmarks,**” you must first click on the  symbol to the left of the directory you wish to view. The contents of the directory will be displayed. To open a particular file within a directory you must click on the name of the document you wish to open.

To close a file, click on the  symbol to the left of the file.

3. Hyperlinked Text –

Hyperlinks, identified by **blue text**, enable the user to quickly advance to text and phrases without using the “**Search**” function.

To use the hyperlinked text function, place the cursor on the **blue text**; when the cursor changes to the “**Pointing Finger**” icon, click once to advance to the link. To return to the previous page, click on the  icon.

Printing Pages:

An Important Reminder –

When printing a page(s) from this manual you must first determine the page(s) you wish to print by referring to the **“Page Counter”** at the bottom of the computer screen. Due to the digital formatting of this manual, page numbers on the **“Page Counter”** will not match the page numbers that appear on the pages within the document.

Printing Pages from the Manual Flash Drive –

Printing pages from the Manual flash drive can be accomplished by printing a single page or multiple pages.

Once you have located the page you wish to print, click on the page in the document and then click on the **“Printer”** icon  located in the horizontal tool bar at the top of your computer screen. Clicking on this icon will produce the **“Print”** prompt. When the **“Print”** prompt appears, select **“Current Page”** and press **“Enter”** on your keyboard. The page you are viewing on your computer screen will be printed.

To print more than one page you must first determine the page numbers you wish to print. This information can be found in the **“Page Counter”** located at the bottom of the computer screen. Click on the **“Printer”** icon  located in the horizontal tool bar at the top of your computer screen. When the **“Print”** prompt appears, select **“Pages from”** and enter the appropriate page numbers, then press **“Enter”** on your keyboard. The selected pages will be printed.

Customizing Policies:

Text in the PDF file format can only be customized using the Adobe Acrobat Professional 9, **not** the Adobe Reader 9 software provided on the manual flash drive. The Adobe Acrobat Professional 9 may be purchased from an authorized reseller or from www.adobe.com. *It is important to note that Adobe Acrobat is not intended for use as a word processing application. It is possible to make minor (“touch up text”) changes within the application, but large-scale editing is not recommended. If page numbers are altered, the hyperlinks in the PDF file may become unusable.*

Note: This flash drive may also contain Microsoft Word (.doc) files. If these files are available, we highly recommend making custom changes in those files using the Microsoft Word application.

Technical Support

Heaton Resources Customer Support

Technical Support

1-800-438-8884

NOTE: Heaton Resources only provides technical support for questions concerning the use of Adobe Acrobat Reader 9.0 with our products. For all other technical support issues (i.e., installing, text editing, printing, etc.) please see the Customer Support information below.

Adobe Acrobat Reader Customer Support

Adobe customers outside the United States and Canada, please contact the sales or support team of your local Adobe distributor or see the 24-Hour Complimentary Support section below.

Contact Customer Services for Adobe Acrobat Reader at www.adobe.com to:

- Get answers about product information, pricing, system requirements, and availability (including upgrades).
- Get answers about product serial numbers and licensing.
- Register or transfer ownership of Adobe products.
- Purchase Adobe products and upgrades.

Record of Adoption

On _____ the _____ day of _____
20 _____ the Governing Board of this facility adopted the policies and procedures outlined in this manual. Such policies and procedures have been reviewed by the Board, the Medical Director, and the Quality Assurance and Performance Improvement Committee and found to be adequate in meeting the day-to-day operational needs of this facility and our residents. The Administrator has been delegated the administrative authority, responsibility, and accountability of assuring that all personnel, residents, and the community are made aware of these policies and procedures through an established orientation and/or in-service training program.

INFECTION CONTROL

Policy and Procedure Manual

About the Manual

Item # H50045

About the Manual

This manual has been designed to help establish infection control programs that meet the specific needs of the elderly population and the facilities caring for them. Infections are one of the most significant and costly problems nursing facilities face today. They account for a large proportion of morbidity and mortality among residents, and for many hospital transfers. Preventing infections in long-term care is an arduous task that requires the ongoing cooperation of staff, administration, residents and visitors.

Structure and Organization

The documents in this manual are divided into two general categories to help users locate information quickly. These categories are Operational and Clinical.

Operational Policies and Procedures (Part 1) contains infection control policies and procedures that are facility-wide and operational in nature. The following list describes these chapters:

- **Administrative Policies** - contains administrative infection control policies and documentation tools (e.g., committee duties and responsibilities; monitoring compliance with infection control; policy review and updating, etc.) This chapter also includes a job description for the Infection Preventionist.
- **Bioterrorism and Disaster Preparedness** - contains policies and related guidelines regarding infectious disease threats; and current CDC information regarding biological and chemical agents and related threats (anthrax, smallpox, plague, etc.), as well as recommendations to prepare facilities for natural and man-made disasters.
- **Employee Health** - includes policies, procedures, and documentation tools that govern the health and safety of employees, including what to do if an exposure incident occurs, employee work assignments, and how to screen employees for infectious diseases. This chapter also includes a discussion of the role of the Medical Director in employee health.
- **Environmental Infection Control** - provides policies, procedures, and documentation tools that guide the proper cleaning and disinfecting of the environment, disposal of medical waste, and infection control during construction.
- **Surveillance** - contains policies, recordkeeping forms and documentation tools that assist facilities in surveillance of infections, recognition of outbreaks of communicable disease, and reporting.
- **OBRA Regulations and Interpretive Guidelines** - provides the most current OBRA regulations and interpretive guidelines for infection control.

Clinical Practices and Procedures (Part 2) contains information related to specific clinical situations and conditions, including practices to prevent or minimize the spread or occurrence of infections while caring for residents. These topics include:

- **Clinical Policies and Procedures** - includes clinical protocols, policies, procedures, and documentation tools related to infection control aspects of clinical situations and conditions common in long-term care (e.g., fecal incontinence, soiled dressings, suctioning, multidrug-resistant organisms, etc.). This chapter also contains CDC recommendations for preventing antimicrobial resistance in long-term care.
- **General Infection Control Practices** - contains policies and procedures that guide routine infection control practices, including personal protective measures, handwashing and hand hygiene, and guidelines for Standard and Transmission-Based Precautions.
- **Immunization and Vaccination** - includes policies, procedures, and documentation tools that govern immunization and vaccination of residents.

- **Miscellaneous** - a placeholder for miscellaneous information that may be added in future updates.
- **Guidelines and Recommendations** - lists current guidelines and recommendations (CDC, APIC, OSHA, etc.) with URLs for the current web documents. Selected full text documents are available on the flash drive.

Locating Topics

There are three ways to locate documents or topics:

1. **Alphabetical Index** - located in the back of each part. This is a comprehensive index of topics, keywords, phrases, and document titles cross-referenced to page numbers and chapters throughout the manual.
2. **Chapter Tables of Content** - located behind the title page of each chapter. The TOC provides a list of documents in that chapter with the corresponding page numbers.
3. **Flash Drive** - provided with the manual. The flash drive contains a searchable Adobe Acrobat™ (pdf) version of the manual. It is a single, bookmarked, hyperlinked document file.

Navigating the Documents

Clinical Protocols - clinical protocols provide a multidisciplinary approach to addressing specific clinical conditions and situations. The protocols are evidence-based and consistent with current standards of practice. References are included in the documents. The format of the clinical protocols reflects a problem-oriented, multidisciplinary approach to care and includes:

- **Assessment and recognition** - guides the multidisciplinary team in recognizing signs and symptoms of new onset or worsening conditions.
- **Cause identification** - assists in defining problems and identifying root causes, including problems that lead to other problems.
- **Management** - helps to identify functions and tasks associated with care delivery, and encourages care delivery in the proper context.
- **Monitoring and follow-up** - guides the review of resident progress, and helps to determine the effect (desired and undesired) of treatments.
- **References Box** - provides regulatory and reference information, lists related documents located throughout the manual, and provides the document version number. Clinical protocols contain a list of sources referenced in the content development.

Policies - policies establish the underlying premise for all procedures. They are governing statements that facilitate consistency and simplify decision-making. Each policy format is designed to help the reader locate information quickly.

- **Policy Statement** - a summary statement that indicates the primary focus of the policy.
- **Policy Interpretation and Implementation** - the detailed steps that outline what the policy statement means and how it is implemented in the facility.
- **References Box** - provides regulatory and reference information, lists related documents located throughout the manual, and provides the document version number.

Procedures - procedures provide step-by-step guidelines for specific actions, treatments, or processes.

- **Purpose of the Procedure** - a summary statement that indicates the general purpose of the procedure.
- **Clinical Tier** - establishes the complexity of the procedure and the level of skill and training associated with the procedure. (Note: Facilities should use this as a guideline only and always defer to

the state licensing requirements and practice standards for each discipline.) Clinical tiers for procedures consist of the following parameters:

- **Level I:** Consists of procedures that represent basic levels of care in the facility. These procedures may be performed by all trained and oriented clinical staff (licensed or unlicensed) and in some cases non-clinical staff (e.g., housekeeping).
- **Level II:** Represents procedures that require additional skill, experience, or special training for non-licensed staff to perform. In some cases, procedures may only be performed under the supervision of licensed staff.
- **Level III:** Represents specialized or complex procedures that should be performed by licensed and trained staff (for details, consult state licensing and practice guidelines).

Finding Related Information

- **Related Documents** - listed (where applicable) in the References box. Where possible, like topics are grouped in the same chapter, however, in some cases related documents may be located in other chapters (or appendices of chapters) in the manual. We recommend using the cumulative index to search for the location of related documents, or using the hyperlinks and search function in the Adobe Acrobat™ (pdf) version of the manual on the flash drive.
- **Chapter Appendices** - contain documentation tools, references, and forms that compliment the policies and procedures within the chapter.

INFECTION CONTROL

Policy and Procedure Manual

Update Letters

Item # H50045

Infection Control Policy and Procedure Manual

UPDATE: 2nd Period 2020

Product #: H50045

WHAT INFORMATION DOES THIS UPDATE CONTAIN?

This manual has been updated to reflect the following:

- 2020** Centers for Medicare and Medicaid Services (CMS). Interim Final Rule Updating Requirements for Notification of Confirmed and Suspected COVID-19 Cases among Residents and Staff in Nursing Homes. QSO-20-29-NH. May 6, 2020.
- 2020** Centers for Disease Control and Prevention. Infection Prevention and Control Assessment Tool for Nursing Homes Preparing for COVID-19. May 8, 2020.
- 2020** Centers for Disease Control and Prevention. Interim U.S. Guidance for Risk Assessment and Work Restrictions for Healthcare Personnel with Potential Exposure to COVID-19. June 18, 2020.
- 2020** Centers for Disease Control and Prevention (CDC). Preparing for COVID-19 in Nursing Homes. June 25, 2020.
- 2020** Centers for Disease Control and Prevention (CDC). Interim Clinical Guidance for Management of Patients with Confirmed Coronavirus Disease (COVID-19) Clinical Care Guidance. June 30, 2020.
- 2020** Centers for Disease Control and Prevention (CDC). Criteria for Return To Work for Healthcare Personnel with SARS-CoV-2 Infection (Interim Guidance). July 17, 2020.
- 2020** Centers for Disease Control and Prevention (CDC). Interim SARS-CoV-2 Testing Guidelines for Nursing Home Residents and Healthcare Personnel. July 21, 2020.
- 2020** Centers for Medicare and Medicaid Services (CMS). Interim Final Rule (IFC), CMS-3401-IFC, Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency related to Long-Term Care (LTC) Facility Testing Requirements and Revised COVID-19 Focused Survey Tool (QSO-20-38-NH).

IMPORTANT – PLEASE READ

This update is provided **FREE** as part of your *Subscription Service*. There is **no additional charge** for this update. If the name of the person on the shipping label is no longer at your facility, please contact our customer service department and inform them of the name of the person to whom your update service should be directed. It is not necessary to return this update to us. If you need information about your Subscription Service, please contact our customer service department at 800-438-8884.

See Filing Instructions

Tips for Filing Updates...

- File this update as soon as possible to prevent loss of important information.
- Remove all pages that are **replaced** by this update and retain all removed information indefinitely. (See *Archiving Removed Pages*.)
- File updates in the order in which you receive them.
- Do not file updates out of sequential order.

Need assistance with this update or have questions about our subscription services?

List of Revisions – 2nd Period 2020

The following documents have been created/revised/deleted based on changes to regulatory or clinical guidelines. The content changes in these documents should be reviewed to determine their impact on facility staff and operations, and an appropriate date of adoption. Documents that are included in this update but do not appear on this list have minor revisions such as a revised page number or small typographical changes.

Document Type	Status	Title	Chapter	Page No.	Date Reviewed	Initials
Policy	New	Coronavirus Disease (COVID-19) – Education and Training	Administrative Policies	25		
Policy	New	Coronavirus Disease (COVID-19) – Managing Supplies and Resources	Administrative Policies	27

**After filing this update, place this Update Letter and Filing Instructions
AFTER tab and title page entitled “Update Letters”**

Dear Heaton Resources Customer:

Since late February 2020, we have monitored the public health and federal guidelines pertaining to COVID-19 preparedness and response in Long-Term Care facilities. The documents in this update are current as of the publication date, which is September 3, 2020. However, the COVID-19 pandemic is an evolving situation and we urge you to review the enclosed policies and make changes as necessary. In addition, State and local public health resources should inform your facility's specific mitigation plans and phases of reopening.

The COVID-19 related policies and procedures are organized in the Infection Control Policy and Procedure Manual as follows:

Policy/Procedure Title	Chapter
Coronavirus Disease (COVID-19) – Education and Training	Administrative Policies
Coronavirus Disease (COVID-19) – Managing Supplies and Resources	Administrative Policies
Coronavirus Disease (COVID-19) – Overview of Prevention and Control Strategies	Administrative Policies
Coronavirus Disease (COVID-19) – Phased Reopening	Administrative Policies
Coronavirus Disease (COVID-19) – Reporting Facility Data to Residents and Families	Administrative Policies
Coronavirus Disease (COVID-19) – Telehealth and Telemedicine	Administrative Policies
Coronavirus Disease (COVID-19) – Emergency Management	Bioterrorism and Disaster Preparedness
Coronavirus Disease (COVID-19) – Surge Capacity Staffing	Bioterrorism and Disaster Preparedness
Coronavirus Disease (COVID-19) – Testing Residents	Clinical Policies and Procedures
Coronavirus Disease (COVID-19) – Identification and Management of Ill Residents	Clinical Policies and Procedures
Coronavirus Disease (COVID-19) – Specimen Collection, Reporting and Documentation for COVID-19 Testing	Clinical Policies and Procedures
Coronavirus Disease (COVID-19) – Occupational Health	Employee Health
Coronavirus Disease (COVID-19) – Testing and Return to Work Criteria for Healthcare Personnel	Employee Health
Coronavirus Disease (COVID-19) – Infection Prevention and Control Measures	General Infection Control Practices
Coronavirus Disease (COVID-19) – Visitors	General Infection Control Practices
Personal Protective Equipment – Contingency and Crisis Use of Eye Protection (COVID-19 Outbreak)	General Infection Control Practices
Personal Protective Equipment – Contingency and Crisis Use of Facemasks (COVID-19 Outbreak)	General Infection Control Practices
Personal Protective Equipment – Contingency and Crisis Use of Isolation Gowns (COVID-19 Outbreak)	General Infection Control Practices

Personal Protective Equipment – Contingency and Crisis Use of N-95 Respirators (COVID-19 Outbreak)	General Infection Control Practices
Coronavirus Disease (COVID-19) – Reporting Facility Data to the Centers for Disease Control and Prevention	Surveillance

Each document contains hyperlinks to the guidelines that informed that policy, and related policies and tools included in the manual. Finally, the **COVID-19 Preparedness and Response Checklist** that accompanies this letter is a cross reference to guidelines and policies by topic. Our goal is to provide you with the most current information to date along with a way to monitor changing recommendations.

Thank you for your dedication to keeping residents and staff safe during this challenging time.

Sincerely,

Stacy Yale, RN, BSN
 Managing Editor, Heaton Resources
 September 2020

INFECTION CONTROL

Policy and Procedure Manual

Introduction

Item # H50045

Introduction: Infection Prevention and Control in Long-Term Care

Infections are among the most frequent and significant problems facing nursing facility residents today. They account for a large proportion of morbidity and mortality, and for many hospital transfers. Most infections involve the urinary tract, respiratory tract, gastrointestinal tract, or skin and soft tissues.

The Centers for Medicare and Medicaid Services' Conditions of Participation requires an infection prevention and control program in certified nursing facilities. In addition, state and local health departments typically require certain infection prevention and control systems to be in place to control outbreaks and report potentially contagious infections and diseases.

Infection prevention and control is a facility-wide effort involving all disciplines and individuals. It should also be considered an integral part of a facility's overall quality assurance and performance improvement program, and should have the active support of the administration, residents, families, clinical and support staff, and attending physicians. Because of changing requirements and circumstances, the infection prevention and control program should be considered a dynamic, not static, process. Its usefulness and effectiveness should be reevaluated periodically.

The Purposes of Infection Prevention and Control Programs (IPCP)

The major purposes of infection prevention and control program in the nursing facility are to minimize the effects of infections on residents and employees, and to educate the staff about methods to prevent, control and mitigate the spread of transmissible diseases. A successful infection prevention and control program requires an underlying commitment and facility-wide participation. It should not just be seen as a way to meet paperwork requirements but as a way to analyze and use information effectively to improve care and prevent problems.

Infection prevention and control programs should fulfill essential functions and also be flexible enough to fit a facility's specific environment, pertinent to residents' potential and actual problems, and able to accommodate new issues or requirements. The program's benefits should justify its costs in resources, staff time, and inconvenience. Each component of the program should be reasonable (i.e., supported by information in the medical literature wherever possible), meaningful, and coherent.

In addition to preventing and controlling the spread of communicable disease, programs must also be designed to capture, track and make sense of infection data so that process improvements can be made where necessary. Surveillance tools and protocols for gathering and submitting data, like those available through the National Health Safety Network are among some of the resources available to long-term care facilities.

Elements of the IPCP

While infection prevention and control programs vary slightly with regard to systems and tools, the following elements should be included:

- Coordination and Oversight
- Policies and Procedures
- Surveillance and Data Analysis
- Antibiotic Stewardship
- Prevention of Healthcare Associated Infections
- Outbreak Management
- Influenza and Pneumococcal Immunization
- Employee Health and Safety

Using this Manual to Develop the IPCP

Details on the components of an infection prevention and control program are found throughout this manual. For example, the program highlights and roles and responsibilities are described in the *Administrative Policies* chapter, surveillance tools are provided in the *Surveillance* chapter (with electronic forms on the flash drive), and specific infection prevention and control measures are outlined in the *General Infection Control* chapter, and the Guidelines and recommendations lists by topic standards of practice established by industry experts.

We hope this manual is used to help standardize infection prevention and control practices in long-term care and support the efforts to maintain a safe, sanitary and comfortable environment for residents and help prevent the development and transmission of communicable disease.

Admission of Residents with Communicable Disease

Policy Statement

Admission to this facility depends upon our ability to provide appropriate medical and nursing care. This includes situations where a resident has a known communicable disease or infection.

Policy Interpretation and Implementation

1. Prior to or upon admission, the Infection Preventionist, or designee, will assess the following infection risks for each admission:
 - a. *M. tuberculosis* (TB) infection, by purified protein derivative (PPD) test or recent chest x-ray;
 - b. Immunization status, by history;
 - c. During the period of October 1 through March 31, current status of influenza immunization, by history;
 - d. Evidence of continuing active infection or clinically significant colonization by multidrug-resistant organism by history and review of hospital discharge summaries;
 - e. Clinical evidence of a current infection; and
 - f. Evidence of pediculosis or scabies, by direct observation.
2. The Infection Preventionist or designee will request an Infection Control Transfer Form from the sending facility prior to the resident's transfer. This form should provide information on the resident's infection status, isolation precautions, signs and symptoms of infection(s), antibiotic usage, and influenza/pneumococcal immunization status.
3. The Infection Preventionist or designee will maintain a log of residents with current evidence of infection or colonization due to multidrug-resistant organisms, including methicillin-resistant *staphylococcus aureus*, vancomycin-resistant *enterococci* and *Clostridium difficile* (MRSA/VRE/*C. difficile*). When considering room assignments the log will be checked to prevent placing a resident with MDRO infection or colonization with a resident at risk of infection.
4. A resident who is transferred to an acute care facility with infection due to a multidrug-resistant organism should be reviewed prior to return for details of the status of any such infection and clarification of any possible infection control risks that the situation presents.
5. A resident admitted with colonization or infection due to a multidrug-resistant organism may be placed in a private room, or cohorted with another resident of the same sex who is colonized with a similar organism. A colonized resident also may be cohorted or placed with a non-colonized resident who is not immunocompromised, if no other bed is available.
6. Our facility will not deny admission to someone just because they have infection with the human immunodeficiency virus (HIV), or are HIV antibody positive.
7. Placement of individuals with other potentially infectious conditions such as herpes zoster or scabies will be made based on appropriate clinical evaluation by the Attending Physician and/or Medical Director of the status of the infection and risk for its dissemination.
8. The facility will not admit individuals with active tuberculosis or acid-fast bacillus (AFB) positive sputum until they have been treated elsewhere for long enough to no longer be considered contagious.

continues on next page

9. Persons found upon admission evaluation to have a positive PPD reaction or a suspicious chest X-ray will be evaluated promptly to determine whether they might have active TB, in which case they will either not be admitted, will be moved to a section of the facility where appropriate isolation can occur (if available), or will be discharged promptly to a facility where they can be isolated or treated appropriately for active TB.
10. Admissions requiring infection control restrictions will be placed on appropriate Isolation Precautions based on this facility's policies governing Isolation Precautions.

Biohazard Labeling

Policy Statement

Materials contaminated with blood or body fluids shall be labeled and discarded appropriately.

Policy Interpretation and Implementation

1. All wastes containing blood or body fluids will be identified by a red bag, “Biohazard” tag, label, or sign.
2. The primary purposes of identifying and labeling biohazardous waste are to warn about possible occupational exposure and to prevent accidental injury or illness to hazardous or potentially hazardous materials.
3. Biohazard bags, labels, tags, or signs will remain in place until the material is removed or disposed of according to approved procedures.
4. A second uncontaminated outer bag must be used if the outside of a bag is contaminated with body fluids (e.g., if blood splashes onto the container, if the outside of the container is handled by an employee wearing contaminated gloves, etc.) to prevent exposure.
5. Biohazard labeling tags used by our facility shall contain the following information:
 - a. The word “Biohazard” or the biological hazard symbol (The word “Biohazard” will be readable at a minimum distance of five feet (1.52m) or greater, as warranted by the hazard.); and
 - b. The specific hazardous condition or the instructions to be communicated to the employee (presented in writing, graphically, or both).
6. All staff will be informed in writing about the meaning of biohazard labels and related precautions.
7. Refrigerators or freezers containing blood or other potentially infectious materials, or other equipment contaminated by such materials, must contain an appropriate warning label or sign.
8. Anyone who willfully removes, tampers with, defaces, or otherwise alters a hazard warning sign, label, or tag will be subjected to disciplinary action, which could include termination of employment.
9. Any container used to store, transport, or ship blood or other potentially infectious materials must be properly labeled with a biohazard warning before it is transported within, or removed from, the premises.
10. Regulated waste that has been decontaminated does not need to be labeled or color-coded.
11. All inquiries concerning the identification of biohazards should be referred to the Infection Preventionist (or designee).

Employee Training on Infection Control

Policy Statement

The facility shall provide staff with appropriate information and instruction about infection control through various means, including initial orientation and ongoing training programs.

Personnel are required to attend and participate in task and job-specific infection control training programs.

Policy Interpretation and Implementation

1. All staff and personnel will complete orientation and training on preventing the transmission of healthcare associated infections.
2. The Infection Preventionist and Administrator will identify those disciplines or individuals who need task- or job-specific infection control training beyond that provided by initial orientation or policies and procedures.
3. Infection control training topics will include at least:
 - a. Standard Precautions, including hand hygiene;
 - b. Transmission-Based Precautions (airborne, droplet, contact);
 - c. OSHA's bloodborne pathogens standard and needlestick prevention;
 - d. Use of personal protective measures;
 - e. Prevention, transmission and symptoms of communicable diseases (tuberculosis, influenza, etc.);
 - f. Prevention, transmission, monitoring and treatment of multidrug-resistant organisms (MDROs);
 - g. Information about the use of vaccines as an adjunct to infection control measures (i.e., influenza vaccination for staff members);
 - h. Sanitation procedures; and
 - i. Information on any newly developed or revised infection control policies and procedures.
4. Infection control training programs will include:
 - a. Material that applies the principles of teaching the adult learner;
 - b. Content and language that is appropriate to the target audience; and
 - c. Return demonstration competency checklists, where appropriate.
5. The Infection Preventionist (or designee) will maintain appropriate records of topics, content, and attendance at any training sessions, as well as copies of any handouts, pre/post tests, competency demonstration checklists, etc., and any other information relative to recordkeeping and documentation requirements.

continues on next page

6. Contracted and agency personnel are required to participate in facility-specific infection control orientation and training before having direct contact with residents.

Facility Assessment

Policy Statement

A facility assessment is conducted annually to determine and update our capacity to meet the needs of and competently care for our residents during day-to-day operations. Determining our capacity to meet the needs of and care for our residents during emergencies is included in this assessment.

Policy Interpretation and Implementation

1. Once a year, and as needed, a designated team conducts a facility-wide assessment to ensure that the resources are available to meet the specific needs of our residents.
2. The team responsible for conducting, reviewing and updating the facility assessment includes the following:
 - a. The Administrator;
 - b. A representative of the governing body;
 - c. The medical director;
 - d. The director of nursing services;
 - e. The infection preventionist; and
 - f. The director (or designee) from the following departments:
 - (1) Environmental services;
 - (2) Physical operations;
 - (3) Dietary services;
 - (4) Social services;
 - (5) Activity services; and
 - (6) Rehabilitative services.
3. The facility assessment includes a detailed review of the resident population. This part of the assessment includes:
 - a. Resident census data from the previous 12 months;
 - b. Resident capacity of the facility and its occupancy rate for the past 12 months;
 - c. Factors that affect the overall acuity of the residents, such as the number and percentage of residents with:
 - (1) Need for assistance with ADLs;
 - (2) Mobility impairments;
 - (3) Incontinence (bowel or bladder);
 - (4) Cognitive or behavioral impairments; and
 - (5) Conditions or diseases that require specialized care (e.g., dialysis, ventilators, wound care).
 - d. Religious, ethnic or cultural factors that affect the delivery of care and services, such as:
 - (1) Food and nutrition requirements;
 - (2) Decision making and end of life care;
 - (3) Activities; and
 - (4) Language translation requirements.

continues on next page

4. The facility assessment also includes a detailed review of the resources available to meet the needs of the resident population. This part of the assessment includes:
 - a. The physical characteristics of the facility including:
 - (1) Buildings and their intended or potential purpose;
 - (2) Number of beds/resident capacity; and
 - (3) Vehicles.
 - b. Equipment and supplies (medical and non-medical);
 - c. The contracts or agreements with third parties to provide services, equipment and supplies to the facility during normal operations and in the event of an emergency;
 - d. Services currently provided, including:
 - (1) Skilled or specialized care (e.g., memory care);
 - (2) Physical or occupational therapies;
 - (3) Rehabilitative or restorative; and
 - (4) Pharmacy.
 - e. All personnel, including:
 - (1) Directors;
 - (2) Managers;
 - (3) Regular employees (full and part time);
 - (4) Contracted staff (full and part time); and
 - (5) Volunteers.
 - f. A breakdown of the training, licensure, education, skill level and measures of competency for all personnel;
 - g. The current status of health information technology, including:
 - (1) Electronic health records;
 - (2) Electronic exchange of information with other organizations; and
 - (3) Personnel access to devices and equipment, internet and other tools.
5. Once the reviews of the resident needs and the facility resources are conducted, the facility assessment consists of systematically evaluating how well aligned these are. Each department provides input on current or potential gaps in care or services due to possible misalignment or lack of appropriate resources.
6. The facility assessment is intended to help our facility plan for and respond to changes in the needs of our resident population and helps to determine budget, staffing, training, equipment and supplies needed. It is separate from the Quality Assurance and Performance Improvement evaluation.
7. Our facility's ability to meet the requirements of our residents during emergency situations is a component of the facility assessment. This assessment is based on the information acquired during the assessment of operations under normal conditions, and the facility's Hazards Vulnerability Assessment conducted as part of our emergency preparedness plan.
8. Our facility's ability to address the needs of residents during the emergence of infectious disease events or outbreaks is a component of the facility assessment. This assessment is based on information acquired during a facility-based infection control risk assessment, as well as a community-based risk assessment.
9. The facility assessment is reviewed and updated annually, and as needed. Facility or resident changes or modifications that may prompt a reassessment sooner include:
 - a. A decision to provide specialized care or services that had not been previously available to residents;
 - b. A change to the physical environment that would affect the care and services provided to our residents;

continues on next page

- c. A significant change in the resident census and/or overall acuity of our residents; or
 - d. A change in cultural, ethnic or religious factors that may affect the provision of care or service.
10. The QAPI Committee is responsible for reviewing facility and resident information quarterly to determine if a facility reassessment is warranted.
11. Residents, representatives and family members may be asked to participate in the review of the care and services provided to meet the needs of our residents.

Facility Policies and Procedures – Annual Reviews

Policy Statement

Policies and procedures are reviewed as needed and at least annually. Revisions to policies and procedures are made as necessary to reflect current facility operations, regulatory requirements and accepted standards of care.

Policy Interpretation and Implementation

1. The Quality Assurance and Assessment Committee reviews policies and procedures and makes revisions as necessary:
 - a. When changes in regulations or professional standards of practice necessitate revisions;
 - b. When additional procedures are needed according to the facility assessment and/or individual resident needs; and
 - c. At least annually.
2. Personnel will be informed of changes in our policies and procedures.
3. Administrators, the medical director and department leaders are sent draft revisions with an opportunity to review and respond to proposed changes.
4. Final revisions are posted for staff with a summary of changes and effective date.
5. Staff are required to acknowledge receipt and review of the posted changes prior to the effective date.
6. Appropriate in-service training is conducted when changes in resident care policies and procedures are introduced.
7. Inquiries relative to policy and procedure reviews should be referred to the Administrator or his/her designee.

Infection Prevention and Control Committee

Objectives

Our facility has an Infection Prevention and Control Program. The objectives may be attained as a component of the Quality Assurance and Performance Improvement (QAPI) committee or by having a separate Infection Prevention and Control Committee (IPCC).

1. The objectives of the IPCC are to:
 - a. Assist in development and implementation of written policies and procedures for the prevention and control of infections among residents and personnel;
 - b. Provide facility guidelines for a safe and sanitary environment;
 - c. Review, establish, and monitor environmental infection prevention and control practices in accordance with CDC/HICPAC/OSHA guidelines and local or state requirements;
 - d. Develop isolation precaution protocols for when control of an infectious or communicable disease or disease risk is required in accordance with current CDC guidelines and recommendations;
 - e. Identify situations that may result in employees' exposure to blood, body fluids, or other potentially infectious materials;
 - f. Help develop an effective employee health program;
 - g. Develop infection prevention and control orientation and in-service training programs for all levels of facility personnel;
 - h. Develop policies and procedures for the surveillance and monitoring of infection control practices; and
 - i. Review and help monitor the medical waste management plan.

Duties of the Committee

1. With the input of direct care staff, practitioners, the Medical Director, and the Director of Nursing Services, assist in the development and implementation of written policies and procedures for the prevention and control of infectious or communicable diseases within the facility.
2. Assist in developing the content and scope of the employee health program and help disseminate current information on health practices to all employees.
3. Assist in developing and implementing the written policies and procedures to identify and address infections within the facility.
4. Establish and monitor the facility Antibiotic Stewardship Program.
5. Notify appropriate government agencies of reportable contagious or infectious disease.
6. Assist in reviewing food handling practices, laundry practices, waste disposal and pest control.
7. Provide guidelines for review of pending construction, renovation, remediation, repair and demolition projects and coordinate effective environmental infection control and engineering standards in accordance with CDC/HICPAC/OSHA recommendations and state or local requirements.
8. Assist in monitoring and assessing facility-wide environmental infection prevention and control practices.
9. Assist in monitoring the infection-prevention impact of ventilation and water systems within the facility.

continues on next page

10. Assist administration in evaluating job classifications and facility procedures to determine the risk of exposure potential to blood, body fluids, or other potentially infectious material.
11. Assist in developing written policies and procedures for the care of residents who have contagious, infectious or communicable diseases.
12. Provide guidelines for, and help monitor the health status of all employees, ensuring that all personnel receive (as necessary) appropriate skin tests, chest x-rays, physicals, etc., prior to, and during employment as outlined in our personnel policies and in accordance with federal and state guidelines.
13. Collaborate with Environmental Services Director to establish policies and procedures that are consistent with environmental infection prevention and control best practices.
14. Meet at least monthly, or more often if deemed necessary.
15. Maintain written accounts of meetings conducted and action taken by the committee (minutes of meeting).
16. Ensure infection prevention and control orientation and in-service training programs are provided to employees on a timely basis.
17. Review, and revise if necessary, isolation precaution techniques and procedures to help ensure that all personnel, residents, and visitors follow established procedures/precautions.
18. Review written infection prevention and control policies, techniques, procedures and documentation tools and provide/ recommend necessary revisions or updates.
19. Provide the QAPI Committee with a copy of the minutes of all Infection Prevention and Control Committee meetings held.
20. Help assure that sufficient inventory of personal protective equipment (i.e., gowns, gloves, masks, etc.), is on hand and readily accessible.
21. Maintain access to current CDC, OSHA and State/Federal regulations, guidelines and recommendations relative to infection control issues in healthcare facilities.
22. Other functions that may become necessary to enable the prevention and control of communicable diseases.

Composition of the Committee

1. If the Infection Control Committee is a separate entity, it will consist of the following individuals:
 - a. Administrator (or designee);
 - b. Medical Director;
 - c. Director of Nursing Services;
 - d. Infection Preventionist;
 - e. Dietitian/Food Services Director;
 - f. Environmental Services Director/Supervisor;
 - g. Maintenance Director/Supervisor;
 - h. Laundry Director/Supervisor; and
 - i. Others as appropriate.
2. The Administrator will appoint committee members.
3. The administration shall provide all necessary logistical support for the committee or the committee's functions if assumed by the QAPI committee.

continues on next page

Risk Exposure Categories

1. The Infection Prevention and Control Committee shall advise the Administrator about working conditions and specific tasks that employees are expected to encounter that may pose an infection risk, including:
 - a. Evaluating the workplace to:
 - (1) Establish categories of risk classifications for all routine and reasonably anticipated job-related tasks;
 - (2) Identify all workers whose employment requires performance of tasks that may involve exposure to blood/body fluids; and
 - (3) Determine for identified tasks those body fluids to which workers most probably will be exposed and the potential extent and route of exposure.
 - b. Developing, or supervising the development of, standard operating procedures (SOPs) for tasks involving exposure to blood/body fluids. These SOPs include mandatory work practices and protective equipment for identified tasks.
 - c. Monitoring the effectiveness of work practices and protective equipment. This includes:
 - (1) Surveillance of the workplace to ensure that required work practices are observed and that protective clothing and equipment are provided and properly used; and
 - (2) Investigating known or suspected exposures to blood/body fluids to establish the condition surrounding the exposure and to improve training, work practices, or protective equipment to prevent a recurrence.

Training and Education

The Infection Control Committee shall oversee training programs for all employees who may have the potential for exposure to blood, or to body fluids containing visible blood, during the course of their workday. Instructions will focus on identifying and using procedures related to the prevention of bloodborne illnesses, including but are not limited to:

1. Disease transmission and prevention;
2. The modes of transmission of hepatitis B and C (HBV/HCV) and AIDS (HIV) viruses;
3. Standard and Transmission-based Precautions;
4. How to recognize and determine tasks that involve exposure to blood/body fluids;
5. Types of personal protective equipment (i.e., gowns, gloves, masks, etc.) that are necessary when performing tasks that may involve exposure to blood/body fluids;
6. How to select appropriate barrier equipment;
7. Appropriate actions to take if unplanned potential exposure to blood occurs, or is anticipated;
8. Procedures to follow when personal protective equipment is used;
9. How personal protective equipment maintained in the facility is to be used, decontaminated, and disposed of;
10. Limitations of personal protective equipment (e.g., needlesticks will occur through gloves);
11. Corrective actions and cleaning procedures for spills of blood and body fluids;

continues on next page

12. Proper action to follow should exposure to blood or body fluids occur (i.e., emergency procedures, reporting measures, follow-up monitoring, medical treatment, counseling, etc.); and
13. Other state specified education/training and/or those listed in training/education policy.

Recordkeeping

The Infection Prevention and Control Committee will advise administration and management about ensuring that records are maintained to document the following:

1. Infection Prevention and Control in-service training records, indicating the dates of training sessions, the content of those training sessions along with the names of all persons conducting the training, and the names of all those receiving training;
2. Findings made during routine surveillance for compliance with work practices and use of protective clothing or equipment and actions taken in case of noncompliance;
3. Findings made during surveillance of antibiotic usage patterns; and
4. Circumstances related to incidents of exposure to body fluids or tissue, and a description of any corrective measures taken to prevent a recurrence of other similar exposures.

Delegation of Authority

1. The Infection Preventionist will oversee the Infection Prevention and Control program and report to the Infection Prevention and Control Committee. The Administrator, will be responsible for oversight of the Infection Prevention and Control Program.

Meetings

1. The Infection Prevention and Control Committee shall meet whenever necessary, or its functions will be covered by the QAPI committee, and at least monthly.
2. During outbreak situations, emergency meetings may be called.
3. Over time, committee meetings will cover at least:
 - a. Directives from the health department (state and local);
 - b. Surveillance reports of infections or infectious diseases;
 - c. Surveillance reports of antibiotic usage and antibiotic susceptibility patterns;
 - d. Policy review and revisions;
 - e. Current infection control/prevention concerns;
 - f. Environmental infection control concerns as they relate to construction, renovation, remediation, repair, and demolition;
 - g. Changes in regulations, guidelines and recommendations relative to infection control issues in healthcare facilities;
 - h. Exposure to blood, body fluids, secretions, or excretions;
 - i. Antibiotic utilization patterns and emergence of antibiotic-resistant organisms;
 - j. Measures to prevent infections or exposures in the future; and
 - k. In-service training programs.

Infection Prevention and Control Program

Policy Statement

An infection prevention and control program (IPCP) is established and maintained to provide a safe, sanitary and comfortable environment and to help prevent the development and transmission of communicable diseases and infections.

Policy Interpretation and Implementation

1. The infection prevention and control program is developed to address the facility-specific infection control needs and requirements identified in the facility assessment and the infection control risk assessment. The program is reviewed annually and updated as necessary.
2. The program is based on accepted national infection prevention and control standards.
3. The infection prevention and control program is a facility-wide effort involving all disciplines and individuals and is an integral part of the quality assurance and performance improvement program.
4. The elements of the infection prevention and control program consist of coordination/oversight, policies/procedures, surveillance, data analysis, antibiotic stewardship, outbreak management, prevention of infection, and employee health and safety.
5. **Coordination and Oversight**
 - a. The infection prevention and control program is coordinated and overseen by an infection prevention specialist (infection preventionist).
 - b. The qualifications and job responsibilities of the Infection Preventionist are outlined in the *Infection Preventionist Job Description*.
 - c. The infection prevention and control committee is responsible for reviewing and providing feedback on the overall program. Surveillance data and reporting information is used to inform the committee of potential issues and trends. Some examples of committee reviews may include:
 - (1) documented IPCP incidents and corrective actions taken;
 - (2) whether physician management of infections is optimal;
 - (3) whether antibiotic usage patterns need to be changed because of the development of resistant strains;
 - (4) whether information about culture results or antibiotic resistance is transmitted accurately and in a timely fashion; and
 - (5) whether there is appropriate follow-up of acute infections.
 - d. The committee meets regularly, at least quarterly, and consists of team members from across disciplines, including the Medical Director.
6. **Policies and Procedures**
 - a. Policies and procedures are utilized as the standards of the infection prevention and control program.
 - b. Policies and procedures reflect the current infection prevention and control standards of practice.
 - c. The infection prevention and control committee, Medical Director, Director of Nursing Services, and other key clinical and administrative staff review the infection control policies at least annually. The review will include:
 - (1) Updating or supplementing policies and procedures as needed;

continues on next page

- (2) Assessment of staff compliance with existing policies and regulations; and
- (3) Any trends or significant problems since the previous review.

7. Surveillance

- a. Process surveillance (adherence to infection prevention and control practices) and outcome surveillance (incidence and prevalence of healthcare acquired infections) are used as measures of the IPCP effectiveness.
- b. Surveillance tools are used for recognizing the occurrence of infections, recording their number and frequency, detecting outbreaks and epidemics, monitoring employee infection, monitoring adherence to infection prevention and control practices, and detecting unusual pathogens with infection control implications.
- c. The information obtained from infection control surveillance activities is compared with that from other facilities and with acknowledged standards (for example, acceptable rates of new infections), and used to assess the effectiveness of established infection prevention and control practices.
- d. Standard criteria are used to distinguish community-acquired from facility-acquired infections.

8. Antibiotic Stewardship

- a. Culture reports, sensitivity data, and antibiotic usage reviews are included in surveillance activities.
- b. Medical criteria and standardized definitions of infections are used to help recognize and manage infections.
- c. Antibiotic usage is evaluated and practitioners are provided feedback on reviews.

9. Data Analysis

- a. Data gathered during surveillance is used to oversee infections and spot trends.
- b. One method of data analysis is by manually calculating number of infections per 1000 resident days as follows:
 - (1) The infection preventionist collects data from the nursing units, categorizes each infection by body site (these can also be categorized by organism or according to whether they are facility- or community-acquired), and records the absolute number of infections;
 - (2) To adjust for differences in bed capacity or occupancy on each unit, and to provide a uniform basis for comparison, infection rates can be calculated as the number of infections per 1000 patient days (a patient day refers to one patient in one bed for one day), both for each unit and for the entire facility;
 - (3) Monthly rates can then be plotted graphically or otherwise compared side-by-side to allow for trend comparison; and
 - (4) Finally, calculating means and standard deviations (using computer software) allows for screening of potentially clinically significant rates of infections (greater than two standard deviations above the mean).
- c. The Medical Director will help design data collection instruments, such as infection reports and antibiotic usage surveillance forms, used by the Infection Preventionist.

10. Outbreak Management

- a. Outbreak management is a process that consists of:
 - (1) determining the presence of an outbreak;
 - (2) managing the affected residents;
 - (3) preventing the spread to other residents;
 - (4) documenting information about the outbreak;
 - (5) reporting the information to appropriate public health authorities;

continues on next page

- (6) educating the staff and the public;
 - (7) monitoring for recurrences;
 - (8) reviewing the care after the outbreak has subsided; and
 - (9) recommending new or revised policies to handle similar events in the future.
- b. Specific criteria will be used to help differentiate sporadic cases from true outbreaks or epidemics.
 - c. The medical staff will help the facility comply with pertinent state and local regulations concerning the reporting and management of those with reportable communicable diseases.

11. Prevention of Infection

- a. Important facets of infection prevention include:
 - (1) identifying possible infections or potential complications of existing infections;
 - (2) instituting measures to avoid complications or dissemination;
 - (3) educating staff and ensuring that they adhere to proper techniques and procedures;
 - (4) communicating the importance of standard precautions and cough etiquette to visitors and family members;
 - (5) enhancing screening for possible significant pathogens;
 - (6) immunizing residents and staff to try to prevent illness;
 - (7) implementing appropriate isolation precautions when necessary; and
 - (8) following established general and disease-specific guidelines such as those of the Centers for Disease Control (CDC).

12. Immunization

- a. Immunization is a form of primary prevention.
- b. Widespread use of influenza vaccine in the nursing facility is strongly encouraged.
- c. Policies and procedures for immunization include the following:
 - (1) the process for administering the vaccines;
 - (2) who should be vaccinated;
 - (3) contraindications to vaccination;
 - (4) potential facility liability and release from liability;
 - (5) obtaining direct and proxy consent, and how often;
 - (6) monitoring for side effects of vaccination; and
 - (7) availability of the vaccine, and who pays for it.

13. Monitoring Employee Health and Safety

- a. The facility has established policies and procedures regarding infection control among employees, contractors, vendors, visitors, and volunteers, including:
 - (1) situations when these individuals should report their infections or avoid the facility (for example, draining skin wounds, active respiratory infections with considerable coughing and sneezing, or frequent diarrheal stools);
 - (2) pre-employment screening for infections required by law or regulation (such as TB);
 - (3) any limitations (such as visiting restrictions) when there are infectious out breaks in the facility; and
 - (4) precautions to prevent these individuals from contracting infections such as hepatitis and the HIV virus from residents or others.
- b. Testing for medical conditions is done in compliance with other laws (such as the Americans with Disabilities Act), and regulations protecting individual confidentiality and/or prohibiting discrimination against those with certain disabilities or conditions.

continues on next page

- c. Those with potential direct exposure to blood or body fluids are trained in and required to use appropriate precautions and personal protective equipment.
- (1) The facility provides personal protective equipment, checks for its proper use, and provides appropriate means for needle disposal.
 - (2) A protocol is in place for managing those who stick themselves with a needle that was possibly or actually in contact with blood or body fluids.

Infection Preventionist

Policy Statement

The Infection Preventionist is responsible for coordinating the implementation and updating of our established infection prevention and control policies and practices.

Policy Interpretation and Implementation

1. The Infection Preventionist (or designee) shall coordinate the development and monitoring of our facility's established infection prevention and control policies and practices.
2. The Infection Preventionist shall report information related to compliance with our facility's established infection prevention and control policies and practices to the Administrator and Quality Assurance and Performance Improvement Committee.
3. The Infection Preventionist shall keep abreast of changes in infection prevention and control guidelines and regulations to ensure our facility's protocols remain current and aid in preventing and controlling the spread of infections.
4. Upon approval from the Administrator, the Infection Preventionist may designate other employees to assist him/her in the performance of these duties.
5. The Infection Preventionist will collect, analyze and provide infection and antibiotic usage data and trends to nursing staff and health care practitioners; consult on infection risk assessment and prevention control strategies; provide education and training; and implement evidenced-based infection prevention and control practices.

Monitoring Compliance with Infection Control

Policy Statement

Routine monitoring and surveillance of the workplace are conducted to determine compliance with infection prevention and control policies and practices.

Policy Interpretation and Implementation

1. The infection preventionist or designee monitors the compliance and effectiveness of our infection prevention and control policies and practices.
2. Monitoring includes regular surveillance of adherence to hand hygiene practices and availability of hand hygiene supplies, and the availability of personal protective equipment and its appropriate use.
3. The infection preventionist conducts compliance surveillance at least quarterly or at a frequency determined by the Infection Prevention and Control Committee (IPCC) or the Quality Assurance and Performance Improvement (QAPI) committee.
4. Compliance surveillance is unannounced.
5. Compliance surveillance includes the use of standardized assessment and observation tools.
6. The infection preventionist and/or the IPC committee provides reports to the QAPI committee that reflect:
 - a. Staff adherence to infection prevention processes (hand hygiene, use of personal protective equipment, etc.);
 - b. Incidents of employee exposure to blood/body fluids (including a description of the precipitating events and outcomes);
 - c. Adherence to the facility's antibiotic stewardship program; and
 - d. All infection surveillance data.
7. The QAPI committee reviews and acts upon, as necessary, surveillance and monitoring records.
8. Gaps identified in infection prevention and control processes are addressed promptly.

Policies and Practices – Infection Control

Policy Statement

This facility's infection control policies and practices are intended to facilitate maintaining a safe, sanitary and comfortable environment and to help prevent and manage transmission of diseases and infections.

Policy Interpretation and Implementation

1. This facility's infection control policies and practices apply equally to all personnel, consultants, contractors, residents, visitors, volunteer workers, and the general public alike, regardless of race, color, creed, national origin, religion, age, sex, handicap, marital or veteran status, or payor source.
2. The objectives of our infection control policies and practices are to:
 - a. Prevent, detect, investigate, and control infections in the facility;
 - b. Maintain a safe, sanitary, and comfortable environment for personnel, residents, visitors, and the general public;
 - c. Establish guidelines for implementing Isolation Precautions, including Standard and Transmission-Based Precautions;
 - d. Establish guidelines for the availability and accessibility of supplies and equipment necessary for Standard and Transmission-Based Precautions;
 - e. Maintain records of incidents and corrective actions related to infections; and
 - f. Provide guidelines for the safe cleaning and reprocessing of reusable resident-care equipment.
3. The Quality Assurance and Performance Improvement Committee, through the Infection Control Committee, shall establish, review, and revise infection control policies and practices, and help department heads and managers ensure that they are implemented and followed.
4. All personnel will be trained on our infection control policies and practices upon hire and periodically thereafter, including where and how to find and use pertinent procedures and equipment related to infection control. The depth of employee training shall be appropriate to the degree of direct resident contact and job responsibilities.
5. The Administrator or Governing Board, through the Quality Assurance and Performance Improvement and the Infection Control Committees, has adopted the infection control policies and practices. Inquiries concerning our infection control policies and facility practices should be referred to the Infection Preventionist or Director of Nursing Services.

Coronavirus Disease (COVID-19) – Education and Training

Policy Statement

Residents, visitors, family and staff are provided educational materials and updated information on COVID-19, including signs and symptoms, infection prevention and control, and testing.

Policy Interpretation and Implementation

1. The Infection Prevention and Control Committee has appointed a COVID-19 Education Coordinator who is responsible for providing information about COVID-19 to the staff, residents and families.
2. Information provided to personnel includes:
 - a. Reinforcement of standard and transmission-based precaution procedures (including hand hygiene, respiratory hygiene, and proper use and disposal of personal protective equipment);
 - b. Signs and symptoms of COVID-19 infection;
 - c. Self-monitoring and shift screening requirements;
 - d. Reporting of signs or symptoms of infection in self or residents;
 - e. Revised or updated sick leave policies;
 - f. Return to work criteria;
 - g. Management of ill residents;
 - h. Visitor policies; and
 - i. Contingency staffing plans.
3. Information provided to residents and their representatives and families, presented in a language and format that can be understood by each, includes:
 - a. What is being done to protect residents and staff from infection;
 - b. Signs and symptoms of COVID-19 infection;
 - c. How to report symptoms or concerns;
 - d. Availability of testing;
 - e. Access to information for families; and
 - f. Visitor policies.
4. New suspected or confirmed COVID-19 infections and deaths in the facility are reported to residents and their representatives and families within 24 hours, with a cumulative number reported at least weekly.
5. Educational information for personnel, residents and families on COVID-19 is found at:
 - a. [Get the Facts about Coronavirus](#) (CDC);
 - b. [Infection Control Guidance for Healthcare Professionals about COVID-19](#) (CDC); and
 - c. [Coronavirus Disease: Coping with Stress](#) (CDC).

Coronavirus Disease (COVID-19) – Managing Supplies and Resources

Policy Statement

Essential infection prevention and control supplies are systematically monitored and anticipated.

Policy Interpretation and Implementation

1. The Infection Preventionist appoints an Infection Prevention and Control Supply Coordinator who is responsible for monitoring the current supply and anticipated needs for:
 - a. Handwashing supplies (soap and paper towels);
 - b. Alcohol-based hand rub (ABHR) (containing 60%-95% alcohol);
 - c. Tissues;
 - d. Personal protective equipment (gloves, gowns, eyewear, facemasks);
 - e. Cleaning supplies (including EPA hospital-registered disinfectants effective against human coronaviruses);
 - f. Trash bins;
 - g. _____ ;
 - h. _____ ;
 - i. _____ ; and
 - j. _____ .
2. Supplies are stationed throughout the facility to facilitate access and ease of use, for example:
 - a. ABHR in all resident rooms, resident care and common areas;
 - b. Soap and paper towels at all handwashing sinks;
 - c. Tissues and trash cans in all resident rooms and common areas; and
 - d. PPE in all resident care areas and nursing stations.
3. The Infection Prevention and Control Supply Coordinator is: _____ .
4. The supply coordinator communicates the infection prevention and control supply needs to the purchasing or business office.
5. The supply coordinator is responsible for maintaining relationships with the local, regional and tribal planning groups, vendors, and/or healthcare coalitions, including:
 - a. Communicating estimated needs and current supplies;
 - b. Participating in stockpiling and resource sharing arrangements;
 - c. Developing strategies for prioritizing limited allocation of resources; and
 - d. Identifying normal and alternative channels for procuring resources.
6. Supply needs are estimated using formulas that calculate current and projected demands (for a minimum of eight weeks), including those for surge capacity.
7. Contingency and crisis capacity strategies for personal protective equipment have been established and can be reviewed in the Personal Protective Equipment Procedures.

Coronavirus Disease (COVID-19) – Overview of Prevention and Control Strategies

Policy Statement

The strategies to prevent and control the current outbreak of COVID-19 are based on existing best practices in infection control and disaster response, as well as emerging guidelines and directives specific to COVID-19.

Policy Interpretation and Implementation

1. Infection prevention and control measures are based on established Centers for Disease Control and Prevention guidelines governing all communicable diseases and those developed specifically for coronavirus disease (COVID-19).
2. Disaster Response and Continuity of Operations Planning are based on this facility's existing Emergency Preparedness and Response Plans for Infectious Disease Threats.
3. A COVID-19 Response Committee has been established to oversee the development of the COVID-19 Plan/Mitigation Strategy.
4. A COVID-19 Response Plan Coordinator provides on-site management of the COVID-19 prevention and response activities in collaboration with the COVID-19 Response Committee. The name and contact number of the coordinator is: _____.
5. The COVID-19 Plan/Mitigation Strategy includes the following elements:
 - a. Communications Planning;
 - b. Management of Supplies and Resources;
 - c. Infection Prevention and Control;
 - d. Implementation of Facility Restrictions and Phased Reopening;
 - e. Identification and Management of Ill residents;
 - f. Occupational Health;
 - g. Education of Families and Residents and Staff Training; and
 - h. Surge Capacity Strategies for Staffing, Supplies and Equipment.
6. The details and progress of preparedness strategies are managed in the *COVID-19 Preparedness and Response Checklist* Table referenced below and described in accompanying policies and procedures.

Coronavirus Disease (COVID-19) – Phased Reopening

Policy Statement

Strategies for mitigating the transmission of COVID-19 in the facility are in place and will remain at the levels recommended by state and local public health authorities. Criteria for phased reopening (relaxing restrictions) are specific and measurable.

Policy Interpretation and Implementation

1. Factors that inform decisions regarding mitigation efforts and stages of reopening include the following:
 - a. The status of new cases, hospitalizations and deaths due to COVID-19 in the surrounding community;
 - b. The status of cases of COVID-19 in the facility;
 - c. The status of staffing in the facility;
 - d. Access to testing and a testing plan in place, including:
 - (1) The capacity for the facility to test all residents and staff with a baseline test and to retest all staff (including volunteers and vendors) and to retest staff every week;
 - (2) The capacity to test all residents if another resident or healthcare personnel tests positive for COVID-19 and to re-test at least once a week until all residents test negative;
 - (3) The ability to arrange for laboratory processing of approved tests; and
 - (4) A process to address residents or staff who decline or are unable to take the test.
 - e. The implementation of written screening protocols for staff (each shift) and residents (daily), and anyone entering the building;
 - f. The implementation of universal source control (cloth face coverings and masks), physical distancing and strict adherence to hand hygiene protocols; and
 - g. The capacity for the local hospital to accept transfers from the facility.
2. For current recommendations and specific criteria for reopening, see [Nursing Home Reopening Recommendations for State and Local Officials](#).

Coronavirus Disease (COVID-19) – Reporting Facility Data to Residents and Families

Policy Statement

Residents and families are kept informed of the current COVID-19 situation in the facility.

Policy Interpretation and Implementation

1. Residents and their representatives and families are notified when there is a single confirmed case of COVID-19, or three or more residents or staff with new onset of respiratory symptoms that occur within 72 hours of each other.
2. Notices of the above information are provided to residents, representatives and families not later than 5 p.m. of the calendar day following the occurrence(s).
3. Cumulative information on the number of cases of confirmed COVID-19 or new onset of respiratory symptoms is included with the notice of confirmed case(s), or clusters of three or more residents or staff with respiratory symptoms occurring within 72 hours of each other. Cumulative updates are reported at least weekly.
4. Notices are distributed through:
 - a. email;
 - b. website postings;
 - c. telephone recordings; and/or
 - d. _____.
5. The information in the notices:
 - a. does not include personally identifiable information;
 - b. includes steps that are being taken to prevent or reduce the risk of transmission; and
 - c. communicates any alterations or interruptions in normal facility operations.

References	
OBRA Regulatory	§483.80(g)(3) Inform residents, their representatives, and families of those residing in facilities by 5 p.m. the next calendar day following the occurrence of either a single confirmed infection of COVID-19, or three or more residents or staff with new-onset of respiratory symptoms occurring within 72 hours of each other. Coronavirus Disease (COVID-19) – Telemedicine and Telehealth

Policy Statement

For the duration of the Coronavirus (COVID-19) public health emergency, residents are encouraged to utilize telemedicine and telehealth services. These services are supported through the facility telehealth and telemedicine access program.

Policy Interpretation and Implementation

1. Telehealth and telemedicine are utilized to help residents who need routine care and to keep residents with mild symptoms in the facility while maintaining access to the care they need. This is intended to reduce the exposure to and spread of the coronavirus.
2. Virtual services include Medicare telehealth visits, virtual check-ins and e-visits.
 - a. Medicare telehealth visits consist of provider-patient visits utilizing a telecommunication system.
 - b. Virtual check-ins are brief (5-10 minutes) check-ins to determine if an office visit or other service is needed.
 - c. E-visits are communication between a patient and his or her provider through an online portal.
3. Telehealth and telemedicine visits are facilitated by a designated staff person at the facility who is experienced with managing the platforms (e.g., FaceTime, Skype, Zoom, etc.) and devices necessary to successfully conduct telehealth and telemedicine visits.
4. Our telecommunications technology is capable of audio and video, two-way, and real-time interactive communication.
5. A licensed nurse is present with a resident during the telehealth/telemedicine visit. The nurse documents the telehealth visit in the nurses' note, including the time, duration, location of the resident, location of the provider, and the names and titles of those participating in the visit. Telemedicine orders are documented as telephone orders.
6. The provider submits documentation of the visit to the facility through the electronic health record platform if compatible. If not, hard copy documentation is provided by facsimile or other approved exchange of records.

Line Listing Report, Influenza-Like Illness

Long-Term Care and Other Residential Facilities Pandemic Influenza Planning Checklist

Pandemic Influenza Planning Committee Roster

Activation of Emergency Management Plan

Policy Statement

The facility has emergency response guidelines and procedures for activation of an emergency response.

Policy Interpretation and Implementation

1. Any staff member aware of a crisis or disaster situation must notify his or her immediate supervisor and/or the Administrator.
2. In the event of a crisis or disaster situation (or notification of the potential for one), the most qualified staff member (in respect to the Incident Command System) on duty at the time assumes the Incident Commander position.
3. The facility ensures that all staff members are trained on the Incident Command System and identifies qualified/trained individuals who may assume the role of Incident Commander throughout the facility on all shifts.
4. The Incident Commander, in conjunction with the Administrator (if the Administrator does not function as the Incident Commander), has the responsibility to declare a situation a disaster and to activate the Emergency Management Plan.

Procedure

1. Communicate the appropriate code to bring leadership staff to the pre-designated Incident Command Post and alert the facility of a disaster status.
2. Instruct staff to remain in their assigned areas to begin implementation of related emergency procedures and then report to the Incident Command Post as called.
3. Activate the recall roster if the Incident Commander determines the situation requires such action.
4. If staff members are called in from home to respond to the emergency, they do so after rendering their families safe and will report to the facility in a safe manner.
5. Activate the appropriate parts of the plan, based on the type of disaster that has occurred.
6. Notify the following as needed:
 - a. Emergency Management Services–CALL 911 if not already notified;
 - b. Administrator, Director of Maintenance and Director of Nursing to potentially activate Recall Roster;
 - c. Other key individuals within the organization (owner, corporate contact); and
 - d. Local, regional, tribal and state Emergency Management agencies, and State Licensing and Certification agencies.
7. Follow the guidance provided in the plan for the specific crisis or disaster situation

Version	1.2 (PEMAPL0019)

Activation of Incident Command System (ICS)

Policy Statement

This facility utilizes elements of the National Incident Management System (NIMS) and Incident Command System (ICS) in crisis and disaster situations to help manage the events in an organized and efficient manner.

Policy Interpretation and Implementation

While long term care facilities are not required to implement this approach, our facility has made the decision to utilize elements of the ICS to handle emergencies.

1. Incident Command

- a. The most qualified staff member (with respect to the ICS) on duty at the time of the emergency assumes the Incident Commander position until the Administrator or his/her designee arrives at the facility. The Administrator or his/her designee then assumes the role of Incident Commander, if he/she is more or equally qualified.
- b. The facility trains the leadership team on the Incident Command System, so in the event of an emergency of significant magnitude, other Incident Command positions can be designated and filled as needed. It may not be practical for all positions to be filled due to lack of available/ICS qualified staff at any given time. Therefore some positions may be covered by the same individual.
- c. The facility utilizes an *Incident Action Plan (IAP)* to document the incident and pertinent details surrounding the disaster or crisis situation. The Incident Management Sheet also lists the employees who assume the ICS functions during the incident.

2. Transfer of Command

- a. Transfer of Command is the process of turning over responsibility from one Incident Commander to another.
- b. There are five steps in effectively assuming command of an incident in progress:
 - (1) The incoming Incident Commander, if possible, performs an assessment of the situation with the existing Incident Commander.
 - (2) The current Incident Commander briefs the incoming Incident Commander face-to-face if possible. The briefing includes the following:
 - (a) What has happened thus far (**Incident Briefing (ICS 201)**)
 - (b) Priorities and objectives (**Incident Objectives (ICS 202)**)
 - (c) Current plan (**Incident Action Plan (IAP)**)
 - (d) Resource assignments (**Assignment List (ICS 204)**)
 - (e) Incident organization (**Organization Assignment List (ICS 203)**)
 - (f) Resources update (**Resources Status Change (ICS 210)**)
 - (g) Facilities established
 - (h) Status of communications (**Incident Radio Communications (ICS 205)**)
 - (i) Any constraints or limitations
 - (j) Incident potential
 - (k) Delegation of authority

continues on next page

- (3) The incoming Incident Commander determines a time for transfer of command after the incident briefing.
- (4) At the appropriate time, notice of a change in Incident Commander is made.
- (5) The incoming Incident Commander may give the previous Incident Commander another assignment, as he/she has first-hand knowledge of the incident.

Disaster Training

Policy Statement

This facility has established training and education programs that provide specific guidance and instruction on the proper handling of a crisis or disaster situation.

Policy Interpretation and Implementation

1. Staff members, contract employees, and volunteers are trained upon hire and at least annually on the community's emergency preparedness and response plan and procedures.
2. Exercises, drills, and simulations are conducted on all levels of management within the organization and not just confined to routine fire or evacuation drills.
3. The main objectives for the training are:
 - a. to provide staff with relevant information on emergency procedures and emergency management in compliance with local, state, and federal guidelines, as well as nationally recognized standards and best practices;
 - b. to foster a "culture" of emergency preparedness within the facility to help ensure the safety of residents, families, visitors, and team members; and
 - c. to help ensure that proper planning, response, and recovery programs are in place and are appropriate for the facility.
4. Training exercises are conducted annually to test the emergency plan. Training exercises include all of the following:
 - a. unannounced drills using the emergency procedures;
 - b. community based, or facility based full-scale; and
 - c. community based or facility based "table top" exercise that includes a group discussion led by a facilitator using a narrative scenario with problems and questions designed to challenge an emergency plan.
5. Emergency training exercises, drills, and simulations are conducted in accordance with all applicable local, state, and federal guidelines.
6. Training topics presented to facility staff on a regular basis include the following subjects:
 - a. Discovering/Reporting an Emergency Situation;
 - b. Sounding the Alarm/Initiating Emergency Procedures;
 - c. Using, maintaining, and operating emergency equipment;
 - d. Emergency Code System;
 - e. Fire Control and Extinguishment;
 - f. Implementing evacuation, shelter-in-place and relocation procedures;
 - g. Containing or limiting the spread of infectious disease during outbreaks, including proper isolation precautions and the use of personal protective equipment;
 - h. Accessing emergency medical information, equipment, and medications for residents;
 - i. Transfer Trauma;
 - j. Evacuation Carries and Maneuvers;

continues on next page

- k. Locating and shutting off utilities;
 - l. Severe Weather Awareness and Procedures;
 - m. Sheltering-in-Place Principles and Procedures;
 - n. Emergency Response/Succession of Command;
 - o. General principles of the National Incident Management System (NIMS) and the Incident Command System (ICS); and
 - p. Utilizing community support services.
7. An annual schedule of exercises, drills, and simulations is maintained to help ensure compliance with regulations as well as meet recommended practices.
 8. Disaster training is organized and conducted by qualified persons within the organization or from other credible resources, such as local emergency responders, qualified vendors, and consultants.
 9. Outside resources, including local emergency responders, local emergency coordinator, and other appropriate persons or agencies are invited periodically to participate in, observe, and evaluate internal exercises and drills.
 10. An actual natural or man-made emergency that requires activation of the emergency plan will satisfy the annual training requirement.
 11. All exercises, drills, and simulations are documented and include the individuals who participated, issues identified, an analysis of the response and any revisions made to the plan.
 12. Documentation of training is maintained for at least two years.

Emergency Communications

Policy Statement

This facility has methods of communicating both internally and externally during a crisis or disaster situation, and recognizes that traditional communication systems may not be available (failure) or may be overwhelmed (overload) during such a critical event.

Policy Interpretation and Implementation

Planning for Alternate Communications

1. In the event that the primary method of communication fails, alternate communication methods are:
 - a. cellular phones (possibly cellular phones with outside area codes);
 - b. satellite phones (both of which may not always be reliable);
 - c. internet (if computer systems are operable);
 - d. two-way radios;
 - e. CB or Ham radios; and/or
 - f. mass notification systems.
2. The facility utilizes _____ as the primary communication method for internal usage in the event of a disaster event.
3. _____ is the alternate and supplemental method of internal communication in the event the primary system is inoperable.
4. _____ is the primary means of external communication in the event of a disaster.
5. _____ is the alternate and supplemental method of external communication in the event of a disaster.
6. _____ (facility position) is responsible for the testing and maintenance of the above devices. Testing is done quarterly to ensure proper functioning.

Communication with Residents and Family Members

1. The facility shares with residents, families and/or legal representatives the All Hazards Emergency Plan upon admission and annually. A copy is maintained _____ for residents and legal representatives to review upon request.
2. The facility maintains emergency contact numbers in addition to primary telephone numbers for resident responsible parties and family members. Responsible parties and family members are notified as quickly as possible when there is a disaster/emergency situation at the facility.

continues on next page

3. Staff members are briefed on the following elements to share with residents and family members as assigned:
 - a. Type of threat;
 - b. Estimated time and severity of impact;
 - c. General outlook at the current time;
 - d. Expected disruptions to services or routines;
 - e. What the facility administration has done and is doing right now to lessen negative outcomes;
 - f. When to expect updated status reports; and
 - g. What the residents, responsible parties, and family members can do to help.

Public Relations – Information for the Community

1. In advance of an impending crisis or disaster situation, the facility informs staff members, residents, family members, and the community-at-large that the facility has developed a relationship with local emergency responders as well as the local/regional/tribal, state or federal Emergency Management Agency to properly plan for, prepare for, respond to, and recover from such situations.
2. The facility designates an individual to educate staff members, residents, family members, and other applicable members/organizations within the community that the facility has initiated a comprehensive program to address issues pertaining to emergency preparedness and planning in order to lessen its perceived burden on the community.
3. The following persons are the official spokespersons with alternates designated:

Name/Contact Information	Title	Department

4. In advance of a crisis or disaster scenario that may require the facility to evacuate or shelter-in-place and present media and public relations issues/concerns, the following points are considered:
 - a. Standardized ways of disseminating information (regular briefings, scheduled press conferences, etc.);
 - b. What information will be released, when and to whom;
 - c. Appropriate training for anyone in the organization who may deal with the media or perform public relations duties;
 - d. Information that will need to be provided pertaining to the situation:
 - e. How residents will be protected;
 - f. How residents and family will be kept informed of the situation;
 - g. How residents and family members can help or be involved;
 - h. Who will be in charge of the situation;
 - i. Who will be providing the most accurate information about the facility’s status; and
 - j. Training for all employees to clearly define responsibilities and limitations regarding contact with the media and the release of information as part of the employees’ conditions of employment.
5. Factors to consider when releasing information must balance protection of the privacy, health, and welfare of the residents. When the information cannot be disclosed, the release is refused with an explanation.

continues on next page

6. While addressing the public’s need for information and reassurance, communication includes:
 - a. Advising the public not to come to the scene unless asked to do so;
 - b. Methods of apprising the public of the situation;
 - c. Anticipated “next steps”;
 - d. Coordination of messages to residents, physicians, and staff members; and
 - e. Coordination of messages for handling the “worried well” (volunteers, separate locations, family members).

References	
OBRA Regulatory Reference Numbers	§483.73(c) The LTC facility must develop and maintain an emergency preparedness communication plan that complies with Federal, State, and local laws and must be reviewed and updated at least annually.

Version	1.2 (PEMAPL0010)

Emergency Management Plan

Policy Statement

The purpose of the Emergency Management Plan is to provide an all-hazards approach to guide in the event of an emergency, a crisis, or a disaster scenario that would affect the safety and well-being of our residents and employees as well as community members affected by the situation. The desired outcome is to protect the residents, employees, families, volunteers and facility from various emergencies.

Policy Interpretation and Implementation

1. The Emergency Management Plan is written to be applicable in all disaster and emergency situations. As part of emergency management planning, unique characteristics and vulnerabilities of the facility are identified.
2. Facility characteristics are determined through comprehensive facility, hazard vulnerability and security vulnerability assessments.
3. Facility characteristics and vulnerabilities are documented in the Emergency Management Plan.
4. The unique needs of the resident population are documented in the facility assessment.
5. Through the completion of the Hazard Vulnerability Assessment the top three potential hazards to the safety and welfare of the residents and employees are:
 - a. _____
 - b. _____
 - c. _____
6. The Emergency Management Plan complies with elements of the National Incident Management System (NIMS) and Incident Command System (ICS).
7. The Emergency Management Plan has been distributed to individual administrative personnel and departments within the facility, as well as other relevant organizations, including but not limited to local emergency responders and municipal, township, county, and state agencies.
8. The following chart is a record of distribution.

Record of Distribution

Individual Name/Facility Department/Outside Organization	Date Distributed

9. The Administrator has developed a list of specific key personnel based on job title to clearly identify the Succession of Command.
10. The person in charge at the time of an emergency is the individual who remains in charge until someone higher in the chain of command arrives on the scene.
11. The following table describes the Succession of Command during normal business hours or if the designated staff members are present during an after-hour emergency. Unless otherwise specified, the designated person in charge after normal business hours (Monday – Friday 8:00 a.m. to 5:00 p.m.) is the RN Unit Manager or RN Charge Nurse.

Succession of Command	
1.	Name: _____ Job Title: _____ Contact Information: _____
2.	Name: _____ Job Title: _____ Contact Information: _____
3.	Name: _____ Job Title: _____ Contact Information: _____
4.	Name: _____ Job Title: _____ Contact Information: _____

12. The Incident Command Post is a designated area where the Administrator/Designee, Incident Commander, management team, and other staff members convene to review the situation and develop tactics and strategies to manage the incident.
13. The Incident Command Post is located _____ during an emergency or disaster situation.
14. If the disaster occurs in or disables the Incident Command Post, the Alternate Incident Command Post is _____ (alternate location).
15. A master copy of the Emergency Management Plan is kept in a secure location within the facility. The location of the plan is: _____.
16. Copies of the Emergency Management Plan are distributed to every department as well as to key members of the organization.

continues on next page

- 17. In addition, a copy of the Emergency Management Plan is kept in a remote location that is secure and accessible in the event the facility is stricken by a crisis or disaster situation during which copies of the plan are not accessible within the facility.
- 18. The remote location of the plan is: _____.
- 19. The Emergency Management Plan is reviewed and updated at a minimum annually to ensure its accuracy.

Emergency Procedure – Infectious Disease Threat

Policy Statement

This facility has an emergency protocol for an infectious disease event.

Policy Interpretation and Implementation

1. An infectious disease threat is defined as a rapidly spreading (highly contagious), virulent illness that threatens the health and safety of residents, staff and visitors.
2. A communicable disease outbreak is not considered a disaster unless the disease results in loss of life or severe illness *and* has the potential to spread easily from person to person.
3. All staff members are trained on preventing, containing and responding to an infectious disease threat.
4. Emerging (newly identified) infectious pathogens and diseases are identified by public health agencies (for example, local health departments, the Centers for Disease Control and Prevention and the World Health Organization).
5. The Infection Preventionist is responsible for establishing relationships and managing information from public health agencies regarding existing or emerging infectious disease events.
6. The Infection Preventionist is responsible for establishing and implementing policies and procedures for screening residents, visitors and staff for exposure to and signs and symptoms of serious infectious diseases.
7. An Infectious Disease Threat Plan is initiated when the spread of a serious pathogen is sustaining human-to-human transmission in the United States, and the Infection Prevention and Control team determines that residents, staff and visitors face imminent threat of infection.

Emergency Procedure - Infectious Disease

Utilize the following procedure in the event of an infectious disease emergency.

1. Announce “CODE PURPLE,” if appropriate. Otherwise, mobilize the Infection Prevention and Control team to prepare for the incident.
2. Notify the Administrator, Director of Maintenance, and Director of Nursing if not on the premises.
3. Activate the Recall Roster if warranted.
4. Facility staff report to the Incident Command Post for briefing and instruction.
5. Activate the Incident Command System (ICS) to manage the incident. The most qualified staff member (with respect to the Incident Command System) on duty at the time assumes the Incident Commander position.
6. Screen all residents, visitors and employees for exposure to and symptoms of the infectious disease, and continue to monitor daily until the threat has been contained.
7. Provide methods for staff and residents to self-report symptoms and exposure.

continues on next page

8. Follow infection prevention and control protocols specific for the disease to manage infected residents, high-risk employees and for guidelines regarding when infected employees can return to work.
9. Strictly adhere to infection prevention and control policies and procedures.
10. Restrict admissions and visitations as indicated. Communicate this to the affected parties.
11. Contact local, regional, tribal and state health departments to discuss the availability of prevention and treatment protocols.
12. Ensure adequate supplies of food, water, and medical supplies are available to sustain the facility if widespread outbreak occurs in the geographic region or at the facility.
13. Cohort residents and employees as necessary.
14. Implement contingency staffing plans as needed.

Version	2.1 (PEMAPR0004)

Emergency Procedure – Terrorism/Biological Attack

Policy Statement

This facility has completed training exercises in preparation for a biological attack. The following procedures will be utilized in response to such an event.

General Guidelines

1. Biological agents are organisms or toxins that can kill or incapacitate people, livestock, and crops.
2. The three basic groups of biological agents that would likely be used as weapons are bacteria, viruses, and toxins.
3. Most biological agents are difficult to grow and maintain. Many break down quickly when exposed to sunlight and other environmental factors, while others, such as anthrax spores, are long-lived.
4. Biological agents can be dispersed by spraying them into the air, by infecting animals that carry the disease to humans, and by contaminating food and water. Delivery methods include:
 - a. Aerosols – Biological agents are dispersed into the air, forming a fine mist that may drift for miles. Inhaling the agent may cause disease in people or animals.
 - b. Animals – Some diseases are spread by insects and animals, such as fleas, mice, flies, mosquitoes, and livestock.
 - c. Food and water contamination – Some pathogenic organisms and toxins may persist in food and water supplies. Most microbes can be killed, and toxins deactivated, by cooking food and boiling water. Most microbes are killed by boiling water for one minute, but some require longer. Follow official instructions.
 - d. Person-to-person spread of a few infectious agents is also possible. Humans have been the source of infection for smallpox, plague, and the Lassa viruses.
5. Children and older adults are particularly vulnerable to biological agents.

Planning Considerations for Biological Attack

1. Determine the type and level of filtration in the facility and the level of protection it provides against biological agents.
2. The National Institute of Occupational Safety and Health (NIOSH) provides technical guidance on this topic in their publication *Guidance for Filtration and Air-Cleaning Systems to Protect Building Environments from Airborne Chemical, Biological, or Radiological Attacks*. To obtain a copy, call 1 (800) 35NIOSH or visit the National Institute for Occupational Safety and Health Web site, <http://www.cdc.gov/NIOSH/>, and request or download NIOSH Publication 2003-136.
3. Consider installing a high efficiency particulate air (HEPA) filter in your furnace return duct. These filters remove particles in the 0.3 to 10 micron range and will filter out most biological agents that may enter the facility.
4. HEPA filters are useful in some biological attacks. HEPA filters do not filter chemical agents.

continues on next page

5. If you have a central heating and cooling system with a HEPA filter, leave it on if it is running or turn the fan on if it is not running. Moving the air in the facility through the filter helps to remove the agents from the air.
6. If you do not have a central heating or cooling system, a stand-alone portable HEPA filter can be used.
7. If you have a portable HEPA filter, take it with you to the internal room where you are seeking shelter and turn it on.
8. If you are in a facility that has a modern, central heating and cooling system, the system's filtration should provide a relatively safe level of protection from outside biological contaminants.

Emergency Procedure – Terrorism/Biological Attack

1. The basic public health procedures and medical protocols for handling exposure to biological agents are the same as for any infectious disease.
2. Individuals who find or become aware of an unusual and suspicious substance or package should notify the Administrator or highest ranking individual in the facility and follow the Suspicious Package Protocol below):
 - a. The first evidence of an attack may be when symptoms of the disease caused by exposure to an agent appear.
 - b. Be suspicious of any symptoms you notice, but do not assume that any illness is a result of the attack.
 - c. Use common sense and practice standard precautions.
3. Notify the Administrator, Director of Maintenance and Director of Nursing if a biological attack has occurred, if they are not aware or on the premises.
4. Activate the Recall Roster if warranted.
5. Activate the Incident Command System (ICS). The most qualified staff member (with respect to the Incident Command System) on duty at the time assumes the Incident Commander position.
6. Announce "CODE WHITE, a Biological Attack has occurred: Attention all staff members, residents, and visitors please remain in the facility until further notice."
7. Facility management staff report to the Incident Command Post for a briefing and instruction.
8. With suspicious envelopes and packages other than those that might contain explosives, take these additional steps against possible biological and chemical agents:
 - a. Contact 911 and Emergency Services immediately. Do not disturb the package.
 - b. Leave the room and close the door, or section off the area to prevent others from entering.
 - c. Wash your hands with soap and water.
 - d. List all people who were in the room or area when this suspicious letter or package was recognized. Give a copy of this list to both the local public health authorities and law enforcement officials for follow-up investigations and advice.
9. If exposure occurs with a biological agent:
 - a. Remove and bag clothes and personal items. Follow official instructions for disposal of contaminated items.
 - b. Wash with soap and water and put on clean clothes.
 - c. Seek medical assistance as soon as possible when it is announced by the local authorities where to go to receive medical care. You may be advised to stay away from others or even be quarantined.

continues on next page

10. Instruct staff members, residents, and visitors to remain in the facility until further notice from the local authorities.
11. Continue to listen for official instructions via radio, television, and emergency alert systems for further instructions.
12. Account for all staff members and residents.

After a Biological Attack

1. The basic public health procedures and medical protocols for handling exposure to biological agents are the same as for any infectious disease.
2. Pay attention to official instructions via radio, television, and emergency alert systems.

Protocol for Suspicious Packages

1. Be wary of suspicious packages and letters. They can contain explosives or chemical or biological agents.
2. Be particularly cautious in the mail handling area and refrain from eating or drinking in that area.
3. Characteristics that should trigger suspicion, include parcels that:
 - a. Are unexpected or from someone unfamiliar to you.
 - b. Have no return address, or have one that can't be verified as legitimate.
 - c. Have protruding wires or aluminum foil, strange odors, or stains.
 - d. Show a city or state in the postmark that doesn't match the return address.
 - e. Are of unusual weight given their size, or are lopsided or oddly shaped.
 - f. Are marked with threatening language.
 - g. Have inappropriate or unusual labeling.
 - h. Have excessive postage or packaging material, such as masking tape and string.
 - i. Have misspellings of common words.
 - j. Are addressed to someone no longer with your organization or otherwise outdated.
 - k. Have incorrect titles or titles without a name.
 - l. Are not addressed to a specific person.
 - m. Have handwritten or poorly typed addresses.
4. If suspicious envelopes and packages are found (other than those that might contain explosives), take these additional steps against possible biological and chemical agents:
 - a. Notify the Administrator or highest ranking individual in the facility.
 - b. Contact 911 and Emergency Services immediately. Do not disturb the package.
 - c. Leave the room and close the door, or section off the area to prevent others from entering.
 - d. Wash your hands with soap and water.
 - e. List all people who were in the room or area when this suspicious letter or package was recognized. Give a copy of this list to both the local public health authorities and law enforcement officials for follow-up investigations and advice.

Emergency Job Tasks – Terrorism/Biological Attack

1. Administrator/Incident Commander
 - a. Contact 911 and Emergency Management Services if necessary.

continues on next page

- b. Upon arrival of authorities, establish contact with the officer in charge and relay all relevant information regarding the situation
 - c. Activate the ICS to manage the incident. The most qualified staff member (in regard to the Incident Command System) on duty at the time assumes the Incident Commander position. If severity of the incident warrants, then appoint other positions of the ICS structure.
 - d. Instruct all staff members to remain in the facility.
 - e. Listen for official instructions via radio, television, and emergency alert systems for further instructions.
 - f. Ensure staff members and residents are accounted for and safe.
 - g. Continuously remind all staff to remain calm and in control so as to not upset the residents.
2. Management Staff of All Departments
- a. Report to the Incident Command Post.
 - b. Instruct staff members to remain in the facility with windows and doors closed.
 - c. Follow instructions if exposure occurs.
 - d. Listen for official instructions via radio, television, and emergency alert systems for further instructions.
 - e. Remain calm so as to not upset the residents.
 - f. Assist the Incident Commander as needed.
3. Maintenance
- a. Report to the Incident Command Post.
 - b. Instruct staff members to keep windows and doors closed.
 - c. Follow instructions if exposure occurs.
 - d. Listen for official instructions via radio, television, and emergency alert systems for further instructions.
 - e. Remain calm so as to not upset the residents.
 - f. Assist the Incident Commander as needed.
4. Staff Members of All Departments
- a. Keep windows and doors shut.
 - b. Ensure residents and visitors remain in the facility until further notice from the local authorities.
 - c. Follow procedures if exposure occurs.
 - d. Remain calm to not upset the residents.
 - e. Assist the Incident Commander as needed

Infectious Disease Threat Communications Plan

Policy Statement

As part of the facility's overall disaster plan, the Infection Prevention and Control Committee has an infectious disease threat communications plan.

Policy Interpretation and Implementation

1. The Infection Preventionist maintains a list of critical contact points and attends regional meetings, workshops and training sessions to obtain information on coordinating the facility's plans with other infectious disease threat plans.
2. Critical points of contact for all stages of an infectious disease threat include:
 - a. Local health department;
 - b. State health department;
 - c. The Centers for Disease Control and Prevention;
 - d. State long-term care professional/trade association;
 - e. Local emergency preparedness groups;
 - f. State emergency preparedness groups;
 - g. Other regional emergency preparedness groups;
 - h. Local area hospitals; and
 - i. Other local healthcare providers (other long-term care facilities; emergency medical services; etc.).
3. The Infection Preventionist communicates with staff, residents, and families regarding the status and impact of infectious disease threats in the facility.
 - a. Various communication methods are utilized to disseminate information regarding the status of infectious disease threats in the facility.
 - b. The Infection Preventionist will determine the most appropriate communication methods (signs, phone trees, internet, etc.) for the situation.
4. The Infection Preventionist receives a current list of facility residents and contact information of resident family members on a weekly basis.
5. The Infectious Disease Threat Communications Plan is reviewed and updated at least annually.

Infectious Disease Threat, Infection Control Measures During

Policy Statement

When an infectious disease threat is detected in the geographic region of the facility, aggressive infection control measures will be implemented to prevent introduction of the pathogen to residents, staff and visitors.

Policy Interpretation and Implementation

1. The following infection prevention and control measures may be implemented to prevent or contain an infectious disease threat in the facility:
 - a. Training clinical staff in the mode of transmission of the pathogen;
 - b. Training residents, families and non-clinical staff on the early symptoms of disease;
 - c. Training all staff, residents and visitors on the importance of standard infection control precautions (e.g., handwashing, respiratory hygiene/cough etiquette, etc.);
 - d. Vaccinating residents and staff, if vaccines are available;
 - e. Surveillance and early detection of infection in the facility;
 - f. Treatment of infected individuals, according to current clinical practice guidelines;
 - g. Strict adherence to appropriate transmission-based precautions;
 - h. Restriction of visitors as necessary;
 - i. Displaying signs and/or posters (in appropriate languages) at the entry to the facility restricting entry by any persons who have been exposed to or have symptoms of the infectious disease threat;
 - j. Screening visitors at facility entry points for symptoms of the infectious disease; and
 - k. Screening employees for symptoms before coming on duty and send any symptomatic employees home.

Version	1.3 (H5MAPL1006)

Infectious Disease Threat Surveillance and Detection

Policy Statement

As part of the pandemic influenza preparedness plan this facility has established a program for surveillance and detection of infectious diseases among residents and staff, and actively monitors public health surveillance and advisories.

Policy Interpretation and Implementation

1. The Infection Preventionist coordinates infectious disease threat planning, surveillance and detection.
2. Recognizing and reporting symptoms of infectious diseases in residents and staff is ongoing and is the responsibility of all clinical direct care staff.
3. The Infection Preventionist monitors public health advisories (federal and state) at least weekly, and is responsible for updating the Medical Director and the Director of Nursing when a serious infectious disease threat is reported in the United States and is nearing the geographic area.
4. Evaluation and diagnosis of residents and/or staff with symptoms shall follow current CDC Guidelines for evaluation of symptoms and laboratory diagnostic procedures.
5. Enhanced surveillance of residents and staff will be considered on a case-by case basis in collaboration with the local public health department. Determination of enhanced surveillance will be based on the clinical presentation of symptoms, risk factors for exposure, and current CDC recommendations.
6. Confirmed and suspected cases will be reported to the local public health department and the CDC as appropriate.

Infectious Disease Threat Training and Education

Policy Statement

This facility has developed an education and training program for disaster preparedness, including infectious disease threat preparedness training for staff, residents, and families.

Policy Interpretation and Implementation

1. The Infection Preventionist, in collaboration with the Staff Development Coordinator, is responsible for developing and overseeing clinical training on infectious disease threats.
2. Staff training on infectious disease emergencies includes the following components:
 - a. Communication with residents and family members;
 - b. Quarantine and/or visitor restrictions;
 - c. Control measures, including vaccinations and infection control precautions; and
 - d. Screening and detection.
3. Local (e.g., health department, hospital-based) and long-distance (web-based) training opportunities may be utilized for additional staff training.
4. Resident and family education may include the following:
 - a. The facility’s current state of emergency preparedness;
 - b. Fact sheets and bulletins regarding infection prevention and control; and
 - c. The importance of strict adherence to any transmission-based precautions that are implemented.
5. Printed information distributed to residents and family will be in a language and reading level that can be understood by the resident and family.

Coronavirus Disease (COVID-19) – Emergency Management

Policy Statement

This facility has developed a structure for decision making and emergency response planning amid the current coronavirus disease (COVID-19) outbreak.

Policy Interpretation and Implementation

1. The response to the current outbreak of coronavirus disease is based on the most current recommendations from health policy officials, state agencies and the federal government.
2. COVID-19 Plan/Mitigation Strategy has been incorporated into the emergency management plan (“the plan”) for the facility.
3. A COVID-19 Response Committee (“the committee”) has been established to oversee the development of the emergency management plan for COVID-19. Members of the COVID-19 Response Committee include:
 - a. Facility administration;
 - b. Medical director;
 - c. Director of nursing;
 - d. Infection preventionist;
 - e. Occupational health;
 - f. Staff training and orientation;
 - g. Engineering/maintenance services;
 - h. Environmental (housekeeping) services;
 - i. Dietary (food) services;
 - j. Pharmacy services;
 - k. Occupational/rehabilitation/physical therapy services;
 - l. Transportation services;
 - m. Purchasing agent;
 - n. Facility staff representative; and
 - o. Other member(s) as appropriate.
4. The committee appoints a COVID-19 Response Plan Coordinator (“the coordinator”) to organize the development of the response plan. The name and contact number of the coordinator is:

5. The coordinator communicates with local, regional and federal planning groups, and oversees inter-facility communications.
6. The plan follows the organizational structure of the National Incident Management and Incident Command Systems (NIMS and ICS).
7. The plan is available at the following location in the facility and is accessible to staff at all times:

Coronavirus Disease (COVID-19) – Surge Capacity Staffing

Policy Statement

When staffing shortages are anticipated, the Director of Human Resources (DHR), in collaboration with the Director of Nursing Services (DNS), will use contingency capacity strategies to ensure staffing needs are met.

Policy Interpretation and Implementation

1. In order to provide a safe working environment and sufficient coverage for resident care, the DHR and the DNS collaborate to understand and anticipate the staffing needs of this facility.
2. The DHR communicates with the health department, emergency planning agencies and healthcare coalitions (state and local) to identify available options for additional staffing.

Contingency Staffing Strategies

Contingency staffing strategies are adopted when staffing shortages are anticipated. Contingency strategies are based on current guidelines from the CDC and CMS and include:

1. Adjusting schedules, hiring additional staff and rotating positions including:
 - a. Cancelling non-essential procedures;
 - b. Cross-training staff so that they can be reassigned to essential resident care functions;
 - c. Addressing social factors, such as childcare issues and transportation by offering flexible scheduling and accommodation of adjusted hours to the extent possible;
 - d. Identifying sources of additional licensed and non-licensed staff (e.g., healthcare coalitions, collaboration with other facilities, etc.); and
 - e. Asking staff to postpone elected time off.
2. Identifying outside facilities that have been designated as isolation or alternate care sites with appropriate levels of staff.
3. Allowing asymptomatic staff who have been exposed to COVID-19 to continue working when:
 - a. They report normal temperature and lack of symptoms every day before reporting to work;
 - b. They wear a facemask at work for 14 days after the exposure event; and
 - c. They agree to stop any resident care activities, report to their supervisor, and leave the facility if (even mild) symptoms develop.
4. Prioritizing exposed and symptomatic personnel for testing. When personnel are tested and found to be infected with SARS-CoV-2 they are excluded from work until they meet all [Return to Work Criteria](#) unless staffing shortages continue despite other mitigation strategies and certain criteria are met.
5. Allowing staff with suspected or confirmed COVID-19 infection (who are well enough to work) to return to work before all [Return to Work Criteria](#) have been met is based on the following considerations:
 - a. The type of staffing shortages that need to be addressed;
 - b. Where the individual is in the course of their illness (e.g., viral shedding appears to be higher earlier in the course of illness);

continues on next page

- c. The types of symptoms they are experiencing (e.g., persistent fever);
 - d. Their degree of interaction and contact with residents and other staff in the facility; and
 - e. The type of residents they typically care for (e.g., immunocompromised patients).
6. Notifying residents, family and other staff members of measures that will be taken to protect them from exposure if staff with suspected or confirmed COVID-19 are allowed to work.

Crisis Staffing Strategies

Crisis staffing strategies are implemented if staffing shortages are interfering with safe resident care. Crisis strategies are based on current guidelines from the CDC and CMS and include:

1. Implementing regional plans to transfer residents with COVID-19 to designated healthcare facilities, isolation sites or alternate care sites with adequate staffing.
2. If not already done, allowing asymptomatic staff who have had an unprotected exposure to COVID-19 to continue to work. These individuals will:
 - a. report temperature and absence of symptoms each day before starting work;
 - b. wear a facemask while at work for the 14 days after the exposure event;
 - c. stop resident care activities and notify their supervisor and leave the facility if even mild symptoms consistent with COVID-19 develop; and
 - d. be prioritized for testing.
3. If shortages continue despite other mitigation strategies, implementing criteria to allow staff with suspected or confirmed COVID-19 (who are well enough to work but have not met all [Return to Work Criteria](#)) to work.
4. If staff are allowed to work before meeting all [Return to Work Criteria](#), restricting them from contact with severely immunocompromised patients and prioritizing their duties in the following order:
 - a. If not already done, allowing staff with suspected or confirmed COVID-19 to perform job duties where they do not interact with others, such as in telemedicine services.
 - b. Allow staff with confirmed COVID-19 to provide direct care only for residents with confirmed COVID-19, preferably in a cohort setting.
 - c. Allow staff with confirmed COVID-19 to provide direct care for residents with suspected COVID-19.
 - d. As a last resort, allow staff with confirmed COVID-19 to provide direct care for residents without suspected or confirmed COVID-19.
5. If staff are permitted to return to work before meeting all [Return to Work Criteria](#), requiring adherence to all Return to Work Practices and Work Restrictions recommendations described in that guidance. These include:
 - a. Wearing a facemask at all times while in the healthcare facility until all symptoms are completely resolved or until 14 days after illness onset, whichever is longer;
 - b. Reminding them that in addition to potentially exposing residents, they could also expose their co-workers:
 - (1) Facemasks will be worn even when they are in non-resident care areas such as breakrooms; and
 - (2) If they must remove their facemask, for example, in order to eat or drink, they are asked to separate themselves from others.
 - c. Restricting them from contact with severely immunocompromised patients until the full [Return to Work Criteria](#) have been met;

continues on next page

- d. Adhering to hand hygiene and respiratory hygiene, and cough etiquette (e.g., cover nose and mouth when coughing or sneezing, dispose of tissues in waste receptacles); and
- e. Self-monitoring for symptoms and seeking re-evaluation from occupational health if respiratory symptoms recur or worsen.

Communicable/Contagious Diseases, Employee

Policy Statement

Personnel with active communicable infections that can be transmitted by direct contact are prohibited from coming in direct contact with residents or their food.

Policy Interpretation and Implementation

1. Employees with acute or active communicable or infectious diseases or infected skin lesions may not participate in direct resident care responsibilities or handle resident food until they are no longer considered infectious or contagious. Such conditions include (but are not limited to):
 - a. Tuberculosis;
 - b. Mononucleosis;
 - c. Herpes varicella zoster (HVZ);
 - d. Herpes simplex virus (HSV);
 - e. Influenza;
 - f. Pneumonia;
 - g. _____;
 - h. _____; and
 - i. _____.
2. Healthcare workers will not be prohibited from participating in resident-care activities strictly on the basis of their infection with bloodborne pathogens such as hepatitis B virus (HBV), hepatitis C virus (HCV), or HIV/AIDS.
3. Restrictions on participation in resident-care activities will be based on factors associated with the risk of transmission.
4. The Infection Prevention and Control Committee (IPCC), along with the Medical Director and Infection Preventionist, will review cases in which healthcare workers or providers are infected with HBV, HCV, or HIV/AIDS.
5. The following restrictions/limitations apply to healthcare workers who are infected with **hepatitis B virus (HBV)**:
 - a. Healthcare workers who test positive for HBV “e” antigen (HBeAg) OR have circulating HBV burden of greater than 10^4 genome equivalents per mL of blood (GE/mL):
 - (1) Will double glove during any invasive procedure, contact with mucous membranes or non-intact skin, and for any procedure in which gloving is recommended.
 - (2) Will NOT perform procedures that are associated with increased risk for transmission of HBV (see Related Documents for a list of risk categories).
 - b. Healthcare workers infected with HBV who have circulating viral burdens of less than 10^4 GE/mL will be allowed to perform procedures that are associated with increased risk of transmission of HBV, provided the healthcare worker:
 - (1) Has not previously transmitted HBV infection to his or her residents;
 - (2) Consults with the IPCC regarding his or her practice and optimal infection control practices;

continues on next page

- (3) Obtains follow-up testing at least twice a year to demonstrate a continued viral burden of less than 10^4 GE/mL;
 - (4) Seeks ongoing care from a personal physician who has expertise in the management of HBV infection and allows that physician to communicate with the IPCC about the healthcare worker's clinical status;
 - (5) Strictly adheres to all infection control practices and procedures; and
 - (6) Signs a contract agreeing to his or her responsibilities as an HBV-infected healthcare worker.
6. The following restrictions/limitations apply to healthcare workers who are infected with **hepatitis C virus (HCV)**:
- a. Healthcare workers who have circulating HCV burden of greater than 10^4 GE/ mL of blood:
 - (1) Will double glove during any invasive procedure, contact with mucous membranes or non-intact skin, and for any procedure in which gloving is recommended.
 - (2) Will NOT perform procedures that are associated with increased risk for transmission of HCV (see Related Documents for a list of risk categories).
 - b. Healthcare workers infected with HCV who have circulating viral burdens of less than 10^4 GE/mL will be allowed to perform procedures that are associated with increased risk of transmission of HCV provided the healthcare worker:
 - (1) Has not previously transmitted HCV infection to his or her residents;
 - (2) Consults with the IPCC regarding his or her practice and optimal infection control practices;
 - (3) Obtains follow-up testing at least twice a year to demonstrate a continued viral burden of less than 10^4 GE/mL;
 - (4) Seeks ongoing care from a personal physician who has expertise in the management of HCV infection and allows that physician to communicate with the IPRP about the healthcare worker's clinical status;
 - (5) Strictly adheres to all infection control practices and procedures; and
 - (6) Signs a contract agreeing to his or her responsibilities as an HCV-infected healthcare worker.
7. The following restrictions/limitations apply to healthcare workers who are infected with human immunodeficiency virus (HIV) or acquired immune deficiency syndrome (AIDS):
- a. Healthcare workers who have circulating HIV burden of greater than 5×10^5 GE/ mL of blood:
 - (1) Will double glove during any invasive procedure, contact with mucous membranes or non-intact skin, and for any procedure in which gloving is recommended.
 - (2) Will NOT perform procedures that are associated with increased risk for transmission of HIV (see Related Documents for a list of risk categories).
 - b. Healthcare workers infected with HIV/AIDS who have circulating viral burdens of less than 5×10^5 GE/mL will be allowed to perform procedures that are associated with increased risk of transmission of HIV provided the healthcare worker:
 - (1) Has not previously transmitted HCV infection to his or her residents;
 - (2) Consults with the IPRP regarding his or her practice and optimal infection control practices;
 - (3) Obtains follow-up testing at least twice a year to demonstrate a continued viral burden of less than 5×10^5 GE/mL;
 - (4) Seeks ongoing care from a personal physician who has expertise in the management of HIV infection and allows that physician to communicate with the IPRP about the healthcare worker's clinical status;

continues on next page

- (5) Strictly adheres to all infection control practices and procedures; and
- (6) Signs a contract agreeing to his or her responsibilities as an HIV-infected healthcare worker.
8. In-service training programs on the following diseases are conducted annually:
- HIV/AIDS;
 - Hepatitis;
 - Tuberculosis;
 - _____;
 - _____; and
 - _____.
9. Employees are required to attend in-service training classes.

Employee Health – Medical Director Role

Policy Statement

The Medical Director shall advise the facility about employee health and safety issues; help develop employee health policies and shall be utilized appropriately in rendering medical care to facility employees.

Policy Interpretation and Implementation

1. The Medical Director will advise the facility about employee health issues, including safety, immunization, and the risk of infection exposure and transmission. Examples of such involvement may include:
 - a. Helping identify the scope and contents of a pre-employment medical questionnaire.
 - b. Reviewing and helping the facility identify the physical and emotional demands of a particular position or job category.
 - c. Helping interpret the significance of any health problems or physical limitations in relation to job responsibilities.
 - d. Interpreting and discussing findings related to employee health problems.
 - e. Helping make appropriate referrals for follow-up of employee illnesses and injuries.
 - f. Evaluating for possible return to work after illness or injury.
 - g. Conferring with an employee's personal physician.
2. The Medical Director will advise the administration and Employee Health Coordinator concerning clinical aspects of employee health policies, including emergency and follow-up care of injuries and illnesses.
3. The Medical Director will advise the facility Infection Preventionist regarding infection control issues involving employees.
4. The Medical Director will help the facility identify and address safety issues, including protecting employees against health hazards in the work environment; for example, transmission of bloodborne illnesses and preventing injuries while caring for individuals with dementia who are physically aggressive.
5. The Medical Director will advise the Employee Health Coordinator about medical topics or issues related to employee health education and counseling.
6. The facility's Medical Director and other physicians are not expected to treat the staff, but they may establish a doctor-patient relationship outside of the work setting by mutual agreement.
7. An employee with a work-related health problem or injury will report to his/her supervisor, who will evaluate the situation and identify the need for subsequent referral for medical evaluation and care.

continues on next page

8. The facility will only render first aid on site and will refer staff for subsequent evaluation; for example, to a physician's office or a medical clinic.

Employee Health Records

Policy Statement

Health records will be maintained for all employees.

Policy Interpretation and Implementation

1. A health record for each employee will contain, at a minimum:
 - a. Employee identification information (e.g., name, social security number, etc.);
 - b. History of immunization status and any related medical information;
 - c. Associate TB Screening Record;
 - d. Record of job-related injuries or illnesses;
 - e. Any exposure history to bloodborne pathogens;
 - f. Employee vaccination consent/declination forms;
 - g. Dates of all hepatitis B vaccinations;
 - h. Medical information relevant to whether the employee should receive, and can be given, hepatitis B vaccination;
 - i. A copy of any results of examinations, medical testing, and follow-up procedures related to employee health and infection control issues;
 - j. A copy of any information provided to a healthcare professional, clinic, etc.;
 - k. Treatments or vaccinations administered by this organization; and
 - l. Other pertinent health-related information deemed appropriate or necessary.
2. Employee health records will be filed separately from other employee records, and shall be kept confidential. The Director of Human Resources (or designee) shall maintain them.
3. Employee health-related information may only be released in accordance with established facility policy and current laws/regulations governing the release of such information.
4. Employees may request a release of information from their health records. To do so, they must first submit a signed and dated request to the Administrator or designee(s). The request must include a description of the information to be released and to whom it is to be released.
5. Employee health records will be maintained for the length of the employee's employment, plus thirty (30) years or as mandated by current state law if the employee has had a bloodborne pathogens exposure.

continues on next page

6. An employee who leaves our employment may obtain a copy of his/her health record upon submitting a written request to the business office. A fee may be charged for copying such records.

Employee Infection and Vaccination Status

Policy Statement

Prior to or upon an employee's duty assignment, the facility will assess the status of an employees' vaccination against infectious conditions, screening or tuberculosis, and recent history of communicable diseases. History of infectious diseases will be documented in the employee's health record and vaccinations will be documented on the *Employee Record of Vaccination*.

Policy Interpretation and Implementation

Reportable Conditions

1. Employees must report the following conditions to the Infection Preventionist (or designee):
 - a. Temperature greater than 100°F;
 - b. Nausea/vomiting;
 - c. Head or body lice (pediculosis);
 - d. Skin rashes, poison ivy/oak;
 - e. Acute diarrheal illness with other symptoms (i.e., fever, abdominal cramps, bleeding, etc.) or diarrhea lasting longer than twenty-four (24) hours;
 - f. Oro-facial herpes simplex virus or herpetic whitlow;
 - g. Diagnosed Streptococcal (Group A) sore throat;
 - h. Skin lesions which are infected, especially on exposed body parts, including impetigo and other staphylococcal infection;
 - i. Acute Upper Respiratory Infection (URI) or influenza; and/or
 - j. Active infection with/or exposure to:
 - (1) Hepatitis (jaundice);
 - (2) Human Immunodeficiency Virus (HIV) (if HIV antibody positive);
 - (3) Measles (if the employee is not immune);
 - (4) Mumps (if the employee is not immune);
 - (5) Rubella (if the employee is not immune);
 - (6) Herpes varicella zoster (chickenpox/shingles) virus (if the employee is not immune);
 - (7) Tuberculosis (symptoms including fever, fatigue, weight loss, cough, coughing blood, or night sweats); or
 - (8) Pertussis.
2. The Medical Director and Infection Preventionist will collaborate to determine the significance of any employee health condition in relation to job responsibility and the employees' restrictions regarding direct resident contact.
3. Staff must report any exposure to a resident's blood or body fluids to the Infection Preventionist or designee as soon as practical after the exposure.

continues on next page

Vaccinations

1. Employees will be current with mandated vaccinations (i.e., TST) prior to performing direct resident care.
2. Employees will also be offered vaccinations per state or local agency policies/regulations. Employees will be provided with educational materials to make informed decisions for non-mandated vaccinations. If declined, a declination form will be completed and placed in the employee's health record.
3. The facility will obtain and/or administer vaccinations required for pre- and post-exposure to infectious diseases in the workplace. Vaccinations may also be provided by the employee's personal physician or healthcare provider.
4. Documentation of vaccinations will include the signature of a licensed healthcare provider and employee when being administered. Vaccinations that are declined by the employee will be documented on the applicable declination form and placed in the employee's health record.
5. Employees who are HIV antibody positive may be exempt from routine vaccination mandates, consistent with their condition. (Note: MMR vaccination is indicated in asymptomatic HIV infection in those who are susceptible.)
6. Inquiries concerning employee vaccination evaluations should be referred to the Infection Preventionist (or designee).

Employee Work Assignments

Policy Statement

Staff members providing care to residents in isolation or to residents with an infectious/communicable disease must be medically able to perform such services.

Policy Interpretation and Implementation

1. Upon employment, employees will be assessed for previous immunization for hepatitis B and others, as required by state regulatory agencies.
2. Staff members who may be at risk of exposure to an infectious agent(s) as a result of responsibility for the care of a resident with an infectious/communicable disease shall be informed of that resident’s diagnosis, or possible diagnosis, prior to providing care to the resident.
3. Staff members who are not immune to varicella will not be assigned to provide nursing care to residents with chickenpox or herpes varicella zoster (HVZ).
4. Employees with communicable or contagious diseases may work as long as they are physically and mentally able to perform the essential functions of their jobs, and as long as they do not pose any undue risks to themselves or other employees, residents, or visitors of this facility.
5. Healthcare workers will not be prohibited from participating in resident-care activities strictly on the basis of their infection with a bloodborne pathogen such as hepatitis B virus (HBV), hepatitis C virus (HCV) or HIV/AIDS.
6. Restrictions on participation in resident-care activities will be based on factors associated with the risk of transmission.
7. Policies and procedures governing our facility’s employee health program have been established by our facility.

Employees of Other Employers, Infection Control

Policy Statement

Employees of other employers performing work on our premises shall cooperate fully with the facility in recognizing, preventing, and avoiding infection control hazards while in the workplace.

Policy Interpretation and Implementation

1. The Infection Preventionist (or designee) is responsible for informing employees of other employers (e.g., construction workers, repairmen, temporary employees, consultants, etc.) of any infection control hazards they may encounter while in the work area or while on our premises.
2. The Infection Preventionist (or designee) will inform any employers of other employees performing work on our premises of our infection control risks and requirements. The contracted employer will be responsible for informing his/her employees of such risks and safety requirements.
3. The failure of any contractor's employees to abide by pertinent infection control procedures and precautions may jeopardize the work contract with that company.
4. The Infection Preventionist will inform the facility management of a contracted employee's failure to follow pertinent procedures and precautions.
5. The facility management will inform the contractor of such violations and any necessary corrective action.

Engineering Controls

Policy Statement

The facility employs engineering controls to reduce worker exposure to bloodborne pathogens including the AIDS (HIV) and hepatitis B and C (HBV/HCV) viruses.

Policy Interpretation and Implementation

1. Whenever possible, engineering controls will be used as the primary method to reduce employee exposure to harmful substances and bloodborne pathogens, and to provide protection to our employees.
2. The purpose of engineering controls is to use, to the fullest extent feasible, inherently safe substances, procedures, and/or devices (i.e., providing puncture-resistant sharps containers, single-use devices, protective shields, needleless devices, etc.).
3. Our facility utilizes work practices and protective equipment to reduce the possibility of exposing staff to potentially infectious materials.
4. All staff is required to use protective equipment and to follow established work practices to reduce exposures to potentially infectious materials.
5. Each procedure performed on our premises has been evaluated and the work practices and protective equipment necessary to perform the procedure have been identified. Such information is posted and/or available in the area in which the procedure is performed.
6. Non-managerial staff helps select protective devices and help develop, implement, and revise procedures to help prevent occupational exposure to hazardous substances.
7. Staff is responsible for reporting faulty engineering control practices and procedures to the Infection Preventionist (or designee).
8. Our facility has developed an exposure control plan that provides detailed information relative to engineering controls and preventive measures. Staff undergoes training when engineering controls and practices are modified and when new procedures are implemented. The Infection Preventionist (or designee) maintains a master copy of our facility's exposure control plan.

Version	1.2 (H5MAPL0279)

Exposure Classification of Tasks/Procedures

Policy Statement

All tasks/procedures performed on the premises will be evaluated to determine the potential for exposure to bloodborne pathogens and other potentially infectious materials.

Policy Interpretation and Implementation

1. The Infection Preventionist (or designee), with the assistance of the Medical Director and other staff, shall be responsible to identify, evaluate, and classify each task/procedure performed on premises.
2. Task/Procedure classification will include as a minimum:
 - a. Identifying body fluids that are likely to be contaminated with the AIDS (HIV) and hepatitis B and C (HBV/HCV) viruses;
 - b. Determining the amount of body fluids that staff are likely to encounter as a result of performing a procedure;
 - c. Determining the probability of the employee being exposed to contaminated body fluids as a result of performing the procedure;
 - d. Identifying the ways in which the AIDS (HIV) or hepatitis B and C (HBV/HCV) viruses could enter the employee's body as a result of performing the procedure;
 - e. Identifying the protective equipment that should be used while performing the procedure; and
 - f. Identifying work practices necessary to perform the procedure.
3. A *Standard Precautions Barrier Checklist* will be developed, based on the foregoing task/procedure classifications.
4. At least annually, and in conjunction with other staff and the administration, the Infection Preventionist (or designee) will re-evaluate the task/procedure classifications to determine if any task/procedure should be reclassified to a higher or lower risk category.
5. Department heads and staff will be included in the classification effort as well as to help identify engineering controls that may be useful in preventing potential exposure to blood, body fluids or other potentially infectious materials.

continues on next page

6. Inquiries concerning our facility’s classification system should be referred to the Infection Preventionist (or designee).

Exposure Reporting and Investigating

Policy Statement

All employee exposure incidents to blood, body fluids or other potentially infectious materials must be reported to the Infection Preventionist as soon as practical after such incident occurs.

Policy Interpretation and Implementation

1. Any accident or incident that results in an occupational exposure to blood, body fluids or other potentially infectious materials is to be reported to the Infection Preventionist within twenty-four (24) hours of such exposure.
2. The Infection Preventionist (or designee) will investigate the exposure incident. The following data, as applicable, must be included in the investigation:
 - a. The date and time the exposure incident took place;
 - b. The circumstances surrounding the accident/incident;
 - c. Where the incident took place (e.g., resident room, treatment room, etc.);
 - d. The name(s) of any witness(es) and his/her account of the incident;
 - e. The injured employee's account of the incident;
 - f. The nature of the injury (e.g., needlestick, cut, eye/mouth splash, etc.);
 - g. A description of the task/procedure being performed at the time of the incident;
 - h. A description of the safety measures established for completing the task/procedure;
 - i. A description of the safety measures not followed by the injured (as applicable);
 - j. A description of the safety measures that failed to protect the injured while performing such task/procedure;
 - k. A description of the measures implemented/modified to aid in preventing the recurrence of such exposure incidents;
 - l. A description of how non-managerial staff members participated in the selection of safety measures to prevent the recurrence of exposure incidents while performing such task/procedure;
 - m. Follow-up information as may be necessary/required by facility policy;
 - n. Other pertinent data as necessary or required by facility policy or current regulatory agencies; and
 - o. The signature and title of the person completing the report.
3. The Infection Preventionist (or designee) responsible for conducting the investigation and/or completion of the investigation report(s), must provide such completed documents to the Administrator or designee(s), within twenty-four (24) hours of completing them.
4. The facility has established procedures governing the recording of occupational injuries and illnesses on the current OSHA approved form/log. Copies of such procedures and current OSHA logs are available from the Infection Preventionist and Director of Nursing Services.

continues on next page

5. A sharps injury record must be completed for all occupational percutaneous exposure incidents (e.g., injuries caused by needlesticks, scalpel cuts, etc.).

Exposure Reports

Policy Statement

An occupational exposure report shall be completed for all known employee exposures to blood and/or body fluids.

Policy Interpretation and Implementation

1. Exposures meeting the following criteria shall be reported to the Infection Preventionist (or designee) as soon as practical following emergency site care:
 - a. Parenteral exposure to blood, body fluids (whether or not they contain visible blood) including semen, vaginal secretions, amniotic, cerebrospinal, pericardial, peritoneal, pleural, and synovial fluids, by needlestick or contamination of an open wound;
 - b. Mucous membrane exposure to blood, body fluids including semen, vaginal secretions, amniotic, cerebrospinal, pericardial, peritoneal, pleural, and synovial fluids;
 - c. Cutaneous exposure to large amounts of blood; and/or
 - d. Prolonged contact with blood.
2. The Infection Preventionist (or designee) will investigate all known exposures to determine the cause of the exposure. The Infection Preventionist (or designee) will complete an exposure report form. A supply of exposure report forms is maintained at each nurses' station.
3. The Infection Preventionist will submit a copy of the exposure report, including any investigative reports, corrective actions taken, etc., to the administrator not later than forty-eight (48) hours after the exposure incident.
4. Exposure reports shall be kept confidential to protect the privacy of the injured. Release of such information will only be on a need-to-know basis (for example, to the Administrator, Director of Nursing Services, Infection Preventionist, employee's physician, and government officials, as required by law).
5. Completed exposure report forms shall be maintained separately from employee personnel records.

First Aid Treatment

Policy Statement

Residents and employees who experience minor injuries shall be treated at the facility. If the injuries cannot be treated with basic Red Cross first aid intervention, the emergency medical system (EMS) will be activated.

Policy Interpretation and Implementation

1. As part of the initial orientation and training, all licensed staff will complete an American Red Cross basic life support and first aid training course (or similar program that has been approved by the Quality Assurance and Performance Improvement Committee).
 - a. Instructor-led, “hands-on” training will occur initially upon hire and periodically thereafter. Skills for basic first aid shall be reviewed as needed.
 - b. Training shall be up to date with current first aid techniques and knowledge.
 - c. Training and reference materials shall be replaced as necessary.
2. The goal of staff training is to enable employees to provide basic life support and/or first aid intervention to injured residents or employees. In the case of life-threatening injuries or situations, the goal is patient stabilization until the EMS arrives.
3. Basic first aid intervention includes (but is not limited to) interventions for the following situations:
 - a. Choking, breathing emergencies;
 - b. Burns (chemical, heat, electrical);
 - c. Cuts, lacerations;
 - d. Bleeding (mild and moderate);
 - e. Shock;
 - f. Joint, bone and musculoskeletal injuries;
 - g. Allergic reactions and anaphylaxis; and/or
 - h. Bites and stings.
4. The goal of emergency intervention is to stabilize the resident and the situation until further treatment is available.
5. In addition to providing basic first aid intervention, contact the emergency medical system (EMS) or advanced medical personnel immediately for the following situations:
 - a. Unconsciousness or altered consciousness;
 - b. Difficulty or absence of breathing;
 - c. Chest pain;
 - d. Persistent abdominal pain or pressure;
 - e. Severe bleeding;
 - f. Vomiting blood or blood in stool;
 - g. Severe burns;
 - h. Suspected poisoning;
 - i. Seizures;
 - j. Suspected stroke (sudden unilateral weakness, slurred speech or severe headache);

continues on next page

- k. Suspected head, neck or spine injury;
 - l. Suspected broken bone or open fracture; or
 - m. Condition is not clear or is worsening.
6. Procedures for basic first aid intervention are located in the facility First Aid Manual/Guide Book. A copy of this manual is kept at each nurse's station with the first aid kit.
 7. A first aid kit shall be maintained at each nurse's station for use in treating minor injuries. Each kit contains, as a minimum, the following supplies:
 - a. Assorted Bandages (50-75);
 - b. Fingertip Fabric Bandages (10);
 - c. Knuckle Fabric Bandages (10);
 - d. 2" x 2" Gauze Pads (5) – Packs of 2;
 - e. 3" x 3" Gauze Pads (5) – Packs of 2;
 - f. 2" Gauze Roll Bandage (1) – 2" Roll;
 - g. 3" Gauze Roll Bandage (1) – 3" Roll;
 - h. Elastic Wrap Bandage (1) – 2" x 5 yd. Bandage;
 - i. Triangular Sling/Bandage (1);
 - j. 5" x 9" Trauma Pad (1);
 - k. Butterfly Wound Closure Bandages (10);
 - l. Alcohol Cleansing Pads (20);
 - m. Antiseptic Cleansing Wipes (10);
 - n. First Aid/Burn Cream Packs (10);
 - o. First Aid Antibiotic Ointment Packs (10);
 - p. Burn Relief Gel 3.5 gm. Packs (6);
 - q. Eye Wash 1 oz. Bottle (1);
 - r. Castile Soap Towelettes (10);
 - s. Moleskin – 2" Square (10);
 - t. CPR Face Shield and Vinyl Gloves (1) Shield, (1) Pair Gloves;
 - u. Vinyl Gloves (2) Pairs;
 - v. First Aid Tape (1) – 1/2" x 10 yd. Roll;
 - w. Cloth First Aid Tape (1) – 1" x 5 yd. Roll;
 - x. Bandage Protectant/Finger Cot (50);
 - y. Nickel Plated Scissors (1) 4-1/2" Scissor;
 - z. Stainless Steel Tweezers, Slanted (1) 3"; and
 - aa. First Aid Guide (1) Guidebook.
 8. The Director of Nursing Services, or his/her designee, shall be responsible for ensuring that first aid kits are inspected quarterly and that adequate supplies are on-hand at all times.
 9. First aid kits may not be removed from their assigned locations except for treatment of the injured, drill exercises, and/or the replenishment of supplies.
 10. Emergency first aid treatment will be provided to injured residents and employees. However, residents and employees have the right to refuse such medical treatment. Such information must be recorded in the resident's medical record or the employee's personnel file. For residents who refuse the treatment, the Charge Nurse and Attending Physician shall be notified of the refusal.

continues on next page

11. Regardless of the nature or severity, any resident's injury/situation shall be reported to the resident's Attending Physician and family, and documented in the resident's medical record. If the resident's Attending Physician is not available, follow the facility policy for Emergency Physician Care.
12. An injured employee may seek medical attention from his/her Personal Physician, the facility's Medical Director, or from a Medical Treatment Center.
13. Regardless of the nature or severity of an employee's injury, all on-the-job injuries must be reported to the employee's department director or supervisor.

Hepatitis B Vaccine

Policy Statement

Hepatitis B vaccination is offered to all unvaccinated adults at risk for HBV infection and for adults requesting protection from HBV infection, unless the vaccine is contraindicated.

Policy Interpretation and Implementation

Immunization of Staff

1. Our facility provides hepatitis B vaccines to staff who have not previously been immunized or who are not known to be immune to the hepatitis B virus (HBV).
2. If an individual has previously received the hepatitis vaccine series, his or her antibody to hepatitis B surface antigen (anti-HBs) status may be measured. If the anti-HBs is <10 mIU/mL, he or she will be offered one or more additional doses of Hep B vaccine and retested. (See Figure 1 below.)
3. Employees who are pregnant at the time of vaccination must provide the Infection Preventionist (or designee) with written authorization from an obstetrician before the vaccine may be administered.
4. Lactating mothers must provide the Infection Preventionist (or designee) with written authorization from a pediatrician before the vaccine may be administered.
5. All eligible employees are given the hepatitis B vaccine series free of charge.
6. If an employee receives the vaccine series from his or her personal physician, the employee should provide the Infection Preventionist (or designee) with proof of vaccination.
7. If an employee initially declines the vaccines, he or she may opt to receive the vaccine at a later time in accordance with this policy.

Immunization of Residents

1. Residents are screened for vaccination status and risk for HBV infection and offered the vaccine if appropriate.
2. For residents who were previously vaccinated, serological testing prior to re-vaccination may be indicated.¹
3. Serological testing² is considered for:
 - a. Household, sexual, or needle contacts of hepatitis B surface antigen (HBsAg)–positive persons†;
 - b. HIV-positive persons†;
 - c. Persons with elevated alanine aminotransferase/aspartate aminotransferase of unknown etiology†;
 - d. Hemodialysis patients†;
 - e. Men who have sex with men†;

continues on next page

1. Serologic testing comprises testing for hepatitis B surface antigen (HBsAg), antibody to HBsAg, and antibody to hepatitis B core antigen.
2. †Denotes persons also recommended for hepatitis B vaccination. Serologic testing should occur prior to vaccination. Serologic testing should not be a barrier to vaccination of susceptible persons. The first dose of vaccine should typically be administered immediately after collection of the blood for serologic testing.

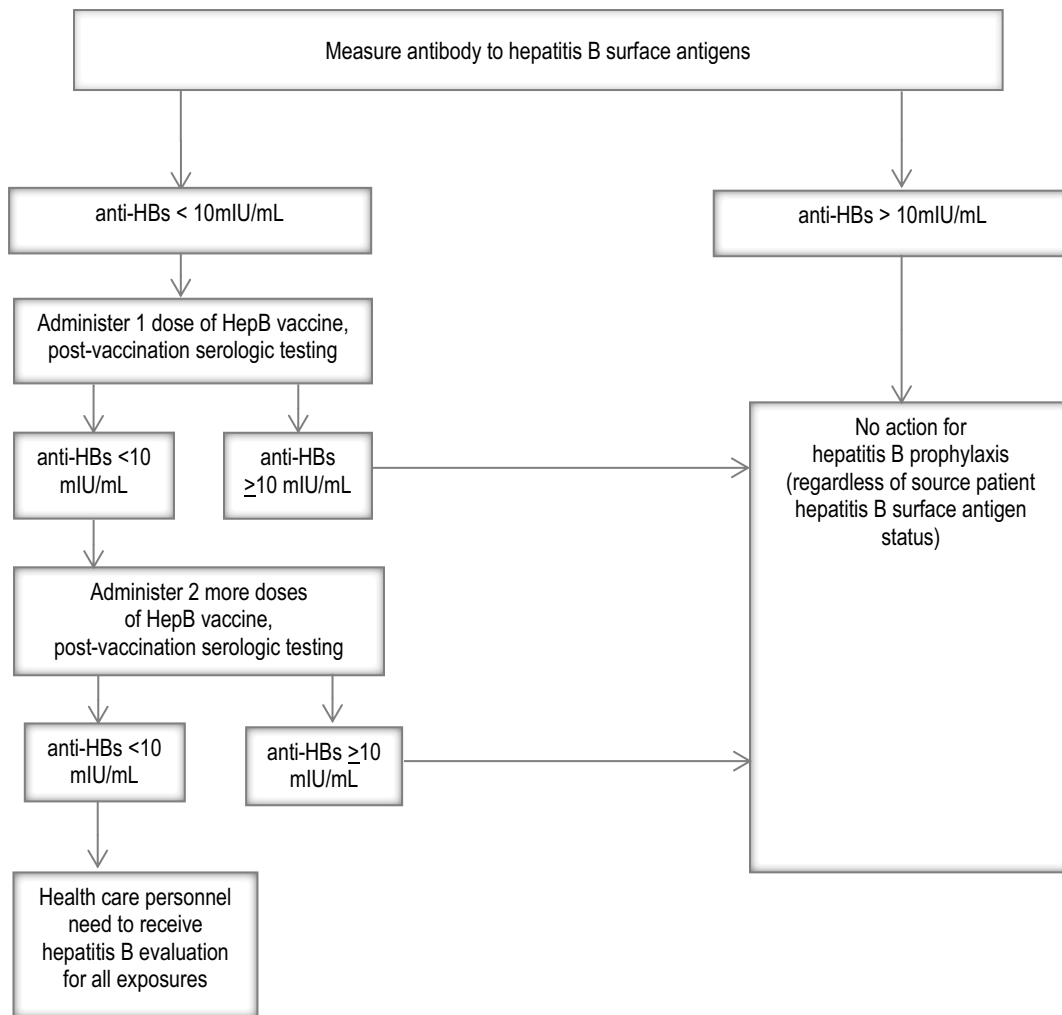

- f. Past or current persons who inject drugs†;
 - g. Persons born in countries of high and intermediate hepatitis B virus (HBV) endemicity (HBsAg prevalence $\geq 2\%$);
 - h. U.S.-born persons not vaccinated as infants whose parents were born in countries with high HBV endemicity ($\geq 8\%$);
 - i. Persons needing immunosuppressive therapy, including chemotherapy, immunosuppression related to organ transplantation, and immunosuppression for rheumatologic or gastroenterologic disorders; or
 - j. Donors of blood, plasma, organs, tissues, or semen.
4. Residents who have a history of immunosuppressive disorders, receive hemodialysis, or are infected with the human immunodeficiency virus (HIV), must have an order from their physician before the vaccine may be administered.
 5. Residents may be charged for the hepatitis vaccine.

Informed Consent

1. Prior to vaccine administration, the Infection Preventionist (or designee) provides residents (or representatives) and staff with information pertaining to hepatitis B vaccination.
2. Staff and residents (or representatives) are required to sign an informed consent acknowledging their understanding of the information provided.

Needlesticks and Cuts

Policy Statement

All personnel must follow our facility's established procedures to help prevent injuries caused by needles, sharp blades, broken glass, or other sharp instruments or devices, and to report all such incidents that occur.

Policy Interpretation and Implementation

1. The staff shall handle with caution used needles, sharp blades, broken glass, or other sharp objects or devices, to reduce the possibility of needlestick injuries and cuts.
2. To help prevent needlestick injuries, needles shall not be recapped, purposely bent or broken by hand, removed from disposable syringes, or otherwise manipulated by hand.
3. Staff shall place used needles and other sharp objects in puncture-resistant containers.
4. All personnel shall report needlestick injuries and cuts to their supervisor, who shall report the injury to the Infection Preventionist as soon as practical.
5. The facility has established procedures governing the handling and disposing of used needles and syringes. Copies of such procedures are available from the Infection Preventionist and Director of Nursing Services.

Sharps Injury Record

Policy Statement

All percutaneous injuries from contaminated sharps shall be recorded on the Sharps Injury Record.

Policy Interpretation and Implementation

1. Any incident that results in an occupational exposure to blood, body fluids or other potentially infectious materials from contaminated sharps shall be recorded on the *Sharps Injury Record*.
2. The Infection Preventionist (or designee) will complete the *Sharps Injury Record*. This record will contain, at a minimum:
 - a. The injury identification number established by the facility;
 - b. The type of device involved in the incident;
 - c. The brand of device involved in the incident;
 - d. The department or work area where the exposure incident occurred;
 - e. An explanation of how the incident occurred;
 - f. The injured employee's account of the incident;
 - g. The injured employee's opinion about engineering controls and/or work practices that could have been implemented or followed that might have prevented the injury;
 - h. Other pertinent data as necessary or required by facility policy or current regulatory agencies; and
 - i. The signature and title of the person completing the report.
3. The *Sharps Injury Record* must be completed within fourteen (14) days of the date the incident was reported to the Infection Preventionist.
4. Information contained in the *Sharps Injury Record* shall be recorded and maintained to protect the confidentiality of the injured employee.
5. A supply of *Sharps Injury Records* is maintained at each nurses' station and the Infection Preventionist's office.

Standard Precautions Barrier Checklist

Policy Statement

The Infection Preventionist (or designee) shall provide classification of occupational exposure risk and barriers needed for specific tasks on the *Standard Precautions Barrier Checklist*.

Policy Interpretation and Implementation

1. Staff shall apply Standard Precautions to the care of all residents in all situations, regardless of suspected or confirmed presence of infectious disease.
2. Hand hygiene and safe needle handling/injection practices are always applied in the care of all residents.
3. In addition, specific tasks will be evaluated for occupational exposure risk to:
 - a. Blood;
 - b. Body fluids;
 - c. Secretions;
 - d. Excretions;
 - e. Non-intact skin; and
 - f. Mucous membranes.
4. All tasks will be evaluated for:
 - a. Volume of exposure;
 - b. Probability of exposure; and
 - c. Route of exposure.
5. Using this information, the Infection Preventionist (or designee) shall determine barriers that are indicated for specific departmental tasks. Barriers include gloves, gowns, masks, eye protection, and face shields.
6. The Infection Preventionist (or designee) shall enter barrier information for each departmental task on the *Standard Precautions Barrier Checklist* and shall post the checklist in a location where employees in each department have access to it.

Tuberculosis – Employee Exposure Follow-Up

Policy Statement

The Employee Health Coordinator (or designee) shall notify, monitor and document the health status of employees who, while working in the facility, are exposed to an active case of tuberculosis (TB). Follow-up shall consist of screening employees for signs and symptoms of active TB and referring the employees for treatment appropriately.

Policy Interpretation and Implementation

1. If employees ARE EXPOSED TO AN ACTIVE CASE OF TB, the Infection Preventionist (or designee) will:
 - a. Inform (in writing) other employees who may have been exposed;
 - b. Review each identified employee's baseline screening for TB; and
 - c. Conduct a TB symptom evaluation for exposed individuals.
2. The Infection Preventionist determines the appropriate screening test (tuberculin skin test [TST] or TB blood test [interferon gamma release assay/IGRA]) according to CDC recommendations, availability and individual situation.
3. For TST or IGRA testing:
 - a. Screening is administered as soon as possible after exposure.
 - b. Employees with positive baseline screening tests are not tested again. These individuals are monitored for clinical signs and symptoms of active TB disease and follow up treatment is based on consideration of medical history.
 - c. If the initial test is negative, a second test is administered eight (8) to ten (10) weeks after the exposure.
 - d. Exposed employees are educated about symptoms suggesting TB, such as persistent cough, night sweats, bloody sputum, weight loss, or fever and instructed to report the development of such symptoms to the Infection Preventionist immediately.
4. After results are confirmed:
 - a. Employees with positive screening tests or those with symptoms suggesting active TB disease are referred for immediate evaluation, chest X-ray, treatment and follow-up.
 - b. If latent tuberculosis infection (LTBI) is diagnosed, treatment is strongly encouraged.
 - c. Any employee found to have active TB is reported to the local health department and must complete recommended treatment and be free of clinical symptoms prior to returning to work.
 - d. Positive screening tests and positive chest X-rays are recorded on the OSHA 300 log.
 - e. All positive screening results, active TB cases, and follow-up screenings, recommendations, and results are reported to the Infection Prevention and Control Committee.

Version	2.0 (H5MAPL0900)

Tuberculosis, Employee Screening for

Policy Statement

All employees are screened for latent tuberculosis infection (LTBI) and active tuberculosis (TB) disease, using tuberculin skin test (TST) or interferon gamma release assay (IGRA) and symptom screening, prior to beginning employment.

Policy Interpretation and Implementation

Screening

1. Each newly hired employee is screened for LTBI and active TB disease after an employment offer has been made but prior to the employee's duty assignment.
2. Screening includes a baseline test for LTBI using either a TST or IGRA, individual risk assessment and symptom evaluation.
 - a. If the baseline test is negative and the individual risk assessment indicates no risk factors for acquiring TB, then no additional screening is indicated.
 - b. If the baseline test is positive, but the individual risk assessment is negative and the individual is asymptomatic, a second test (either TST or IGRA) is conducted.
3. The Employee Health Coordinator (or designee) will accept documented verification of TST or IGRA results within the preceding 12 months.
 - a. If the previous TST or IGRA result was negative and the individual is at low risk of TB infection, the employee will not be re-tested prior to beginning employment.
 - b. If the previous TB test was positive, but the individual is at low risk for TB infection, is asymptomatic, and is at low risk of disease progression, a second test will be conducted.
 - c. Individuals who have had BCG vaccination will have an initial screening test. An IGRA is the preferred method of testing for individuals who have received the BCG vaccine.
4. Third party contractors who may come in contact with residents, including service employees, consultants and privately hired sitters, must provide proof of screening for LTBI and active TB disease prior to contact with residents, or as required by State regulations.

Evaluation and Treatment of Positive Screening

1. If first baseline test and individual risk assessment are both positive, or if the follow-up test is positive the individual must undergo symptom evaluation and chest X-ray to rule out active TB disease.
2. If the chest X-ray is negative and he/she is free of symptoms of active TB, the employee is considered free of active tuberculosis but positive for LTBI.
 - a. Employees who are diagnosed with LTBI are strongly encouraged to complete the recommended treatment for LTBI.
 - b. Employees who do not complete LTBI treatment are monitored and screened annually for symptoms. In addition, they are provided with education about the signs and symptoms of active TB and advised to contact the Employee Health Coordinator immediately if symptoms develop.

continues on next page

3. If the X-ray shows signs of lung abnormalities or the symptom questionnaire is positive, the employee is referred to his/her private physician or the appropriate health department to discuss possible TB prophylaxis or treatment.
 - a. The private physician or health department must provide the Employee Health Coordinator with a signed medical release indicating that the individual is free from active TB prior to beginning or returning to work.

Serial Testing of Employees

1. The decision to perform serial (e.g., annual) testing after baseline is based on individual risk factors of exposure both at work and outside of work.
2. The Infection Preventionist determines how to proceed with follow up testing based on individual risk factors and baseline test results.

Waste Disposal

Policy Statement

All infectious and regulated waste shall be handled and disposed of in a safe and appropriate manner.

Policy Interpretation and Implementation

1. All infectious and regulated waste destined for disposal shall be placed in closable leak-proof containers or bags that are color-coded or labeled as herein described. The Infection Preventionist and Environmental Services Director will ensure that waste is properly disposed of and the following rules are observed:
 - a. If outside contamination of the container or bag is likely to occur, a second leak-proof container or bag which is closable and labeled (or color-coded) shall be placed over the outside of the first container or bag and closed to prevent leakage during handling, storage, and transport.
 - b. Disposal of all infectious and regulated waste shall be in accordance with applicable federal, state, and local regulations.
 - c. Immediately after use, sharps shall be disposed of in closable, puncture resistant, disposable containers that are leak-proof on the sides and bottom and are labeled or color-coded.
 - (1) These containers shall be easily accessible to personnel and located in the immediate area of use; and
 - (2) These containers shall be replaced routinely and not allowed to overfill.
2. The facility has established procedures governing infectious and regulated waste disposal. Copies of such policies are available from the Infection Preventionist and Environmental Services Director.

Work Practices

Policy Statement

In our facility, employees shall follow personal hygiene and established work practices at all times.

Policy Interpretation and Implementation

1. Employees shall wash their hands as soon as possible after removing gloves or other personal protective equipment and after contact with blood or other potentially infectious materials.
2. All personal protective equipment shall be removed in the area where contamination occurred, or as soon as possible if overtly contaminated, and placed in an appropriately designated area or container for storage, washing, decontaminating or disposal.
3. Used needles and other sharps shall not be sheared, bent, broken, recapped, or re-sheathed by hand. Used needles shall not be removed from disposable syringes.
4. Eating, drinking, smoking, applying cosmetics or lip balm and handling contact lenses are all prohibited in work areas where there is a potential for occupational exposure.
5. Food and drink shall not be stored in refrigerators, freezers, or other cabinets where blood or other potentially infectious materials are stored or in other areas of possible contamination.
6. All procedures involving blood or other potentially infectious materials, shall be performed in such a manner as to minimize splashing, spraying, and aerosolization of these substances.
7. Mouth pipetting/suctioning is prohibited.
8. Employees who fail to follow our established policies and procedures governing occupational exposure to blood or body fluids are subject to disciplinary action in accordance with our personnel policies.

Coronavirus Disease (COVID-19) – Occupational Health

Policy Statement

Facility practices are in place to protect Healthcare personnel from exposure to COVID-19 to the extent possible, in accordance with Occupational Health and Safety Administration (OSHA) and Center for Disease Control and Prevention (CDC) recommendations.

Policy Interpretation and Implementation

1. This facility has engineering, administrative, and work practice measures in place to protect staff from exposure to COVID-19 and other infectious diseases.
2. Engineering controls consist of physical barriers that separate staff from infected individuals, for example, barrier curtains, dedicated rooms, or airborne infection isolation rooms if available.
3. Administrative controls include specific measures adopted by the facility, for example policies, procedures, training, and facility practices that reduce the risk of exposure for healthcare workers.
4. Safe work practices are measures that staff are asked to comply with in order to reduce their exposure, for example, hand hygiene, proper donning and removal of PPE, handling waste and potentially infectious material, and complying with all infection prevention and control practices.
5. This facility has [] does not have [] an OSHA approved respiratory protection program.
 - a. This facility is equipped with _____ airborne infection isolation (negative-pressure) rooms.
 - b. The number of personnel who have been trained, medically cleared and fit-tested for N95 respirators: _____.
 - c. Current and projected 30-day supply of N95 respirators: _____.
6. Healthcare workers and other facility staff are required to self-monitor and report fever (temperature > 100°F or subjective fever), or symptoms consistent with COVID-19. Staff are screened before each shift for signs and symptoms of COVID-19 infection, including temperature > 100°F.
7. Any staff member with potential exposure to a resident, visitor or other staff member with confirmed COVID-19 is managed according to [Interim U.S. Guidance for Risk Assessment and Work Restrictions for Healthcare Personnel with Potential Exposure to COVID-19](#).
8. Employee safety and health standards related to COVID-19 are based on [The Occupational Safety and Health Act standards and regulations](#).

continues on next page

Guidance for Asymptomatic HCP Who Were Exposed to Individuals with Confirmed COVID-19

This following table applies to HCP with potential exposure in a healthcare setting to patients, visitors, or other HCP with confirmed COVID-19.

Exposure	Personal Protective Equipment Used	Work Restrictions
HCP who had prolonged ⁽¹⁾ close contact ⁽²⁾ with a patient, visitor, or HCP with confirmed COVID-19 ⁽³⁾	<ul style="list-style-type: none"> - HCP not wearing a respirator or facemask⁽⁴⁾ - HCP not wearing eye protection if the person with COVID-19 was not wearing a cloth face covering or facemask - HCP not wearing all recommended PPE (i.e., gown, gloves, eye protection, respirator) while performing an aerosol-generating procedure⁽¹⁾ 	<ul style="list-style-type: none"> - Exclude from work for 14 days after last exposure⁽⁵⁾. - Advise HCP to monitor themselves for fever or symptoms consistent with COVID-19⁽⁶⁾. - Any HCP who develop fever or symptoms consistent with COVID-19⁽⁶⁾ should immediately contact their established point of contact (e.g., occupational health program) to arrange for medical evaluation and testing.
HCP other than those with exposure risk described above	N/A	<ul style="list-style-type: none"> - No work restrictions. - Follow all recommended infection prevention and control practices, including wearing a facemask for source control while at work, monitoring themselves for fever or symptoms consistent with COVID-19⁽⁶⁾ and not reporting to work when ill, and undergoing active screening for fever or symptoms consistent with COVID-19⁽⁶⁾ at the beginning of their shift. - Any HCP who develop fever or symptoms consistent with COVID-19⁽⁶⁾ should immediately self-isolate and contact their established point of contact (e.g., occupational health program) to arrange for medical evaluation and testing.
HCP with travel or community exposures should inform their occupational health program for guidance on need for work restrictions.		

HCP = healthcare personnel

(1) Data are insufficient to precisely define the duration of time that constitutes a prolonged exposure. Until more is known about transmission risks, it is reasonable to consider an exposure of 15 minutes or more as prolonged. However, any duration should be considered prolonged if the exposure occurred during performance of an aerosol generating procedure.

(2) Data are limited for the definition of close contact. For this guidance it is defined as:

- a. being within 6 feet of a person with confirmed COVID-19; or
- b. having unprotected direct contact with infectious secretions or excretions of the person with confirmed COVID-19.

(3) Determining the time period when the patient, visitor, or HCP with confirmed COVID-19 could have been infectious:

- a. For individuals with confirmed COVID-19 who developed symptoms, consider the exposure window to be 2 days before symptom onset through the time period when the individual meets criteria for discontinuation of Transmission-Based Precautions.

continues on next page

- b. For individuals with confirmed COVID-19 who never developed symptoms, determining the infectious period can be challenging. In these situations, collecting information about when the asymptomatic individual with COVID-19 may have been exposed could help inform the period when they were infectious.
- (1) In general, individuals with COVID-19 should be considered potentially infectious beginning 2 days after their exposure until they meet criteria for discontinuing Transmission-Based Precautions.
 - (2) If the date of exposure cannot be determined, although the infectious period could be longer, it is reasonable to use a starting point of 2 days prior to the positive test through the time period when the individual meets criteria for discontinuation of Transmission-Based Precautions for contact tracing.

(4) While respirators confer a higher level of protection than facemasks and are recommended when caring for patients with COVID-19, facemasks still confer some level of protection to HCP, which was factored into this risk assessment. Cloth face coverings are not considered PPE because their capability to protect HCP is unknown.

(5) If staffing shortages occur, it might not be possible to exclude exposed HCP from work. For additional information and considerations refer to [Strategies to Mitigating HCP Staffing Shortages](#).

(6) For the purpose of this guidance, fever is defined as subjective fever (feeling feverish) or a measured temperature of 100.0°F (37.8°C) or higher. Note that fever may be intermittent or may not be present in some people, such as those who are elderly, immunocompromised, or taking certain fever-reducing medications (e.g., nonsteroidal anti-inflammatory drugs [NSAIDs]).

Coronavirus Disease (COVID-19) – Testing and Return to Work Criteria for Healthcare Personnel

Policy Statement

Healthcare Personnel (HCP) in this facility, including all paid and unpaid individuals with potential for direct or indirect exposure to residents or infectious materials, are tested for the SARS-CoV-2 virus to detect the presence of current infections (viral testing) and to help prevent the transmission of COVID-19 in the facility.

Testing may be provided by this facility (Point of Care testing) or offsite through an approved laboratory that has rapid testing capabilities (the ability to process large numbers of tests and report results within 48 hours).

Tests must be able to detect the SARS-CoV-2 virus (e.g., polymerase chain reaction/PCR) with greater than 95% sensitivity, greater than 90% specificity and with results obtained within 48 hours. Antibody tests are not used to diagnose active infection, or to inform the infection prevention and control strategy for COVID-19.

Policy Interpretation and Implementation

Testing

1. Symptomatic HCP (those with signs or symptoms associated with COVID-19) are tested, regardless of severity of symptoms. Symptomatic HCP are restricted from the facility pending the results of testing.
2. Asymptomatic HCP with known or suspected exposure to SARS-CoV-2 (including those who have had close contact with SARS-CoV-2 infection in the community) are tested as part of community contact tracing efforts.
3. If there is a COVID-19 outbreak in the facility, expanded viral testing of all HCP and residents, regardless of symptoms and/or exposure, will be initiated.
 - a. An outbreak is defined as a new SARS-CoV-2 infection in any HCP or any nursing home-onset SARS-CoV-2 infection in a resident.
 - b. Expanded viral testing includes initial testing of all HCP followed by repeat testing of all previously negative HCP, generally between every 3 days to 7 days, until the testing identifies no new cases of SARS-CoV-2 infection among residents or HCP for a period of at least 14 days since the most recent positive result.
4. Routine testing of HCP (those who are asymptomatic and have no known or suspected exposure to SARS-CoV-2) is based on the extent of the virus in the community.
 - a. Routine testing consists of initial viral testing of all HCP, along with periodic retesting.
 - b. Frequency of retesting is based on the following criteria:
 - (1) Low COVID-19 activity (county positivity rate <5%) – once a month;
 - (2) Medium COVID-19 activity (county positivity rate 5-10%) – once a week; or
 - (3) High COVID-19 activity (county positivity rate >10%) – twice a week.
5. Frequency of retesting is based on data reported for the previous week and is accessed at: <https://data.cms.gov/stories/s/COVID-19-Nursing-Home-Data/bkwz-xpvg>.

continues on next page

6. The county positivity rate is monitored every other week (the first and third Mondays of every month).
 - a. If the county positivity rate increases to a higher level of testing, increased frequency of testing begins as soon as that data is accessed.
 - b. If the county positivity rate decreases to a lower level of testing, the higher frequency of testing will remain in place until the county positivity rate remains at the lowered activity level for at least two weeks.
7. The infection preventionist, or designee, reports positive test results to the local or state health department (as appropriate) for contact tracing and the Occupational Health and Safety Administration according to requirements for Recording and Reporting Occupational Injuries and Illness (29 CFR part 1904).
8. Symptomatic HCP who refuse testing may not enter the building until return to work criteria have been met. Asymptomatic HCP who refuse outbreak testing or routine testing are restricted from the building until testing has been completed.
9. HCP who have recovered from COVID-19 and are asymptomatic do not need to be retested until three months from initial onset of symptoms from prior infection.

Return to Work – Symptom-Based Strategies

1. HCP who have suspected or confirmed infection with SARS-CoV-2 and who have been asymptomatic may return to work based on the following criteria:
 - a. For exposures considered to pose a higher risk of transmission, HCP are excluded from work for 14 days following exposure.
 - (1) If there are staffing shortages, HCP with higher risk exposures may be allowed to return to work prior to the 14 day time period with daily symptom screening (prior to start of shift) and source control (with a facemask) while at work.
 - b. For exposures considered lower risk, HCP are allowed to work with daily symptom screening (prior to start of shift) and source control measures while at work.
2. HCP who have suspected or confirmed infection with SARS-CoV-2 and who have been symptomatic may return to work based on the following criteria:
 - a. HCP with mild to moderate illness who are not severely immunocompromised:
 - (1) At least 10 days have passed since symptoms first appeared;
 - (2) At least 24 hours have passed since last fever without the use of fever-reducing medications; and
 - (3) Symptoms (e.g., cough, shortness of breath) have improved.
 - b. HCP with severe to critical illness or who are severely immunocompromised:
 - (1) At least 20 days have passed since symptoms first appeared;
 - (2) At least 24 hours have passed since last fever without the use of fever-reducing medications; and
 - (3) Symptoms (e.g., cough, shortness of breath) have improved.

Return to Work – Test-Based Strategies

1. HCP who have been symptomatic:
 - a. Resolution of fever without the use of fever-reducing medications; and
 - b. Improvement in symptoms (e.g., cough, shortness of breath); and
 - c. Results are negative from at least two consecutive respiratory specimens collected ≥ 24 hours apart (total of two negative specimens) tested using an FDA-authorized molecular viral assay to detect SARS-CoV-2 RNA.

continues on next page

2. HCP who have been asymptomatic:
 - a. Results are negative from at least two consecutive respiratory specimens collected ≥ 24 hours apart (total of two negative specimens) tested using an FDA-authorized molecular viral assay to detect SARS-CoV-2 RNA.

Return to Work Practices

1. After returning to work, HCP will:
 - a. Wear a facemask (not a cloth face covering) for source control at all times while in the healthcare facility until all symptoms are completely resolved or at baseline. After this time period, these HCP may return to approved facility source control measures.
 - b. Wear an N95 or equivalent or other recommended PPE when indicated, as a facemask does not replace the need for PPE when caring for residents with suspected or confirmed SARS-CoV-2 infection.
 - c. Self-monitor for symptoms and seek re-evaluation if symptoms of SARS-CoV-2 infection recur or worsen.

Bed Bugs, Preventing and Managing Infestations of

Level I

Purpose

Staff will employ infection control strategies to prevent and manage infestation of bed bugs (*Cimex lectularius*).

Preparation

Staff should be trained to recognize bed bugs and bed bug infestation, and know what their specific roles will be should an infestation occur.

General Guidelines

1. Bed bugs belong to the arthropod family Cimicidae.
2. They feed on human blood and other warm-blooded hosts.
3. Adult bed bugs can be as large as 5 mm in length, are red-brown in color and oval shaped.
4. They feed primarily at night. Each feeding “session” lasts for approximately 5 minutes, after which the bugs return to their hiding places – under mattresses, in linens or rugs, or on clothing.
5. There is a distinct odor associated with bed bug infestation. Some describe it as soured fruit or rotting meat.
6. Female bed bugs can lay up to three eggs daily; eggs hatch in 3-5 days.
7. Lifespan of bed bugs can be up to two years with a food source, and up to a year without.
8. Bed bug bites can cause pruritus, papules, vesicle and wheals on the skin. Bites frequently appear in clusters of three. Scratching the bites can lead to local and (later) systemic infections. Severe allergy to the bed bug saliva can lead to anaphylaxis.
9. Infestation can cause psychological stress and “psychogenic itching.”
10. Bed bug management is part of an overall integrated pest management philosophy, which utilizes the most effective combination of methods to control pests while minimizing resident exposure to pesticides.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure.

1. Flashlight;
2. Gloves;
3. Magnifying glass;
4. Plastic containers for insect specimen;
5. Tweezers or forceps;
6. Photos or drawings of bed bugs and bed bug infestations;
7. Vacuums;
8. Insecticides;
9. Mattress encasements; and
10. Medications, as ordered.

continues on next page

Steps in the Procedure

Identifying and eradicating bed bug infestation is a multi-disciplinary task, involving the resident, nursing, infection control, administration, and housekeeping. The following section identifies areas of responsibility that may be assigned to one or more disciplines.

Monitoring and Inspection

1. Maintain vigilance if there is an outbreak reported in the geographic region.
2. Thoroughly screen newly admitted residents, as well as those who are returning from a stay away from the facility.
 - a. Assess skin for papules, vesicles, wheals, or bullae.
 - b. Ask the resident if they have been exposed to bed bugs or have experienced pruritus.
 - c. Check medication orders for any medication used to treat pruritic rash.
3. Remain alert to complaints of pruritus. (Note that many elderly residents have a reduced sensation of itching.) Pay particular attention to unusual developments in skin appearance in any resident.
4. Regularly inspect mattresses, box springs, bed frames and headboards following current published guidelines for inspection and identification (see References).
 - a. Check resident rooms at night when bed bugs are active. Use a flashlight to check for signs of bed bug activity.
 - b. Use contact and standard precautions during inspections.
5. Consider the use of dogs trained to detect bed bugs, which has been used with success.
6. Signs of bed bug activity include:
 - a. Visual identification of the bugs. Adults and nymphs can be seen with the naked eye. Eggs require a magnifying glass.
 - b. Fecal spots, egg cases, or exuviae (shed skins). These may be visible on mattresses, headboards, bedframes or box springs.
 - c. Odor resembling rotting fruit or meat.

Identification

1. During monitoring and inspection, use a visual guide (see Bed Bug Identification Guide) to help identify insects and residue from insects that are thought to be bed bugs.
2. If evidence of bedbugs is found, collect specimens and contact a pest management company or service that can identify the specimens. Positive identification of bed bugs by a pest control professional should be made before treatment of the infestation begins.

Treatment

1. Effective treatment includes the following components:
 - a. Staff and resident education;
 - b. Recordkeeping and reporting;
 - c. Pre-Treatment (see Pre-Treatment Preparation Checklist);
 - d. Treatment of resident symptoms;
 - e. Treatment of infestation (chemical and non-chemical); and
 - f. Evaluation of treatment effectiveness and continued monitoring.

continues on next page

Treatment of Symptoms

1. The primary goals of treatment are to relieve itching and prevent secondary infections.
2. Administer medications as ordered. These may include antibiotics, antihistamines, corticosteroids, or topical antiseptics.

Treatment of Infestation

1. Remove and/or treat all infested materials using non-chemical methods, including:
 - a. Washing and drying bedding, linens, and clothing at high temperatures;
 - b. Vacuuming or steam-cleaning floors, mattresses, and any porous surfaces that cannot be machine-washed;
 - c. Steaming or heat-treating infested rooms and areas (commercial heating services can be contracted for this procedure);
 - d. Freezing, dry ice or liquid CO²; and
 - e. Using mattress encasements that are specifically designed to stop bed bugs.
2. Contract with a licensed pest-control service for chemical methods if non-chemical interventions do not resolve the infestation. However, many bed bugs are resistant to even commercial grade insecticides and insecticides alone will usually not eradicate the problem.
3. Combine chemical and non-chemical efforts for the best results. For severe infestation, relocation may be necessary until the life cycle of nymphs and eggs are complete.

Evaluation and Continued Monitoring

1. After treatment methods have been applied it is important to follow up by monitoring for subsequent infestations. Even if eradication of adult bed bugs was successful, eggs may have survived and hatched.
2. Reapplication of treatments may be needed for several weeks.
3. Keep clutter to a minimum to reduce the potential hiding places for bed bugs.
4. Vacuum regularly.
5. Monitor for bed bugs on a daily basis.
6. Seal cracks and crevices to remove hiding places.

Documentation

The following should be documented at the facility level:

1. Identified instances of infestation (including who reported, how it was confirmed, and the date and time).
2. Response to the report of infestation.
3. Actions taken, including all interventions and strategies to eliminate the infestation.
4. Staff training on eradication measures.
5. Names and license numbers of professional service contractors.
6. The facility-wide plan to monitor and respond to future infestation (Integrated Pest Management Plan).

continues on next page

The following should be documented at the resident level for those directly affected by the infestation:

1. Resident response to the infestation.
2. Interventions and treatments.
3. Notification of family/responsible party.
4. If complications ensue (bites, psychological stress, infections, etc.) accident/incident reports must be completed for each resident affected.

Reporting

Check with local health department regarding mandatory reporting of bed bug infestation.

Cleaning and Disinfecting Non-Critical Resident-Care Items Level I

Purpose

The purpose of this procedure is to provide guidelines for disinfection of non-critical resident-care items.

Preparation

1. Assemble the equipment and supplies as needed.

General Guidelines

1. Discard resident-care items when damaged or so grossly soiled that a disinfection process is not effective in rendering the item clean.
2. Single resident use items are for single resident use only. Mark with the resident's name and/or room number and discard upon transfer or discharge.
3. The following categories are used to distinguish the levels of sterilization/disinfection necessary for items used in resident care:
 - a. **Critical items** consist of items that carry a high risk of infection if contaminated with any microorganism. Objects that enter sterile tissue (e.g., urinary catheters) or the vascular system (e.g., intravenous catheters) are considered critical items and must be sterile.
 - b. **Semi-critical items** consist of items that may come in contact with mucous membranes or non-intact skin (e.g., respiratory therapy equipment). Such devices should be free from all microorganisms, although small numbers of bacterial spores are permissible. (Note: Some items that may come in contact with non-intact skin for a brief period of time (e.g., hydrotherapy tanks, bed side rails) are usually considered non-critical surfaces and are disinfected with intermediate-level disinfectants.)
 - c. **Non-critical items** are those that come in contact with intact skin but not mucous membranes.
 - (1) Non-critical resident-care items include bedpans, blood pressure cuffs, crutches and computers.
 - (2) Most non-critical reusable items can be decontaminated where they are used (as opposed to being transported to a central processing location).
 - d. **Reusable items** are cleaned and disinfected or sterilized between residents (e.g., stethoscopes, durable medical equipment).
 - (1) **Single resident-use items** are cleaned/disinfected between uses by a single resident and disposed of afterwards (e.g., bedpans, urinals).
 - e. **Single-use items** are disposed of after a single use (e.g., thermometer probe covers).
4. Intermediate and low-level disinfectants for non-critical items include:
 - a. Ethyl or isopropyl alcohol;
 - b. Sodium hypochlorite (5.25-6.15% diluted 1:500 or per manufacturer's instructions);
 - c. Phenolic germicidal detergents;
 - d. Iodophor germicidal detergents; and
 - e. Quaternary ammonium germicidal detergents (low-level disinfection only).

continues on next page

5. Manufacturers' instructions will be followed for proper use of disinfecting (or detergent) products including:
 - a. Recommended use-dilution;
 - b. Material compatibility;
 - c. Storage;
 - d. Shelf-life; and
 - e. Safe use and disposal.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure.

1. Non-critical resident care item;
2. Soap and water;
3. Disinfectant solution;
4. Wipes;
5. Paper towels; and
6. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

1. Arrange the supplies so they can be easily reached.
2. Wash and dry your hands thoroughly.
3. Put on gloves.

Bedpans

1. Cover the bedpan or urinal before taking it to the bathroom or to the dirty utility room.
2. Empty contents (urine and feces) into the toilet. Flush the toilet.
3. Rinse bedpan or urinal with cool water to remove feces and urine.
4. Wash surface of bedpan or urinal with disinfectant solution.
5. Rinse with hot running water.
6. For disinfection, use EPA-registered and facility approved low-level disinfectant solution (e.g., sodium hypochlorite). Follow manufacturer's dilution instructions.
7. Pour small amount of disinfectant solution (enough to thoroughly wet surfaces) on and into bedpan or urinal or spray liberally to thoroughly wet the surfaces.
8. Do not use a brush to clean the bedpan or urinal as this may cause splashes or spatters of urine or feces.
9. Rotate bedpan or urinal to allow solution to cover entire inner surface.
10. Place article on paper towel and allow to air dry or dry article with paper towel.
11. Discard disposable equipment and supplies in designated containers.
12. Remove gloves and discard into designated container. Wash and dry your hands thoroughly.
13. Return the bedpan or urinal to resident's bedside cabinet.
14. Wash and dry your hands thoroughly.

continues on next page

Measuring Graduates/Urinals

1. Rinse measuring graduate/urinal with warm water after each use.
2. Disinfect measuring graduates/urinals weekly using EPA-registered and facility approved low-level disinfectant solution (e.g., sodium hypochlorite). Follow manufacturer's dilution instructions.
3. Pour solution into measuring graduate/urinal. Let sit ten (10) minutes.
4. Flush solution down the toilet.
5. Allow the measuring graduate/urinal to air dry.
6. Remove gloves and discard into designated container. Wash and dry your hands thoroughly.

Stethoscope

1. Examine stethoscope for damages. Report damaged equipment to your supervisor.
2. Select facility approved low-level disinfectant (e.g., ethyl or isopropyl alcohol).
3. Applying firm pressure in a circular motion, use disinfectant and wipes to clean stethoscope ear pieces, tubing, diaphragm and bell.
4. Remove gloves and discard into designated container. Wash and dry your hands thoroughly.
5. Return the stethoscope to its designated storage area.
6. Discard disposable equipment and supplies in designated containers.
7. Clean and disinfect the surface area used to clean the stethoscope.
8. Wash and dry your hands thoroughly.

Version	1.2 (H5MAPR0109)

Cleaning and Disinfecting Residents' Rooms

Level I

Purpose

The purpose of this procedure is to provide guidelines for cleaning and disinfecting residents' rooms.

General Guidelines

1. Housekeeping surfaces (e.g., floors, tabletops) will be cleaned on a regular basis, when spills occur, and when these surfaces are visibly soiled.
2. Environmental surfaces will be disinfected (or cleaned) on a regular basis (e.g., daily, three times per week) and when surfaces are visibly soiled.
3. Manufacturers' instructions will be followed for proper use of disinfecting (or detergent) products including:
 - a. Recommended use-dilution;
 - b. Material compatibility;
 - c. Storage;
 - d. Shelf-life; and
 - e. Safe use and disposal.
4. Walls, blinds, and window curtains in resident areas will be cleaned when these surfaces are visibly contaminated or soiled.
5. Disinfecting (or detergent) solutions will be prepared as needed and replaced with fresh solution frequently.
6. Floor mopping solution will be replaced every three resident rooms, or changed no less often than at 60-minute intervals.
7. Personnel should remain alert for evidence of rodent activity (droppings) and report such findings to the Environmental Services Director.
8. Use heavy-duty gloves (and other PPE as indicated) for housekeeping tasks.
 - a. Gloves, protective eyewear and masks may be indicated to reduce exposure levels to disinfectant chemicals as well as to protect employees from exposure to blood and OPIM while cleaning or disinfecting.
 - b. Heavy-duty gloves may be reused as long as the integrity of the gloves is intact and they are disinfected regularly.
9. Clean medical waste containers intended for reuse (e.g., bins, pails, cans, etc.) daily or when such receptacles become visibly contaminated with blood, body fluids or other potentially infectious materials.
10. Perform hand hygiene after removing gloves.
11. Intermediate and low-level disinfectants for non-critical items include:
 - a. Ethyl or isopropyl alcohol;
 - b. Sodium hypochlorite (5.25-6.15% diluted 1:500 or per manufacturer's instructions);
 - c. Phenolic germicidal detergent;
 - d. Iodophor germicidal detergent; and
 - e. Quaternary ammonium germicidal detergent (low-level only).
12. The Environmental Services Director and Administrator, in conjunction with the Infection Preventionist, will select appropriate facility disinfectants.

continues on next page

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure.

1. Supplies and equipment appropriate for the task (for example):
 - a. Disinfectant solution;
 - b. Cleaning cloths;
 - c. Mop;
 - d. Bucket; and
 - e. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

Resident Room Cleaning:

1. Gather supplies as needed.
2. Prepare disinfectant according to manufacturer's recommendations.
3. Discard disinfectant/detergent solutions that become soiled or clouded with dirt and grime and prepare fresh solution.
4. Change mop solution water at least every three (3) rooms, or as necessary.
5. Change cleaning cloths when they become soiled. Wash cleaning cloths daily and allow cloths to dry before reuse.
6. Clean horizontal surfaces (e.g., bedside tables, overbed tables, and chairs) daily with a cloth moistened with disinfectant solution. Do not use feather dusters.
7. Clean personal use items (e.g., lights, phones, call bells, bedrails, etc.) with disinfectant solution at least twice weekly.
8. When cleaning rooms of residents on isolation precautions, use personal protective equipment as indicated.
9. When possible, isolation rooms should be cleaned last and water discarded after cleaning room.
10. Utilize disinfectant solution based on type of precaution.
11. Clean curtains, window blinds, and walls when they are visibly soiled or dusty.
12. Clean spills of blood or body fluids as outlined in the established procedure.

Terminal Room Cleaning:

1. Terminal room cleaning is done when the resident is transferred, discharged, or expires.
2. Gather equipment (e.g., heavy-duty gloves, freshly prepared disinfectant, cleaning cloth, plastic trash bag, mop, and bucket).
3. Prepare disinfectant according to manufacturer's recommendations.
 - a. Use fresh solutions for terminal and thorough cleaning of all rooms.
 - b. Discard solution when the procedure has been completed.
4. Clean all high-touch furniture items (e.g., bedside tables, overbed tables, chairs, and beds) with disinfectant solution.
5. Clean all high-touch personal use items (e.g., lights, phones, call bells, bedrails, etc.) with disinfectant solution.
6. Discard personal (e.g., powder, toothpaste, toothbrushes, mouthwash, lotions, and soaps) and single-resident use items (e.g., thermometers).
7. Return items still in their original wrappers to stock if the integrity of the wrapper is not compromised, the outside of the container is visibly clean, and the item is not outdated.

Cleaning and Disinfection of Environmental Surfaces

Policy Statement

Environmental surfaces will be cleaned and disinfected according to current CDC recommendations for disinfection of healthcare facilities and the OSHA Bloodborne Pathogens Standard.

Policy Interpretation and Implementation

1. The following categories are used to distinguish the levels of sterilization/disinfection necessary for items used in resident care and those in the resident's environment:
 - a. **Critical items** consist of items that carry a high risk of infection if contaminated with any microorganism. Objects that enter sterile tissue (e.g., urinary catheters) or the vascular system (e.g., intravenous catheters) are considered critical items and must be sterile.
 - b. **Semi-critical items** consist of items that may come in contact with mucous membranes or non-intact skin (e.g., respiratory therapy equipment). Such devices should be free from all microorganisms, although small numbers of bacterial spores are permissible. (Note: Some items that may come in contact with non-intact skin for a brief period of time (e.g., hydrotherapy tanks, bed side rails) are usually considered non-critical surfaces and are disinfected with intermediate-level disinfectants.)
 - c. **Non-critical items** are those that come in contact with intact skin but not mucous membranes.
 - (1) Non-critical environmental surfaces include bed rails, some food utensils, bedside tables, furniture and floors.
 - (2) Most non-critical items can be decontaminated where they are used (as opposed to being transported to a central processing location).
2. Non-critical surfaces will be disinfected with an EPA-registered intermediate or low-level hospital disinfectant according to the label's safety precautions and use directions.
 - a. Most EPA-registered hospital disinfectants have a label contact time of 10 minutes.
 - b. By law, all applicable label instructions on EPA-registered products must be followed.
3. Devices that are used by staff but not in direct contact with residents (e.g., computer keyboards, PDAs, etc.) shall be cleaned and disinfected regularly (according to facility schedule) by the environmental services staff and as needed by the nursing staff.
4. Intermediate and low-level disinfectants for non-critical items include:
 - a. Ethyl or isopropyl alcohol;
 - b. Sodium hypochlorite (5.25-6.15% diluted 1:500 or per manufacturer's instructions);
 - c. Phenolic germicidal detergents;
 - d. Iodophor germicidal detergents; and
 - e. Quaternary ammonium germicidal detergents (low-level disinfection only).
5. Manufacturers' instructions will be followed for proper use of disinfecting (or detergent) products including:
 - a. Recommended use-dilution;
 - b. Material compatibility;
 - c. Storage;
 - d. Shelf-life; and
 - e. Safe use and disposal.

continues on next page

6. A one-step process and an EPA-registered hospital disinfectant designed for housekeeping purposes will be used in resident care areas where:
 - a. uncertainty exists about the nature of the soil on the surfaces (e.g., blood or body fluid contamination versus routine dust or dirt); or
 - b. uncertainty exists about the presence of multidrug-resistant organisms on such surfaces.
7. Detergent and water will be used for cleaning surfaces in non resident care areas (e.g., administrative offices).
8. High-level disinfectants/liquid chemical sterilants will not be used for disinfection of non-critical surfaces.
9. Housekeeping surfaces (e.g., floors, tabletops) will be cleaned on a regular basis, when spills occur, and when these surfaces are visibly soiled.
10. Environmental surfaces will be disinfected (or cleaned) on a regular basis (e.g., daily, three times per week) and when surfaces are visibly soiled.
11. Walls, blinds, and window curtains in resident areas will be cleaned when these surfaces are visibly contaminated or soiled.
12. Disinfecting (or detergent) solutions will be prepared as needed and replaced with fresh solution frequently (e.g., floor mopping solution will be replaced every three resident rooms, or changed no less often than at 60-minute intervals).
13. Mop heads and cleaning cloths will be decontaminated regularly (e.g., laundered and dried at least daily).
14. Horizontal surfaces will be wet dusted regularly (e.g., daily, three times per week) using clean cloths moistened with an EPA-registered hospital disinfectant (or detergent). The disinfectant (or detergent) will be prepared as recommended by the manufacturer.
15. Spills of blood and other potentially infectious materials will promptly be cleaned and decontaminated. Blood-contaminated items will be discarded in compliance with federal regulations (i.e., OSHA Bloodborne Pathogens Standard).
16. The following procedures will be implemented for site decontamination of spills of blood or other potentially infectious materials (OPIM):
 - a. Use protective gloves and other PPE (e.g., when sharps are involved use forceps to pick up sharps and discard these items in a puncture-resistant container) appropriate for this task.
 - b. Disinfect areas contaminated with blood spills using an EPA-registered tuberculocidal agent, a registered germicide on the EPA Lists D and E (i.e., products with specific label claims for HIV and HBV) or freshly diluted hypochlorite solution.
 - c. If sodium hypochlorite solutions are selected use a 1:100 dilution to decontaminate nonporous surfaces after a small spill (e.g., <10 mL) of either blood or OPIM.
 - d. If a spill involves large amounts (e.g., >10 mL) of blood or OPIM, or involves a culture spill in the laboratory, use a 1:10 dilution for the first application of hypochlorite solution before cleaning in order to reduce the risk of infection during the cleaning process in the event of a sharps injury.
 - e. Follow this decontamination process with a terminal disinfection, using a 1:100 dilution of sodium hypochlorite.
17. If the spill contains large amounts of blood or body fluids, the visible matter will be cleaned with disposable absorbent material, and the contaminated materials discarded in an appropriate, labeled container.

continues on next page

18. Protective gloves and other PPE appropriate for this task will be used.
19. In units with high rates of endemic *Clostridium difficile* infection or in an outbreak setting, dilute solutions of 5.25%–6.15% sodium hypochlorite (e.g., 1:10 dilution of household bleach) or an EPA registered antimicrobial product effective against *Clostridium difficile* spores will be used for routine environmental disinfection. If chlorine solution is not prepared fresh daily, it will be stored at room temperature for up to 30 days in a capped, opaque plastic bottle. (Note: A 50% reduction in chlorine concentration will occur by day 30.)
20. An EPA-registered sodium hypochlorite product is preferred, but if such products are not available, generic versions of sodium hypochlorite solutions (e.g., household chlorine bleach) may be used.

Version	1.2 (H5MAPL1198)

Cleaning and Disinfection of Resident-Care Items and Equipment

Policy Statement

Resident-care equipment, including reusable items and durable medical equipment will be cleaned and disinfected according to current CDC recommendations for disinfection and the OSHA Bloodborne Pathogens Standard.

Policy Interpretation and Implementation

1. The following categories are used to distinguish the levels of sterilization/ disinfection necessary for items used in resident care:
 - a. **Critical items** consist of items that carry a high risk of infection if contaminated with any microorganism. Objects that enter sterile tissue (e.g., urinary catheters) or the vascular system (e.g., intravenous catheters) are considered critical items and must be sterile.
 - b. **Semi-critical items** consist of items that may come in contact with mucous membranes or non-intact skin (e.g., respiratory therapy equipment). Such devices should be free from all microorganisms, although small numbers of bacterial spores are permissible. (Note: Some items that may come in contact with non-intact skin for a brief period of time (e.g., hydrotherapy tanks, bed side rails) are usually considered non-critical surfaces and are disinfected with intermediate-level disinfectants.)
 - c. **Non-critical items** are those that come in contact with intact skin but not mucous membranes.
 - (1) Non-critical resident-care items include bedpans, blood pressure cuffs, crutches and computers.
 - (2) Most non-critical reusable items can be decontaminated where they are used (as opposed to being transported to a central processing location).
 - d. **Reusable items** are cleaned and disinfected or sterilized between residents (e.g., stethoscopes, durable medical equipment).
 - (1) **Single resident-use items** are cleaned/disinfected between uses by a single resident and disposed of afterwards (e.g., bedpans, urinals).
 - e. **Single-use items** are disposed of after a single use (e.g., thermometer probe covers).
 - f. **Reprocessed single-use devices** are those that have been previously used by a resident and then subjected to additional processing (manufacturing) for the purpose of an additional single use on another resident. Use of reprocessed single-use devices is permitted if:
 - (1) The device is reprocessed by a FDA-registered third party preprocessor; and
 - (2) There is documentation from the third party processor indicating that it has been cleared by the FDA to reprocess the device.
2. Critical and semi-critical items will be sterilized/disinfected in a central processing location and stored appropriately until use. Equipment to be processed will be labeled with at least the following information:
 - a. That the equipment is contaminated;
 - b. The address to which the equipment is to be shipped;
 - c. The address from which the equipment was removed (including telephone number);
 - d. The name of the person labeling the equipment; and
 - e. The date and time the label was affixed to the equipment.
3. Durable medical equipment (DME) must be cleaned and disinfected before reuse by another resident.
4. Reusable resident care equipment will be decontaminated and/or sterilized between residents according to manufacturers' instructions.

continues on next page

5. Only equipment that is designated reusable shall be used by more than one resident.
6. Single use items will be discarded after a single use.
7. Intermediate and low-level disinfectants for non-critical items include:
 - a. Ethyl or isopropyl alcohol;
 - b. Sodium hypochlorite (5.25-6.15% diluted 1:500 or per manufacturer's instructions);
 - c. Phenolic germicidal detergents;
 - d. Iodophor germicidal detergents; and
 - e. Quaternary ammonium germicidal detergents (low-level disinfection only).
8. High-level disinfectants/liquid chemical sterilants will not be used for disinfection of non-critical items.

Cleaning Broken Glass When Contaminated With Blood or Body Fluids

Level I

Purpose

The purpose of this procedure is to remove the hazards of broken glass from all areas while taking care to disinfect the area in the event of blood/body fluid spills.

Preparation

Assemble the equipment and supplies needed.

General Guidelines

1. Notify environmental services of spills of blood or body fluids with incidents that result in broken glass.
2. Never pick up broken glass by hand, regardless of glove usage.
3. Spills of blood and other potentially infectious materials will promptly be cleaned and decontaminated. Blood-contaminated items will be discarded in compliance with federal regulations (i.e., OSHA Bloodborne Pathogens Standard).

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure for blood and body fluid spills.

1. OSHA compliant Blood Spill Kit.
2. If spill kit is unavailable, proceed to obtain the following equipment:
 - a. Absorbent granules;
 - b. Mop;
 - c. Disinfectant/bleach/EPA Registered germicidal solution;
 - d. Plastic scoop or specially marked dustpan;
 - e. Brush/tongs/forceps;
 - f. Sharps container (or larger puncture-proof container if glass fragments are larger); and
 - g. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

1. Arrange the supplies so they can be easily reached.
2. Put on gloves.
3. Sprinkle absorbent granules over spill area and allow to absorb.
4. When all liquid has been absorbed by granules, carefully (using tongs, forceps, or brush) place gel and glass fragments into the dustpan or scoop.
5. Discard glass fragments and gel into the sharps container.
6. Thoroughly mop spill area. If the spill contained blood/body fluids, follow procedures for cleaning spills of blood.
7. Discard disposable equipment and supplies in designated containers.

continues on next page

8. Clean and disinfect equipment used to pick up glass fragments.
9. Remove gloves carefully (avoiding embedded glass fragments) and discard in designated container.
10. Wash and dry your hands thoroughly.

Reporting

1. Notify environmental services of spills of blood or body fluids with incidents that result in broken glass.
2. Report other information in accordance with facility policy and professional standards of practice.

Cleaning/Repairing Carpeting and Cloth Furnishings

Policy Statement

Carpeting and cloth furnishings shall be cleaned regularly and repaired promptly.

Policy Interpretation and Implementation

1. Carpeting throughout the facility shall be vacuumed regularly in accordance with facility cleaning schedules.
2. Carpets shall be deep-cleaned periodically (approximately once per month), or more often as needed.
3. Spills of blood or body fluids shall be cleaned promptly. Carpet tiles will be replaced if contaminated by blood or body fluids.
4. Carpet that becomes wet shall be dried thoroughly within 72 hours.
5. Upholstered furniture shall be kept in good repair and replaced if torn excessively.
6. Stained or soiled upholstered furniture shall be cleaned in a manner consistent with the type of fabric and stain.

Cleaning Spills or Splashes of Blood or Body Fluids

Policy Statement

Spills or splashes of blood or other body fluids must be cleaned and the spill or splash area decontaminated as soon as practical.

Policy Interpretation and Implementation

1. Whoever spills or splashes blood or body fluid, or witnesses splattered or spilled blood anywhere in the facility, shall notify environmental services that a spill or splash of blood or body fluids has occurred and shall provide pertinent information, including the amount and area in which the incident occurred.
2. An appropriately trained and authorized individual shall clean and disinfect any surfaces or equipment contaminated with spills or splashes of blood or body fluids as soon as practical to prevent exposure.
3. Whoever is exposed to blood or body fluids shall report the occurrence to the Infection Preventionist (or designee) and wash his/her hands as soon as practical after exposure.
4. Staff must wear gloves when cleaning spills or splashes of blood or body fluids. (Note: Other protective equipment, i.e., gowns, masks, and goggles, may be necessary if splashing of blood or body fluids into the eyes, nose, or mouth, or soiling of clothing is likely. Shoe coverings will be necessary if there is a large amount of blood or body fluids on the floor.)
5. Wash hands as soon as practical after exposure to blood or body fluids.
6. The facility has established procedures governing the cleaning and disinfection of spills or splashes of blood or body fluids.

Version	1.2 (H5MAPL0130)

Cleaning Spills or Splashes of Blood or Body Fluids

Level I

Purpose

The purpose of this procedure is to minimize the danger of environmental contamination and the possible spread of bloodborne infections, including the AIDS (HIV) and Hepatitis B (HBV) viruses, to employees and residents while cleaning up spills of blood or body fluid splashes.

Preparation

Assemble the equipment and supplies as needed.

General Guidelines

1. Hands must be washed as soon as practical after an exposure to blood.
2. As all residents' blood and body fluids are considered potentially infectious, all exposures to blood/body fluids must be reported to the Infection Preventionist (or designee) or supervisor.
3. Do not pick up broken glass by hand. Use forceps, tongs, or brush and dustpan.
4. Report spills of blood or body fluids to the Infection Preventionist (or designee) so that an investigation into the cause of the spill can be initiated and the corrective measures identified to prevent similar spills from occurring.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure:

1. Nonsterile gloves (exam or heavy-duty);
2. Bleach (EPA registered sodium hypochlorite 5.25%);
3. Spray bottle;
4. Water;
5. Cloth or paper towels;
6. Plastic bag (Note: If a red bag is not used, a "biohazard" label must be affixed to the bag);
7. Forceps, tongs, or brush and dustpan (as applicable if picking up broken glass);
8. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed); and
9. Other as appropriate or as may be needed.

Steps in the Procedure

1. Arrange the supplies so they can be easily reached.
2. Using appropriate personal protective measures, mix and label the following disinfectant solutions:
 - a. One (1) part bleach and ten (10) parts water (written as 1:10); and/or
 - b. One (1) part bleach and one hundred (100) parts water (written as 1:100).
3. Put on nonsterile exam gloves or heavy-duty gloves.
4. If the spill involves large amounts of blood (two cups or more), spray the area with 1:10 disinfectant solution until thoroughly saturated.
5. Use forceps, tongs, or brush and dustpan to pick up broken glass.

continues on next page

6. Place contaminated items, including equipment used to pick up glass fragments, in properly labeled receptacle for decontamination.
7. Wipe up the spill or splash with a cloth or paper towels or use granules to absorb spill.
8. Discard the saturated cloth or paper towels into the plastic “biohazard” bag.
9. Repeat as necessary until the spill or splash area is dry.
10. Disinfect the area by swabbing with a cloth or paper towel which has been moderately saturated with a 1:100 bleach solution. Allow to air dry.
11. Discard the contaminated cleaning cloth or paper towels into the plastic “biohazard” bag.
12. Spray disinfectant solution onto the discarded cloth or paper towels inside the plastic bag.
13. Tie the bag. If the outside of the plastic bag becomes contaminated with blood, body fluids, secretions, or excretions, place the contaminated bag into a clean plastic bag.
14. Place the plastic bag into a designated container for medical waste.
15. Remove gloves and place them into designated container. Wash and dry hands thoroughly.
16. Return unused supplies or equipment to the designated storage areas.
17. Wash and dry your hands thoroughly.

Reporting

1. Notify environmental services of spills of blood or body fluids and/or incidents that result in broken glass.
2. Report other information in accordance with facility policy and professional standards of practice.

Construction and Renovation – Maintaining Air Quality and Safety

Policy Statement

This facility shall take environmental infection control measures pertaining to air quality and safety.

Purpose

To prevent and control airborne opportunistic infections (e.g., Legionnaire’s Disease, healthcare-acquired *Aspergillosis*) caused by air handling systems or due to construction, renovation, remediation, repair, and demolition.

1. All new and renovated air handling systems will be designed following *American Institute of Architects* (AIA) standards and state or local requirements.
2. Ventilation systems are maintained by the Environmental Services Director (or designee) consistent with manufacturers’ instructions and Centers for Disease Control and Prevention (CDC) and Healthcare Infection Control Practices Advisory Committee (HICPAC) recommendations to ensure optimal removal of particulates, elimination of excess moisture, and appropriate pressure differentials.
3. Humidity controls will be monitored periodically to ensure adequate moisture removal.
4. The facility does not use cool mist humidifiers.
5. Air duct grills will be cleaned regularly, according to the facility maintenance schedule.
6. The Administrator will ensure that all construction, renovation, remediation, repair and demolition projects are reviewed to determine the need for dust-control procedures and barrier precautions.
7. If a case of suspected acquired airborne illness such as *Legionnella pneumonia* or *aspergillosis* or other opportunistic environmental airborne disease occurs during or immediately after construction, follow-up measures will be initiated in accordance with current CDC/HICPAC recommendations.

Version	1.0 (H5MAPL0152)

Construction and Renovation – Role of the Administrator or Designee(s)

Policy Statement

The Administrator or designee(s) shall plan, implement, and supervise infection control practices during construction, renovation, remediation, repair, and/or demolition of the facility in accordance with recommendations of the Centers for Disease Control and Prevention (CDC), the Healthcare Infection Control Practices Advisory Committee (HICPAC), and state or local requirements.

Purpose

To reduce resident and employee exposure to potentially infectious agents released into the environment due to construction, renovation, remediation, repair and demolition or related activities.

1. The Administrator or designee(s) will review all plans for construction, renovation, remediation, repair and demolition projects prior to beginning projects.
2. Prior to beginning any construction-related projects, the Administrator or designee(s) will perform an infection control risk assessment (ICRA) to define the scope of the project and the need for dust control procedures and barrier measures.
3. The Administrator or designee(s) will monitor dust control procedures and barriers and other infection control measures during internal and external construction in accordance with the most recent CDC/HICPAC recommendations and state or local requirements.
4. The Administrator or designee(s) will establish or designate a multidisciplinary construction team that includes infection control staff and will maintain a log of the team's activities and considerations.
5. The Administrator or designee(s) will provide to construction workers and healthcare staff educational materials and in-services, as needed, regarding the following issues:
 - a. Airborne infection risks to immunocompromised patients as they relate to construction projects;
 - b. Dispersal of fungal spores and other dust-borne or airborne infectious agents during construction projects; and
 - c. Methods to control the dissemination of dust-borne or airborne infectious agents.
6. The Administrator or designee(s) will review construction contracts and incorporate mandatory adherence agreements for infection control practices in accordance with CDC/HICPAC recommendations and state or local requirements.
7. The Administrator or designee(s) will consider including monetary penalties for noncompliance when necessary, and will implement mechanisms to ensure timely correction if problems are identified.
8. The Administrator or designee(s) will establish and maintain surveillance for airborne and waterborne environmental disease (e.g. aspergillosis, Legionnaire's disease) as appropriate throughout the project to protect immunocompromised patients.
9. The Administrator or designee(s) will monitor construction and renovation projects until completion to ensure adherence to current CDC/HICPAC guidelines and state or local requirements.

Equipment and Supplies Used During Isolation

Policy Statement

Appropriate infection prevention and control equipment and supplies are obtained, stored and used in accordance with current guidelines and manufacturer instructions.

Policy Interpretation and Implementation

1. All equipment and supplies needed to implement transmission-based (isolation) precautions are obtained from an approved vendor.
2. Infection prevention and control supplies are stored and maintained in accordance with current guidelines and manufacturer's recommendations.
3. The Infection Preventionist (or designee) oversees the availability and inventory of infection prevention and control supplies.
4. The nursing department will notify environmental services when equipment used to care for a resident needs to be sanitized.
 - a. Personal protective equipment (i.e., gloves, gowns, etc.) are worn when handling or transporting resident-care equipment and supplies that are visibly soiled or have been in contact with blood or body fluids.
 - b. Environmental services staff is responsible for cleaning and sanitizing equipment before it is returned to Central Supply or to designated storage areas.

Ice Machines and Ice Storage Chests

Policy Statement

Ice machines and ice storage/distribution containers will be used and maintained to assure a safe and sanitary supply of ice.

Policy Interpretation and Implementation

1. Ice-making machines, ice storage chests/containers, and ice can all become contaminated by:
 - a. Unsanitary manipulation by employees, residents, and visitors;
 - b. Waterborne microorganisms naturally occurring in the water source;
 - c. Colonization by microorganisms; and/or
 - d. Improper storage or handling of ice.
2. To help prevent contamination of ice machines, ice storage chests/containers or ice, staff shall follow these precautions:
 - a. Limit access to ice machines or ice storage chests/containers to employees only;
 - b. Keep access doors or storage container tops closed when not in use;
 - c. Do not handle ice directly by hand;
 - d. Use a smooth-surface ice scoop to obtain and dispense ice;
 - e. Keep the ice scoop/bin in a covered container when not in use. (Note: If the ice scoop is maintained on a chain, be sure the chain is short enough to ensure the scoop does not touch the floor.);
 - f. Clean and sanitize the tray and ice scoop daily;
 - g. Do not store pharmaceuticals or medical solutions on ice intended for consumption;
 - h. If another receptacle such as a small chest or bin is used to transport ice from the source to another point of distribution, follow the same steps as above. Do not distribute ice directly from an open container;
 - i. To keep medical solutions cold, use equipment specifically manufactured for this purpose; and
 - j. Flush and clean the ice machine and dispenser after lengthy water disruptions (if not disconnected prior to disruption).
3. Our facility has established procedures for cleaning and disinfecting ice machines and ice storage chests which adhere to the manufacturer's instructions. The Infection Preventionist (or designee) maintains a copy of these procedures.
4. Microbiologic sampling of ice, ice machines and ice storage chests/containers will be conducted during epidemiologic investigations.

Laundry and Bedding, Soiled

Policy Statement

Soiled laundry/bedding shall be handled, transported and processed according to best practices for infection prevention and control.

Policy Interpretation and Implementation

Handling

1. All used laundry is handled as potentially contaminated until it is properly bagged and labeled for appropriate processing.
 - a. Soiled laundry and bedding (e.g., personal clothing, uniforms, scrub suits, gowns, bed sheets, blankets, pillows, towels, etc.) contaminated with blood or other potentially infectious materials is handled as little as possible and with a minimum of agitation.
 - b. Laundry that is contaminated with blood or body substances is placed in leak-proof bags or containers.
 - c. Contaminated laundry is placed in a bag or container at the location where it is used and not sorted or rinsed at the location of use.

Transport

1. Contaminated laundry bags/containers are not held close to the body or squeezed during transport.
2. There are no additional requirements for transporting linen from rooms where transmission-based precautions are in effect.
3. Linen carts are cleaned and disinfected whenever visibly soiled and according to the established schedule.
4. Carts that are used for transport of dirty linen are thoroughly cleaned and disinfected before being used to transport clean linens.
5. Clean linens are protected from dust and soiling during transport and storage to ensure cleanliness.
6. Clean linens are stored separately, away from soiled linens, at all times.

Processing

1. Laundry services are provided by:
 - a. _____ (onsite); or
 - b. _____ (offsite).
2. Sharps containers are located in the laundry room. Sharps (e.g., needles, razor blades, etc.) found in laundry are discarded in the sharps container.
3. Forceps/tongs or similar safe sorting devices are available for sorting laundry.

continues on next page

Mattresses, Pillows and Overlays

1. Moisture-resistant mattress covers are cleaned and disinfected using EPA-registered disinfectants between uses by different residents.
2. Fabric mattress covers are laundered between uses by different residents.
3. Mattresses that are torn, stained with bodily fluids, or have been wet for prolonged periods are discarded.
4. Air fluidized beds and pressure-reducing overlays are maintained, cleaned, and replaced in accordance with manufacturers' instructions.
5. Washable pillows are laundered in hot water when soiled with bodily substances and before exchange between residents. Pillows that are torn, damaged, or permanently stained are discarded.

Personal Clothing

1. Personal clothing that becomes soiled with blood or body fluids is covered (e.g., with a gown) or removed and immediately laundered before leaving the work area.
2. Employees' personal protective equipment, uniforms or clothing contaminated with blood or other potentially infectious materials are laundered, replaced, or repaired at no cost to the employee.

Legionella Water Management Program

Policy Statement

Our facility is committed to the prevention, detection and control of water-borne contaminants, including *Legionella*.

Policy Interpretation and Implementation

1. As part of the infection prevention and control program, our facility has a water management program, which is overseen by the water management team.
2. The water management team will consist of at least the following personnel:
 - a. The infection preventionist;
 - b. The administrator;
 - c. The medical director (or designee);
 - d. The director of maintenance; and
 - e. The director of environmental services.
3. The purposes of the water management program are to identify areas in the water system where *Legionella* bacteria can grow and spread, and to reduce the risk of Legionnaire's disease.
4. The water management program used by our facility is based on the Centers for Disease Control and Prevention and ASHRAE recommendations for developing a *Legionella* water management program.
5. The water management program includes the following elements:
 - a. An interdisciplinary water management team;
 - b. A detailed description and diagram of the water system in the facility, including the following:
 - (1) Receiving;
 - (2) Cold water distribution;
 - (3) Heating;
 - (4) Hot water distribution; and
 - (5) Waste.
 - c. The identification of areas in the water system that could encourage the growth and spread of *Legionella* or other waterborne bacteria, including:
 - (1) Storage tanks;
 - (2) Water heaters;
 - (3) Filters;
 - (4) Aerators;
 - (5) Showerheads and hoses;
 - (6) Misters, atomizers, air washers and humidifiers;
 - (7) Hot tubs;
 - (8) Fountains; and
 - (9) Medical devices such as CPAP machines, hydrotherapy equipment, etc.

continues on next page

- d. The identification of situations that can lead to *Legionella* growth, such as:
 - (1) Construction;
 - (2) Water main breaks;
 - (3) Changes in municipal water quality;
 - (4) The presence of biofilm, scale or sediment;
 - (5) Water temperature fluctuations;
 - (6) Water pressure changes;
 - (7) Water stagnation; and
 - (8) Inadequate disinfection.
 - e. Specific measures used to control the introduction and/or spread of *legionella* (e.g., temperature, disinfectants);
 - f. The control limits or parameters that are acceptable and that are monitored;
 - g. A diagram of where control measures are applied;
 - h. A system to monitor control limits and the effectiveness of control measures;
 - i. A plan for when control limits are not met and/or control measures are not effective; and
 - j. Documentation of the program.
6. The Water Management Program will be reviewed at least once a year, or sooner if any of the following occur:
- a. The control limits are consistently not met;
 - b. There is a major maintenance or water service change;
 - c. There are any disease cases associated with the water system; or
 - d. There are changes in laws, regulations, standards or guidelines.

Medical Waste, Categories of

Policy Statement

This facility classifies its medical wastes in accordance with current guidelines and recommendations for regulated medical wastes.

Policy Interpretation and Implementation

1. Medical wastes from this facility are categorized into the following classifications:
 - a. Cultures and stocks of infectious agents and associated biologicals, including:
 - (1) Cultures from medical and pathological laboratories;
 - (2) Cultures of infectious agents; and
 - (3) Culture dishes and devices used to transfer, inoculate and mix cultures, including those used to obtain patient specimens to send to a diagnostic laboratory.
 - b. Human blood and blood products, including:
 - (1) Liquid wastes;
 - (2) Human blood;
 - (3) Products of blood, including plasma and platelets;
 - (4) Items saturated and/or dripping with human blood or other potentially infectious materials (OPIM); and
 - (5) Items that were saturated and/or dripping with human blood that are now caked with dried human blood, including serum, plasma, and other blood components and their containers, which were used or intended for use in either patient care, testing or laboratory analysis. Intravenous bags are also included in this category.
 - c. Pathological wastes, including:
 - (1) Human pathological and anatomical wastes and body fluids; and
 - (2) Specimens of body fluids in their containers, including patient specimens obtained to send to a diagnostic laboratory.
 - d. Contaminated sharps, including:
 - (1) Sharps that have been used in patient care or treatment, including hypodermic needles, syringes with or without needle attached (if state specifies);
 - (2) Pipettes;
 - (3) Scalpel blades;
 - (4) Blood vials;
 - (5) Test tubes;
 - (6) Needles with attached tubing;
 - (7) Culture dishes (regardless of the presence of infectious agents);
 - (8) Broken or unbroken glassware that was in contact with infectious agents such as used slides and cover slips; and
 - (9) Razor blades (if state specifies).

continues on next page

- e. Unused discarded sharps, including:
 - (1) Hypodermic needles;
 - (2) Suture needles;
 - (3) Syringes (if state specifies); and
 - (4) Scalpel blades.

Medical Waste Containers

Policy Statement

Medical waste containers shall be located throughout the facility and treatment areas.

Policy Interpretation and Implementation

1. Medical waste containers shall be located throughout the facility and treatment areas and must be kept covered at all times. Designated individuals will be responsible for ensuring that containers are placed in locations where needed.
2. Medical waste containers are located in the following areas of the facility:

3. Medical waste containers used by this facility will be:
 - a. Closable;
 - b. Constructed to contain all contents and prevent leakage of fluids during handling, storage, transport or shipping;
 - c. Labeled or color-coded in accordance with established policies governing the labeling of containers;
 - d. Closed prior to removal from the facility, treatment areas, or from the premises to prevent spillage or protrusion of contents during handling, storage, transport, or shipping; and
 - e. Impermeable and capable of maintaining impermeability through final waste disposal.
4. A container that becomes contaminated must be placed in a second container, which must also meet the requirements outlined in paragraph 3.
5. Designated individuals will dispose of medical waste in accordance with current federal, state, and local statutes.

Medical Waste Handling

Policy Statement

Medical waste will be handled and disposed of safely and in accordance with regulatory requirements.

Policy Interpretation and Implementation

1. For the purpose of this policy, medical wastes include human blood and blood-soiled articles, contaminated items (i.e., soiled dressings), and disposable sharps (e.g., needles/scalpels).
2. Medical waste is regulated at the state level. State medical waste regulations can be accessed at: <http://www.epa.gov/osw/nonhaz/industrial/medical/programs.htm>.
3. All sharps must be handled as medical waste, placed in approved sharps containers, and sent for eventual incineration.
4. Liquid blood, excretions, and secretions shall be flushed into the sewer system.
5. Disposable items contaminated with excretions or secretions from residents believed to be infectious must be placed in plastic bags and sealed, and either decontaminated with bleach/EPA registered germicidal (1:10 or 1:100 dilution) or stored in appropriate container until removal from the premises.
6. Disposable items soiled with blood or other potentially infectious materials must be placed in plastic bags or containers, and a solution of one (1) part bleach/EPA registered germicidal and nine (9) parts water added to saturate the items. Alternatively, items can be placed in appropriate containers and handled as medical waste.
7. Medical wastes will be weighed at the time of collection and/or storage prior to disposal, per state requirements.
8. _____ is responsible for weighing medical wastes.
9. The weight, in pounds, will be recorded on the medical waste tracking form (manifest) and/or the shipment log maintained by this facility.
10. Any compactor/dumpster must be locked from the outside when not in use and at night.
11. Only authorized vendors are permitted to collect regulated wastes.

Medical Waste Management – Employee Training

Policy Statement

All personnel will be required to attend and participate in regularly scheduled in-service training programs.

Policy Interpretation and Implementation

1. All personnel who generate or handle infectious waste will be required to attend and participate in infectious waste management training. The training will provide an overview of the issues and will identify relevant policies and procedures.
2. Training in medical waste management includes, but is not limited to:
 - a. An explanation and review of the medical waste management plan;
 - b. A review of each employee’s duties and responsibilities concerning the handling, disposing, and storage of medical wastes; and
 - c. Possible health and safety hazards associated with handling and disposal of potentially infectious medical waste.
3. All staff and practitioners will refer to relevant policies and procedures regarding management of infectious wastes in their everyday activities.

Medical Waste – Preparing for Pickup

Policy Statement

Medical waste generated by this facility will be properly packaged, labeled, and marked before being transported to an off-site facility for treatment or disposal.

Policy Interpretation and Implementation

1. Individuals cleaning up medical waste generated by this facility will place it in a container or combination of containers that are rigid and leak resistant, impervious to moisture, strong enough to prevent tearing or bursting under normal handling, and securely sealed.
2. Individuals who handle sharps (e.g., needles, razor blades, broken glass, syringes, lancets, scalpel blades, etc.) will package them in a rigid container resistant to punctures.
3. Individuals who handle blood or body fluids will pour them into a container resistant to breaking and equipped with a tightly fitting lid or stopper.
4. Individuals who handle medical waste for disposal will affix a water-resistant label to all containers or packages of untreated medical waste.
5. When there is inner and outer packaging, or containers, the individuals who package them will label each container (inside and outside) “Infectious Waste,” “Medical Waste,” or “Biohazard,” or will affix the universal Biohazard Symbol.
6. Red plastic bags, when used as inner packaging for untreated waste, need no labels. However, the outer packaging or container will be identified by the proper label or symbol.
7. Before shipment, designated individuals will mark all packaging—inner and outer—with indelible ink or with a water-resistant identification tag. Each inner container, if used, will show the name and address of this facility (or identifying numbers).
8. Each outer container will identify the contents as “medical waste” and include the information as it appears on the *sample* tag shown below:

Medical Waste – Segregating and Separating

Policy Statement

Medical waste generated by this facility will be segregated from general waste in accordance with current federal and state guidelines.

Policy Interpretation and Implementation

1. Medical waste may not be discarded with general trash.
2. General trash that is placed in containers with medical waste will be handled as regulated medical waste.
3. Designated individuals will be responsible for separating (to the extent practical) medical waste generated by this facility into the following groups:
 - a. Sharps (e.g., needles, scalpels, glassware, and syringes);
 - b. Other regulated medical waste (e.g., blood-soaked bandages, tubing, gauze pads, swabs, etc.); and
 - c. Other items per state-specific regulation.
4. Everyone who generates or handles medical waste will be responsible for discarding it into appropriate receptacles.
5. Medical waste will be discarded into designated containers (e.g., red bag or container marked with the “biohazard” symbol).

Version	1.1 (H5MAPL0501)

Medical Waste Storage

Policy Statement

Medical waste stored for treatment, disposal, or pickup shall be protected in accordance with established policies and procedures.

Policy Interpretation and Implementation

1. Containers of untreated medical waste will be labeled with a “biohazard” or “infectious medical waste” water-resistant label affixed to the outside of the container.
2. Warning labels must be large enough to ensure that they are clearly visible and readable from a distance of at least five (5) feet.
3. Containers of medical waste will be stored in the following location(s):

4. **Note:** Containers must be protected from the wind, rain, and water.
5. Medical waste that is likely to decay or rot before being treated, disposed of, or picked up, will be refrigerated or kept in a manner that prevents the waste from decaying or rotting until it has been properly disposed of. Medical wastes meeting this criteria will be maintained at the following location(s):

6. Medical wastes must be stored so that it is protected from animals and does not provide a food source for insects and rodents.
7. Containers or buildings that are used to store medical wastes and sharps outdoors (e.g., dumpsters, sheds, etc.), will be locked at all times to prevent unauthorized access.
8. Access to medical wastes storage areas are limited to the following personnel:

9. Anyone who discovers violations of these policies must report such incidents to the Infection Preventionist (or designee) immediately or as soon as practical.

continues on next page

10. Medical waste will not be stored on premises for more than _____ days.
11. Should our medical waste storage area become full or the maximum number of storage days be exceeded, the Infection Preventionist (or designee) will notify appropriate personnel/agencies and request that the waste be removed promptly.
12. The Infection Preventionist (or designee), with the assistance of administrative staff, shall monitor the medical waste storage areas to assure that medical waste is treated, disposed of, or picked up by the authorized vendor on a timely basis.

Version	1.2 (H5MAPL0505)

Medical Waste Tracking

Policy Statement

A medical waste tracking form (or manifest) will be used to maintain a record (log) of infectious waste generated by and transported from this facility.

Policy Interpretation and Implementation

1. Should our facility generate more than fifty (50) pounds of regulated medical waste (or the state-designated limit) monthly, we will prepare and maintain approved medical waste tracking forms of all waste transported from our premises.
2. Should our facility generate less than fifty (50) pounds a month of regulated waste (or the state-designated limit), we will prepare and maintain a shipment log of all waste transported from our premises.
3. All medical waste generated by this facility, including waste treated, destroyed, and disposed of on site, must be stored in accordance with medical waste storage policies.
4. Our tracking form (manifest) will contain at least:
 - a. The date of the pickup or shipment;
 - b. The weight of the shipment;
 - c. The type of medical waste shipped (e.g., cultures and stocks of infectious agents/biologicals, pathological waste, human blood, blood products, contaminated sharps, etc.);
 - d. Whether or not shipment contains treated or untreated medical waste;
 - e. Any special handling instructions;
 - f. Appropriate permit or identification numbers (e.g., state permit/ID number; EPA medical waste ID number, etc.);
 - g. Name and address of facility;
 - h. Name, address, telephone number, and permit/ID numbers of waste hauler; and
 - i. Signatures of facility representative, waste hauler, and employee accepting containers for shipment.
5. If a shipment log is maintained, it shall include at least:
 - a. The name, address, and telephone number of the transporter;
 - b. The transporter's state permit or ID number;
 - c. The quantity and category of waste transported (e.g., treated or untreated);
 - d. The number of containers transported;
 - e. The weight of the shipment;
 - f. The date of shipment; and
 - g. The signature of the person accepting the waste for transport.
6. Within thirty-five (35) days of the removal of medical waste from our premises, the destination facility's owner/operator must provide this facility with a completed copy of the tracking form, which includes the following:
 - a. The method of treatment of the medical waste received from this facility;
 - b. The location of the landfill used to deposit our medical waste; and
 - c. The date and signature of the destination facility's owner/operator.

continues on next page

7. If, after thirty-five (35) days, our facility has not received the signed and dated tracking form, the Infection Preventionist (or designee) will try to determine the location of the medical waste. Documentation will be maintained of such attempts and filed in the business office.
8. If, after forty-five (45) days, a signed and dated tracking form has not been received, the Administrator will file an Exception Report with the state and the EPA Regional Administrator the next day.
9. Exception Reports shall include at least:
 - a. A letter explaining our efforts to locate the waste and the results of such effects; and
 - b. A legible copy of the original tracking form.
10. The administration shall maintain copies of all tracking forms, shipping logs, exception reports, etc., for at least three (3) years from the date of receipt or as required by current federal, state, or local statutes.

Pets, Animals, and Plants

Policy Statement

Animals are permitted in this facility when they are part of animal-assisted activities, as service animals, and for pet visits when deemed appropriate by the Administrator and/or Director of Nursing.

Animals allowed in the facility will be monitored and managed in order to prevent the spread of microorganisms/infections resulting from contact with animals.

The Administrator has the authority to allow or prohibit animal visitation in the facility.

Policy Interpretation and Implementation

Service Animals

1. Service animals are permitted in the facility in accordance with the Americans with Disabilities Act (ADA) and applicable state and local laws.
 - a. A service animal, by ADA definition is *any dog that is individually trained to do work or perform tasks for the benefit of an individual with a disability, including a physical, sensory, psychiatric, intellectual, or other mental disability (www.ada.gov)*.
 - b. Only dogs are recognized as service animals.
2. A service animal is not required to have “certification” or any documentation identifying them as a service animal. Therefore, staff may not request such documentation as a prerequisite for allowing the animal to be in the facility.
 - a. Staff may only screen service animals by asking the handler or owner what work or tasks the animal assists the person with.
 - b. A dog used to provide emotional support, comfort, or well-being to its owner is not considered a service animal according to the ADA definition.
3. The facility is not required to permit service animals that are in training, but may do so at the discretion of the Administrator.
4. Service animals that demonstrate aggressive behavior, that do not have the ability to contain urine or feces, are vomiting, or are excessively noisy will be excluded from animal service in this facility.
 - a. Any decision to restrict a service animal from its owner or handler will include a discussion with the resident or designee in order to reach a consensus about the concerns and potential solutions. Staff will document the concern(s), discussion and decision made.
 - b. The legal department will be consulted before removing a designated service animal from the facility.
5. The owner/handler is responsible for the health of the animal.
 - a. If staff suspects that a service animal is ill, he or she may temporarily remove the animal from his or her owner until a certified veterinarian evaluates the animal. A discussion with the owner prior to making such a decision is required and will be documented.
 - b. The facility is not liable for any costs associated with healthcare-associated infections transmitted to the animal.

continues on next page

6. Service animals are not allowed in the following areas of the facility:
 - a. Treatment or procedure areas;
 - b. In rooms or areas where a resident is immunocompromised or otherwise at high risk for infection;
 - c. Medication rooms;
 - d. Food preparation areas; and
 - e. Areas where the animal may be harmed by equipment, or vice versa.
7. Visitors who are accompanied by a service animal will be instructed to check with the resident's primary care nurse to ensure that the resident has no allergy or condition that prohibits close contact with the animal.
8. Any roommate of a resident who has a service animal will be given the opportunity to change rooms if he or she has an allergy or condition that prohibits close contact with the animal.

Animal-Assisted Activities

1. The Director of Activity Services coordinates and oversees animal-assisted activities.
2. Only dogs will be allowed to participate in animal-assisted activities.
3. Dogs participating in animal-assisted activities must:
 - a. be in good health and not in heat (estrus);
 - b. be at least one year of age;
 - c. be groomed, brushed and have trimmed nails;
 - d. have been successfully temperament-tested within the past three years;
 - e. have received a health evaluation by a licensed veterinarian within the past year;
 - f. have proof of vaccination for animal-borne diseases and negative tests for enteric parasites; and
 - g. be kept on a leash or in a carrier at all times.
4. Dogs will have a formally trained handler, preferably one who is certified through a recognized animal therapy organization.
5. Training programs for dog handlers will include the following modules:
 - a. Zoonotic diseases;
 - b. Standard precautions;
 - c. Cleaning and disinfection of surfaces contaminated by animal waste;
 - d. Disposal of animal waste;
 - e. Inspecting animals for ectoparasites;
 - f. Detecting signs of fear, aggression, stress fatigue or discomfort in dogs; and
 - g. What to do in the event of an emergency.
6. Dog handlers will be subjected to the same screening process and requirements as staff and volunteers, including:
 - a. Background checks;
 - b. Immunization requirements;
 - c. Compliance with policies and procedures; and
 - d. Restrictions on resident contact when infected with a contagious or communicable disease.
7. Animal-assisted activities will be restricted to certain areas of the facility and will not exceed one hour.
8. Animals used in activities will be protected from harm, stress, fear or fatigue to the greatest extent possible.

continues on next page

Personal Pet Visits

1. Visits by dogs owned by residents or family members of residents will be considered on an individual basis.
2. The following rules and restrictions apply to personal pet visits:
 - a. A staff member, volunteer, or other designated individual must accompany animals at all times;
 - b. Dogs must be on a leash and/or restrained while in the facility;
 - c. The resident's physician and primary care nurse must approve the visit; and
 - d. The visit should not last longer than one hour.
3. All animal visits and activities will be logged.

Safety Precautions

1. Nursing staff will record any safety issues and known allergies on resident care plans relative to animal visitation programs.
2. Animals will not be allowed in food preparation areas, dining areas, bathrooms, or treatment areas.
3. Any dog that shows aggressive or inappropriate behavior, including lunging, growling or biting will be immediately removed from the facility and visiting privileges will be revoked.
4. Bites or any other wounds caused by an animal will be treated immediately, documented, and reported according to state or local requirements.

Infection Prevention

1. Hand hygiene is required after contact with animals.
2. Animals will not come in contact with medical devices, catheter insertion sites, wounds, etc.
3. Equipment that has been in substantial (i.e., more than incidental) contact with animals must be cleaned and disinfected before reuse.
4. If a dog vomits or has diarrhea, he or she will be restricted from the facility for a minimum of one week.

Resident Rights

1. Animals may not come into contact with any resident who does not give verbal permission for contact.
2. Before entering an elevator with an animal, the handler will ask permission of the other passengers before entering.

Plants and Flowers

1. Plants and flowers will be cared for by staff not directly involved in resident/patient care, when practical.
2. Direct care staff must wear gloves to care for plants and flowers and perform hand hygiene after removing gloves.

Sharps Disposal

Policy Statement

This facility shall discard contaminated sharps into designated containers.

Policy Interpretation and Implementation

1. Whoever uses contaminated sharps will discard them immediately or as soon as feasible into designated containers.
2. Contaminated sharps will be discarded into containers that are:
 - a. Closable;
 - b. Puncture resistant;
 - c. Leakproof on sides and bottom;
 - d. Labeled or color-coded in accordance with our established labeling system; and
 - e. Impermeable and capable of maintaining impermeability through final waste disposal.
3. During use, containers for contaminated sharps will be handled as follows:
 - a. Designated individuals will ensure that the containers are easily accessible to employees and located as close as feasible to the immediate area where sharps are used or can be reasonably anticipated to be found;
 - b. Nursing staff will ensure that the containers are maintained in an upright position throughout use; and
 - c. Designated individuals will be responsible for sealing and replacing containers when they are 75% to 80% full to protect employees from punctures and/or needlesticks when attempting to push sharps into the container.
4. When moving containers of contaminated sharps from the area of use, employees must:
 - a. Close the container immediately prior to removal or replacement to prevent contents from spilling or protruding during handling, storage, transport, or shipping;
 - b. Place the container in a secondary container if leakage is possible; and
 - c. If a second container is used, it must be:
 - (1) Closable;
 - (2) Constructed to contain all contents and prevent leakage during handling, storage, transport, or shipping; and
 - (3) Labeled or color-coded according to established policies governing the labeling of containers.
 - d. Seal and replace containers when they are 75% to 80% full to protect employees from punctures and/or needlesticks when attempting to push sharps into the container.

continues on next page

5. No one shall open, empty, or manually clean reusable containers, or handle such containers in a manner which would expose him/her to the risk of percutaneous injury.
6. No one shall bend, recap, or break used syringe needles before discarding into the sharps container.
7. Whoever observes incorrect disposal or handling of contaminated sharps should report the information to the Infection Preventionist (or designee).

Water Supply

Policy Statement

Our facility handles and maintains its water supply in accordance with recommendations of the CDC, the Healthcare Infection Control Practices Advisory Committee and the FDA.

Purpose

To maintain a sanitary water supply and control the spread of waterborne microorganisms.

Policy Interpretation and Implementation

1. Approaches to controlling waterborne microorganisms (i.e., water system decontamination) will be consistent with current Centers for Disease Control and Prevention (CDC), Healthcare Infection Control Practices Advisory Committee (HICPAC) and the Food and Drug Administration (FDA) recommendations or state and local health department requirements.
2. Do not place decorative fountains and fish tanks within easy access of cognitively impaired residents.
3. Hot water distribution systems serving resident care areas will be continuously recirculated.

Version	1.2 (H5MAPL0946)

Water Supply – Disruption Due to Repairs or Emergencies

Policy Statement

Our facility will take precautions to avoid using contaminated water supply during repairs or emergencies.

Policy Interpretation and Implementation

1. Our facility has estimated the basic water needs for the entire facility for three days (e.g., 1 to 3 liters per resident per day for hydration plus 50 gallons per day per 100 residents for general use) and has secured provisions for these needs with our municipal water source. The Administrator maintains documentation supporting this arrangement.
2. The ice machines will be disconnected prior to planned water disruptions.
3. During any advisory to boil water issued by the municipal water utility, the staff will:
 - a. Alert residents, family, and staff not to consume water from drinking fountains, ice, or drinks made from municipal tap water;
 - b. Adhere to the advisory until the municipal water utility lifts the advisory; and
 - c. After the advisory is lifted, run faucets at full flow for at least 5 minutes, or decontaminate the water according to current recommendations.
4. After any advisory to boil water is lifted, the nursing staff, physicians, and Infection Preventionist (or designee) shall be alert for any outbreaks of gastrointestinal (GI) illnesses among residents.
5. After a disruption or contamination of water supply, the maintenance department and Infection Preventionist (or designee) will evaluate the need for decontamination of the hot water system. Our facility will adhere to the current CDC/HICPAC guidelines if decontamination is necessary.
6. In the event of sewage system flooding or failure, our facility will evaluate infection control risks to the residents and implement appropriate measures including possible transfer of residents as needed, and in accordance with current CDC/HICPAC guidelines and state and local health department requirements.
7. Regardless of the original source of water damage (e.g., flooding, water leaks), wet, absorbent, structural items (e.g., carpeting, wallpaper, wallboard) and cloth furnishings will be assessed for possible replacement if they are not thoroughly dried within 72 hours and are considered to present continuing sources of contamination

Antibiotic Stewardship

Policy Statement

Antibiotics will be prescribed and administered to residents under the guidance of the facility's Antibiotic Stewardship Program.

Policy Interpretation and Implementation

1. The purpose of our Antibiotic Stewardship Program is to monitor the use of antibiotics in our residents.
2. Orientation, training and education of staff will emphasize the importance of antibiotic stewardship and will include how inappropriate use of antibiotics affects individual residents and the overall community.
3. Training and education will include emphasis on the relationship between antibiotic use and:
 - a. Gastrointestinal disorders;
 - b. Opportunistic infections (e.g., *C. difficile*, *candida albicans*, etc.);
 - c. Medication interactions; and
 - d. The evolution of drug-resistant pathogens.
4. If an antibiotic is indicated, prescribers will provide complete antibiotic orders including the following elements:
 - a. Drug name;
 - b. Dose;
 - c. Frequency of administration;
 - d. Duration of treatment:
 - (1) Start and stop date; or
 - (2) Number of days of therapy;
 - e. Route of administration; and
 - f. Indications for use.
5. When a resident is admitted from an emergency department, acute care facility, or other care facility, the admitting nurse will review discharge and transfer paperwork for current antibiotic/anti-infective orders.
6. Discharge or transfer medical records must include all of the above drug and dosing elements.
7. When a resident is discharged home, the nurse will review complete antibiotic orders with the resident, including:
 - a. The reason for the antibiotic;
 - b. How to take the antibiotic, including all dosing essentials;
 - c. Possible side effects;
 - d. The importance of taking the antibiotic until the prescribed end-date;
 - e. The date his/her next doctor's appointment should be scheduled; and
 - f. Drug monograph as provided by the dispensing pharmacy or other approved drug information resource, when discharging the resident with the antibiotic.
8. When a nurse calls a physician/prescriber to communicate a suspected infection, he or she will have the following information available:
 - a. Signs and symptoms;

continues on next page

- b. When symptoms were first observed;
 - c. Resident’s hydration status;
 - d. Current medication list;
 - e. Allergy information;
 - f. Infection type;
 - g. Any orders for warfarin and results of last INR;
 - h. Last creatinine clearance or serum creatinine, if available; and
 - i. Time of the last antibiotic dose.
9. When an interacting antibiotic is to be administered concomitantly with warfarin, an INR will be ordered within three days. When results are returned:
 - a. INR will be communicated to prescriber as soon as received;
 - b. The appropriate dose of warfarin will be confirmed;
 - c. Any changes in warfarin orders will be communicated to the pharmacy; and
 - d. The next scheduled INR will be ordered.
 10. When antibiotics are prescribed over the phone, the primary care practitioner will assess the resident within 72 hours of the telephone order.
 11. When a culture and sensitivity (C&S) is ordered lab results and the current clinical situation will be communicated to the prescriber as soon as available to determine if antibiotic therapy should be started, continued, modified, or discontinued.
 12. Before a nurse removes an antibiotic from the facility emergency supply of medication, he or she will check for the right drug, right strength, allergy information and use of warfarin, along with the following:
 - a. The nurse will contact the pharmacist if not familiar with the antibiotic dose or drug-drug interactions;
 - b. The pharmacy removal slip for the dose(s) removed will be completed; and
 - c. As soon as clinically appropriate, the prescriber will be asked to review converting parenteral antibiotics to an oral formulation.

Antibiotic Stewardship – Orders for Antibiotics

Antibiotics will be prescribed and administered to residents under the guidance of the facility's Antibiotic Stewardship Program and in conjunction with the facility's general policy for Medication Utilization and Prescribing.

Policy Interpretation and Implementation

1. Prior to calling a physician/prescriber to communicate a suspected infection, the nurse will obtain and have the following information available:
 - a. Clinical signs and symptoms of suspected infection (based on approved definitions of infection);
 - b. A history of the present illness;
 - c. Resident's hydration status;
 - d. Current medication list;
 - e. Allergy information;
 - f. Any orders for warfarin and results of last INR;
 - g. Last creatinine clearance or serum creatinine, if available; and
 - h. Time of the last antibiotic dose.
2. If an antibiotic is indicated, prescribers will provide complete antibiotic orders including the following elements:
 - a. Drug name;
 - b. Dose;
 - c. Frequency of administration;
 - d. Duration of treatment:
 - (1) Start and stop date; or
 - (2) Number of days of therapy;
 - e. Route of administration; and
 - f. Indications for use.
3. Appropriate indications for use of antibiotics include:
 - a. Criteria met for clinical definition of active infection or suspected sepsis; and
 - b. Pathogen susceptibility, based on culture and sensitivity, to antimicrobial (or therapy begun while culture is pending).
4. Empirical use of an antibiotic based on clinical criteria of suspected sepsis may be appropriate. The staff and practitioner will document the specific criteria that support the suspicion in the resident's clinical record.
5. If a resident is admitted from an emergency department, acute care facility, or other care facility, the admitting nurse will review discharge and transfer paperwork for current antibiotic/anti-infective orders. Discharge or transfer medical records must include all of the above drug and dosing elements.
6. When antibiotics are prescribed over the phone, the primary care practitioner will assess the resident within 72 hours of the telephone order.

continues on next page

7. When a culture and sensitivity (C&S) is ordered, it will be completed, and:
 - a. Lab results and the current clinical situation will be communicated to the prescriber as soon as available to determine if antibiotic therapy should be started, continued, modified, or discontinued.
8. As soon as clinically appropriate, the prescriber will be asked to review converting parenteral antibiotics to an oral formulation.
9. When a resident is discharged home, the nurse will review complete antibiotic orders with the resident, including:
 - a. The reason for the antibiotic;
 - b. How to take the antibiotic, including all dosing essentials;
 - c. Possible side effects;
 - d. The importance of taking the antibiotic until the prescribed end-date;
 - e. The date their next doctor’s appointment should be scheduled; and
 - f. Drug monograph as provided by the dispensing pharmacy or other approved drug information resource, when discharging the resident with the antibiotic.
10. Before a nurse removes an antibiotic from the emergency supply of medication, he or she will check for the right drug, right strength, allergy information and use of warfarin, along with the following:
 - a. The nurse will contact the pharmacist if not familiar with the antibiotic dose or drug-drug interactions;
 - b. The pharmacy removal slip for the dose(s) removed will be completed; and
 - c. The use will be reported to the infection preventionist.

Antibiotic Stewardship – Review and Surveillance of Antibiotic Use and Outcomes

Policy Statement

Antibiotic usage and outcome data will be collected and documented using a facility-approved antibiotic surveillance tracking form. The data will be used to guide decisions for improvement of individual resident antibiotic prescribing practices and facility-wide antibiotic stewardship.

Policy Interpretation and Implementation

1. As part of the facility Antibiotic Stewardship Program, all clinical infections treated with antibiotics will undergo review by the Infection Preventionist, or designee.
2. The IP, or designee, will review antibiotic utilization as part of the antibiotic stewardship program and identify specific situations that are not consistent with the appropriate use of antibiotics.
 - a. Therapy may require further review and possible changes if:
 - (1) The organism is not susceptible to antibiotic chosen;
 - (2) The organism is susceptible to narrower spectrum antibiotic;
 - (3) Therapy was ordered for prolonged surgical prophylaxis; or
 - (4) Therapy was started awaiting culture, but culture results and clinical findings do not indicate continued need for antibiotics.
3. At the conclusion of the review, the provider will be notified of the review findings.
4. All resident antibiotic regimens will be documented on the facility-approved antibiotic surveillance tracking form. The information gathered will include:
 - a. Resident name and medical record number;
 - b. Unit and room number;
 - c. Date symptoms appeared;
 - d. Name of antibiotic (see approved surveillance list);
 - e. Start date of antibiotic;
 - f. Pathogen identified (see approved surveillance list);
 - g. Site of infection;
 - h. Date of culture;
 - i. Stop date;
 - j. Total days of therapy;
 - k. Outcome; and
 - l. Adverse events.

Antibiotic Stewardship – Staff and Clinician Training and Roles

The facility will educate and train staff and practitioners about the facility Antibiotic Stewardship Program, including appropriate prescribing, monitoring, and surveillance of antibiotic use and outcomes.

Policy Interpretation and Implementation

Nursing Assistants

1. Nursing assistants and other unlicensed staff will be trained and in-serviced on:
 - a. Recognizing signs and symptoms of infection that should be reported to the nurse; and
 - b. How to report resident changes of condition to the nurse (e.g., using tools such as INTERACT Stop and Watch Early Warning Tool).

Nursing and Direct Care Licensed Staff

1. Nurses will receive initial orientation and ongoing training on:
 - a. The facility's Antibiotic Stewardship Program, including the need for judicious use of antibiotics;
 - b. Common clinical conditions and associated pathogens treated at this facility;
 - c. How to utilize the standardized assessment and communication tool for residents suspected of having an infection;
 - d. How to access the list of antimicrobial agents available through the pharmacy formulary;
 - e. How to communicate with residents and family about the need for appropriate use of antibiotics;
 - f. Specific information that should be reported to the physician or provider upon identifying signs and symptoms of possible infection; and
 - g. Specific information that should be obtained when an order for an antibiotic is received.

Director of Nursing (DON) and Infection Preventionist (IP)

1. Administrative and management personnel with clinical oversight responsibilities will receive initial orientation and ongoing training on:
 - a. The facility's Antibiotic Stewardship Program;
 - b. The rationale for judicious use of antibiotics;
 - c. Common clinical conditions and associated pathogens treated at this facility;
 - d. How to access the current facility antibiogram, if applicable;
 - e. How to access the list of antimicrobial agents available through the pharmacy formulary;
 - f. How to use surveillance tools to monitor infections rates, antibiotic usage patterns and outcomes;
 - g. How to report notifiable infections when applicable;
 - h. How and when to gather data to present to the Infection Prevention and Control Committee (IPCC) for scheduled meetings; and
 - i. Individual roles and responsibilities in maintaining antibiotic stewardship.
2. The DON will monitor individual resident antibiotic regimens, including:
 - a. Reviewing clinical documentation supporting antibiotic orders; and
 - b. Compliance with start/stop dates and/or days of therapy.

continues on next page

3. The IP will audit and the DON will provide feedback to providers on antibiotic prescribing practices.
4. The IP will monitor over time and report to the IPCC:
 - a. Measures of antibiotic use (new antibiotic starts/1000 resident days AND days of therapy/1000 resident days);
 - b. Antibiotic susceptibility patterns (antibiogram data for specific timeframe); and
 - c. Negative outcomes or events related to antibiotic use, for example:
 - (1) *C. difficile* infections;
 - (2) Adverse drug events; and
 - (3) Antibiotic resistance rates.
5. The IP will obtain, and the DON will provide to healthcare practitioners, educational resources and materials about antibiotic resistance and opportunities for improved antibiotic use.
6. The IP and DON will participate in IPCC meetings on a regular basis.

Consultant Pharmacist

1. During the drug regimen review, the Consultant Pharmacist will identify, and flag, orders for antibiotics that are not consistent with antibiotic stewardship practices.
2. The CP will review the microbiology culture data (antibiogram) and share with the providers to help guide antibiotic selection.
3. The CP will provide the facility with the most current medication formulary.
4. The CP will participate in IPCC meetings on a regular basis.

Healthcare-Associated Infections, Identifying

Policy Statement

The facility shall attempt to identify and distinguish healthcare-associated infections from those acquired in the community.

Policy Interpretation and Implementation

1. Healthcare-associated infections (HAIs) are those that are acquired during the delivery of healthcare across settings, in contrast to those that were acquired prior to entering the healthcare setting but may persist after admission to the facility.
2. The goals of identifying healthcare-associated infections are:
 - a. To identify and correct breaches in infection control practices that may have contributed to the spread of a healthcare-associated infection;
 - b. To prevent the further spread of infection (resident-to-resident, staff-to resident) through the initiation of appropriate isolation precautions where warranted; and
 - c. To identify, treat and report epidemiologically important organisms (e.g., *C. difficile*, MDROs) that have a high risk of transmission, severity of disease, and/or are difficult to treat.
3. When an infection is identified the Infection Preventionist will determine whether it meets the criteria of infection for surveillance purposes and/or a healthcare-associated infection. This will be based upon standardized, published definitions of infections for surveillance and healthcare-associated infections.
4. The Infection Preventionist will report surveillance information to the Infection Control Committee and the Quality Assurance and Performance Improvement Committee performing infection control oversight functions. The committee will review the reports and identify trends, patterns, or problems that might contribute to the development of healthcare-associated infections.
5. The facility has established procedures and forms to perform and document surveillance. Targeted surveillance and reporting of certain healthcare-associated infections may be conducted through the National Health Safety Network using NHSN protocols and forms.

Legionella Surveillance and Detection

Policy Statement

Our facility is committed to the prevention, detection and control of water-borne contaminants, including *Legionella*. Legionnaire's disease will be included as part of our infection surveillance activities.

Policy Interpretation and Implementation

1. As part of the Infection Prevention and Control Program, all cases of pneumonia that are diagnosed in residents \geq 48 hours after admission will be investigated for possible Legionnaire's disease.
2. Clinical staff will be trained on the following signs and symptoms associated with pneumonia and Legionnaire's:
 - a. Cough;
 - b. Shortness of breath;
 - c. Fever;
 - d. Muscle aches;
 - e. Headache; and
 - f. Diarrhea, nausea and confusion associated with Legionnaire's disease.
3. If pneumonia or Legionnaire's disease are suspected, the nurse will notify the physician or practitioner immediately.
4. Residents who have signs and symptoms of pneumonia may be placed on transmission-based (droplet) precautions, although person-to-person transmission is rare.
5. Diagnosis of Legionnaire's disease is based on a culture of lower respiratory secretions and urinary antigen testing (concurrently).
6. Depending on the severity of illness, a hospital transfer may be initiated.
7. If *Legionella* is detected in one or more residents, the Infection Preventionist will:
 - a. Initiate active surveillance for Legionnaire's diseases;
 - b. Notify the local health department; and
 - c. Notify the Administrator and the Director of Nursing Services.
8. The Infection Preventionist will meet with the Water Management Team to investigate the possible source of contamination.

continues on next page

Outbreak of Communicable Diseases

Policy Statement

Outbreaks of communicable diseases within the facility will be promptly identified and appropriately handled.

Policy Interpretation and Implementation

1. An outbreak of most communicable diseases can be defined as one of the following:
 - a. One case of an infection that is highly communicable;
 - b. Trends that are ten (10) percent (or more) above the historical rate of infection for the facility; or
 - c. Occurrence of three (3) or more cases of the same infection over a specified period of time and in a defined area.
2. An outbreak of food poisoning is defined as two (2) or more cases in persons who shared the same meal or one (1) case of botulism.
3. An outbreak of diarrhea is defined as anything exceeding the endemic rate, or a single case if unusual for the facility.
4. An outbreak of influenza is defined as anything exceeding the endemic rate, or a single case if unusual for the facility. A single case of influenza is reportable to the Department of Health.
5. Contacts will be assessed as appropriate to determine if any actions need to be taken.
6. Symptomatic residents and employees are to be considered potentially infected and will be assessed for appropriate actions.
7. The Administrator will be responsible for:
 - a. Telephoning a report to the health department;
 - b. Restricting admissions to the facility as indicated or as authorized by the health department/Medical Director;
 - c. Submitting periodic progress reports to the health department, as requested;
 - d. Calling emergency meetings of the Infection Control Committee;
 - e. Discontinuing group activities, as indicated;
 - f. Limiting visitors if indicated (i.e., influenza in the community); and
 - g. Forwarding Communicable Disease Report Cards to the health department, as required.
8. The Infection Preventionist and Director of Nursing Services will be responsible for:
 - a. Receiving surveillance information and tabulating data;
 - b. Maintaining a line listing of identified cases on the appropriate *Line Listing Report*;
 - c. Notifying the Medical Director and the Attending Physicians;
 - d. Assigning nursing personnel, if appropriate, to same residents group for the duration of the outbreak; and
 - e. Completing the *Infection Treatment/Tracking Report* form, if required.
9. The nursing staff will be responsible for:
 - a. Notifying the Director of Nursing Services of symptomatic residents;
 - b. Providing infection surveillance data in a timely manner;
 - c. Obtaining laboratory specimens as directed;

continues on next page

- d. Initiating isolation precautions as directed or as necessary; and
 - e. Confining symptomatic residents to their rooms as much as feasible, when indicated.
10. All employees should:
- a. Practice good hygiene and handwashing technique; and
 - b. Report any symptoms relating to the current disease outbreak to their supervisor.
11. The Medical Director is responsible for:
- a. Working with the Attending Physician(s) and the health department to determine the need for laboratory specimens; and
 - b. Overseeing the management of the outbreak.
12. The Attending Physician will be responsible for:
- a. Ordering isolation precautions, as needed or as per state regulations;
 - b. Working with the Medical Director and health department to determine the need for laboratory specimens;
 - c. Determining the need for follow-up specimens and discontinuing isolation precautions;
 - d. Obtaining nasal (or sometimes throat) specimens for rapid influenza test in an influenza outbreak, if necessary; and
 - e. In case of an influenza A outbreak, determining the need for prophylaxis.

Reportable Diseases

Policy Statement

Certain infectious, contagious, or communicable diseases are reported to appropriate city, county and/or state health department officials.

Policy Interpretation and Implementation

1. Should any resident(s) or staff be suspected or diagnosed as having a reportable communicable/infectious disease according to State-specific criteria, such information is promptly reported to appropriate local and/or state health department officials.
2. If the disease or condition is listed as a Nationally Notifiable Infectious Disease according to the CDC, the Infection Preventionist, or designee, notifies the State health department.

Reporting Communicable Diseases

Level III

Purpose

The purpose of this procedure is to guide reporting of suspected and confirmed communicable diseases to the appropriate governmental agency or authority.

General Guidelines

1. All reportable infectious diseases (residents' or employees') must be reported to the Infection Preventionist as soon as a definite diagnosis is made or strongly suspected.
2. The Infection Preventionist is responsible for notifying the local, district, or state health department of confirmed cases of state-specific reportable diseases.
3. Diseases that are included in state lists of reportable diseases may also include diseases that must be reported to the CDC (Nationally Notifiable Diseases).
4. Reportable diseases are divided into several groups:
 - a. Mandatory written reporting: a report of the disease must be made in writing.
 - b. Mandatory reporting by telephone: a health care provider must make a report by phone.
 - c. Report of total number of cases.
 - d. Cancer: Cancer cases are reported to the state Cancer Registry.
5. When a disease has been reported to the local, district, or state health department, the Infection Preventionist is responsible for maintaining an in-house report of such action, including the date and time of the report.
6. Should the resident or employee reside in another county, the disease must be reported directly to the county of residence (if known). If such information is not known, the disease will be reported to the local county health department.
7. Cases of sexually transmitted diseases (STDs) must be reported directly to the appropriate local health agency; for example, the STD Branch of the Public Health Department.

Surveillance for Infections

Policy Statement

The Infection Preventionist will conduct ongoing surveillance for Healthcare-Associated Infections (HAIs) and other epidemiologically significant infections that have substantial impact on potential resident outcome and that may require transmission-based precautions and other preventative interventions.

Policy Interpretation and Implementation

1. The purpose of the surveillance of infections is to identify both individual cases and trends of epidemiologically significant organisms and Healthcare-Associated Infections, to guide appropriate interventions, and to prevent future infections.
2. The criteria for such infections are based on the current standard definitions of infections.
3. Infections that will be included in routine surveillance include those with:
 - a. Evidence of transmissibility in a healthcare environment;
 - b. Available processes and procedures that prevent or reduce the spread of infection;
 - c. Clinically significant morbidity or mortality associated with infection (e.g., pneumonia, UTIs, *C. difficile*); and
 - d. Pathogens associated with serious outbreaks. (e.g., invasive *Streptococcus* Group A, acute viral hepatitis, norovirus, scabies, influenza).
4. Infections that may be considered in surveillance include those with limited transmissibility in a healthcare environment; and/or limited prevention strategies.
5. Nursing Staff will monitor residents for signs and symptoms that may suggest infection, according to current criteria and definitions of infections, and will document and report suspected infections to the Charge Nurse as soon as possible.
6. If a communicable disease outbreak is suspected, this information will be communicated to the Charge Nurse and Infection Preventionist immediately.
7. When infection or colonization with epidemiologically important organisms is suspected, cultures may be sent, if appropriate, to a contracted laboratory for identification or confirmation. Cultures will be further screened for sensitivity to antimicrobial medications to help determine treatment measures.
8. The Charge Nurse will notify the Attending Physician and the Infection Preventionist of suspected infections.
 - a. The Infection Preventionist and the Attending Physician will determine if laboratory tests are indicated, and whether special precautions are warranted.
 - b. The Infection Preventionist will determine if the infection is reportable.
 - c. The Attending Physician and interdisciplinary team will determine the treatment plan for the resident.
9. If transmission-based precautions or other preventative measures are implemented to slow or stop the spread of infection, the Infection Preventionist will collect data to help determine the effectiveness of such measures.

continues on next page

10. When transmission of Healthcare-Associated Infections continues despite documented efforts to implement infection control and prevention measures, the appropriate state agency and/or a specialist in infection control and epidemiology will be consulted for further recommendations.

Gathering Surveillance Data

1. The Infection Preventionist or designated infection control personnel is responsible for gathering and interpreting surveillance data. The Infection Control Committee and/or QAPI Committee may be involved in interpretation of the data.
2. The surveillance should include a review of any or all of the following information to help identify possible indicators of infections:
 - a. Laboratory records;
 - b. Skin care sheets;
 - c. Infection control rounds or interviews;
 - d. Verbal reports from staff;
 - e. Infection documentation records;
 - f. Temperature logs;
 - g. Pharmacy records;
 - h. Antibiotic Review; and
 - i. Transfer log/summaries.
3. If laboratory reports are used to identify relevant information, the following findings merit further evaluation:
 - a. Positive blood cultures;
 - b. Positive wound cultures that do not just represent surface colonization;
 - c. Positive urine cultures (bacteriuria) with corresponding signs and symptoms that suggest infection;
 - d. Positive sputum culture;
 - e. Other positive cultures (i.e., stool culture, eye cultures, etc.); and
 - f. All cultures positive for Group A Streptococcus.
4. After removing duplicates and negative reports, prioritize the reports as follows:
 - a. Multidrug-resistant reports:
 - (1) All multidrug-resistant reports require immediate attention.
 - (2) Ensure that appropriate precautions, if needed, are in place.
 - (3) If this is a new or unexpected report notify the Administrator, Director of Nursing Services, and Medical Director;
 - b. Blood cultures;
 - c. Positive wound cultures if there are corresponding signs and symptoms that indicate infection;
 - d. Positive sputum cultures;
 - e. Bacteriuria WITH corresponding signs and symptoms of UTI; and
 - f. Other positive cultures (i.e., eye cultures).
5. In addition to collecting data on the incidence of infections, the surveillance system is designed to capture certain epidemiologically important data that may influence how the overall surveillance data is interpreted; for example, focused surveillance data may be gathered for residents with a high risk for infection or those with a recent hospital stay.

continues on next page

Data Collection and Recording

1. For residents with infections that meet the criteria for definition of infection for surveillance, collect the following data as appropriate:
 - a. Identifying information (i.e., resident's name, age, room number, unit, and Attending Physician);
 - b. Diagnoses;
 - c. Admission date, date of onset of infection (may list onset of symptoms, if known, or date of positive diagnostic test);
 - d. Infection site (be as specific as possible, e.g., cutaneous infections should be listed as "pressure ulcer, left foot," pneumonia as "right upper lobe," etc.);
 - e. Pathogens;
 - f. Invasive procedures or risk factors (i.e., surgery, indwelling tubes, Foley, etc., fractured hip, malnutrition, altered mental status, etc.);
 - g. Pertinent remarks (additional relevant information, i.e., temperatures, other symptoms of specific infection, white blood cell count, etc.). Also, record if the resident is admitted to the hospital, or expires; and
 - h. Treatment measures and precautions (interventions and steps taken that may reduce risk).
2. Using the current suggested criteria for Healthcare-Associated Infections, determine if the resident has a Healthcare-Associated Infection.
3. For targeted surveillance and reporting through the CDC National Health Safety Network (NHSN), follow the surveillance protocols for each module using the data collection tools provided at <https://www.cdc.gov/nhsn/ltc/index.html>
4. For targeted surveillance using facility-created tools, follow these guidelines:
 - a. DAILY (as indicated): Record detailed information about the resident and infection on an individual infection report form (e.g., *Infection Treatment/Tracking Report*, *Infection Report Form*, or similar form).
 - b. MONTHLY: Collect information from individual resident infection reports and enter line listing of infections by resident for the entire month (e.g., *Line Listing of Infections by Resident* or similar form).
 - c. MONTHLY: Summarize monthly data for each nursing unit by site and by pathogen (e.g., *Facility-Wide Monthly Infection Report by Site*, *Facility-Wide Monthly Infection Report by Pathogen*, or similar form).
 - d. MONTHLY/QUARTERLY: Identify predominant pathogens or sites of infection among residents in the facility or in particular units by recording them month to month and observing trends. (See *Facility-Wide 12-Month Pathogen Trends* or *Facility-Wide 12-Month Infection Site Trends* or similar tool.)
 - e. MONTHLY/QUARTERLY: Compare incidence of current infections to previous data to identify trends and patterns. Use an average infection rate over a previous time period (for example, over the past 12 months) as the baseline. Compare subsequent rates to the average rate to identify possible increases in infection rates.

Calculating Infection Rates

1. Obtain the month's total resident days from the business office. The following data is used as the denominator to calculate the monthly infection rate:
 - a. Total resident days (daily census of each day in the designated time period added together).

continues on next page

2. To determine the incidence of infection per 1000 resident days, divide the number of new healthcare associated infections for the month by the total resident days for the month (obtained from the business office) X 1000.

Example	
Total number of new infections for the month	16
Total resident days for the month	3025
Infections per 1000 resident days	$16 \div 3025 \times 1000 = 5.3$

Interpreting Surveillance Data

1. Analyze the data to identify trends.
 - a. Compare the rates to previous months in the current year and to the same month in previous years, to identify seasonal trends.
 - b. Consider how increases or decreases might relate to recent process changes, events, or activities in the facility (i.e., change in handwashing preparations, increased turnover in personnel or residents, etc.). These, of course, are not necessarily the reason for the change. However, trends should be monitored.
 - c. If the infection rates rise each month over a period of six (6) months, additional advice is warranted.
2. Surveillance data will be provided to the Infection Control Committee regularly.
3. The Infection Control Committee will determine how important surveillance data will be communicated to the Physicians and other providers, the Administrator, nursing units, and the local and State Health Departments.

Coronavirus Disease (COVID-19) – Reporting Facility Data to the Centers for Disease Control and Prevention

Policy Statement

Data related to suspected and confirmed cases of COVID-19 among residents and staff is reported to the Centers for Disease Control and Prevention electronically and in the standardized format specified per federal regulations. Data reporting begins no later than 11:59 p.m. (EST) on May 31, 2020.

Policy Interpretation and Implementation

1. Data related to suspected and confirmed cases of COVID-19 among residents and staff is reported to the Centers for Disease Control and Prevention (CDC) National Health Safety Network (NHSN), including the following:
 - a. Suspected and confirmed COVID-19 infections among residents and staff, including residents previously treated for COVID-19;
 - b. Total deaths and COVID-19 deaths among residents and staff;
 - c. Personal protective equipment and hand hygiene supplies in the facility;
 - d. Ventilator capacity and supplies in the facility;
 - e. Resident beds and census;
 - f. Access to COVID-19 testing while the resident is in the facility; and
 - g. Staffing shortages.
2. Data is reported to the CDC as specified in 483.80(g)(2). Data is collected daily and submitted to the CDC no less than weekly.
3. Collection periods (e.g., Sunday through Monday) and submission of data (e.g., every Tuesday) are to remain consistent.
4. The Infection Preventionist (or a designee) is responsible for enrollment, collection and submission of data and serving as the NHSN Facility Administrator.

F836

(Rev. 173, Issued: 11-22-17, Effective: 11-28-17, Implementation: 11-28-17)

§483.70(a) Licensure.

A facility must be licensed under applicable State and local law.

§483.70(b) Compliance with Federal, State, and Local Laws and Professional Standards.

The facility must operate and provide services in compliance with all applicable Federal, State, and local laws, regulations, and codes, and with accepted professional standards and principles that apply to professionals providing services in such a facility.

§483.70(c) Relationship to Other HHS Regulations.

In addition to compliance with the regulations set forth in this subpart, facilities are obliged to meet the applicable provisions of other HHS regulations, including but not limited to those pertaining to nondiscrimination on the basis of race, color, or national origin (45 CFR part 80); nondiscrimination on the basis of disability (45 CFR part 84); nondiscrimination on the basis of age (45 CFR part 91); nondiscrimination on the basis of race, color, national origin, sex, age, or disability (45 CFR part 92); protection of human subjects of research (45 CFR part 46); and fraud and abuse (42 CFR part 455) and protection of individually identifiable health information (45 CFR parts 160 and 164). Violations of such other provisions may result in a finding of non-compliance with this paragraph.

DEFINITIONS §483.70(a)-(c)

"Accepted professional standards and principles" means Federal, State and local laws or professional licensure standards.

An **"authority having jurisdiction"** is the public agency, i.e., Federal, State or local, or official(s) having the authority to make a determination of noncompliance, and is responsible for providing and signing official correspondence notifying the facility or professional of their final adverse action.

GUIDANCE §483.70(a)-(c)

This regulation and guidance only applies to actions taken under State licensure authority or other Federal HHS agencies as defined in the regulation, it does NOT include any federal CMS enforcement actions as required at 42 CFR Part §488.

PROCEDURES: §483.70(a)-(c)

Facility licenses, permits, and approvals must be provided upon request if necessary to determine compliance with these requirements. Surveyors may not interpret or enforce another agency's requirements. If surveyors identify a situation indicating that the facility or any professional providing services may not be in compliance with a State or local law, regulation, Code and/or standard, refer that information to the authority having jurisdiction for their follow-up action. The Centers for Medicare & Medicaid Services (CMS), Regional Office (RO) will assist you to contact the appropriate Federal agency to refer your concerns. Do not delay a survey waiting for confirmation of receipt from another agency or authority having jurisdiction.

If surveyors determined and received confirmation from the authority having jurisdiction that a final adverse action has been taken, then the facility could be found to not meet the requirements at

§483.70(b) or (c) and a deficiency may be cited here. A final adverse action includes an action imposed by the authority having jurisdiction and is not under appeal or litigation by the facility or the professional providing services in the facility.

Do not cite this tag:

- When the authority having jurisdiction has not taken a final adverse action;
- To simply cite non-compliance with State or local licensure requirements unless final adverse action from the authority having jurisdiction has been confirmed; or
- As past non-compliance if, at the time of the current survey, the facility or professional is in compliance with the Federal, State or local law, regulation, code and /or standard but was found not to be in compliance with those requirements during a time before the current survey. If there is a question, confirm the facility's current compliance status with the authority having jurisdiction.

KEY ELEMENTS OF NONCOMPLIANCE

To cite deficient practice at F836, the surveyor's investigation will generally show that the facility failed to do any one of the following:

- Hold a current license from the State or other applicable authority to operate as a nursing home and this information has been verified with the appropriate authority; or
- Provide services in compliance with all applicable Federal, State, and local laws, regulations, and codes, and with accepted professional standards and principles that apply to any professional providing services in the facility, whether temporary or permanent.

F866

(Rev. 173, Issued: 11-22-17, Effective: 11-28-17, Implementation: 11-28-17)

§483.75(c) Program feedback, data systems and monitoring.

(§483.75(c) will be implemented during Phase 3) A facility must establish and implement written policies and procedures for feedback, data collections systems, and monitoring, including adverse event monitoring. The policies and procedures must include, at a minimum, the following:

§483.75(c)(1) Facility maintenance of effective systems to obtain and use of feedback and input from direct care staff, other staff, residents, and resident representatives, including how such information will be used to identify problems that are high risk, high volume, or problem-prone, and opportunities for improvement.

§483.75(c)(2) Facility maintenance of effective systems to identify, collect, and use data and information from all departments, including but not limited to the facility assessment required at §483.70(e) and including how such information will be used to develop and monitor performance indicators.

§483.75(c)(3) Facility development, monitoring, and evaluation of performance indicators, including the methodology and frequency for such development, monitoring, and evaluation.

§483.75(c)(4) Facility adverse event monitoring, including the methods by which the facility will systematically identify, report, track, investigate, analyze and use data and information relating to adverse events in the facility, including how the facility will use the data to develop activities to prevent adverse events.

F880

(Rev. 173, Issued: 11-22-17, Effective: 11-28-17, Implementation: 11-28-17)

§483.80 Infection Control

The facility must establish and maintain an infection prevention and control program designed to provide a safe, sanitary and comfortable environment and to help prevent the development and transmission of communicable diseases and infections.

§483.80(a) Infection prevention and control program.

The facility must establish an infection prevention and control program (IPCP) that must include, at a minimum, the following elements:

§483.80(a)(1) A system for preventing, identifying, reporting, investigating, and controlling infections and communicable diseases for all residents, staff, volunteers, visitors, and other individuals providing services under a contractual arrangement based upon the facility assessment conducted according to §483.70(e) and following accepted national standards;

§483.80(a)(2) Written standards, policies, and procedures for the program, which must include, but are not limited to:

- (i) A system of surveillance designed to identify possible communicable diseases or infections before they can spread to other persons in the facility;
- (ii) When and to whom possible incidents of communicable disease or infections should be reported;
- (iii) Standard and transmission-based precautions to be followed to prevent spread of infections;
- (iv) When and how isolation should be used for a resident; including but not limited to:
 - (A) The type and duration of the isolation, depending upon the infectious agent or organism involved, and
 - (B) A requirement that the isolation should be the least restrictive possible for the resident under the circumstances.
- (v) The circumstances under which the facility must prohibit employees with a communicable disease or infected skin lesions from direct contact with residents or their food, if direct contact will transmit the disease; and
- (vi) The hand hygiene procedures to be followed by staff involved in direct resident contact.

§483.80(a)(4) A system for recording incidents identified under the facility's IPCP and the corrective actions taken by the facility.

§483.80(e) Linens.

Personnel must handle, store, process, and transport linens so as to prevent the spread of infection.

§483.80(f) Annual review.

The facility will conduct an annual review of its IPCP and update their program, as necessary.

INTENT §483.80(a),(e),(f)

The intent of this regulation is to ensure that the facility:

- Develops and implements an ongoing infection prevention and control program (IPCP) to prevent, recognize, and control the onset and spread of infection to the extent possible and reviews and updates the IPCP annually and as necessary. This would include revision of the IPCP as national standards change;
- Establishes facility-wide systems for the prevention, identification, investigation and control of infections of residents, staff, and visitors. It must include an ongoing system of surveillance designed to identify possible communicable diseases or infections before they can spread to other persons in the facility and procedures for reporting possible incidents of communicable disease or infections; **NOTE:** For purposes of this guidance, "staff" includes employees, consultants, contractors, volunteers, caregivers who provide care and services to residents on behalf of the facility, and students in the facility's nurse aide training programs or from affiliated academic institutions.
- Develops and implements written policies and procedures for infection control that, at a minimum:
 - Explain how standard precautions and when transmission-based precautions should be utilized, including but not limited to the type and duration of precautions for particular infections or organisms involved and that the precautions should be the least restrictive possible for the resident given the circumstances and the resident's ability to follow the precautions;
 - Prohibit staff with a communicable disease or infected skin lesions from direct contact with residents or their food, if direct contact will transmit the disease; and
 - Require staff follow hand hygiene practices consistent with accepted standards of practice.
- Requires staff handle, store, process, and transport all linens and laundry in accordance with accepted national standards in order to produce hygienically clean laundry and prevent the spread of infection to the extent possible.

DEFINITIONS

"Airborne precautions": actions taken to prevent or minimize the transmission of infectious agents/organisms that remain infectious over long distances when suspended in the air. These infectious particles can remain suspended in the air for prolonged periods of time and can be carried on normal air currents in a room or beyond, to adjacent spaces or areas receiving exhaust air.¹

"Alcohol-based handrub (ABHR)": a 60-95 percent ethanol or isopropyl alcohol-containing preparation base designed for application to the hands to reduce the number of viable microorganisms.

"Cleaning": removal of visible soil (e.g., organic and inorganic material) from objects and surfaces and is normally accomplished manually or mechanically using water with detergents or enzymatic products.

"Cohorting": the practice of grouping residents infected or colonized with the same infectious agent together to confine their care to one area and prevent contact with susceptible residents (cohorting residents).¹ During outbreaks, healthcare staff may be assigned to a specific cohort of residents to further limit opportunities for transmission (cohorting staff). The terms "cohort or cohorting" is standardized language used in the practice of infection prevention and control; the use of this terminology is not intended to offend residents or staff.

"Colonization": the presence of microorganisms on or within body sites without detectable host immune response, cellular damage, or clinical expression.¹

"Communicable disease" (also known as [a.k.a.] "contagious disease"): an infection transmissible (e.g., from person-to-person) by direct contact with an affected individual or the individual's body fluids or by indirect means (e.g., contaminated object).

"Community-acquired infections" (a.k.a. "present on admission"): infections that are present or incubating at the time of admission and which generally develop within 72 hours of admission.

"Contact precautions": measures that are intended to prevent transmission of infectious agents which are spread by direct or indirect contact with the resident or the resident's environment.¹

"Contaminated laundry": laundry which has been soiled with blood/body fluids or other potentially infectious materials or may contain sharps.

"Decontamination": the use of physical or chemical means to remove, inactivate, or destroy pathogenic organisms on a surface or item to the point where they are no longer capable of transmitting infectious particles and the surface or item is rendered safe for handling, use, or disposal.

"Disinfectant": usually a chemical agent (but sometimes a physical agent) that destroys disease-causing pathogens or other harmful microorganisms but might not kill bacterial spores. It refers to substances applied to inanimate objects.²

"Disinfection": thermal or chemical destruction of pathogenic and other types of microorganisms. Disinfection is less lethal than sterilization because it destroys most recognized pathogenic microorganisms but not necessarily all microbial forms (e.g., bacterial spores).²

"Droplet precautions": actions designed to reduce/prevent the transmission of pathogens spread through close respiratory or mucous membrane contact with respiratory secretions.

"Hand hygiene": a general term that applies to hand washing, antiseptic hand wash, and alcohol-based hand rub.³

"Hand washing": the vigorous, brief rubbing together of all surfaces of hands with plain (i.e., nonantimicrobial) soap and water, followed by rinsing under a stream of water.⁴

"Healthcare-associated infection (HAI)": an infection that residents acquire, that is associated with a medical or surgical intervention (e.g., podiatry, wound care debridement) within a nursing home and was not present or incubating at the time of admission.

"Hygienically clean": being free of pathogens in sufficient numbers to cause human illness.⁵

"Infection": the establishment of an infective agent in or on a suitable host, producing clinical signs and symptoms (e.g., fever, redness, heat, purulent exudates, etc.).

"Infection preventionist": term used for the person(s) designated by the facility to be responsible for the infection prevention and control program. NOTE: Designation of a specific individual, detailed training, qualifications, and hourly requirements for an infection preventionist are not required until implementation of Phase 3.

"Personal protective equipment (PPE)": protective items or garments worn to protect the body or clothing from hazards that can cause injury and to protect residents from cross-transmission.

"(Regulated) Medical waste": liquid or semi-liquid blood or other potentially infectious materials; contaminated items that would release blood or other potentially infectious materials in a liquid or semi-liquid state if compressed; items that are caked with dried blood or other

potentially infectious materials and are capable of releasing these materials during handling (e.g., blood-soaked bandages); contaminated sharps.⁶

NOTE: Authorities having jurisdiction may have more stringent regulations than OSHA.

"Standard Precautions": infection prevention practices that apply to all residents, regardless of suspected or confirmed diagnosis or presumed infection status. Standard precautions is based on the principle that all blood, body fluids, secretions, excretions except sweat, regardless of whether they contain visible blood, non-intact skin, and mucous membranes may contain transmissible infectious agents. Furthermore, equipment or items in the patient environment likely to have been contaminated with infectious body fluids must be handled in a manner to prevent transmission of infectious agents. Standard precautions include but are not limited to hand hygiene; use of gloves, gown, mask, eye protection, or face shield, depending on the anticipated exposure; safe injection practices, and respiratory hygiene/cough etiquette. Also, equipment or items in the patient environment likely to have been contaminated with infectious body fluids must be handled in a manner to prevent transmission of infectious agents (e.g., wear gloves for direct contact, properly clean and disinfect or sterilize reusable equipment before use on another patient).¹

"Transmission-based precautions" (a.k.a. "Isolation Precautions"): actions (precautions) implemented, in addition to standard precautions that are based upon the means of transmission (airborne, contact, and droplet) in order to prevent or control infections. **NOTE:** Although the regulatory language refers to "isolation," the nomenclature widely accepted and used in this guidance will refer to "transmission-based precautions" instead of "isolation".

GUIDANCE §483.80(a),(e),(f)

INFECTION PREVENTION AND CONTROL PROGRAM

Healthcare-associated infections (HAIs) can cause significant pain and discomfort for residents in nursing homes and can have significant adverse consequences. The facility must establish and maintain an IPCP designed to provide a safe, sanitary, and comfortable environment and to help prevent the development and transmission of communicable diseases and infections. This program must include, at a minimum, a system for preventing, identifying, reporting, investigating, and controlling infections and communicable diseases for all residents, staff, and visitors. The IPCP must follow national standards and guidelines.

For purposes of this guidance, we would expect facilities to tailor the emphasis of their IPCP for visitors. We expect facilities to work to prevent transmission of infection to the resident from the visitor using reasonable precautions and national standards.¹ For example, passive screening through the use of signs at the entrances to alert visitors with signs and symptoms of communicable diseases not to enter the facility.¹ If a facility has a visitor exception protocol (e.g., end-of-life care), this would need to be determined by the facility. In this case, if a symptomatic visitor/family member must enter the facility, the visitor must still follow the facility's policies for prevention of transmission (e.g., following respiratory hygiene/cough etiquette procedures).

The Infection Prevention and Control Program must include the following parts:

- A system for preventing, identifying, reporting, investigating, and controlling infections and communicable diseases that:

- Covers all residents, staff, volunteers, visitors, and other individuals providing services under a contractual arrangement;
- Is based on the individual facility assessment;
- Follows accepted national standards;
- Written standards, policies and procedures in accordance with §483.80(a)(2);
- A system for recording incidents identified under the IPCP and corrective actions taken by the facility; and
- An antibiotic stewardship program (ASP) (F881).

FACILITY ASSESSMENT

Pursuant to §483.70(e) (F838), the facility must conduct and document a facility-wide assessment to determine what resources are necessary to care for its residents competently during both day-to-day operations and emergencies. The facility must review and update that assessment, as necessary, and at least annually. The facility must also review and update this assessment whenever there is, or the facility plans for, any change that would require a substantial modification to any part of this assessment. The facility assessment must address or include a facility-based and community-based risk assessment, utilizing an all-hazards approach. See §483.70(e) (F838) for guidance on the facility assessment. The results of the facility assessment must be used, in part, to establish and update the IPCP, its policies and/or protocols to include a system for preventing, identifying, reporting, investigating, and controlling infections and communicable diseases for residents, staff, and visitors.

NOTE: A community-based risk assessment should include review for risk of infections (e.g., multidrug-resistant organisms-MDROs) and communicable diseases such as tuberculosis and influenza. Appropriate resident tuberculosis screening should be performed based on state requirements.

NOTE: While not required for compliance, a sample tool of an infection control risk assessment is available for adaptation.⁷

INFECTION CONTROL POLICIES AND PROCEDURES

The facility must develop and implement written policies and procedures for the provision of infection prevention and control. The facility administration and medical director should ensure that current standards of practice based on recognized guidelines are incorporated in the resident care policies and procedures. These IPCP policies and procedures must include, at a minimum:

- As necessary, and at least annually, review and revision of the IPCP based upon the facility assessment (according to §483.70(e)) which includes any facility and community risk;
- An ongoing system of surveillance designed to identify possible communicable diseases or infections before they can spread to other persons in the facility;
- When and to whom possible incidents of communicable disease or infections should be reported within the facility;
- Which communicable diseases are reportable to local/state public health authorities;
- How to use standard precautions and how and when to use transmission-based precautions (i.e., contact precautions, droplet precautions, airborne isolation precautions). The areas described below are part of standard and transmission-based precautions¹ which are further described under their respective sections. For example:
 - Hand hygiene (HH) (e.g., hand washing and/or ABHR): consistent with accepted standards of practice such as the use of ABHR instead of soap and water in all clinical situations except when hands are visibly soiled (e.g., blood, body fluids), or after caring for a resident

with known or suspected *Clostridium (C.) difficile* or norovirus infection during an outbreak, or if infection rates of *C. difficile* infection (CDI) are high; in these circumstances, soap and water should be used;⁸ NOTE: According to the CDC, strict adherence to glove use is the most effective means of preventing hand contamination with *C. difficile* spores as spores are not killed by ABHR and may be difficult to remove even with thorough hand washing. For further information on appropriate hand hygiene practices see the following CDC website: <http://www.cdc.gov/handhygiene/providers/index.html>

- The selection and use of PPE (e.g., indications, donning/doffing procedures) and the clinical conditions for which specific PPE should be used (e.g., CDI, influenza);
- Addressing the provision of facemasks for residents with new respiratory symptoms;
- Addressing resident room assignment (e.g. single/private room/cohorted) as appropriate and/or available, based on a case by case analysis of the presence of risk factors for increased likelihood of transmission (e.g., uncontained drainage, stool incontinence);¹
- The process to manage a resident on transmission-based precautions when a single/private room is not available;
- Limiting the movement of a resident with a highly infectious disease (e.g., norovirus, CDI) who is on transmission-based precautions with active symptoms (e.g., resident has diarrhea, vomiting, draining wounds, or other uncontained excretions or secretions) while outside of his/her room for medically necessary purposes only;¹ and
- Respiratory Hygiene/Cough Etiquette¹: Implementing policies and procedures would include providing resources and instructions for performing HH in or near lobby areas or entrances; provide conveniently-located dispensers of ABHR and supplies for hand washing where sinks are available. During times of increased prevalence of respiratory infections in the community, facilities must have facemasks available and should offer facemasks to coughing or sneezing visitors and other symptomatic persons (e.g., family who accompany ill residents upon entry to the facility). Symptomatic (e.g., coughing) visitors should wear a facemask or maintain at least a three foot separation from others in common areas (e.g., admitting office). In addition, the facility should consider posting signs in the facility with instructions to family/visitors with symptoms of respiratory infection to cover their mouth/nose when coughing or sneezing; use and dispose of tissues; perform hand hygiene after contact with respiratory secretions; and to take appropriate precautions if they are having symptoms of respiratory infection or other communicable diseases.
- Resident Care Activities:
 - The use and care of urinary catheters, which must include a written rationale for the use, consistent with evidence-based guidelines (e.g., acute urinary retention, bladder outlet obstruction, neurogenic bladder or terminally ill for comfort measures) (Refer to §483.25(e)(2)(i)(ii)&(iii) Incontinence, F690, for further information.);
 - Wound care, fecal/urinary incontinence care, and skin care. Since the IPCP must be based on the facility assessment, the presence of certain resident conditions would require that the facility have policies and procedures related to other specific services such as mechanical ventilation, infusion therapy, and/or dialysis either onsite or at an offsite dialysis facility;
 - Performing fingersticks and point-of-care testing (e.g., assisted blood glucose monitoring) to the extent identified as a resident need based on the facility assessment;
 - Preparation, administration, and care for medications administered by injection or peripheral and central venous catheters, if performed by the facility; and
 - Use and care of peripheral and central venous catheters, if performed by the facility.

- Environmental cleaning/disinfection:
 - Routine cleaning and disinfection of high-touch surfaces in common areas, resident rooms, and at the time of discharge; and

NOTE: Privacy curtains in the resident's room should be changed when visibly dirty by laundering or cleaning with an Environmental Protection Agency (EPA)-registered disinfectant per manufacturer's instructions.

 - Cleaning/disinfection of resident care equipment including equipment shared among residents (e.g., blood pressure cuffs, rehabilitation therapy equipment, blood glucose meters, etc.).
- Written occupational health policies that address:
 - Reporting of staff illnesses and following work restrictions per nationally recognized standards and guidelines;⁹
 - Prohibiting contact with residents or their food when staff have potentially communicable diseases or infected skin lesions;
 - Assessing risks for tuberculosis (TB) based on regional/community data and screening staff to the extent permitted under applicable federal guidelines¹⁰ and state law;
 - Monitoring and evaluating for clusters or outbreaks of illness among staff;
 - Implementing an exposure control plan in order to address potential hazards posed by blood and body fluids, from dialysis, glucose monitoring or any other point of care testing; and
- Education and competency assessment: facilities must ensure staff follow the IPCP's standards, policies and procedures. Therefore, staff must be informed and competent. Knowledge and skills pertaining to the IPCP's standards, policies and procedures are needed by all staff in order to follow proper infection control practices (e.g., hand hygiene and appropriate use of personal protective equipment) while other needs are specific to particular roles, responsibilities, and situations (e.g., injection safety and point of care testing). Furthermore, residents and their representatives should receive education on the facility's IPCP as it relates to them (e.g., hand hygiene, cough etiquette) and to the degree possible/consistent with the resident's capacity. For example, residents should be advised of the IPCP's standards, policies and procedures regarding hand hygiene before eating and after using the restroom.

SURVEILLANCE

The facility must establish a system for surveillance based upon national standards of practice and the facility assessment, including the resident population and the services and care provided. The facility must establish routine, ongoing, and systematic collection, analysis, interpretation, and dissemination of surveillance data to identify infections (i.e., HAI and community-acquired), infection risks, communicable disease outbreaks, and to maintain or improve resident health status. As part of the system of surveillance, identification and prevention, the facility should determine how it will track the extent to which staff are following the facility's IPCP policies and procedures, and facilities would want to particularly address any areas that are related to a corrective action.

The facility's surveillance system must include a data collection tool and the use of nationally-recognized surveillance criteria such as but not limited to CDC's National Healthcare Safety Network (NHSN) Long Term Care Criteria to define infections or updated McGeer criteria¹¹. Furthermore, the facility must know when and to whom to report communicable diseases, healthcare-associated infections (as appropriate), and potential outbreaks (e.g., list of

communicable diseases which are reportable to local/state public health authorities). The facility must document follow-up activity in response to important surveillance findings (e.g., outbreaks).

In addition, the facility must establish and implement a system, including who to notify (e.g. infection preventionist), for early detection and management of a potentially infectious, symptomatic resident at the time of admission. This includes the identification and use of appropriate transmission-based precautions.¹ This is important to incorporate into the resident's baseline care plan that must be developed within 48 hours of admission and include the minimum healthcare information necessary to properly care for a resident, including physician orders (e.g., medication orders). See §483.21, Comprehensive Person-Centered Care Planning for further information.

Furthermore, the facility must have a process for communicating information at the time of transfer (e.g., CDC, state, or other standardized inter-facility infection transfer form) when a resident has an infection or is colonized.¹² When a resident is transferred, the information provided to the receiving provider must include special instructions or precautions for ongoing care and other necessary information including a discharge summary. When a resident is discharged, the discharge summary must include the resident's disease diagnoses and health conditions, course of illness/treatment or therapy, medications, and pertinent lab, radiology, consultation results, and instructions or precautions for ongoing care. See §483.21(c)(2), Discharge Summary (F661) and §483.15(c)(2)(iii), Transfer and Discharge (F622) for further information on these requirements.

Additionally, as part of the overall IPCP for surveillance, the facility shall establish process and outcome surveillance.

Process Surveillance

Process surveillance is the review of practices by staff directly related to resident care.¹³ The purpose is to identify whether staff implement and comply with the facility's IPCP policies and procedures. Some areas that facilities may want to consider for process surveillance are the following:

- Hand hygiene;
- Appropriate use of personal protective equipment (e.g., gowns, gloves, facemask);
- Injection safety;
- Point-of-care testing (e.g., during assisted blood glucose monitoring);
- Implementation of infection control practices for resident care such as but not limited to urinary catheter care, wound care, injection/IV care, fecal/urinary incontinence care, skin care, respiratory care, dialysis care, and other invasive treatments;
- Managing a blood borne pathogen exposure.

NOTE: This may not lend itself to monitoring and feedback;

- Cleaning and disinfection products and procedures for environmental surfaces and equipment;
- Appropriate use of transmission-based precautions; and
- Handling, storing, processing, and transporting linens so as to prevent the spread of infection.

Outcome Surveillance

Another component of a system of identification is outcome surveillance. For example, this addresses the criteria that staff would use to identify and report evidence of a suspected or confirmed HAI or communicable disease. This process consists of collecting/documenting data on individual resident cases and comparing the collected data to standard written definitions (criteria) of infections.

NOTE: Refer to the CDC/SHEA Position Statement: Surveillance Definitions of Infections in Long-Term Care Facilities: Revisiting the McGeer Criteria¹¹ or NHSN at <https://www.cdc.gov/nhsn/> for examples of nationally accepted surveillance definitions.

The following are some sources of data that can be utilized in outcome surveillance for infections, antibiotic use and susceptibility: Monitoring a resident(s) with fever or other signs or symptoms suspicious for infection;

- Laboratory cultures or other diagnostic test results consistent with potential infections to detect clusters, trends, or susceptibility patterns;
- Antibiotic orders;
- Medication regimen review reports;
- Documentation from the clinical record of residents with suspicion of an infection such as physician orders/progress notes; and/or
- Transfer/discharge summaries for new or readmitted residents for infections.¹³

SYSTEM OF SURVEILLANCE: DATA ANALYSIS, DOCUMENTATION AND REPORTING

The facility's policies and procedures for a system of surveillance must include data to properly identify communicable diseases or infections before they spread. Therefore, the policies and procedures would include identifying:

- Data to be collected, including how often and the type of data to be documented, including:
 - The infection site (i.e., type of infection), pathogen (if available), signs and symptoms, and resident location, including summary and analysis of the number of residents (and staff, if applicable) who developed infections;
 - Observations of staff including the identification of ineffective practices (e.g., not practicing hand hygiene and/or using PPE when indicated as well as practices that do not follow the facility's IPCP policies and procedures), if any; and
 - The identification of unusual or unexpected outcomes (e.g. foodborne outbreak), infection trends and patterns.
- How the data will be used and shared with appropriate individuals (e.g., staff, medical director, director of nursing, quality assessment and assurance committee-QAA), when applicable, to ensure that staff minimize spread of the infection or disease (e.g., require revision of staff education and competency assessment).

The facility must identify how reports will be provided to staff and/or prescribing practitioners in order to revise interventions/approaches and/or re-evaluate medical interventions related to the infection rates and outcomes.

RECOGNIZING, CONTAINING AND REPORTING COMMUNICABLE DISEASE OUTBREAKS

The facility must know how to recognize and contain infectious disease outbreaks. An outbreak is the occurrence of more cases than expected in a given area or among a specific group of people over a particular period of time.¹⁴ If a condition is rare or has serious health implications, an outbreak may involve only one case. While a single case of a rare infectious condition or one that has serious health implications may or may not constitute an outbreak, facilities should not wait for the definition of an outbreak to act. For example, one case of laboratory confirmed influenza in a resident should alert the facility to begin an outbreak investigation.¹⁵ If an outbreak is identified, the facility must:

- Take the appropriate steps to diagnose and manage cases, implement appropriate precautions, and prevent further transmission of the disease as well as documentation of follow-up activity in response; and
- Comply with state and local public health authority requirements for identification, reporting, and containing communicable diseases and outbreaks.

NOTE: Some states have specific regulations regarding responding to and reporting outbreaks that must be included in the IPCP.

PREVENTION AND CONTROL OF TRANSMISSION OF INFECTION

Infectious organisms (e.g., bacteria, viruses, or parasites) may be transmitted by direct contact (e.g., skin-to-skin) or indirect contact (e.g., inanimate objects). Healthcare staff and resident care equipment often move from resident to resident and therefore may serve as a vehicle for transferring infectious organisms.

Direct Contact Transmission (Person-to-Person) occurs when microorganisms such as methicillin-resistant *Staphylococcus aureus* (MRSA), vancomycin-resistant enterococci (VRE), carbapenem-resistant Enterobacteriaceae (CRE), influenza, or mites from a scabies-infected resident are transferred from an infected or colonized person to another person. In nursing homes, resident-to-resident direct contact transmission may occur in common areas of the facility such as the recreation room, rehabilitation area, and/or dining room.

Indirect Contact Transmission: involves the transfer of an infectious agent through a contaminated inanimate object or person.

The following are examples of opportunities for indirect contact transmission:

- Clothing, uniforms, laboratory coats, or isolation gowns used as PPE may become contaminated with potential pathogens after care of a resident colonized or infected with an infectious agent, (e.g., MRSA, VRE, and *C. difficile*); and
- Contamination of high touch environmental surfaces (e.g., bedside table, bed rails, toilets, sinks, and handrails), contributes to transmission of pathogens including *C. difficile* and norovirus.

Certain pathogens may contaminate and survive on equipment and environmental surfaces for long periods of time. Examples include, but are not limited to:

- *C. difficile* spores can live on inanimate surfaces for up to 5 months;¹⁶
- The hepatitis B virus can last up to a week on inanimate surfaces;¹⁷ and
- The influenza virus can survive on fomites (e.g., any inanimate object or substance capable of carrying infectious organisms and transferring them from one individual to another) for up to 8 hours.¹⁸

Mechanisms to prevent and control transmission of infectious organisms through direct and indirect contact include standard and transmission-based precautions and are described in their subsequent sections.

STANDARD PRECAUTIONS

Standard precautions represent the infection prevention measures that apply to all resident care, regardless of suspected or confirmed infection status of the resident, in any setting where healthcare is being delivered. These evidence-based practices are designed to protect healthcare staff and residents by preventing the spread of infections among residents and ensuring staff do not carry infectious pathogens on their hands or via equipment during resident care. As mentioned in

the definitions section, standard precautions include hand hygiene, use of PPE (e.g., gloves, gowns, facemasks), respiratory hygiene and cough etiquette, safe injection practices, and safe handling of equipment or items that are likely contaminated with infectious body fluids, as well as cleaning and disinfecting or sterilizing of potentially contaminated equipment.¹

In order to perform hand hygiene appropriately, soap, water, ABHR, and a sink should be readily accessible in appropriate locations including but not limited to resident care areas, and food and medication preparation areas. Staff must perform hand hygiene (even if gloves are used):

- Before and after contact with the resident;
- Before performing an aseptic task;
- After contact with blood, body fluids, visibly contaminated surfaces or after contact with objects in the resident's room;
- After removing personal protective equipment (e.g., gloves, gown, facemask);
- After using the restroom; and
- Before meals.

If residents need assistance with hand hygiene, staff should assist with washing hands after toileting, before meals, and use of ABHR or soap and water at other times when indicated.

The use of PPE during resident care is determined by the nature of staff interaction and the extent of anticipated blood, body fluid, or pathogen exposure to include contamination of environmental surfaces. Furthermore, appropriate use of PPE includes but is not limited to the following:

- Gloves worn before and removed after contact with blood or body fluid, mucous membranes, or non-intact skin;
- Gloves changed and hand hygiene performed before moving from a contaminated-body site to a clean-body site during resident care;
- Gown worn for direct resident contact if the resident has uncontained secretions or excretions or with contaminated or potentially contaminated items;
- Appropriate mouth, nose, and eye protection (e.g., facemasks, face shield) is worn for procedures that are likely to generate splashes or sprays of blood or body fluids;
- PPE appropriately discarded after resident care prior to leaving room followed by hand hygiene; and
- Supplies necessary for adherence to proper PPE use (e.g., gloves, gowns, masks) are readily accessible in resident care areas (i.e., nursing units, therapy rooms) although, equipment supply carts should not be brought into the resident's room.

The facility must prevent infections through indirect contact transmission. This requires the decontamination(i.e., cleaning and/or disinfecting an object to render it safe for handling) of resident equipment, medical devices, and the environment. Alternatively, the facility may also consider using single-use disposable devices or designating reusable equipment for only an individual resident. NOTE: Refer to the CDC website for information on environmental cleaning - https://www.cdc.gov/hicpac/pdf/guidelines/eic_in_HCF_03.pdf

The facility must identify the decontamination method based upon the risk of infection to the resident coming into contact with equipment or medical devices. Equipment or items in the resident environment likely to have been contaminated with infectious fluids or other potentially infectious matter must be handled in a manner so as to prevent transmission of infectious agents, (e.g., wear gloves for handling soiled equipment and properly clean and disinfect or sterilize reusable equipment before use on another resident).¹

The CDC has adopted the Spaulding classification system that identifies three risk levels associated with medical and surgical instruments: critical, semi-critical, and noncritical.¹⁹ This includes:

- Critical items (e.g., needles, intravenous catheters, indwelling urinary catheters) enter sterile tissue or the vascular system. These items or equipment must be sterile when used, based on one of several accepted sterilization procedures. Most of the items in this category should be purchased as sterile or be sterilized;
- Semi-critical items (e.g., dental, podiatry equipment, electric razors) contact mucous membranes or non-intact skin. Such items require meticulous cleaning followed by high-level disinfection treatment using a Food and Drug Administration (FDA)-approved high-level chemical disinfectant, or they may be sterilized. High-level disinfection is traditionally defined as complete elimination of all microorganisms in or on an instrument, except for small numbers of bacterial spores. Refer to the specific disinfectant label claim to determine effectiveness; and
- Non-critical items are those that come in contact with intact skin but not mucous membranes. Noncritical items are divided into noncritical resident care items (e.g., blood pressure cuffs, stethoscopes, wheelchairs, therapy equipment) and noncritical environmental surfaces (e.g., bed rails, bedside tables). They require low level disinfection by cleaning periodically and after visible soiling, following manufacturer's instructions with an EPA-registered disinfectant, detergent or germicide that is approved for health care settings. All applicable label instructions on EPA-registered disinfectant products must be followed (e.g., use-dilution, shelf life, storage, material compatibility, safe use and disposal).

Single-use disposable equipment is an alternative to sterilizing reusable medical instruments. Single-use devices must be discarded after use and are never used for more than one resident. Nursing homes may purchase reprocessed single-use devices when these devices are reprocessed by an entity or a third party reprocessor that is registered with the FDA. The nursing home must have documentation from the third party reprocessor that indicates that it has been cleared by the FDA to reprocess the specific device in question.

NOTE: Refer to the CDC website for information on disinfection and sterilization - <https://www.cdc.gov/infectioncontrol/guidelines/Disinfection/index.html>

TRANSMISSION-BASED PRECAUTIONS

Transmission-based precautions must be used when a resident develops signs and symptoms of a transmissible infection, arrives at a nursing home with symptoms of an infection (pending laboratory confirmation), or has a laboratory confirmed infection and is at risk of transmitting the infection to other residents. For example, a resident with influenza and signs of infection should wear a facemask (e.g., surgical or procedure facemask) when leaving his/her room for medically-necessary care (i.e., droplet precautions for the duration of the illness). The diagnosis of many infections is based on clinical signs and symptoms, but often requires laboratory confirmation. However, since laboratory tests (especially those that depend on culture techniques) may require two or more days to complete, transmission-based precautions may need to be implemented while test results are pending, based on the clinical presentation and the likely category of pathogens.^{1,12}

Facility policies must identify the type (i.e., contact, droplet, airborne) and duration of the transmission-based precautions required, depending upon the infectious agent or organism involved. Furthermore, transmission-based precautions should be the least restrictive possible for the resident based on his/her clinical situation and used for the least amount of time. When used appropriately, transmission-based precautions is not to be considered involuntary seclusion. However, once the resident is no longer a risk for transmitting the infection (e.g., duration of the

illness and/or can contain secretions), removing transmission-based precautions is required in order to avoid unnecessary involuntary seclusion. For example, a resident with vancomycin-resistant enterococci (VRE) who is colonized based on a urine culture, but is continent and cognitively intact, should be instructed regarding or as necessary, assisted with performing hand hygiene before leaving his/her room, but is not placed on transmission-based precautions.

Facility staff should take measures to reduce or minimize any potential psychosocial negative effects of isolation for whom transmission-based precautions are being used. Boredom, anger, withdrawal or depression are just some of the mood changes that could occur. The facility must pro-actively ensure that individualized needs (e.g., activities) are met.

Implementation of Transmission-Based Precautions

When implementing transmission-based precautions, consideration should be given to the following:¹

- The identification of resident risk factors that increase the likelihood of transmission, (such as uncontained secretions or excretions, non-compliance, cognition deficits, incontinence, etc.);
- The provision of a private room as available/appropriate;
- Cohorting residents with the same pathogen; and
- Sharing a room with a roommate with limited risk factors (e.g., without indwelling or invasive devices, without open wounds, and not immunocompromised) as appropriate.

When a resident is placed on transmission-based precautions, the staff should implement the following:

- Clearly identify the type of precautions and the appropriate PPE to be used;
- Place signage in a conspicuous place outside the resident's room such as the door or on the wall next to the doorway identifying the CDC category of transmission-based precautions (e.g. contact, droplet, or airborne), instructions for use of PPE, and/or instructions to see the nurse before entering. Ensure that signage also complies with residents' rights to confidentiality and privacy;
- Make PPE readily available near the entrance to the resident's room;
- Don appropriate PPE upon entry into the environment (e.g., room or cubicle) of resident on transmission-based precautions (e.g., contact precautions);¹
- Use disposable or dedicated noncritical resident-care equipment (e.g., blood pressure cuff, bedside commode). If noncritical equipment is shared between residents, it will be cleaned and disinfected following manufacturer's instructions with an EPA-registered disinfectant after use;¹
- Clean and disinfect objects and environmental surfaces that are touched frequently (e.g., bed rails, over-bed table, bedside commode, lavatory surfaces in resident bathrooms) with an EPA-registered disinfectant for healthcare use at least daily and when visibly soiled;¹ and
- Provide education to residents (to the degree possible/consistent with the resident's capacity) and their representatives or visitors on the use of transmission-based precautions.

NOTE: Refer to CDC guidelines for current recommendations on standard and transmission-based precautions. <http://www.cdc.gov/hicpac/2007IP/2007isolationPrecautions.html>

Contact Precautions

Contact precautions are intended to prevent transmission of infections that are spread by direct (e.g., person-to-person) or indirect contact with the resident or environment, and require the use of appropriate PPE, including a gown and gloves upon entering (i.e., before making contact with the

resident or resident's environment) the room or cubicle. Prior to leaving the resident's room or cubicle, the PPE is removed and hand hygiene is performed.

Droplet Precautions

The use of droplet precautions applies when respiratory droplets contain viruses or bacteria particles which may be spread to another susceptible individual. Respiratory viruses can enter the body via the nasal mucosa, conjunctivae and less frequently the mouth.²⁰ Examples of droplet-borne organisms that may cause infections include, but are not limited to *Mycoplasma pneumoniae*, influenza, and other respiratory viruses.

Respiratory droplets are generated when an infected person coughs, sneezes, talks, or during procedures such as suctioning, endotracheal intubation, cough induction by chest physiotherapy, and cardiopulmonary resuscitation.¹ The maximum distance for droplet transmission is currently unresolved, but the area of defined risk based on epidemiological findings is approximately 3-10 feet.¹ In contrast to airborne pathogens, droplet-borne pathogens are generally not transmitted through the air over long distances.

Facemasks are to be used upon entry (i.e., within three feet of a resident) into a resident's room or cubicle with respiratory droplet precautions.¹ If substantial spraying of respiratory secretions is anticipated, gloves and gown as well as goggles (or face shield in place of goggles) should be worn.¹ The preference for a resident on droplet precautions would be to place the resident in a private room.¹ If a private room is not available, the resident could be cohorted with a resident with the same infectious agent, or share a room with a roommate with limited risk factors.¹ Spatial separation of at least 3 feet and drawing the curtain between resident beds is especially important for residents in multi-bed rooms with infections transmitted by the droplet route.¹

Airborne Precautions

Airborne transmission occurs when pathogens are so small that they can be easily dispersed in the air, and because of this, there is a risk of transmitting the disease through inhalation. These small particles containing infectious agents may be dispersed over long distances by air currents and may be inhaled by individuals who have not had face-to-face contact with (or been in the same room with) the infectious individual. Staff caring for residents on airborne precautions should wear a fit-tested N95 or higher level respirator that is donned prior to room entry.¹

NOTE: According to the CDC, preventing the spread of pathogens that are transmitted by the airborne route requires the use of special air handling and ventilation systems such as an airborne infection isolation room (AIIR) to contain and then safely remove the infectious agent.¹ Residents with infections requiring an AIIR must be transported to an acute care setting unless the facility can place the resident in a private AIIR room with the door closed. In cases when AIIR is required, such as for a resident with TB, it is important for the facility to have a plan (e.g., public health notification and exposure workup) in place to effectively manage a situation involving a resident with suspected or active TB while awaiting the resident's transfer to an acute care setting.¹

MEDICAL DEVICE SAFETY

Medical devices may be used for administration of medications, point-of-care testing, or for other medical uses.

Point-of-Care Testing

Point-of-care testing is diagnostic testing that is performed at or near the site of resident care. This may be accomplished through use of portable, handheld instruments such as blood glucose meters

or prothrombin time meters. This testing may involve obtaining a blood specimen from the resident using a fingerstick device. The guidance regarding fingerstick devices and blood glucose meters is applicable to other point-of-care devices where a blood specimen is obtained (e.g., prothrombin time meters).

Fingerstick Devices

CDC recommends the use of single-use, auto-disabling fingerstick devices in settings where assisted blood glucose monitoring is performed. This practice prevents inadvertent reuse of fingerstick devices for more than one person. Additionally, the use of single-use, auto-disabling fingerstick devices protects healthcare staff from needlestick injuries. If reusable fingerstick devices are used for assisted monitoring of blood glucose, then they must never be used for more than one resident. Although the package instructions for some fingerstick devices may indicate or imply the potential for multiple resident use, CMS guidance, based upon nationally recognized standards of practice from the CDC and FDA, prohibits the use of fingerstick devices for more than one resident.

NOTE: If fingerstick devices are used on more than one resident, surveyors must cite at this tag and utilize the guidelines in Appendix Q for immediate jeopardy. Furthermore, the state survey agency (SA) must notify the appropriate state public health authority of the deficient practice.

NOTE: For information on fingerstick safety, please refer to:

- <https://www.cdc.gov/injectionsafety/fingerstick-devicesbgm.html>
- https://www.cdc.gov/injectionsafety/providers/blood-glucose-monitoring_faqs.html

Blood Glucose Meters

Blood glucose meters, can become contaminated with blood and, if used for multiple residents, must be cleaned and disinfected after each use according to manufacturer's instructions for multi-patient use. Additionally, staff must not carry blood glucose meters in pockets. The FDA has released guidance for manufacturers regarding appropriate products and procedures for cleaning and disinfection of blood glucose meters. This guidance can be found at the FDA's website: <http://www.fda.gov/MedicalDevices/ProductsandMedicalProcedures/InVitroDiagnostics/ucm227935.htm>

An excerpt from this guidance reads:

"The disinfection solvent you choose should be effective against HIV, Hepatitis C, and Hepatitis B virus. Outbreak episodes have been largely due to transmission of Hepatitis B and C viruses. However, of the two, Hepatitis B virus is the most difficult to kill. Please note that 70% ethanol solutions are not effective against viral bloodborne pathogens and the use of 10% bleach solutions may lead to physical degradation of your device." A list of Environmental Protection Agency (EPA) registered disinfectants can be found at the following website: <https://www.epa.gov/pesticide-registration/selected-epa-registereddisinfectants>.

Furthermore, "healthcare personnel should consult the manufacturers of blood glucose meters in use at their facilities to determine what products, meeting the criteria specified by the FDA, are compatible with their meter prior to using any EPA-registered disinfectant for disinfection purposes. If manufacturers are unable to provide this information then the meter should not be used for multiple patients."²¹

Blood glucose meters dedicated for single-resident use should be stored in a manner that will protect against inadvertent use of the device for additional residents and also cross-contamination via contact with other meters or equipment.

NOTE: If the facility failed to clean and disinfect, per device manufacturer's instructions, and blood glucose meters are used for more than one resident, surveyors must cite this tag and utilize the guidelines in Appendix Q as it may constitute immediate jeopardy.

For more information on point-of-care testing, refer to CDC's website at: <https://www.cdc.gov/injectionsafety/blood-glucose-monitoring.html>

Safe Medication Administration

All injectable medications must be prepared and administered in accordance with safe injection practices, including but not limited to the following:

- Injections are prepared using aseptic technique in a clean area, free from potential sources of contamination (e.g., blood, body fluids, contaminated equipment);
- Needles and syringes are used for only one resident (this includes manufactured prefilled syringes and cartridge devices such as insulin pens).

NOTE: If it is identified that needles or syringes are used for more than one resident, surveyors must cite noncompliance at this tag and utilize the guidelines in Appendix Q for immediate jeopardy. The SA must notify the appropriate state public health authority of the deficient practice;

- Medication containers are entered with a new needle and a new syringe, even when obtaining additional doses for the same resident. If noncompliance is found, further investigation is warranted.

NOTE: If the medication container is used for more than one resident, a new needle and/or syringe was not used with each access, and the container was then used for another resident, surveyors must cite noncompliance at this tag and utilize the guidelines in Appendix Q for immediate jeopardy. The SA must notify the appropriate state public health authority of the deficient practice;

- Single dose (single-use) medication vials, ampules, and bags or bottles of intravenous solution are used for only one resident;
- Medication administration tubing and connectors are used for only one resident.

NOTE: Surveyors must cite at this tag if noncompliance is identified and utilize the guidelines in Appendix Q for immediate jeopardy. The SA must notify the appropriate state public health authority of the deficient practice; and

- Multi-dose vials to be used for more than one resident are kept in a centralized medication area (e.g., medication room or cart) and do not enter the immediate resident treatment area (e.g., resident room). If multi-dose vials enter the immediate resident treatment area, they should be discarded immediately after use.

NOTE: For more information on multi-dose vials, please refer to: https://www.cdc.gov/injectionsafety/providers/provider_faqs_multivials.html

Insulin pens are pen-shaped injector devices that contain a reservoir for insulin or an insulin cartridge. These devices are designed to permit self-injection and are intended for single-person use, using a new needle for each injection. Insulin pens are designed to be used multiple times by a single resident only and must never be shared. Facility staff must follow manufacturer's instructions for administration. Regurgitation of blood into the insulin cartridge after injection will create a risk of blood borne pathogen transmission if the pen is used for more than one resident, even when the needle is changed. The FDA makes the following recommendations to prevent transmission of blood borne infections in residents who require insulin pens:

- Insulin pens containing multiple doses of insulin are meant for single-resident use only, and must never be used for more than one person, even when the needle is changed;
- Insulin pens must be clearly labeled with the resident's name and other identifiers to verify that the correct pen is used on the correct resident; and
- Facilities should review their policies and procedures and educate their staff regarding safe use of insulin pens.

NOTE: Sharing insulin pens, or similar devices, between residents is similar to reusing needles or syringes for more than one resident. If noncompliance is found, surveyors must cite at this tag and utilize the guidelines in Appendix Q for immediate jeopardy. The SA must notify the appropriate state public health authority of the finding.

For more information on insulin pens, please refer to: <https://www.fda.gov/Drugs/DrugSafety/PostmarketDrugSafetyInformationforPatientsandProviders/DrugSafetyInformationforHeathcareProfessionals/ucm133352.htm>

Accessing Vascular Devices

Vascular access devices, especially central venous catheters (CVC), increase the risk for local and systemic infections as well as additional complications such as septic thrombophlebitis. Intravascular access devices such as implanted ports may be accessed multiple times per day, for hemodynamic measurements or to obtain samples for laboratory analysis, thus increasing the risk of contamination and subsequent clinical infection. Limiting access to CVCs for only the primary purpose may help reduce the risk of infection. The following CDC guidelines are provided as a reference for current standards of practice for the care of CVCs:

- <http://www.cdc.gov/HAI/settings/outpatient/basic-infection-control-prevention-plan-2011/central-venous-catheters.html>
- <http://www.cdc.gov/dialysis/PDFs/collaborative/Hemodialysis-Central-Venous-Catheter-STH-Protocol.pdf>
- <http://www.cdc.gov/dialysis/PDFs/collaborative/Catheter-Exit-Site-CareObservations.pdf>
- <http://www.cdc.gov/hicpac/pdf/guidelines/bsi-guidelines-2011.pdf>

SYSTEM OF RECORDING IPCP INCIDENTS

A facility must develop and implement a system for recording incidents identified under the facility's IPCP and the corrective actions taken by the facility based on the investigation of the incidents. A facility-identified incident (e.g., HAI) may include the spread of disease due to errors in infection prevention and control. The facility's system should include defining, identifying, analyzing, and reporting incidents related to failures in infection control practices to the director of nursing, medical director, and the QAA committee. These may include but are not limited to the following:

- Identification of methods by which the facility would obtain information on incidents from residents, family, and direct care/direct access staff;
- A description of how the facility addresses and investigates the incident(s);
- Measures to be implemented for the prevention of incidents or potential incidents as they relate to infection prevention and control;
- Development and implementation of corrective actions;
- Monitoring for the effectiveness of its implemented changes; and
- Methods for feedback to appropriate individuals involved in the failed practices.

LINENS

Laundry Services

The facility must develop and follow practices on handling, storing, processing, and transporting laundry. The facility must monitor to ensure that the laundry practices are implemented, any deviations from practices must be identified, and corrective actions are put in place.

Laundry includes resident's personal clothing, linens, (i.e., sheets, blankets, pillows), towels, washcloths, and items from departments such as nursing, dietary, rehabilitative services, beauty shops, and environmental services. Laundry services may be provided onsite or the facility may have a written agreement in place for offsite laundry services. Regardless of the location where the laundry is processed, the facility must ensure that all laundry is handled, stored, processed and transported in a safe and sanitary method.

Handling Laundry

The facility staff should handle all used laundry as potentially contaminated and use standard precautions (i.e., gloves). Alternatively, if not all used linens are handled as potentially contaminated, staff would provide separation with special identification of bags and containers for contaminated linens with labels, color coding, or other alternative means of separation of the laundry for appropriate handling and processing. The facility should use the following practices:

- Contaminated laundry is bagged or contained at the point of collection (i.e., location where it was used);¹⁹
- Leak-resistant containers or bags are used for linens or textiles contaminated with blood or body substances;¹⁹
- Sorting and rinsing of contaminated laundry at the point of use, hallways, or other open resident care spaces is prohibited; and ¹⁹
- Staff should handle soiled textiles/linens with minimum agitation to avoid the contamination of air, surfaces, and persons.¹⁹

Transport of Laundry

The facility practices must include how staff will handle and transport the laundry with appropriate measures to prevent cross-contamination. This includes but is not limited to the following:

- Contaminated linen and laundry bags are not held close to the body or squeezed when transporting;⁶
- No special precautions (i.e., double bagging) or categorizing for linen originating in transmission-based precaution rooms is necessary;¹⁹
- Double bagging of linen is only recommended if the outside of the bag is visibly contaminated or is observed to be wet through to the outside of the bag;⁶
- Contaminated linen carts must be cleaned and disinfected whenever visibly soiled and according to a schedule developed by the facility;²
- Separate carts must be used for transporting clean and contaminated linen. If this is not possible, the contaminated linen cart should be thoroughly cleaned and disinfected per facility protocol before being used to move clean linens; and ¹⁹
- Clean linens must be transported by methods that ensure cleanliness and protect from dust and soil during intra or inter-facility loading, transport, and unloading.¹⁹

Linen Storage

Facility practices must address linen storage, and should include but are not limited to:

- Covers are not needed on contaminated textile hampers in resident care areas (unless state licensing rules require them); and¹⁹
- Clean linen must always be kept separate from contaminated linen. The use of separate rooms, closets, or other designated spaces with a closing door provides the most secure methods for reducing the risk of accidental contamination.²²

Processing Laundry Including the Use of Laundry Equipment and Detergents in the Facility

The facility must have a process to clean laundry. Detergent and water physically remove many microorganisms from the linen through dilution during the wash cycle. Advances in laundry equipment technology allow modern-day detergents to be much more effective in removing soil and reducing the presence of microbes than those used in the past when much of the research on laundry processing was first conducted. Washing/drying processes includes the use of manufacturer's instructions for use (IFU) for laundry additives and equipment maintenance. The facility staff must prevent contamination of laundry in processing areas. The facility has laundry practices that includes but are not limited to the following:

- Availability and use of hand hygiene products, as well as appropriate PPE (i.e., gloves and gowns) while sorting and handling contaminated linens; ¹⁹
- The receiving area for contaminated textiles is clearly separated from clean laundry areas. Workflow should prevent cross-contamination; ¹⁹
- If using fans in laundry processing areas, prevent cross-contamination of clean linens from air blowing from soiled processing areas (i.e., the ventilation should not flow from soiled processing areas to clean laundry areas); ¹⁹
- Laundry equipment (e.g., washing machines, dryers) is used and maintained according to the manufacturer's IFU to prevent microbial contamination of the system;¹⁹
- Damp laundry is not left in machines overnight;¹⁹
- Laundry detergents, rinse aids or other additives are used according to the manufacturer's IFU's;¹⁹

NOTE: Facilities should communicate information regarding allergies that may impact how an individual resident's laundry is processed.

- Ozone cleaning systems are acceptable for processing laundry;
- If laundry chutes are used, they are designed and maintained so as to minimize dispersion of aerosols from contaminated laundry (e.g., no loose items in the chute and bags are closed before tossing into the chute);¹⁹ and
- The facility should be using the fabric manufacturer's recommended laundry cycles, water temperatures and chemical detergent products:
 - Recommendations for laundry processed in hot water temperatures is 160°F (71°C) for 25 minutes;¹⁹ and
 - For laundry that is not hot water compatible, low temperature washing at 71 to 77 °F (22-25 °C) plus a 125-part-per-million (ppm) chlorine bleach rinse has been found to be effective and comparable to high temperature wash cycles.¹⁹

NOTE: The facility is not required to monitor water temperatures during laundry processing cycles, unless specified by state rules. A chlorine bleach rinse is not required for all laundry items processed in low temperature washing environments due to the availability of modern

laundry detergents that are able to produce hygienically clean laundry without the presence of chlorine bleach. The facility should refer to the manufacturer's recommendations for the use of the detergent and items being laundered.

Offsite Professional Laundry Services

If linen is sent off-site to a professional laundry, the facility has practices that address how the service will be provided, including how linen is processed and handled to prevent contamination from dust and dirt during loading and transport. The facility should assure that this laundry service meets healthcare industry laundry standards.

Mattresses and Pillows

Standard permeable mattresses and pillows can become contaminated with body substances during resident care if the integrity of the covers of these items is compromised. A mattress cover is generally a fitted, protective material, the purpose of which is to prevent the mattress from becoming contaminated with body fluids and substances. A linen sheet placed on the mattress is not considered a mattress cover. Patches for tears and holes in mattress covers do not provide an impermeable surface over the mattress. NOTE: Bed and bath linens must be maintained in good condition (Refer to §483.10(i) Safe environment, F584, for further information).

The facility must have practices that address the methods for cleaning and disinfecting items that are to be used for another resident after an individual resident's use such as but not limited to the following:¹⁹

- Mattress covers with tears or holes are replaced;
- Moisture resistant mattress covers are cleaned and disinfected between use for different residents with an EPA-approved germicidal detergent to help prevent the spread of infections;
- Fabric mattress covers are laundered between use for different residents;
- Pillow covers and washable pillows are laundered in a hot water laundry cycle between use for different residents or when they become contaminated with body substances; and
- Mattresses are discarded if bodily fluids have penetrated into the mattress fabric.

ANNUAL REVIEW OF IPCP

The facility's IPCP and its standards, policies and procedures must be reviewed at least annually to ensure effectiveness and that they are in accordance with current standards of practice for preventing and controlling infections; the IPCP must be updated as necessary. In addition, the facility population and characteristics may change over time, and the facility assessment may identify components of the IPCP that must be changed accordingly.

INVESTIGATIVE SUMMARY

Surveyors would use the Infection Control Facility Task to determine compliance with the infection control part of the survey. One surveyor should coordinate the review of the facility's overall infection prevention and control program (IPCP), however, each member of the survey team should assess for compliance throughout the entire survey when observing his/her assigned areas and tasks. The IPCP must be facility-wide and include all departments and contracted services. The surveyor should corroborate any concerns observed through interviews and record and/or document review.

Observations

Specific observations for the provision of infection prevention and control practices such as following standard precautions (e.g., hand hygiene and the appropriate use of PPE) should be made by all team members throughout the survey. Observe care of a resident on transmission-

based precautions, if any, to determine if implemented appropriately based on precaution type (i.e., contact, droplet, airborne). If concerns are identified, expand the sample to include more residents with transmission-based precautions.

Observe laundry services throughout the survey (e.g., resident and laundry rooms) to determine whether staff handle, store, and transport linens appropriately.

Interviews

Surveyors should interview appropriate facility staff regarding the IPCP. In addition, any potential concerns should be followed up with interviews and record reviews as needed.

KEY ELEMENTS OF NONCOMPLIANCE

To cite deficient practice at F880, the surveyor's investigation will generally show that the facility failed to do any one or more of the following:

- Establish and maintain an IPCP designed to provide a safe, sanitary, and comfortable environment and to help prevent development and transmission of disease and infection;
- The IPCP must be reviewed at least annually and updated as necessary;
- Implement a system for preventing, identifying, reporting, investigating, and controlling infections and communicable diseases for all residents, staff, volunteers, visitors, and other individuals providing services under a contractual arrangement, based on the facility assessment (see §483.70(e)) and follows accepted national standards;
- Develop and implement written IPCP standards, policies, and procedures that are current and based on national standards. These must include:
 - When and to whom possible incidents of communicable diseases should be reported;
 - Developing and implementing a system of surveillance to identify infections or communicable diseases;
 - How to use standard precautions (to include appropriate hand hygiene) and how and when to use transmission-based precautions (i.e., "isolation precautions"); and/or
 - Prohibiting staff with a communicable disease or infected skin lesions from direct contact with residents or their food, if direct contact will transmit disease.
- Assure that staff handle, store, process and transport laundry to prevent the spread of infection; and/or
- Maintain a system for recording identified incidents, and taking appropriate corrective actions.

DEFICIENCY CATEGORIZATION

Examples of Severity Level 4 Non-Compliance: Immediate Jeopardy to Resident Health or Safety include but are not limited to:

- The facility failed to follow standard precautions during the performance of routine testing of blood glucose. The facility reused fingerstick devices for more than one resident. This practice of reusing fingerstick devices for more than one resident created an immediate jeopardy to resident health by potentially exposing residents who required blood glucose testing to the spread of blood borne infections in the facility.
- The facility failed to investigate, document surveillance of, and implement preventative measures to address an outbreak of gastrointestinal illness among residents in one unit of the facility. As a result, several residents in an adjoining unit became seriously ill with diarrheal illnesses resulting in dehydration.
- Facility staff failed to handle soiled linens using safe and sanitary techniques. A resident was observed to have an acute onset of vomiting and diarrhea resulting in soiled clothing and linens.

The nursing staff removed the soiled/contaminated clothing and linens, rinsed them out in the bathroom sink, and placed the wet/soiled linen onto the floor. The bathroom was shared with a roommate who utilized the sink for oral hygiene purposes and stored his/her toothbrush and glass on the sink. The roommate, subsequently developed vomiting and diarrhea, with the development of severe dehydration, resulting in hospitalization.

An Example of Severity Level 3 Non-Compliance: Actual Harm that is not Immediate Jeopardy includes but is not limited to:

- The facility failed to identify and prevent the spread of infestation when a case of scabies (i.e., a highly contagious skin condition caused by the itch mite *Sarcoptes scabiei*) was not diagnosed or adequately treated, and the resident was not placed on transmission-based precautions. Resident A was admitted with an undiagnosed, reddened, itchy pinpoint rash which spread, became infected, and disrupted the resident's sleep. A month later, multiple residents developed a red, pin-point rash with severe itching, which was not present prior to resident A being admitted. The facility failed to identify through assessment and therefore, implement control measures to prevent the transmission of scabies among multiple residents in the facility, causing the residents physical harm. In addition to the physical harm, the residents experienced psychosocial harm due to anxiety and loss of sleep from severe itching and lack of timely diagnosis.
- The facility failed to ensure that linens were handled and processed in a manner to prevent the spread of pediculosis (i.e., head lice) after a resident (resident A) in a semi private room was diagnosed with pediculosis. Staff were aware of the presence of pediculosis, but did not handle the resident's linens or clothing appropriately, removing bed linens and placing them on the roommate's chairs and other furnishings. The resident's roommate (resident B) became infested with pediculosis. The resident's roommate was non-verbal and unable to express that he had intense itching and began to scratch himself.

An Example of Severity Level 2 Non-Compliance: No Actual Harm with Potential for more than Minimal Harm that is not Immediate Jeopardy includes but is not limited to:

- The facility failed to ensure that its staff demonstrates proper use of gloves with hand hygiene between residents to prevent the spread of infections. The nurse administered medications to a resident via a gastric tube and while wearing the same gloves proceeded to administer oral medications to another resident. The nurse did not remove the used gloves nor perform hand hygiene between the two residents.
- The facility failed to implement appropriate measures for the transport of contaminated linens. As a result, the potential exists for transmission of organisms from contaminated uniforms to residents during the delivery of care. A nursing assistant was observed removing bed linens contaminated with urine and fecal material without the use of gloves, and carrying the contaminated linens against his/her uniform down the hall to the laundry bin. The nursing assistant proceeded to assist the resident's roommate with transferring to his/her chair, and his/her uniform made contact with the resident's skin and clothing.
- The facility failed to ensure that a staff member implemented appropriate processes related to handling and storing wound care supplies. As a result, the potential existed for transmission of organisms between residents who received dressing changes. A staff member who was providing wound care, was observed to place dressing supplies on one resident's bedding and after completing the dressing change, placed the supplies, which are used for other residents, in the unit's dressing cart.

An Example of Severity Level 1 Non-Compliance: No actual harm with potential for minimal harm includes but is not limited to:

- The facility failed to ensure that the IPCP program was reviewed annually. The survey was conducted and it was determined that the facility last reviewed the IPCP at 14 months instead of annually (i.e., 12 months). There were no infection control findings outside of annual review and documentation.

POTENTIAL TAGS FOR ADDITIONAL INVESTIGATION

For staff competency concerns, refer to the following F tags:

- F725 or 726, §483.35(a),(c) for Nursing Services;
- F741, §483.40 for any Behavioral Health staff caring for residents with dementia or a history of trauma and/or post-traumatic stress disorder;
- F801, §483.60(a) for Food and Nutrition staff; and
- F839, §483.70(f), Administration for any other staff not referenced above.

If the surveyor has concerns about 1) the overuse of transmission-based ("isolation") precautions, 2) the inappropriate transferring of rooms unnecessarily; or 3) the inappropriate use of PPE such as gloves when used unnecessarily, where residents indicate they are "untouchable," dirty or unclean, review under §483.10(a)(1), F550, Resident Rights (Dignity) or §483.24, F675, Quality of Life.

For concerns related to possible involuntary seclusion, refer to §483.12 (a)(1), F603.

Data from injectable, scheduled drug tracking should be regularly reviewed and discrepancies or unusual access patterns are investigated including whether residents should be screened for exposure to blood borne pathogens (refer to §483.45, F755, Pharmacy Services for further information on reconciliation concerns).

For concerns related to the QAA committee's responsibility to identify or correct quality deficiencies, which may include systemic infection control concerns, refer to 483.75(g)(2)(ii), F867, QAA Activities.

For concerns related to the medical director's role in responsibility for care, refer to §483.70(h), F841, Medical Director.

F881

(Rev. 173, Issued: 11-22-17, Effective: 11-28-17, Implementation: 11-28-17)

§483.80(a) Infection prevention and control program.

The facility must establish an infection prevention and control program (IPCP) that must include, at a minimum, the following elements:

§483.80(a)(3) An antibiotic stewardship program that includes antibiotic use protocols and a system to monitor antibiotic use.

INTENT

The intent of this regulation is to ensure that the facility:

- Develops and implements protocols to optimize the treatment of infections by ensuring that residents who require an antibiotic, are prescribed the appropriate antibiotic;
- Reduces the risk of adverse events, including the development of antibiotic-resistant organisms, from unnecessary or inappropriate antibiotic use; and
- Develops, promotes, and implements a facility-wide system to monitor the use of antibiotics.

DEFINITIONS

"Antibiotic": a medication used to treat bacterial infections. They are not effective for infections caused by viruses (e.g., influenza or most cases of bronchitis).

"Antibiotic Stewardship": refers to a set of commitments and actions designed to optimize the treatment of infections while reducing the adverse events associated with antibiotic use.²⁴ This can be accomplished through improving antibiotic prescribing, administration, and management practices thus reducing inappropriate use to ensure that residents receive the right antibiotic for the right indication, dose, and duration.²⁵

"Clostridium difficile infection (C. difficile or CDI)": an infection from a bacterium that causes colitis, an inflammation of the colon, causing diarrhea.

"Colonization": the presence of microorganisms on or within body sites without detectable host immune response, cellular damage, or clinical expression.

"Methicillin-resistant Staphylococcus aureus (MRSA)" (a.k.a. Oxacillin-resistant Staphylococcus aureus): Staphylococcus aureus bacteria that are resistant to treatment with one of the semi-synthetic penicillins(e.g., Oxacillin/Nafcillin/Methicillin).

"Multidrug-Resistant Organisms (MDROs)": microorganisms, predominantly bacteria, that are resistant to one or more classes of antimicrobial agents.²³ Although the names of certain MDROs describe resistance to only one agent, these pathogens are frequently resistant to most available antimicrobial agents and include multidrug-resistant gram negative bacteria (GNB), Carbapenem-resistant Enterobacteriaceae (CRE), and extended spectrum beta-lactamase-producing Enterobacteriaceae (ESBLs).

"Vancomycin resistant enterococcus (VRE)": species of enterococcus which have developed resistance to the antibiotic, vancomycin.

GUIDANCE

Antibiotic Stewardship

As part of their IPCP programs, facilities must develop an antibiotic stewardship program that promotes the appropriate use of antibiotics and includes a system of monitoring to improve resident outcomes and reduce antibiotic resistance.^{26,27,29} This means that the antibiotic is prescribed for the correct indication, dose, and duration to appropriately treat the resident while also attempting to reduce the development of antibiotic-resistant organisms.

Nursing home residents are at risk for adverse outcomes associated with the inappropriate use of antibiotics that may include but are not limited to the following:

- Increased adverse drug events and drug interactions (e.g., allergic rash, anaphylaxis or death);
- Serious diarrheal infections from *C. difficile*;
- Disruption of normal flora (e.g., this can result in overgrowth of *Candida* such as oral thrush); and/or
- Colonization and/or infection with antibiotic-resistant organisms such as MRSA, VRE, and multidrug-resistant GNB.

NOTE: The Centers for Disease Control and Prevention (CDC) has identified core actions to prevent antibiotic resistance within the control of the nursing home. For more information, refer to CDC NH Core Elements at: <http://www.cdc.gov/longtermcare/pdfs/core-elements-antibiotic-stewardship-appendix-a.pdf>

NOTE: For examples of antibiotic use protocols, policies and practices developed by the Agency for Healthcare Research and Quality, see: <http://www.ahrq.gov/nhguide/index.html>

NOTE: References to non-U. S. Department of Health and Human Services (HHS) sources or sites on the internet are provided as a service and do not constitute or imply endorsement of these organizations or their programs by CMS. CMS is not responsible for the content of pages found at these sites. URL addresses were current as of the date of this publication.

Antibiotic Stewardship Program

As summarized by the CDC²⁵, the core elements for antibiotic stewardship in nursing homes include:

- Facility leadership commitment to safe and appropriate antibiotic use;
- Appropriate facility staff accountable for promoting and overseeing antibiotic stewardship;
- Accessing pharmacists and others with experience or training in antibiotic stewardship;
- Implement policy(ies) or practice to improve antibiotic use;
- Track measures of antibiotic use in the facility (i.e., one process and one outcome measure);
- Regular reporting on antibiotic use and resistance to relevant staff such as prescribing clinicians and nursing staff; and
- Educate staff and residents about antibiotic stewardship.

The facility must develop an antibiotic stewardship program which includes the development of protocols and a system to monitor antibiotic use. This development should include leadership support and accountability via the participation of the medical director, consulting pharmacist, nursing and administrative leadership, and individual with designated responsibility for the infection control program if different.²⁵

The antibiotic stewardship program protocols shall describe how the program will be implemented and antibiotic use will be monitored, consequently protocols must:

- Be incorporated in the overall infection prevention and control program;
- Be reviewed on an annual basis and as needed;
- Contain a system of reports related to monitoring antibiotic usage and resistance data. Examples may include the following:
 - Summarizing antibiotic use from pharmacy data, such as the rate of new starts, types of antibiotics prescribed, or days of antibiotic treatment per 1,000 resident days;²⁵
 - Summarizing antibiotic resistance (e.g., antibiogram) based on laboratory data from, for example, the last 18 months; and/or²⁵
 - Tracking measures of outcome surveillance related to antibiotic use (e.g., *C. difficile*, MRSA, and/or CRE).²⁵
- Incorporate monitoring of antibiotic use, including the frequency of monitoring/review. Monitor/review when the resident is new to the facility; when a prior resident returns or is transferred from a hospital or other facility²⁵; during each monthly medication regimen review when the resident has been prescribed or is taking an antibiotic, or any antibiotic regimen review as requested by the QAA committee. In addition, establish the frequency and mode or mechanism of feedback (e.g., verbal, written note in record) to prescribing practitioners regarding antibiotic resistance data, their antibiotic use and their compliance with facility antibiotic use protocols.²⁵ Feedback on prescribing practices and compliance with facility antibiotic use protocols may include information from medical record reviews for new antibiotic starts to determine whether the resident had signs or symptoms of an infection; laboratory tests ordered and the results; prescription documentation including the indication for use (i.e., whether or not an infection or communicable disease has been documented), dosage and duration; and clinical justification for the use of an antibiotic beyond the initial duration ordered such as a review of laboratory reports/cultures in order to determine if the antibiotic remains indicated or if adjustments to therapy should be made (e.g., more narrow spectrum antibiotic);
- Assess residents for any infection using standardized tools and criteria²⁵ (e.g., SBAR tool for urinary tract infection (UTI) assessment²⁹, Loeb minimum criteria for initiation of antibiotics³⁰); and
- Include the mode (e.g., verbal, written, online) and frequency (as determined by the facility) of education for prescribing practitioners and nursing staff on antibiotic use (stewardship) and the facility's antibiotic use protocols. NOTE: Prescribing practitioners can include attending physicians and non-physician practitioners (NPP) (i.e., nurse practitioners, clinical nurse specialists, and physician assistants).

The Antibiotic Stewardship Program in Relation to Pharmacy Services

The assessment, monitoring, and communication of antibiotic use shall occur by a licensed pharmacist in accordance with §483.45(c), F756, Drug Regimen Review. A pharmacist must perform a medication regimen review (MRR) at least monthly, including review of the medical record and identify any irregularities, including unnecessary drugs.

INVESTIGATIVE SUMMARY

Surveyors should use the Infection Control Facility Task to assess for compliance with the antibiotic stewardship program during the standard survey.

Antibiotic Stewardship Review

Determine whether the facility's antibiotic stewardship program includes antibiotic use protocol(s) addressing antibiotic prescribing practices (i.e., documentation of the indication, dose, and

duration of the antibiotic; review of laboratory reports to determine if the antibiotic is indicated or needs to be adjusted; an infection assessment tool or management algorithm is used when prescribing) and a system to monitor antibiotic use (i.e., antibiotic use reports, antibiotic resistance reports).

Specific Concerns That May Warrant Further Investigation

If concerns have been identified, it may be necessary to conduct record reviews of one (or more) residents receiving antibiotics to identify whether the documented indication for the use of the antibiotic, dosage, and duration is appropriate. It may also be necessary to interview the appropriate person, (e.g., director of nursing, medical director, consulting pharmacist, administrator, or infection preventionist) to verify how antibiotic use is monitored in the facility. Furthermore, review records including evidence of actions taken by the QAA committee related to antibiotic use and stewardship.

KEY ELEMENTS OF NONCOMPLIANCE

To cite deficient practice at F881, the surveyor's investigation will generally show that the facility failed to do any one or more of the following:

- Develop and implement antibiotic use protocols to address the treatment of infections by ensuring that residents who require antibiotics are prescribed the appropriate antibiotics;
- Develop and implement antibiotic use protocols that address unnecessary or inappropriate antibiotic use thereby reducing the risk of adverse events, including the development of antibiotic-resistant organisms; and/or
- Develop, promote and implement a facility-wide system to monitor the use of antibiotics.

DEFICIENCY CATEGORIZATION

An Example of Severity Level 4 Non-Compliance: Immediate Jeopardy to Resident Health or Safety includes but is not limited to:

- The facility failed to develop and implement an antibiotic use protocol which included reporting results of laboratory data to the ordering practitioner. Medical record review indicated the prescribing practitioner had ordered a culture and sensitivity for a resident and prescribed an antibiotic for treatment of pneumonia prior to receipt of the results of the lab test. The facility received the results of the lab test which indicated that the bacteria was resistant to the antibiotic prescribed, however, they did not provide this information to the practitioner. As a result, the antibiotic was not adjusted accordingly and the resident was hospitalized for complications related to the pneumonia.

An Example of Severity Level 3 Non-Compliance: Actual Harm that is not Immediate Jeopardy includes but is not limited to:

- The facility did not develop a protocol for antibiotic use, and did not develop or implement a system to monitor antibiotic use. Based on record review, two residents were currently being treated with antibiotics without an appropriate indication for use. The two residents had indwelling urinary catheters and were asymptomatic for UTIs. There was no established criteria for use in the facility for when to treat a catheter-associated urinary tract infection. As a result of the antibiotic therapy, the two residents developed numerous watery, foul-smelling stools, elevated temperature, nausea, and decreased appetite. The medical record revealed that stool cultures identified positive bacteria for antibiotic-related colitis (*C. difficile*). The two residents were treated for antibiotic-related colitis, but did not require hospitalization and fully recovered.

An Example of Severity Level 2 Non-Compliance: No Actual Harm with Potential for more than Minimal Harm that is not Immediate Jeopardy includes but is not limited to:

- The facility failed to implement its protocol for antibiotic use and failed to monitor actual antibiotic use. Record review indicated that the facility developed a protocol which indicated "residents with MDROs are not to be treated with antibiotics for colonization". However, record review revealed one resident colonized with an MDRO receiving an antibiotic to eliminate colonization. As a result, the potential exists for residents to develop antibiotic resistance.

An Example of Severity Level 1 Non-Compliance: No Actual Harm with Potential for Minimal Harm includes but is not limited to:

- The facility failed to implement their protocol to monitor the rate of new starts of antibiotics monthly. On review, the monitoring was not completed for 6 weeks. There were no findings of increased MDROs or CDI in the facility.

POTENTIAL TAGS FOR ADDITIONAL INVESTIGATION

Additionally, refer to §483.45(c), F756, for concerns related to the failure of the pharmacist to review and report any unnecessary antibiotic irregularity and §483.45(d), F757, for concerns related to unnecessary antibiotic use.

Refer to §483.10(c)(1), §483.10(c)(4)-(6):- the right to be fully informed in advance about care and treatment (F552) for concerns about education of residents and their representatives.

F882

(Rev. 173, Issued: 11-22-17, Effective: 11-28-17, Implementation: 11-28-17)

§483.80(b) Infection preventionist

[§483.80(b) and all subparts will be implemented beginning November 28, 2019 (Phase 3)] The facility must designate one or more individual(s) as the infection preventionist(s) (IP)(s) who are responsible for the facility's IPCP. The IP must:

§483.80(b)(1) Have primary professional training in nursing, medical technology, microbiology, epidemiology, or other related field;

§483.80(b)(2) Be qualified by education, training, experience or certification;

§483.80(b)(3) Work at least part-time at the facility; and

§483.80(b)(4) Have completed specialized training in infection prevention and control.

§483.80(c) IP participation on quality assessment and assurance committee. The individual designated as the IP, or at least one of the individuals if there is more than one IP, must be a member of the facility's quality assessment and assurance committee and report to the committee on the IPCP on a regular basis.

[§483.80(c) will be implemented beginning November 28, 2019 (Phase 3)]

F883

(Rev. 173, Issued: 11-22-17, Effective: 11-28-17, Implementation: 11-28-17)

§483.80(d) Influenza and pneumococcal immunizations

§483.80(d)(1) Influenza. The facility must develop policies and procedures to ensure that-

- (i) Before offering the influenza immunization, each resident or the resident's representative receives education regarding the benefits and potential side effects of the immunization;
- (ii) Each resident is offered an influenza immunization October 1 through March 31 annually, unless the immunization is medically contraindicated or the resident has already been immunized during this time period;
- (iii) The resident or the resident's representative has the opportunity to refuse immunization; and
- (iv) The resident's medical record includes documentation that indicates, at a minimum, the following:
 - (A) That the resident or resident's representative was provided education regarding the benefits and potential side effects of influenza immunization; and
 - (B) That the resident either received the influenza immunization or did not receive the influenza immunization due to medical contraindications or refusal.

§483.80(d)(2) Pneumococcal disease. The facility must develop policies and procedures to ensure that-

- (i) Before offering the pneumococcal immunization, each resident or the resident's representative receives education regarding the benefits and potential side effects of the immunization;
- (ii) Each resident is offered a pneumococcal immunization, unless the immunization is medically contraindicated or the resident has already been immunized;
- (iii) The resident or the resident's representative has the opportunity to refuse immunization; and
- (iv) The resident's medical record includes documentation that indicates, at a minimum, the following:
 - (A) That the resident or resident's representative was provided education regarding the benefits and potential side effects of pneumococcal immunization; and
 - (B) That the resident either received the pneumococcal immunization or did not receive the pneumococcal immunization due to medical contraindication or refusal.

INTENT

The intent of this regulation is to:

- Minimize the risk of residents acquiring, transmitting, or experiencing complications from influenza and pneumococcal disease by ensuring that each resident:
 - Is informed about the benefits and risks of immunizations; and
 - Has the opportunity to receive the influenza and pneumococcal vaccine(s), unless medically contraindicated, refused or was already immunized.
- Ensure documentation in the resident's medical record of the information/education provided regarding the benefits and risks of immunization and the administration or the refusal of or medical contraindications to the vaccine(s).

DEFINITIONS

"The Advisory Committee on Immunization Practices (ACIP)": a group of medical and public health experts that develops recommendations on how to use vaccines to control diseases in the United States. A CIP's recommendations stand as public health advice that will lead to a reduction in the incidence of vaccine preventable diseases and an increase in the safe use of vaccines and related biological products. See <http://www.cdc.gov/vaccines/acip/index.html> for further information.

"Medical contraindication": a condition or risk that precludes the administration of a treatment or intervention because of the substantial probability that harm to the individual may occur.

"Precaution": a condition in a potential recipient that might increase the risk for a serious adverse reaction or that might compromise the vaccine's induction of immunity. For example, as a result of the resident's condition, complications could result, or a person might experience a more severe reaction to the vaccine than would have otherwise been expected. However, the risk for this happening is less than expected with medical contraindications.

GUIDANCE

Overview

Receipt of vaccinations is essential to the health and well-being of long-term care residents. Establishing an immunization program against influenza and pneumococcal disease facilitates achievement of this objective. Influenza outbreaks place both the residents and staff at risk of infection. Pneumococcal pneumonia, a type of bacterial pneumonia, is a common cause of hospitalization and death in older people. People 65 years or older are two to three times more likely than the younger population to get pneumococcal infections.

An effective immunization program involves collaborating with the medical director to develop resident care policies for immunization(s) that reflect current standards of practice and that include:

- Physician approved policies for orders of influenza and pneumococcal vaccines (administration must be based on an assessment of each resident for possible medical contraindications - see §483.30(b)(3), F711, for physician orders for vaccinations);
- Review of the resident's record of vaccination and immunization status, including assessment for potential medical contraindications;
- How pertinent information and education will be provided to residents or their representatives. The facility may wish to use educational resources such as those provided by the U. S. Centers for Disease Control and Prevention (CDC)³¹; and
- The vaccination schedule including mechanisms for recording and monitoring for administration of both influenza and pneumococcal vaccines in accordance with national recommendations.³²

NOTE: Review facility policies regarding the provision of vaccines in order to determine if the policies reflect current standards of practice. Refer to §483.21(b)(3)(i) the services provided or arranged by the facility must meet professional standards of quality (F658). Also, refer to F880 for concerns with infection prevention and control.

Provision of Immunizations

In order for a resident to exercise his or her right to make informed choices, it is important for the facility to provide the resident or resident representative with education regarding the benefits and potential side effects of immunizations. Facilities are required to document the provision of this

education and the administration, refusal of the immunization or the medical contraindication of the immunization. There may be clinical indications or other reasons that a resident may not have received immunizations. The resident's record should show vaccination administration unless it contains documentation as to why the vaccine was not administered, including but not limited to the following:

- A decision may have been made to delay vaccination for a resident because a precaution is present. According to the CDC, "in general, vaccinations should be deferred when a precaution is present. However, a vaccination might be indicated in the presence of a precaution because the benefit of protection from the vaccine outweighs the risk for an adverse reaction. The presence of a moderate or severe acute illness with or without a fever is a precaution to administration of all vaccines".³² The benefits and risks of receiving the vaccine should be discussed with the resident or resident representative if a resident has a precaution to a vaccine. The vaccine can be administered if the benefit of the vaccine outweighs the risk, the resident or resident representative provides consent, and the resident's physician approves (refer to §483.30 Physician Services for further information on physician supervision);
- A resident may be in the end stages of a terminal illness and receiving care that is limited to comfort or palliative measures only and although eligible, the resident or representative has refused the vaccination(s);
- A resident may have a medical contraindication to receiving an influenza or pneumococcal vaccine such as severe allergic reaction to a vaccine component or following prior dose of vaccine;
- The resident or representative refused the vaccine; or
- The resident has already been immunized.

NOTE: For information related to current vaccine recommendations including scheduling and contraindications, refer to <http://www.cdc.gov/vaccines/acip/index.html> or <https://www.cdc.gov/vaccines/pubs/pinkbook/chapters.html>.

NOTE: A nursing home may encounter residents who do not have adequate documentation of vaccinations. With the exception of influenza vaccine and pneumococcal polysaccharide vaccine (PPSV), providers should only accept written, dated records as evidence of vaccination. Self-reported doses of influenza vaccine and PPSV are acceptable. A resident representative can report on behalf of the resident if he/she is unable to self-report and the representative has knowledge of the resident's medical care. State laws may have more stringent requirements related to documentation.

Influenza Immunization

The influenza vaccine is given seasonally. The CDC indicates that administering the vaccine when it becomes available each season, rather than date specific, (i.e., "October 1") is most effective. Facilities should administer the influenza vaccine when it becomes available to the facility. Residents admitted late in the influenza season (typically February or March) should be offered the influenza vaccine as late season outbreaks do occur. If a resident was admitted outside the influenza season, the facility is not expected to offer the influenza vaccine to the resident, but it may, at its discretion.

NOTE: Flu seasons are unpredictable in a number of ways. They can vary in different parts of the country and from season to season. While flu spreads every year, the timing, severity, and length of the season varies from one year to another.

If there is a national shortage of influenza vaccine or other issue with availability leading to an inability to implement the influenza vaccine program, ask the facility to demonstrate that:

- The vaccine has been ordered and the facility received a confirmation of the order indicating that the vaccine has been shipped or that the product is not available but will be shipped when the supply is available;
- Plans are developed on how and when the vaccines are to be administered;
- Residents have been screened to determine how many and which residents are eligible and wish to receive the vaccine; and
- Education regarding immunizations has been implemented.

Pneumococcal Immunizations

The regulation requires that each resident is offered pneumococcal immunization, unless the immunization is medically contraindicated or the resident has already been immunized. There should be documentation in the medical record if there is reason to believe that pneumococcal vaccine(s) was given previously, but the date cannot be verified, and this had an impact upon the decision regarding administration of the vaccine(s). Facilities must follow the CDC and ACIP recommendations for vaccines.

NOTE: As of the date of publication of this guidance, ACIP recommends that "both 23-valent pneumococcal polysaccharide vaccine (PPSV23) and 13-valent pneumococcal conjugate vaccine (PCV13) vaccines should be administered routinely in series to all adults aged ≥ 65 years."³³ ACIP explained that PPSV23 is effective in preventing invasive pneumococcal disease (IPD) but the effectiveness of PPSV23 in preventing non-bacteremic pneumococcal pneumonia has been inconsistent. ACIP expects administration of both PCV13 and PPSV23 will provide optimal protection against pneumococcal infections. The recommendations for adults aged < 65 years are different than for adults aged ≥ 65 years so they should be vaccinated based on the ACIP recommendations for their age group. For more up-to-date information on timing and intervals between vaccines, please refer to ACIP vaccine recommendations located at <http://www.cdc.gov/vaccines/hcp/acip-recs/index.html> and <https://www.cdc.gov/vaccines/schedules/hcp/index.html>.

INVESTIGATIVE SUMMARY

Surveyors must use the Infection Control Facility Task for investigating compliance with this tag. A summary of this facility task is provided below.

Sampling Procedure

Select five residents in the sample to review for the provision of influenza and pneumococcal immunizations. Give precedence in selection to those residents whom the survey team has selected as sampled residents.

Record Review

Review sampled residents' records for education on and provision, refusal, or documentation of medical contraindications for influenza and pneumococcal immunizations. As necessary, determine if the facility developed influenza and pneumococcal vaccine policies and procedures.

KEY ELEMENTS OF NONCOMPLIANCE

To cite deficient practice at F883, the surveyor's investigation will generally show that the facility failed to do any one or more of the following:

- Develop, maintain, or follow policies and procedures for immunization of residents against influenza and pneumococcal disease in accordance with national standards of practice;

- Vaccinate an eligible resident with the influenza and/or the pneumococcal vaccine(s), unless the resident had previously received the vaccine, refused, or had a medical contraindication present;
- Allow a resident or a resident's representative to refuse either the influenza and/or the pneumococcal vaccine(s);
- Provide and/or document the provision of pertinent information regarding the immunizations to the resident or the resident's representative such as the benefits and potential side effects of the influenza and, as applicable, the pneumococcal immunization(s); and/or
- Document that the resident either received the pneumococcal and influenza vaccine(s) or did not receive the vaccine(s) due to medical contraindications, previous vaccination, or refusal.

DEFICIENCY CATEGORIZATION

Examples of Severity Level 4 Non-Compliance: Immediate Jeopardy to Resident Health or Safety include but are not limited to:

- The facility failed to ensure that medical contraindications were identified for the influenza or pneumococcal vaccine, and administered the vaccine to a resident with identified allergies/contraindications. As a result, the resident experienced a life-threatening reaction of anaphylactic shock requiring immediate treatment and admission to the hospital.
- The facility failed to ensure that eligible residents received the influenza vaccines because it did not have a program for vaccinating residents. As a result, several unvaccinated residents in one unit developed influenza, with elevated temperatures, coughing, labored breathing, and required hospitalization for respiratory compromise and dehydration.

Examples of Severity Level 3 Non-Compliance: Actual Harm that is not Immediate Jeopardy include but is not limited to:

- A resident who was not eligible to receive the influenza vaccine due to medical contraindications received the vaccine and experienced a reaction that was not serious or life-threatening (i.e., hives and dizziness). The reaction resulted in fear and anxiety that was not to the level of panic and immobilization, but required treatment.
- The facility failed to administer the influenza vaccine for several weeks, despite its availability. The facility failed to offer influenza immunizations to three residents who were eligible to receive the vaccine. Record review and staff interview revealed that the three residents had been admitted in the past two months, but their names were not included in the facility's monitoring log for residents who had not received the vaccine and when they had last received one. During interviews, two of the three residents stated that they had not taken "a flu shot in over a year", and one stated that he had never taken a flu shot, but all three stated they would have taken one if offered. Based on record review, two of the three residents were diagnosed with influenza with symptoms of a fever, chills, body aches, and had received treatment with an antiviral in the facility. The two residents were unable to participate in activities or leave their rooms due to the acute illness. Record review corroborated the interview information and when interviewed, staff stated they had overlooked the three residents.

Examples of Severity Level 2 Non-Compliance: No Actual Harm with Potential for more than Minimal Harm that is not Immediate Jeopardy include but is not limited to:

- An eligible resident did not receive the vaccine, but did not develop symptoms of influenza.
- An eligible resident received two doses of the same pneumococcal vaccine. The facility could have determined the resident already received the vaccine had it documented in the medical record when it was previously given by the facility. The resident did not experience any untoward reactions from the second immunization.

- The staff did not assess a resident for medical contraindications prior to providing the vaccines, but there were no reactions to the vaccine.

An Example of Severity Level 1 Non-Compliance: No Actual Harm with Potential for Minimal Harm includes but is not limited to:

- The facility failed to document that the resident was provided education on the influenza vaccine prior to administration. When interviewed, the resident stated he had received a copy of the information on influenza risks and benefits and provided the copy to the surveyor. However, the medical record did not reflect receipt of the information.

F884

The following section was released in the Federal Register, dated May 8, 2020. For more information pertaining to COVID-19 reporting requirements see [Interim SARS-CoV-2 Testing Guidelines for Nursing Home Residents and Healthcare Personnel](#) located in the [Guidelines and Recommendations](#) chapter.

§483.80(g) COVID–19 reporting. The facility must—

§483.80(g)(1) Electronically report information about COVID–19 in a standardized format specified by the Secretary. This report must include but is not limited to—

- (i) Suspected and confirmed COVID–19 infections among residents and staff, including residents previously treated for COVID–19;**
- (ii) Total deaths and COVID–19 deaths among residents and staff;**
- (iii) Personal protective equipment and hand hygiene supplies in the facility;**
- (iv) Ventilator capacity and supplies in the facility;**
- (v) Resident beds and census;**
- (vi) Access to COVID–19 testing while the resident is in the facility;**
- (vii) Staffing shortages; and**
- (viii) Other information specified by the Secretary.**

§483.80(g)(2) Provide the information specified in paragraph (g)(1) of this section at a frequency specified by the Secretary, but no less than weekly to the Centers for Disease Control and Prevention’s National Healthcare Safety Network. This information will be posted publicly by CMS to support protecting the health and safety of residents, personnel, and the general public.

F885

The following section was released in the Federal Register, dated May 8, 2020. For more information pertaining to COVID-19 reporting requirements see [Interim SARS-CoV-2 Testing Guidelines for Nursing Home Residents and Healthcare Personnel](#) located in the [Guidelines and Recommendations](#) chapter.

§483.80(g)(3) Inform residents, their representatives, and families of those residing in facilities by 5 p.m. the next calendar day following the occurrence of either a single confirmed infection of COVID–19, or three or more residents or staff with new-onset of respiratory symptoms occurring within 72 hours of each other. This information must—

- (i) Not include personally identifiable information;**
- (ii) Include information on mitigating actions implemented to prevent or reduce the risk of transmission, including if normal operations of the facility will be altered; and**
- (iii) Include any cumulative updates for residents, their representatives, and families at least weekly or by 5 p.m. the next calendar day following the subsequent occurrence of either: Each time a confirmed infection of COVID–19 is identified, or whenever three or more residents or staff with new onset of respiratory symptoms occur within 72 hours of each other.**

F886

The following section was released in the Federal Register, dated September 2, 2020. For more information pertaining to COVID-19 testing requirements see [QSO-20-38-NH Interim Final Rule \(IFC\)](#), [CMS-3401-IFC, Additional Policy and Regulatory Revisions in Response to the COVID-19 Public Health Emergency related to Long-Term Care \(LTC\) Facility Testing Requirements and Revised COVID-19 Focused Survey Tool](#) located in the [Guidelines and Recommendations](#) chapter of this manual.

§483.80(h) COVID-19 Testing.

The LTC facility must test residents and facility staff, including individuals providing services under arrangement and volunteers, for COVID-19. At a minimum, for all residents and facility staff, including individuals providing services under arrangement and volunteers, the LTC facility must:

§483.80(h)(1) Conduct testing based on parameters set forth by the Secretary, including but not limited to:

- (i) Testing frequency;
- (ii) The identification of any individual specified in this paragraph diagnosed with COVID-19 in the facility;
- (iii) The identification of any individual specified in this paragraph with symptoms consistent with COVID-19 or with known or suspected exposure to COVID-19;
- (iv) The criteria for conducting testing of asymptomatic individuals specified in this paragraph, such as the positivity rate of COVID-19 in a county;
- (v) The response time for test results; and
- (vi) Other factors specified by the Secretary that help identify and prevent the transmission of COVID-19.

§483.80(h)(2) Conduct testing in a manner that is consistent with current standards of practice for conducting COVID-19 tests;

§483.80(h)(3) For each instance of testing:

- (i) Document that testing was completed and the results of each staff test; and
- (ii) Document in the resident records that testing was offered, completed (as appropriate to the resident's testing status), and the results of each test.

§483.80(h)(4) Upon the identification of an individual specified in this paragraph with symptoms consistent with COVID-19, or who tests positive for COVID-19, take actions to prevent the transmission of COVID-19.

§483.80(h)(5) Have procedures for addressing residents and staff, including individuals providing services under arrangement and volunteers, who refuse testing or are unable to be tested.

§483.80(h)(6) When necessary, such as in emergencies due to testing supply shortages, contact state and local health departments to assist in testing efforts, such as obtaining testing supplies or processing test results.

F921

(Rev. 173, Issued: 11-22-17, Effective: 11-28-17, Implementation: 11-28-17)

§483.90(i) Other Environmental

Conditions The facility must provide a safe, functional, sanitary, and comfortable environment for residents, staff and the public.

F945

(Rev. 173, Issued: 11-22-17, Effective: 11-28-17, Implementation: 11-28-17)

§483.95(e) Infection control.

A facility must include as part of its infection prevention and control program mandatory training that includes the written standards, policies, and procedures for the program as described at §483.80(a)(2). [§483.95(e) will be implemented beginning November 28, 2019 (Phase 3)]

E-0001

(Rev. 200, Issued: 02-21-20, Effective: 02-21-20, Implementation: 02-21-20)

§483.73 Emergency preparedness.

The LTC facility must comply with all applicable Federal, State and local emergency preparedness requirements. The LTC facility must establish and maintain a [comprehensive] emergency preparedness program that meets the requirements of this section. The emergency preparedness program must include, but not be limited to, the following elements:

(Interpretive guidance for this section does not accurately reflect all changes for Transmittal 200 (published 02-21-20). The guidance is pending and will be published as soon as it is available.)

Interpretive Guidelines

Under this condition/requirement, facilities are required to develop an emergency preparedness program that meets all of the standards specified within the condition/requirement. The emergency preparedness program must describe a facility's comprehensive approach to meeting the health, safety, and security needs of their staff and patient population during an emergency or disaster situation. The program must also address how the facility would coordinate with other healthcare facilities, as well as the whole community during an emergency or disaster (natural, man-made, facility). The emergency preparedness program must be reviewed annually.

A comprehensive approach to meeting the health and safety needs of a patient population should encompass the elements for emergency preparedness planning based on the “all-hazards” definition and specific to the location of the facility. For instance, a facility in a large flood zone, or tornado prone region, should have included these elements in their overall planning in order to meet the health, safety, and security needs of the staff and of the patient population. Additionally, if the patient population has limited mobility, facilities should have an approach to address these challenges during emergency events. The term “comprehensive” in this requirement is to ensure that facilities do not only choose one potential emergency that may occur in their area, but rather consider a multitude of events and be able to demonstrate that they have considered this during their development of the emergency preparedness plan.

Survey Procedures

- Interview the facility leadership and ask him/her/them to describe the facility’s emergency preparedness program.
- Ask to see the facility’s written policy and documentation on the emergency preparedness program.
- For hospitals and CAHs only: Verify the hospital’s or CAH’s program was developed based on an all-hazards approach by asking their leadership to describe how the facility used an all-hazards approach when developing its program.

E-0004

(Rev. 200, Issued: 02-21-20, Effective: 02-21-20, Implementation: 02-21-20)

(a) Emergency plan.

The LTC facility must develop and maintain an emergency preparedness plan that must be reviewed and updated at least annually. The plan must do the following:

(Interpretive guidance for this section does not accurately reflect all changes for Transmittal 200 (published 02-21-20). The guidance is pending and will be published as soon as it is available.)

Interpretive Guidelines

Facilities are required to develop and maintain an emergency preparedness plan. The plan must include all of the required elements under the standard. The plan must be reviewed and updated at least annually. The annual review must be documented to include the date of the review and any updates made to the emergency plan based on the review. The format of the emergency preparedness plan that a facility uses is at its discretion.

An emergency plan is one part of a facility's emergency preparedness program. The plan provides the framework, which includes conducting facility-based and community-based risk assessments that will assist a facility in addressing the needs of their patient populations, along with identifying the continuity of business operations which will provide support during an actual emergency. In addition, the emergency plan supports, guides, and ensures a facility's ability to collaborate with local emergency preparedness officials. This approach is specific to the location of the facility and considers particular hazards most likely to occur in the surrounding area. These include, but are not limited to:

- Natural disasters;
- Man-made disasters;
- Facility-based disasters that include but are not limited to:
 - Care-related emergencies;
 - Equipment and utility failures, including but not limited to power, water, gas, etc.;
 - Interruptions in communication, including cyber-attacks;
 - Loss of all or portion of a facility; and
 - Interruptions to the normal supply of essential resources, such as water, food, fuel (heating, cooking, and generators), and in some cases, medications and medical supplies (including medical gases, if applicable).
- EIDs such as Influenza, Ebola, Zika Virus and others.
 - These EIDs may require modifications to facility protocols to protect the health and safety of patients, such as isolation and personal protective equipment (PPE) measures.

When evaluating potential interruptions to the normal supply of essential services, the facility should take into account the likely durations of such interruptions. Arrangements or contracts to re-establish essential utility services during an emergency should describe the timeframe within which the contractor is required to initiate services after the start of the emergency, how they will be procured and delivered in the facility's local area, and that the contractor will continue to supply the essential items throughout and to the end of emergencies of varying duration.

Survey Procedures

- Verify the facility has an emergency preparedness plan by asking to see a copy of the plan.
- Ask facility leadership to identify the hazards (e.g. natural, man-made, facility, geographic, etc.) that were identified in the facility's risk assessment and how the risk assessment was conducted.
- Review the plan to verify it contains all of the required elements.
- Verify that the plan is reviewed and updated annually by looking for documentation of the date of the review and updates that were made to the plan based on the review.

E-0009

(Rev. 200, Issued: 02-21-20, Effective: 02-21-20, Implementation: 02-21-20)

(4) Include a process for cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to maintain an integrated response during a disaster or emergency situation.

(Interpretive guidance for this section does not accurately reflect all changes for Transmittal 200 (published 02-21-20). The guidance is pending and will be published as soon as it is available.)

Interpretive Guidelines

While the responsibility for ensuring a coordinated disaster preparedness response lies upon the state and local emergency planning authorities, the facility must document its efforts to contact these officials to engage in collaborative planning for an integrated emergency response. The facility must include this integrated response process in its emergency plan. Facilities are encouraged to participate in a healthcare coalition as it may provide assistance in planning and addressing broader community needs that may also be supported by local health department and emergency management resources.

For ESRD facilities, §494.120(c)(2) of the ESRD Conditions for Coverage on Special Purpose Dialysis Facilities describes the requirements for ESRD facilities that are set up in an emergency (i.e., an emergency circumstance facility) which are issued a unique CMS Certification Number (CCN). ESRD facilities must incorporate these specific provisions into the coordination requirements under this standard.

Survey Procedures

Interview facility leadership and ask them to describe their process for ensuring cooperation and collaboration with local, tribal, regional, State, and Federal emergency preparedness officials' efforts to ensure an integrated response during a disaster or emergency situation.

- Ask for documentation of the facility's efforts to contact such officials and, when applicable, its participation in collaborative and cooperative planning efforts.
- For ESRD facilities, ask to see documentation that the ESRD facility contacted the local public health and emergency management agency public official at least annually to confirm that the agency is aware of the ESRD facility's needs in the event of an emergency and know how to contact the agencies in the event of an emergency.

E-0013

(Rev. 200, Issued: 02-21-20, Effective: 02-21-20, Implementation: 02-21-20)

(b) Policies and procedures.

The LTC facility must develop and implement emergency preparedness policies and procedures, based on the emergency plan set forth in paragraph (a) of this section, risk assessment at paragraph (a)(1) of this section, and the communication plan at paragraph (c) of this section. The policies and procedures must be reviewed and updated at least annually. At a minimum, the policies and procedures must address the following:

(Interpretive guidance for this section does not accurately reflect all changes for Transmittal 200 (published 02-21-20). The guidance is pending and will be published as soon as it is available.)

Interpretive Guidelines

Facilities must develop and implement policies and procedures per the requirements of this standard. The policies and procedures are expected to align with the identified hazards within the facility's risk assessment and the facility's overall emergency preparedness program.

We are not specifying where the facility must have the emergency preparedness policies and procedures. A facility may choose whether to incorporate the emergency policies and procedures within their emergency plan or to be part of the facility's Standard Operating Procedures or Operating Manual. However, the facility must be able to demonstrate compliance upon survey, therefore we recommend that facilities have a central place to house the emergency preparedness program documents (to include all policies and procedures) to facilitate review.

Survey Procedures

Review the written policies and procedures which address the facility's emergency plan and verify the following:

- Policies and procedures were developed based on the facility- and community-based risk assessment and communication plan, utilizing an all-hazards approach.
- Ask to see documentation that verifies the policies and procedures have been reviewed and updated on an annual basis.

E-0032

(Rev. 200, Issued: 02-21-20, Effective: 02-21-20, Implementation: 02-21-20)

(3) Primary and alternate means for communicating with the following:

(i) LTC facility's staff.

(ii) Federal, State, tribal, regional, or local emergency management agencies.

(Interpretive guidance for this section does not accurately reflect all changes for Transmittal 200 (published 02-21-20). The guidance is pending and will be published as soon as it is available.)

Interpretive Guidelines

Facilities are required to have primary and alternate means of communicating with staff, Federal, State, tribal, regional, and local emergency management agencies. Facilities have the discretion to utilize alternate communication systems that best meets their needs. However, it is expected that facilities would consider pagers, cellular telephones, radio transceivers (that is, walkie-talkies), and various other radio devices such as the NOAA Weather Radio and Amateur Radio Operators' (HAM Radio) systems, as well as satellite telephone communications systems. We recognize that some facilities, especially in remote areas, may have difficulty using some communication systems, such as cellular phones, even in non-emergency situations, which should be outlined within their risk assessment and addressed within the communications plan. It is expected these facilities would address such challenges when establishing and maintaining a well-designed communication system that will function during an emergency.

The communication plan should include procedures regarding when and how alternate communication methods are used, and who uses them. In addition the facility should ensure that its selected alternative means of communication is compatible with communication systems of other facilities, agencies and state and local officials it plans to communicate with during emergencies. For example, if State X local emergency officials use the SHARED RESOURCES (SHARES) High Frequency (HF) Radio program and facility Y is trying to communicate with RACES, it may be prudent to consider if these two alternate communication systems can communicate on the same frequencies.

Facilities may seek information about the National Communication System (NCS), which offers a wide range of National Security and Emergency Preparedness communications services, the Government Emergency Telecommunications Services (GETS), the Telecommunications Service Priority (TSP) Program, Wireless Priority Service (WPS), and SHARES. Other communication methods could include, but are not limited to, satellite phones, radio, and short wave radio. The Radio Amateur Civil Emergency Services (RACES) is an integral part of emergency management operations.

Survey Procedures

- Verify the communication plan includes primary and alternate means for communicating with facility staff, Federal, State, tribal, regional and local emergency management agencies by reviewing the communication plan.
- Ask to see the communications equipment or communication systems listed in the plan.

Clostridium Difficile

Policy Statement

Measures are taken to prevent the occurrence of *Clostridium difficile* infections (CDI) among residents. Precautions are taken while caring for residents with *C. difficile* to prevent transmission to others residents.

Policy Interpretation and Implementation

1. Clostridium difficile infection is suspected in residents with acute, unexplained onset of diarrhea (three or more unformed stools within 24 hours).
2. Residents considered at high risk of developing symptoms associated with *C. difficile* include those with:
 - a. Advancing age;
 - b. Gastrointestinal manipulation (especially nasogastric tube insertion);
 - c. Previous confirmed infection with *C. difficile*; and
 - d. Antibiotic or anti-neoplastic therapy.
3. The primary reservoirs for *C. difficile* are infected people and surfaces. Spores can persist on resident-care items and surfaces for several months and are resistant to some common cleaning and disinfection methods.
4. *C. difficile* is transmitted via the fecal-oral route. Therefore, any resident-care activity that involves contact with the resident's mouth when hands or instruments are contaminated may provide an opportunity for transmission, for example:
 - a. Oral care/suctioning;
 - b. Administration of tube feedings;
 - c. Administration of oral medications; and
 - d. Insertion of a nasogastric tube.
5. Steps toward prevention and early intervention include:
 - a. Ongoing surveillance of CDI;
 - b. Increasing awareness of symptoms and risk factors among staff, residents and visitors;
 - c. Considering *C. difficile* in differential diagnoses, especially in residents with symptoms or risk factors;
 - d. Frequent hand washing with soap and water by staff and residents;
 - e. Wearing gloves when handling feces or articles contaminated with feces;
 - f. Disinfection of items with potential fecal soiling (e.g., bedpans, commode chairs, bed rails, etc.) using a disinfecting agent recommended for *C. difficile* (e.g., household bleach and water solution or an EPA registered germicidal agent effective against *C. difficile* spores); and
 - g. Removal of environmental sources of *C. difficile* (i.e., replacement of electronic thermometers with disposables).

continues on next page

6. Stool specimens for testing are:
 - a. performed on unformed stool only (unless ileus is suspected);
 - b. submitted in a clean, leak-proof container;
 - c. transported to the laboratory as soon as possible;
 - d. stored at 2°C to 8°C for up to 24 hours, or freeze at -70°C for >24 hour storage times (if timely submission to the laboratory is not possible); and
 - e. not submitted from residents receiving laxatives.
7. Testing of asymptomatic residents and of residents who have responded to therapy is not done routinely.
8. Repeat testing (after initial negative result) is not performed routinely.
9. Residents with diarrhea associated with *C. difficile* (i.e., residents who are colonized and symptomatic) are placed on Contact Precautions.
10. Residents with diarrhea and suspected CDI are placed on Contact Precautions while awaiting laboratory results.
11. Residents who are colonized with *C. difficile* but are asymptomatic do not require Contact Precautions.
12. Residents who are asymptomatic (diarrhea free) for 48 hours can be removed from precautions.
13. Residents with CDI are placed in a private room if available. If a private room is not available, residents will be cohorted with a dedicated commode for each resident.
14. When caring for residents with CDI, staff is to maintain vigilant hand hygiene. Hand washing with soap and water is superior to ABHR for the mechanical removal of *C. difficile* spores from hands.
15. Enhanced infection control measures may be used on units with high rates of *C. difficile* infection, including:
 - a. Universal glove use;
 - b. Enhanced environmental cleaning;
 - c. Reduced sharing of or dedicated medical equipment; and
 - d. Staff cohorting.
16. Environmental cleaning in rooms of residents with CDI is done with a disinfecting agent recommended for *C. difficile* (e.g., household bleach and water solution or an EPA registered germicidal agent effective against *C. difficile* spores).
17. Residents with diarrhea are monitored for signs and symptoms of dehydration.
18. Surveillance and reporting of confirmed CDI is conducted by the infection preventionist.

Colostomy/Ileostomy Care

Level III

Purpose

The purpose of this procedure is to provide guidelines that will aid in preventing exposure of the resident's skin to fecal matter.

Preparation

1. Review the resident's care plan to assess for any special needs of the resident.
2. Assemble the equipment and supplies as needed.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure:

1. Skin cleansing preparation;
2. Clean drainage bag;
3. Soap and water;
4. Barrier creams and lotions (as indicated); and
5. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

1. Place the clean equipment on the bedside stand or overbed table. Arrange the supplies so they can be easily reached.
2. Wash and dry your hands thoroughly.
3. Put on gown if soiling of clothing with feces is likely.
4. Put on gloves.
5. Remove drainage bag.
6. Remove gloves, wash hands, put on clean gloves.
7. Cleanse skin with appropriate skin cleansing preparation.
8. When evaluating the condition of the resident's skin, note the following:
 - a. Breaks in the skin.
 - b. Excoriation.
 - c. Signs of infection (heat, swelling, pain, redness, purulent exudate, etc.).
9. Remove soiled items. Do not place on overbed table. Replace with clean drainage bag.
10. Place disposable bags into appropriate receptacle.
11. Discard disposable items into designated containers.
12. Remove and discard gown into designated container.
13. Remove and discard gloves into designated container. Wash and dry your hands thoroughly.
14. Reposition the bed covers. Make the resident comfortable.
15. Place the call light within easy reach of the resident.
16. Clean the overbed table and return it to its proper position.
17. Wash and dry your hands thoroughly.

continues on next page

18. If the resident desires, return the door and curtains to the open position and if visitors are waiting, tell them that they may now enter the room.
19. Document the procedure in resident's documentation form.

Documentation

The following information should be recorded in the resident's medical record:

1. The date and time the colostomy/ileostomy care was provided.
2. The name and title of the individual(s) who provided the colostomy/ileostomy care.
3. Any breaks in resident's skin, signs of infection (purulent discharge, pain, redness, swelling, temperature), or excoriation of skin.
4. How the resident tolerated the procedure.
5. If the resident refused the procedure, the reason(s) why and the intervention taken.
6. The signature and title of the person recording the data.

Reporting

1. Notify the supervisor if the resident refuses the colostomy/ileostomy care.
2. Notify the supervisor of any abnormal findings (i.e., breaks in skin, excoriation, signs of infection, etc.).
3. Report other information in accordance with facility policy and professional standards of practice.

Cultures for MRSA (Staphylococcus Screening)

Level III

Purpose

The purpose of this procedure is to provide guidelines for proper culturing of residents known or suspected to have Methicillin Resistant Staphylococcus Aureus (MRSA) infection, or who may be exposed to MRSA. (This is not a routine procedure but may be needed during an outbreak or upon advice of the local or state health department.)

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure:

For Nasal Culture

1. Clean gloves; and
2. Sterile culture swab.

For Wound Culture

1. Sterile gloves;
2. Sterile culture swab;
3. Sterile general purpose tray;
4. Alcohol sponges; and
5. Betadine sponges (or ACU-dyne).

Procedure Guidelines

1. Mark the laboratory request with the following:
 - a. The exact location of the wound; or
 - b. "Anterior nares," if appropriate;
 - c. "Staphylococcus screen, R/O MRSA";
 - d. Resident's name and room number;
 - e. Name of person taking culture; and
 - f. Date.

Nasal Culture

1. Validate Physician's order for the culture.
2. Wash hands and put on clean gloves.
3. Using thumb, gently elevate nares by pushing up on tip of nose.
4. Insert sterile culture swab into anterior tips of nares, rotate swab to collect any moisture.
5. Remove swab from nose and replace in sheath.
6. Squeeze capsule to release culture medium. Be sure swab is in medium.
7. Discard gloves and other protective equipment into appropriate receptacle. Wash hands.
8. Label specimen and send to lab.

Wound Culture

1. Validate Physician's order for the culture.
2. Wash hands, open the general equipment tray and put on sterile gloves.
3. Using sterile forceps, remove the dressings to expose the wound.

continues on next page

4. Cleanse the area around the wound with alcohol and then cleanse with Betadine sponges (if resident not allergic). Remove all old drainage from site.
5. Allow the area to dry.
6. Using the sterile culture swab, collect as much fresh drainage as possible, or insert the swab gently into any open, draining area of the wound and rotate it to obtain drainage. Never collect drainage from the outside and then insert the same swab into the wound.
7. Place the swab back into the sheath and squeeze the capsule to release the culture medium.
8. Remove the sterile gloves and discard into appropriate receptacle. Wash hands.
9. Label specimen and send to lab.

(Note: A swab culture is not recommended for a pressure ulcer. All pressure ulcers are colonized with bacteria and the culture will only detect surface colonization and may not reflect the organism responsible for the infection. Notify the physician if infection is suspected.)

Miscellaneous

1. Implement Contact Precautions on a case-by-case basis as determined by risks for transmission including uncontrolled secretions, stool incontinence, draining wounds, diarrhea, and total dependence for activities of daily living.
2. Do not treat or continue to culture asymptomatic colonized individuals unless the realistic clinical goal is to decolonize the individual.
3. A resident who has recently had MRSA bacteremia does not need additional blood cultures once his/her clinical condition has improved.
4. Prioritize known MRSA residents for placement with like MRSA individuals, or a low risk individual.
5. When notification of previous MRSA infection or colonization comes after admission, make decisions on surveillance and precautions based on the individual's ability to contain infected/colonized body fluids or body sites, personal hygiene (e.g., handwashing, keeping hands away from infected/colonized areas) and risk to other residents.
6. Place culture tubes in clear plastic bags for transport.

Diapers/Underpads

Purpose

The purpose of this procedure is to provide guidelines for the proper handling of diapers and underpads.

Preparation

1. Review the resident's care plan to assess for any special needs of the resident.
2. Assemble the equipment and supplies as needed.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure:

1. Skin cleansing preparation;
2. Disinfectant; and
3. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

In Resident Rooms

1. Place the clean equipment on the bedside stand or overbed table. Arrange the supplies so they can be easily reached.
2. Wash and dry your hands thoroughly.
3. Put on gloves.
4. Put on gown or apron if soiling of clothing is likely.
5. Remove diaper or underpad from resident by rolling the diaper/underpad toward the inside soiled area. Contain as much fecal soil as possible.
6. Clean skin of resident and replace fresh diaper or underpad.
7. If fecal material is solid, take the diaper or underpad to the hopper or toilet and let the fecal matter fall, being careful to avoid splashes. Flush the toilet/hopper.
8. Place diaper or underpad into designated hamper/container.
9. Discard disposable equipment and supplies in designated containers.
10. Remove gloves and discard into designated container. Wash and dry your hands thoroughly.
11. Clean the overbed table and return it to its proper position.
12. Lower the bed into lowest position and place the side rails and the head of the bed in the appropriate position as indicated in the resident's plan of care.
13. Reposition the bed covers. Make the resident comfortable.
14. Place the call light within easy reach of the resident.
15. Remove protective clothing before leaving the room. Discard into appropriate receptacles.
16. Wash and dry your hands thoroughly.
17. If the resident desires, return the door and curtains to the open position and if visitors are waiting tell them they may now enter the room.

continues on next page

Documentation

The following information should be recorded in the resident's medical record:

1. The date and time that care was given.
2. The name and title of the individual(s) who assisted with the care.
3. All assessment data (e.g., the condition of the resident's skin) obtained while changing the diaper/underpad.
4. If the resident refused the care, the reason(s) why and the intervention taken.
5. The signature and title of the person recording the data.

Reporting

1. Notify the supervisor if the resident refuses the care.
2. Report other information in accordance with facility policy and professional standards of practice.

Version	2.0 (H5MAPR0103)

Diarrhea and Fecal Incontinence

Level II

Purpose

The purpose of this procedure is to provide guidelines that will aid in preventing the resident's exposure to feces.

Preparation

1. Review the resident's care plan to assess for any special needs of the resident.
2. Assemble the equipment and supplies as needed.

General Guidelines

1. When residents have diarrhea or fecal incontinence, and there is a possibility of soiling clothing during clean-up, gowns or aprons should be worn and removed immediately after completing the procedure and placed into the laundry hamper or discarded, as appropriate.
2. Residents must be cleaned after each episode of incontinence.
3. Disposable items soiled with feces (i.e., disposable briefs or disposable underpads) must be handled so as to prevent contamination of the environment with feces. Such items must be placed in closed containers in the soiled utility room and discarded in accordance with established procedures.
4. Cloth briefs and underpads must be placed into assigned linen hampers and washed separately, using a prewash cycle. Solid feces should be dropped into toilet or hopper before placing items into linen hamper.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure:

1. Brief (disposable or cloth);
2. Underpad (disposable or cloth);
3. Disposable or cloth as designated by resident plan of care;
4. Draw sheet;
5. Soap and water (or incontinence preparation);
6. Barrier creams and lotions (as indicated); and
7. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

1. Place the clean equipment on the bedside stand or overbed table. Arrange the supplies so they can be easily reached.
2. Wash and dry your hands thoroughly.
3. Put on gloves.
4. Put on gown or apron if soiling of clothing is likely.
5. Use high degree of caution when turning residents who are known to be incontinent.
6. Wipe feces from the resident's skin with edge of brief or underpad. Wipe away from the perineum and any indwelling catheters.
7. Wash the resident's skin with soap and water or incontinence preparation.
8. Provide catheter care as indicated, if catheter is soiled with feces.

continues on next page

9. Rinse well and pat dry.
10. Apply barrier creams or lotions as indicated.
11. When evaluating the condition of the resident's skin, note the following:
 - a. Maceration, softening, or breaks in the skin;
 - b. Irritation, chafing, excoriation, or rash; and
 - c. Pressure ulcers.
12. Remove soiled items. Replace with clean dry briefs or underpad, as indicated.
13. Drop solid fecal matter into toilet or hopper and flush.
14. Place disposable brief or underpad into special waste container.
15. Place cloth brief, underpad or draw sheet into designated container.
16. Discard disposable equipment and supplies in designated containers.
17. Remove gown or apron (if worn) and discard into designated container.
18. Remove gloves and discard into designated container. Wash and dry your hands thoroughly.
19. Clean the overbed table and return it to its proper position.
20. Lower the bed into lowest position and place the siderails and the head of the bed in the appropriate position as indicated in the resident's plan of care.
21. Reposition the bed covers. Make the resident comfortable.
22. Place the call light within easy reach of the resident.
23. Remove protective clothing before leaving the room. Discard into appropriate receptacles.
24. Wash and dry your hands thoroughly.
25. If the resident desires, return the door and curtains to the open position and if visitors are waiting tell them they may now enter the room.

Reporting

1. Notify the supervisor if the resident refuses the care.
2. Report other information in accordance with facility policy and professional standards of practice.

Dressings, Dry/Clean

Level III

Purpose

The purpose of this procedure is to provide guidelines for the application of dry, clean dressings.

Preparation

1. Verify that there is a physician's order for this procedure. (Note: This may be generated from a facility protocol.)
2. Review the resident's care plan, current orders, and diagnoses to determine if there are special resident needs.
3. Check the treatment record.
4. Assemble the equipment and supplies as needed. Date and initial all bottles and jars upon opening (unless product is single use). Wipe nozzles of wound with alcohol pledget or facility disinfectant wipe. (Note: This may be performed at the treatment cart.)
5. Explain procedure to the resident and provide privacy.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure.

1. Clean dressing(s);
2. Cleaning solution, as ordered;
3. Tape;
4. Scissors; and
5. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

1. Clean bedside stand. Establish a clean field.
2. Place the clean equipment on the clean field. Arrange the supplies so they can be easily reached.
3. Tape a biohazard or plastic bag on the bedside stand or use a waste basket below clean field.
4. Position resident and adjust clothing to provide access to affected area.
5. Wash and dry your hands thoroughly.
6. Put on clean gloves. Loosen tape and remove soiled dressing.
7. Pull glove over dressing and discard into plastic or biohazard bag.
8. Wash and dry your hands thoroughly.
9. Open dry, clean dressing(s) by pulling corners of the exterior wrapping outward, touching only the exterior surface.
10. Label tape or dressing with date, time and initials. Place on clean field.
11. Using clean technique, open other products (i.e., prescribed dressing; dry, clean gauze).
12. Wash and dry your hands thoroughly.
13. Put on clean gloves.
14. Assess the wound and surrounding skin for edema, redness, drainage, tissue healing progress and wound stage.

continues on next page

15. Cleanse the wound with ordered cleanser. If using gauze, use clean gauze for each cleansing stroke. Clean from the least contaminated area to the most contaminated area (usually, from the center outward).
16. Use dry gauze to pat the wound dry.
17. Apply the ordered dressing and secure with tape or bordered dressing per order. (Note: Use non-allergenic tape as indicated.) Label with date and initials to top of dressing.
18. Discard disposable items into the designated container.
19. Remove disposable gloves and discard into designated container. Wash and dry your hands thoroughly.
20. Reposition the bed covers. Make the resident comfortable.
21. Place the call light within easy reach of the resident.
22. Clean the bedside stand.
23. Wash and dry your hands thoroughly.
24. If the resident desires, return the door and curtains to the open position and if visitors are waiting, tell them that they may now enter the room.

Documentation

The following information should be recorded in the resident's medical record, treatment sheet or designated wound form:

1. The date and time the dressing was changed.
2. Wound appearance, including wound bed, edges, presence of drainage.
3. The name and title (or initials) of the individual changing the dressing.
4. The type of dressing used and wound care given.
5. All assessment data (i.e., wound bed color, size, drainage, etc.) obtained when inspecting the wound.
6. How the resident tolerated the procedure.
7. Any problems or complaints (e.g., pain or discomfort) made by the resident related to the procedure.
8. If the resident refused the treatment, the reason for refusal and the resident's response to the explanation of the risks of refusing the procedure, the benefits of accepting and available alternatives. Document family and physician notification of refusal.
9. The signature and title (or initials) of the person recording the data.

Reporting

1. Notify the supervisor if the resident refuses the dressing change.
2. Report other information in accordance with facility policy and professional standards of practice.

Dressings, Soiled/Contaminated

Policy Statement

All soiled/contaminated dressings must be handled in a safe and sanitary manner and must be incinerated or disposed of following decontamination or containment.

Policy Interpretation and Implementation

1. Disposable items such as bandages, applicators, gauze pads, etc., that are soiled or contaminated with infective material, blood, or body fluids must be placed in a plastic bag and removed from the resident's room upon completion of any procedure.
2. Soiled dressings that are not heavily soiled with exudate may be placed in a plastic bag and placed in regular waste.
3. Soiled dressings that are heavily soiled with exudate or drainage or from a resident with an infectious condition must be placed in specially designated "BIOHAZARD" containers for disposal.
4. Gloves must be worn when changing a dressing and/or when handling items contaminated with blood, body fluids, or potentially infective materials.
5. Follow established procedures governing wound care.

Dressings, Sterile

Level III

Purpose

The purpose of this procedure is to provide guidelines for the application of sterile dressings.

Preparation

1. Verify that there is a physician's order for this procedure. (Note: This may be generated from a facility protocol.)
2. Review the resident's care plan, current orders, and diagnoses to determine if there are special resident needs.
3. Check the treatment record.
4. Assemble the equipment and supplies as needed. Date and initial all bottles and jars upon opening. Wipe nozzles, foil packets, bottle tops, etc., with alcohol pledget before opening, as necessary. (Note: This may be performed at the treatment cart.)
5. Explain procedure to the resident and provide privacy.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure:

1. Sterile dressing tray;
2. Cleaning solution, as ordered;
3. Tape;
4. Scissors;
5. Sterile gauze; and
6. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

1. Clean bedside stand. Establish a clean field.
2. Place the clean equipment on the clean field. Arrange the supplies so they can be easily reached.
3. Tape a biohazard or plastic bag on the bedside stand or use a waste basket below the clean field.
4. Position resident and adjust clothing to provide access to affected area.
5. Wash and dry your hands thoroughly.
6. Put on clean gloves. Loosen tape and remove soiled dressing.
7. Pull glove over dressing and discard into plastic or biohazard bag.
8. Wash and dry your hands thoroughly.
9. Open sterile dressing tray, touching only the exterior surface, and carefully open the exterior wrapping to create a sterile field.
10. Using sterile technique, open other sterile products (i.e., prescribed dressing, sterile gauze) and drop onto sterile field.
11. Wash and dry your hands thoroughly.
12. Put on sterile gloves.
13. Assess the wound and surrounding skin for edema, redness, drainage, progress of tissue healing, and wound stage.

continues on next page

14. Cleanse the wound using sterile forceps to hold gauze. Use separate gauze for each cleansing stroke. Clean from the least contaminated area to the most contaminated area (usually, from the center outward).
15. Use dry gauze to pat the wound dry.
16. Apply the ordered dressing and secure with tape. (Note: Use non-allergenic tape, as indicated.) Label tags (tape or sterile kit label) with date and initials to top of dressing.
17. Discard disposable items into the designated container.
18. Remove disposable gloves and discard into designated container. Wash and dry your hands thoroughly.
19. Reposition the bed covers. Make the resident comfortable.
20. Place the call light within easy reach of the resident.
21. Clean the bedside stand.
22. Wash and dry your hands thoroughly.
23. If the resident desires, return the door and curtains to the open position and if visitors are waiting, tell them that they may now enter the room.

Documentation

The following information should be recorded in the resident’s medical record, treatment sheet or designated wound form:

1. The date and time the dressing was changed.
2. Wound appearance, including wound bed, edges, presence of drainage.
3. The name and title (or initials) of the individual changing the sterile dressing.
4. The type of dressing used and wound care given.
5. All assessment data (i.e., wound bed color, size, drainage, etc.) obtained when inspecting the wound.
6. How the resident tolerated the procedure.
7. Any problems or complaints (e.g., pain or discomfort) made by the resident related to the procedure.
8. Complications related to the wound (e.g., pain, redness, drainage, swelling, bleeding).
9. If the resident refused the treatment, the reason for refusal and the resident’s response to the explanation of the risks of refusing the procedure, the benefits of accepting and available alternatives. Document family and physician notification of refusal.
10. The signature and title (or initials) of the person recording the data.

Reporting

1. Notify the supervisor if the resident refuses the dressing change.
2. Report other information in accordance with facility policy and professional standards of practice.

Guidelines for Preventing Intravenous Catheter-Related Infections

Level III

Purpose

The purpose of this procedure is to maximally reduce the risk of infection associated with indwelling intravenous (IV) catheters.

General Guidelines

1. Facility staff who manage infusion catheters will have training and demonstrated clinical competency in intravenous therapy, including:
 - a. indications for IV catheter use;
 - b. proper procedures for the insertion and maintenance of IV catheters; and
 - c. appropriate infection control measures to prevent IV catheter-related infections.
2. Staff may only insert catheter types for which they have adequate training and demonstrated skill.
3. Aseptic technique shall be observed at all times when working with IV equipment.
4. All infusion equipment shall be sterile when first opened. At all times equipment shall remain aseptic. If it becomes contaminated it must be changed.
5. Resident complaints of pain or problems regarding the catheter or treatment shall be investigated immediately. Interventions shall be initiated as soon as the appropriate measure is identified.

Overview of CRIs

1. Potential risk factors associated with central venous access device (CVAD) and infusion-related infections include:
 - a. catheter dwell time, sutures;
 - b. frequent manipulation of CVAD;
 - c. multi-lumen catheters; and
 - d. presence of immunosuppression.
2. Signs and symptoms that can indicate infection include:
 - a. fever, chills;
 - b. hypotension, hyperventilation;
 - c. altered mental status;
 - d. tenderness at insertion site;
 - e. erythema, induration, purulent drainage;
 - f. positive blood cultures or catheter tip; and
 - g. phlebitis.
3. Infections can be local, systemic, or both.

continues on next page

Nursing Practice Guidelines to Prevent Catheter-Related Infections

Surveillance

1. Observe the insertion site (and sutures if present) on every shift, on admission, and with dressing changes.
2. Observe visually or by palpation through the intact dressing.
3. If signs and symptoms of catheter-related infection are present, contact the Physician.
4. Obtain an order for culture if there are signs of drainage, expanding redness, tenderness at insertion site, and/or fever without obvious source.
5. Cultures may be taken from the site of drainage, the catheter, peripheral blood samples, or any other suspected source as ordered.
6. Any time that dressing is not intact or end caps are missing, the catheter has potential for contamination.
7. The Infection Preventionist is responsible for documenting, reporting, and retaining infection rate statistics.

Hand Hygiene

1. Observe proper hand hygiene procedures either by washing hands with conventional soap and water, or with waterless alcohol-based hand rubs.
2. Observe hand hygiene before and after palpating catheter-insertion sites, as well as before and after inserting, replacing, accessing, repairing, or dressing an IV catheter.
3. Palpate insertion site after hand hygiene and non-sterile gloves are applied.
4. Palpation of the insertion site should not be performed after the application of an antiseptic, unless aseptic technique is maintained.

Selection of IV Catheters

1. Select the appropriate type of catheter to accommodate the resident's vascular access needs based on the intended purpose and duration of use, known infectious and non-infectious complications, and experience of individual catheter operators.
2. Select the smallest and shortest length catheter that will accommodate the prescribed therapy.
3. Select the catheter with the fewest number of lumens possible.
4. Therapies that are not appropriate for peripheral or midline catheters include vesicant therapy, parenteral nutrition, infusate with pH <5 or >9, or osmolality of >600mOsm/L.
5. Use steel winged infusion sets for single dose administration of medication only. These catheters cause vein irritation and cannot be kept in place.
6. Use a midline or PICC catheter if duration of treatment will likely exceed 6 days.
7. Catheters that are placed in the femoral veins are at higher risk of infection due to their proximity to urinary and rectal areas. These catheters require vigilant care and usually have short stay-in-place times.

Aseptic Technique During Catheter Insertion and Care

1. Peripheral short catheters
 - a. Maintain aseptic technique during catheter insertion and care.
 - b. Wear clean gloves when inserting a peripheral IV catheter.
 - c. Wear clean gloves during dressing changes for peripheral catheters.
 - d. Before peripheral catheter insertion, prepare the site with an antiseptic.
 - (1) Use seventy percent (70%) alcohol, alcoholic chlorhexidine gluconate solution, or povidone-iodine tincture for skin antiseptics.
 - (2) Clean the area with a circular motion moving from the insertion site outward, and allow it to air dry.
 - (3) Antiseptics should be left to air dry according the manufacturer's instructions.

continues on next page

2. Midline Catheters
 - a. Wear sterile gloves for the insertion of midline catheters.
3. Central Venous Catheters
 - a. Use maximal sterile barrier precautions (e.g., cap, mask, sterile gown, sterile gloves, and large sterile drape) when inserting or assisting in the insertion of central venous catheters (CVCs).
 - b. Wear sterile gloves for the insertion of arterial and central catheters.
 - c. Maintain sterile technique when changing midline and central catheter dressings or performing site care.
 - d. Remove hair near the insertion site with scissors or electric clippers, not razors, before catheter is inserted (hair removal requires resident consent).
 - e. Before central venous catheter and peripheral arterial catheter insertion and during dressing changes, prepare the site with >0.5% chlorhexidine preparation with alcohol. (If there is a contraindication to chlorhexidine, use tincture of iodine, an iodophor, or 70% alcohol as an alternative.)
 - f. Avoid using the femoral vein for central venous access.
4. Use only one catheter for each cannulation attempt.
5. Do not attempt more than two catheter insertions per Nurse.

Catheter Site Dressing Regimens

1. Change initial dressing after catheter placement within 24 hours.
2. Use either sterile gauze or sterile transparent, semi permeable membrane (TSM) to cover central or peripheral catheter sites.
3. If the patient is diaphoretic or the site is bleeding or oozing, use gauze dressing until resolved.
4. Change TSM dressings on CVADs every 5-7 days or PRN if damp, loosened, or visibly soiled. This does not require a physician's order.
5. Do not use antibiotic ointments or creams on the insertion site.
6. Gauze dressings covered with TSM dressing should be considered a gauze dressing and changed at least every 48 hours.
7. Change the TSM dressing on a peripheral short catheter when site is rotated or compromised.
8. Replace transparent dressings on tunneled or implanted CVCs every 5-7 days, unless the dressing is loose or soiled.
9. Chlorhexidine-impregnated sponge dressing is recommended for temporary, short-term catheters if the central line associated bloodstream infection (CLABSI) rate is not decreasing despite adherence to basic prevention measures (i.e., skin antisepsis, education, training).
10. Monitor the catheter site visually during dressing changes. Palpate catheter-skin junction site for tenderness at least daily through the intact dressing.
11. Do not use topical antibiotic ointments or creams on insertion sites.
12. Do not submerge the catheter or catheter site in water. Patients may shower if the catheter and connecting device can be protected with an impermeable cover. If the dressing becomes wet, change immediately.

Replacement of IV Catheters

1. Promptly obtain physician order for the removal of any peripheral or central IV catheter that is no longer essential.
2. Remove a peripheral venous catheter if the resident develops signs of phlebitis or infection, or if the catheter malfunctions.
3. A peripheral short catheter can stay in place up to 96 hours in an adult resident unless there is suspected contamination, complication, or if therapy is discontinued.

continues on next page

4. If catheter is left in place longer than 96 hours, obtain a physician's order to keep catheter in place and document rationale for leaving the catheter in place.
5. If a catheter is placed under emergency conditions, and aseptic technique cannot be ensured, replace the catheter as soon as possible (within 48 hours).
6. Do not routinely replace midline catheters, CVC or arterial catheters solely for the purpose of reducing the incidence of infection.
7. Any time the resident complains of discomfort or pain related to the catheter, or there are signs and symptoms of complications, assess the resident and catheter site and intervene as appropriate. CVCs and PICCs should not be removed on the basis of fever alone.
8. If a catheter-related bloodstream infection is suspected and a culture is ordered, cultures of catheter and site are obtained before removing catheter.
9. Removal of a midline or any central line is to be performed upon the order of a Physician or authorized prescriber in accordance with state Nurse Practice Act.
10. Never re-advance a catheter that is found out of place.
11. When a new site is selected for cannulation, the site should be proximal to the previous site.
12. Remove midlines or central lines if tip has incorrect placement.
13. Remove catheters at the end of a treatment if there are no further plans for use of the catheter.

Replacement of Administration Sets, Needleless System Equipment

1. Administration Set Replacement
 - a. Replace administration sets whenever the peripheral site is rotated.
 - b. Change continuous primary and secondary administration sets (used for fluids other than blood, blood products, or lipids) no more frequently than every 96 hours, unless there is suspected contamination, or when integrity of the product or system has been compromised.
 - c. Change intermittent sets every 24 hours, immediately upon suspected contamination, or when integrity of product or system has been compromised.
 - d. Once a secondary administration set (piggyback) is detached from the primary set, it is considered an intermittent set.
 - e. Change lipid-containing parenteral nutrition sets at least every 24 hours, when new bag is started, immediately upon suspected contamination, or when the integrity of the product or system has been compromised.
 - f. Change administration sets and add on filters that are used for blood or blood components after administration of each unit or at the end of 4 hours, whichever comes first.
 - g. Discard sets found without a sterile cap on the end of the tubing, or if not labeled.
2. Replacement of the Needleless System Equipment
 - a. Use aseptic technique and observe standard precautions when changing all add-on devices. Add-on devices include, but are not limited to, stopcocks, extension sets, manifold set, extension loops, solid cannula caps, injection/access caps, filters, and any other needleless system equipment.
 - b. Change needleless connection devices if there is blood or debris in the connector, before obtaining blood samples for culture, after blood draws, upon contamination, and in accordance with manufacturer recommendations.
 - c. Change stabilization devices per manufacturer recommendation, usually weekly with dressing change.
 - d. Change filters that are used with medication administration sets with each new dose of medication that is administered.
 - e. Use new extension tubing with any new peripheral short catheter placement.

continues on next page

Cleaning Needleless Connection Devices

1. Keep administration sets and needleless devices aseptic between medication dosages.
2. Disinfect the needleless connector prior to each access using alcohol, tincture of iodine, or chlorhexidine gluconate/alcohol combination.

Preparation and Quality Control of IV Admixtures

1. Do not use any container of parenteral fluid that is visibly cloudy (turbid) or has leaks, cracks, or particulate matter, or if the manufacturer's expiration date has passed.
2. If any IV system is discarded because of suspected fluid contamination, the fluid should be cultured and the implicated bottle saved. If contamination is confirmed, notify the Infection Preventionist. The Infection Preventionist will report contamination that may be related to the manufacturing process to the local health department, Centers for Disease Control, and the U.S. Food and Drug Administration.
3. Use single-dose vials for parenteral additives or medications when practical. Do not combine leftover content of single-use vials for later use.
4. Vials labeled "single dose" or "single use" will not be used on multiple residents. Such vials will be used only for one resident in a single procedure.
5. Refrigerate multi-dose vials after they are opened, if recommended by the manufacturer.
6. Cleanse the access diaphragm of multi-dose vials with alcohol wipe before inserting a device into the vial.
7. Use a sterile device to access a multi-dose vial and avoid contaminating the device or the access diaphragm before penetrating. Discard a multi-dose vial if sterility is compromised.
8. When mixing medications in the facility, do so in an area that is away from traffic. A medication room with a door that closes is preferred. Clean countertop area with soap and water, alcohol, or use waterproof barrier. Use aseptic technique while mixing medicine.

Multi-Lumen Catheters

1. A catheter with the fewest number of lumens possible should be used for the infusion management of the resident.
2. Each lumen is a separate catheter. Flush each lumen at least once every 24 hours to avoid blood clot formation.
3. If catheter is found to have clotted blood in lumens or if catheter is found without needleless connection devices (end cap) or sterile dressing, the catheter should be considered contaminated and replacement is recommended.
4. Consider labeling each lumen as to purpose, to avoid cross contamination and medication interaction.
5. Follow manufacturer recommendations or facility policy for purpose and use of lumens.

Documentation

The following information should be recorded in the resident's medical record:

1. Objective information regarding appearance of insertion site, catheter, and dressing.
2. Any interventions that were done (dressing change, cultures, etc.).
3. Results of any laboratory tests, cultures.
4. Communication with Physician, Supervisor, oncoming shift.

continues on next page

Reporting

1. Report objective information, lab results, and interventions to Supervisor, Physician, and oncoming shift.
2. Report any infection control information to Infection Preventionist, pharmacy, federal agencies if needed.

HIV Antibody Testing and Post-Exposure Prophylaxis

Policy Statement

HIV antibody testing and post-exposure prophylaxis (PEP) will be made available to healthcare personnel as appropriate, following possible exposure in the workplace.

Policy Interpretation and Implementation

1. HIV antibody testing will be made available to healthcare personnel following occupational:
 - a. Parenteral exposure to blood or body fluids by needlestick or contamination of an open wound;
 - b. Mucous membrane exposure to blood or body fluids;
 - c. Cutaneous exposure to large amounts of blood; and
 - d. Contact with blood, especially if skin is chapped, abraded, or inflamed.
2. If the healthcare personnel is exposed to a source person who is HIV infected, or there is reasonable suspicion of HIV infection, a PEP protocol will be initiated as soon as possible (within 72 hours).
3. The post exposure protocol includes:
 - a. Counseling;
 - b. Baseline and follow-up HIV antibody testing;
 - c. Anti-retroviral therapy; and
 - d. Monitoring for drug toxicity.
4. Initial counseling will be available to exposed individuals immediately after exposure. Exposed healthcare personnel will be re-evaluated within 72 hours of reported exposure.
5. Pre- and post-test counseling will be performed by a licensed healthcare professional knowledgeable in the indications, implications, and interpretations of HIV antibody testing.
6. Expert consultation will be sought under the following situations:
 - a. Exposure is reported later than 72 hours after the incident;
 - b. Source of exposure is unknown (e.g., needle stick from sharps container);
 - c. Exposed healthcare personnel is pregnant or breastfeeding;
 - d. Known resistance of source virus to one or more anti-retroviral agents;
 - e. Adverse reaction(s) to the medication regimen; and/or
 - f. Significant underlying illness of the exposed healthcare personnel.
7. All counseling, testing, and maintenance of files will be performed in a confidential manner.
8. The HIV status of the source individual will be determined (upon consent) as soon as possible after the exposure incident.
9. The source individual will be tested in accordance with current federal, state, and/or local regulations governing antibody testing. An informed consent from the source individual (or legal representative) will be obtained before conducting an HIV antibody test.
10. Baseline and follow-up testing (frequency and duration) of exposed healthcare personnel will be consistent with current guidelines and recommendations regarding PEP. Current recommendations are:

continues on next page

- a. HIV tests at baseline (within 72 hours of reported exposure), then follow-up tests at 6 weeks, 12 weeks and 6 months after exposure.
 - b. If 4th generation (combination HIV p24 antigen–HIV antibody) test is used, test at baseline, 6 weeks and 4 months after exposure.
11. HIV test results will be forwarded to the healthcare professional selected by the facility, or chosen by the exposed individual, who will coordinate post-test counseling and therapy, as indicated and in accordance with current guidelines.
 12. Anti-retroviral therapy of exposed healthcare personnel will be implemented under the consultation of a physician or provider who has experience and expertise in the administration of anti-retroviral therapy and HIV transmission.
 13. Medication regimen will be started (upon consent) as soon as possible after occupational exposure.
 14. Exposed healthcare personnel will be counseled about the risks and benefits of post-exposure anti-viral therapy.
 15. Medication regimen and duration will follow current guidelines and recommendations for post-exposure prophylaxis.
 16. Healthcare personnel receiving anti-retroviral therapy will be monitored for drug toxicity, adverse effects, and potential drug interactions. Complete blood counts and renal and hepatic function tests should be ordered at baseline and 2 weeks after exposure. If toxicities are identified, an expert will be consulted for possible modification of the regimen.
 17. Should an employee be exposed to the blood of a known HIV antibody positive person, the employee will be offered the option of entering the Centers for Disease Control’s (CDC) prospective surveillance system.

Influenza, Prevention and Control of Seasonal

Policy Statement

This facility follows current guidelines and recommendations for the prevention and control of seasonal influenza.

Policy Interpretation and Implementation

1. The prevention of seasonal influenza outbreaks is a coordinated effort which is organized by the infection preventionist and overseen by the medical director.
2. The strategies for prevention are reviewed annually and revised as necessary.

Vaccination

1. The Infection Preventionist organizes and oversees an annual influenza vaccine campaign.
2. All residents and staff are offered the vaccine prior to the onset of the influenza season.
3. All residents and staff are encouraged to receive the vaccine unless there is a medical contraindication.
4. Systematic strategies to improve staff vaccination rates may include:
 - a. Providing education about the risks and benefits of vaccination;
 - b. Providing vaccine at no cost to staff;
 - c. Improving access (e.g., offering vaccination at work and during work hours); and
 - d. Mandating influenza vaccination for staff without contraindication.

Surveillance

1. When there is influenza activity in the local community, or one laboratory-confirmed influenza case is identified in the facility, active daily surveillance for influenza illness is conducted among all new and current residents, healthcare personnel and visitors.

Environmental Cleaning

1. Established procedures for environmental cleaning are based on current CDC recommendations.
2. Standard cleaning and disinfection procedures are used for influenza virus environmental control in all settings within the facility.
3. Management of laundry, food service utensils, and medical waste are also performed in accordance with standard procedures.

Training and Education

1. All staff receive job- or task-specific education and training on preventing transmission of infectious agents, including influenza, during orientation to the facility.
2. Key aspects of influenza prevention and control training include:
 - a. The modes of influenza transmission;
 - b. Influenza signs, symptoms, complications, and risk factors for complications;

continues on next page

- c. Self-assessment and reporting of signs and symptoms of influenza;
 - d. Employee sick leave policies;
 - e. Review of standard and transmission-based precautions;
 - f. Appropriate use of personal protective equipment; and
 - g. Engineering controls, work practices and procedures to reduce exposure.
3. New or revised information is provided during subsequent education and training programs.
 4. Competencies are evaluated and documented, as appropriate, for specific staff positions.
 5. Staff employed by outside employers must meet these education and training requirements through programs offered by the outside employer or by participation in our programs.

Visitation

1. During periods of increased influenza activity in the community steps are taken to minimize elective visits by individuals with suspected or confirmed influenza.
2. Visitor restrictions may be considered at the discretion of the administrative staff, including the Director of Nursing Services, the Administrator and the Infection Preventionist.
3. All visitors are instructed to follow respiratory hygiene and cough etiquette precautions.

Influenza Control

Symptomatic Residents and Visitors

1. Residents and visitors are asked to inform staff if they have symptoms of any respiratory infection (e.g., cough, runny nose, fever).
2. This request is made as part of the admission assessment process and/or during screening for communicable diseases.
3. Residents and visitors are reminded to report signs and symptoms of respiratory infection through the posting of signs at the entrance to and in public areas of the facility.
4. Staff are trained in recognizing and reporting signs of respiratory illness observed in residents.
5. All persons with symptoms of a respiratory infection are encouraged to adhere to respiratory hygiene, cough etiquette and hand hygiene procedures throughout the duration of the stay/visit.
6. Visits to residents on precautions for influenza are scheduled and controlled to allow for:
 - a. screening visitors for symptoms of acute respiratory illness before entering the facility; and
 - b. providing instruction, before visitors enter residents' rooms, on hand hygiene, limiting surfaces touched, and use of personal protective equipment (PPE) while in the resident's room.
7. Visual alerts (e.g., signs, posters) are posted at the entrance to and in common areas of the facility to provide residents, visitors and staff with instructions about respiratory hygiene and cough etiquette. Instructions (in appropriate languages) include:
 - a. How to use facemasks or tissues to cover nose and mouth when coughing or sneezing and to dispose of contaminated items in waste receptacles; and
 - b. How and when to perform hand hygiene.

continues on next page

8. Any resident with signs and symptoms of respiratory infection may be asked to take appropriate preventive actions (e.g., wearing a face mask) until he or she can be evaluated by a clinician.
9. Facemasks are provided to visitors with signs and symptoms of respiratory infection.
10. Supplies to perform hand hygiene are available to all residents and visitors in common areas and in resident rooms.

Symptomatic Healthcare Workers

1. The Infection Preventionist and/or designee monitors and manages ill healthcare personnel.
2. Staff who develop fever and respiratory symptoms are:
 - a. Instructed not to report to work, or if at work, to stop resident-care activities, don a facemask, and promptly notify their supervisor and the Infection Preventionist and/or designee before leaving work.
 - b. Excluded from work until at least 24 hours after they no longer have a fever (without the use of fever-reducing medicines such as acetaminophen). Those with ongoing respiratory symptoms will be considered for evaluation by the Infection Preventionist and/or designee to determine appropriateness of contact with residents.
 - c. Considered for temporary reassignment or exclusion from work for 7 days from symptom onset or until the resolution of symptoms, whichever is longer, if returning to care for immunocompromised residents.
3. Staff with fever alone will follow the general policy for staff with fever until a more specific cause of fever is identified or until fever resolves.
4. Staff who develop acute respiratory symptoms without fever may still have influenza infection and are evaluated by the Infection Preventionist to determine appropriateness of contact with residents.
5. If assigned to care for immunocompromised residents the Infection Preventionist may consider, temporary reassignment or exclusion of staff from work for 7 days from symptom onset or until the resolution of all non-cough symptoms, whichever is longer.
6. Sick leave policies for staff are non-punitive, flexible and consistent with public health guidance to allow and encourage staff with suspected or confirmed influenza to stay home.

Laboratory Testing for Influenza

1. Laboratory testing for influenza is considered for residents (whether or not it is influenza season):
 - a. with signs or symptoms of influenza ([Table 2](#)); OR
 - b. for high risk residents ([Table 4](#)) who have atypical signs and symptoms ([Table 3](#)); AND
 - c. for residents in which test results will influence clinical management.
2. Confirmation of influenza infection by laboratory testing is not required in order to prescribe antiviral medication, and antiviral treatment is not delayed while awaiting test results.

continues on next page

Antiviral Medication

1. Antiviral Treatment and Chemoprophylaxis are administered to residents and staff when appropriate, and in accordance with current CDC guidelines.

Infection Precautions

1. Contact and droplet precautions are implemented for residents with suspected or confirmed influenza for seven (7) days after illness onset or until 24 hours after the resolution of fever and respiratory symptoms, whichever is longer. Precautions may be applied for longer periods based on clinical judgment.
2. Information about residents with suspected, probable, or confirmed influenza is communicated to appropriate personnel before transferring them to other departments in the facility or to other facilities.
3. Residents are discharged from care when clinically appropriate, not based on the period of potential virus shedding or recommended duration of transmission-based precautions. Before discharge, the resident's diagnosis and current precautions are provided to care providers as well as transporting personnel.
4. Precautions for aerosol-generating procedures (e.g., suctioning, intubation, etc.) include:
 - a. Only performing these procedures on residents with suspected or confirmed influenza if they are medically necessary and cannot be postponed;
 - b. Limiting the number of staff present during the procedure to only those essential for resident care and support;
 - c. Conducting the procedures in an airborne infection isolation room (AIIR) when feasible;
 - d. Considering use of portable HEPA filtration units to further reduce the concentration of contaminants in the air;
 - e. Wearing respiratory protection equivalent to a fitted N95 filtering face piece respirator or equivalent N95 respirator; and
 - f. Conducting environmental surface cleaning following procedures.
5. Work accommodations to avoid potentially high-risk exposure scenarios, such as performing or assisting with aerosol-generating procedures on residents with suspected or confirmed influenza, are considered for staff at high risk for complications.

Measles Prevention and Control

Policy Statement

1. Staff members will provide documentation of measles vaccine (MMR) and comply with the measles prevention policy outlined below.
2. Residents with signs or symptoms of measles are identified promptly.

Policy Interpretation and Implementation

1. Staff members are to provide written documentation of presumptive immunity to measles, including:
 - a. Documentation of vaccination with 2 doses of measles vaccine:
 - (1) The first dose administered at age 12 months or after; and
 - (2) Second dose at least 28 days after the first; OR
 - b. Laboratory evidence of immunity; OR
 - c. Laboratory confirmation of disease; OR
 - d. Birth before 1957.¹
2. Staff members without presumptive immunity to measles are not permitted to enter the room or provide care to residents with known or suspected measles infection.
3. The Infection Preventionist is responsible for monitoring facility and community infection rates of measles.
4. If measles infection is reported in the community, visitors are screened for signs and symptoms of measles infection before entering the facility.
5. During a measles outbreak, residents, staff and visitors are evaluated for exposure to measles (see *Evaluating a Person for Exposure to Measles in a Healthcare Setting*).
6. Visitors with known or suspected measles exposure or infection are asked to limit or stop visitation with residents until infection is resolved.
7. The Infection Preventionist reports known or suspected measles cases within the facility to the public health authorities.

Management of Staff Members Who are Exposed or Infected

1. Staff without presumptive immunity who are exposed to measles:
 - a. receive post-exposure prophylaxis²; AND
 - b. are excluded from work from the 5th day after the first exposure to the 21st day after the last exposure.

-
1. During a measles outbreak, evidence of two previous doses of measles vaccine is required, regardless of birth year.
 2. If a healthcare provider without evidence of immunity is exposed to measles, MMR vaccine should be given within 72 hours, or immunoglobulin should be given within 6 days when available.

continues on next page

2. If a healthcare provider without evidence of immunity is exposed to measles, MMR vaccine should be given within 72 hours, or immunoglobulin should be given within 6 days when available.
3. Staff who received the first dose of MMR prior to exposure:
 - a. may remain at work;
 - b. must obtain the second dose of vaccine at least 28 days after the first; and
 - c. are monitored for signs and symptoms for at least 21 days after the last exposure.
4. Staff with known or suspected measles infection are excluded from work for 4 days after the rash appears (onset of rash is considered day “0”). Immunosuppressed individuals are excluded from work for the duration of the illness.

Management of Residents Who are Exposed or Infected

1. Residents without presumptive immunity who are exposed to measles:
 - a. are placed on airborne precautions for 21 days after last exposure, or until discharge (if earlier); AND
 - b. receive post-exposure prophylaxis, as ordered.
2. Residents with signs or symptoms of measles are placed on airborne precautions. Airborne precautions will remain in place for 4 days after the onset of rash (onset of rash is considered day “0”).
3. Rooms of residents infected with measles are cleaned using standard cleaning and disinfecting procedures.
4. Disposable PPE and resident-care items of residents with measles infection are treated as medical waste, in accordance with local and federal regulations.

Outbreak Considerations

1. The infection preventionist will communicate and collaborate with public health authorities regarding outbreak management, including surveillance, reporting and managing large numbers of residents who require airborne precautions.

MRSA – Management of Recurrent Skin and Soft Tissue Infection

Policy Statement

Strategies for the management of recurrent skin and soft tissue infections (SSTI) with methicillin-resistant *Staphylococcus aureus* are consistent with current practice guidelines.

Policy Interpretation and Implementation

1. When the infection preventionist or infection prevention and control committee (based on national or local regulations) deems MRSA to be of special clinical and/or epidemiologic significance to a resident or the facility, contact precautions will be initiated. The components of contact precautions may be adapted for use, especially if the resident has draining wounds or difficulty controlling body fluids.
2. Educate staff and residents about the need for personal hygiene and appropriate wound care, including:
 - a. Keeping draining wounds covered with clean, dry bandages;
 - b. Performing hand hygiene after touching infected area or any item that has been in contact with the wound;
 - c. Encouraging/assisting resident with regular bathing; and
 - d. Not allowing residents to share or reuse items that have come in contact with infected skin.
3. Enforce strict environmental cleaning procedures, including:
 - a. Focusing cleaning efforts on high-touch surfaces (e.g., door knobs, counters, bath tubs and showers, toilet seats, etc.); and
 - b. Using CDC recommended cleaners appropriate for the surface being cleaned.
4. Decolonization may be considered in the following situations:
 - a. A resident develops a recurrent SSTI despite optimizing wound care and hygiene measures; or
 - b. Ongoing transmission is occurring among residents or other close contacts despite optimizing wound care and hygiene measures.
5. Decolonization requires a physician order. Strategies may include:
 - a. Nasal decolonization with mupirocin twice daily for 5–10 days; or
 - b. Nasal decolonization with mupirocin twice daily for 5–10 days and topical body decolonization regimens with a skin antiseptic solution (e.g., chlorhexidine) for 5–14 days or dilute bleach baths.
 - (1) For dilute bleach baths, 1 teaspoon per gallon of water (or ¼ cup per ¼ tub or 13 gallons of water) given for 15 minutes twice weekly for 3 months.
6. In cases where interpersonal transmission is suspected:
 - a. Reinforce personal and environmental hygiene strategies; and
 - b. Evaluate contacts for evidence of *S. aureus* infection.
 - (1) Recommend evaluation and treatment of symptomatic contacts; and
 - (2) Recommend the possible decolonization for asymptomatic contacts.
7. Screening cultures prior to decolonization are not recommended if at least one of the previous infections was due to MRSA.

continues on next page

8. Surveillance cultures following decolonization are not recommended in the absence of active infection.
9. Surveillance and reporting of confirmed MRSA infections through the NHSN is recommended.

Related Documents	Isolation – Categories of Transmission-Based Precautions Multidrug-Resistant Organisms NHSN Protocol: Laboratory-identified Multidrug-Resistant Organism (MDRO) & Clostridium difficile Infection (CDI) Events for Long-term Care Facilities (LTCFs)
Version	1.2 (H5MAPL1423)

Multidrug-Resistant Organisms

Policy Statement

Appropriate precautions are taken when caring for individuals known or suspected to have infection with a multidrug-resistant organism.

Policy Interpretation and Implementation

General Guidelines

1. Multidrug-resistant organisms (MDROs) are bacteria and other microorganisms that have developed resistance to one or more classes of antimicrobial drugs.
2. Infection means that the organism is present and is causing illness. Colonization means that the organism is present in or on the body but is not causing illness.

General Prevention and Control of MDROs

The following strategies are adopted from the Centers for Disease Control and Prevention and provide current recommendations for MDRO prevention and control. These recommendations are incorporated into the facility infection prevention and control processes as indicated.

Administrative

1. Make MDRO prevention/control an organizational priority.
2. Provide administrative support and both fiscal and human resources to prevent and control MDRO transmission.
3. Identify experts who can provide consultation and expertise for analyzing epidemiologic data, recognizing MDRO problems, or devising effective control strategies, as needed.
4. Implement systems to communicate information about reportable MDROs to administrative personnel and state/local health departments.
5. Implement a multi-disciplinary process to monitor and improve staff adherence to recommended practices for Standard and Contact Precautions.
6. Implement systems to designate residents known to be colonized or infected with a targeted MDRO and to notify receiving healthcare facilities or personnel prior to transfer of such residents within or between facilities.
7. Support participation in local, regional and/or national coalitions to combat emerging or growing MDRO problems.
8. Provide updated feedback at least annually to healthcare providers and administrators on facility and resident- care unit MDRO infections. Include information on changes in prevalence and incidence, problem assessment and performance improvement plans.

continues on next page

Education/Training

1. Provide education and training on risks and prevention of MDRO transmission during orientation and periodic educational updates for staff. Include information on organizational experience with MDROs and prevention strategies.

Antimicrobial Use

1. Ensure that a multi-disciplinary process is in place to review local susceptibility patterns (antibiograms), and antimicrobial agents included in the formulary, to foster appropriate antimicrobial use.
2. Implement systems (e.g., CPOE, susceptibility report comment, pharmacy or unit director notification) to prompt clinicians to use the appropriate agent and regimen for the given clinical situation.
3. Provide clinicians with antimicrobial susceptibility reports and analysis of current trends, updated at least annually, to guide antimicrobial prescribing practices.
4. In settings with limited electronic communication system infrastructures to implement physician prompts, etc., at a minimum implement a process to review antibiotic use. Prepare and distribute reports to providers.

Surveillance

1. Use standardized laboratory methods and follow published guidelines for determining antimicrobial susceptibilities of targeted and emerging MDROs.
2. Establish systems to ensure that clinical micro labs (in-house and outsourced) promptly notify infection control or a medical director/designee when a novel resistance pattern for that facility is detected.
3. Develop and implement laboratory protocols for storing isolates of selected MDROs for molecular typing when needed to confirm transmission or delineate epidemiology of MDRO in facility.
4. Establish laboratory-based systems to detect and communicate evidence of MDROs in clinical isolates.
5. Prepare facility-specific antimicrobial susceptibility reports as recommended by CLSI and monitor reports for evidence of changing resistance that may indicate emergence or transmission of MDROs.
6. Develop and monitor special-care unit-specific antimicrobial susceptibility reports (e.g., ventilator-dependent units, ICUs, oncology units).
7. Monitor trends in incidence of target MDROs in the facility over time to determine if MDRO rates are decreasing or if additional interventions are needed.

Infection Precautions

1. Follow Standard Precautions in all situations.
2. Consider the individual resident's clinical situation and facility resources in deciding whether to implement Contact Precautions.
3. Masks are not recommended for routine use to prevent transmission of MDROs from residents to HCWs.
4. Use masks according to Standard Precautions when performing splash-generating procedures, caring for residents with open tracheostomies with potential for projectile secretions, and when there is evidence for transmission from heavily colonized sources (e.g., burn wounds).

continues on next page

Room Placement

1. When single-resident rooms are available, assign priority for these rooms to residents with known or suspected MDRO colonization or infection.
2. Give highest priority to those residents who have conditions that may facilitate transmission, e.g., uncontained secretions or excretions.
3. When single-resident rooms are not available, cohort residents with the same MDRO in the same room or resident-care area.
4. When cohorting residents with the same MDRO is not possible, place MDRO residents in rooms with residents who are at low risk for acquisition of MDROs and associated adverse outcomes from infection and are likely to have short lengths of stay.

Environmental Cleaning

1. Follow recommended cleaning, disinfection and sterilization guidelines for maintaining resident care areas and equipment.
2. Dedicate non-critical medical items to use on individual residents known to be infected or colonized with an MDRO. Prioritize room cleaning of residents on Contact Precautions. Focus on cleaning and disinfecting frequently touched surfaces (e.g., bed rails, bedside commodes, bathroom fixtures in resident rooms, doorknobs) and equipment in immediate vicinity of resident.

Decolonization

1. Routine decolonization of residents is not recommended.

Intensified interventions to prevent MDRO transmission

Indications and Approach

1. Indications for intensified MDRO control efforts:
 - a. When incidence or prevalence of MDROs are not decreasing despite implementation of and correct adherence to the routine control measures described above; or
 - b. When the first case or outbreak of an epidemiologically important MDRO (e.g., VRE, MRSA, VISA, VRSA, MDR-GNB) is identified within a healthcare facility or unit.
2. Indications for intensified MDRO control efforts should result in selection and implementation of one or more of the interventions/measures described below. Individualize the selection of control measures according to local considerations.
3. Continue to monitor the incidence of target MDRO infection and colonization after additional interventions are implemented. If rates do not decrease, implement more interventions as needed to reduce MDRO transmission.

Administrative Measures

1. Identify persons with experience in infection control and the epidemiology of MDRO, either in house or through outside consultation, for assessment of the local MDRO problem and for the design, implementation, and evaluation of appropriate control measures.

continues on next page

2. Provide necessary leadership, funding, and day-to-day oversight to implement interventions selected. Involve the governing body and leadership of the healthcare facility or system that have organizational responsibility for this and other infection control efforts.
3. Evaluate healthcare system factors for their role in creating or perpetuating transmission of MDROs, including: staffing levels, education and training, availability of consumable and durable resources, communication processes, policies and procedures, and adherence to recommended infection control measures (e.g., hand hygiene and Standard or Contact Precautions). Develop, implement, and monitor action plans to correct system failures.
4. During the process, update healthcare providers and administrators on the progress and effectiveness of the intensified interventions. Include information on changes in prevalence, rates of infection and colonization; results of assessments and corrective actions for system failures; degrees of adherence to recommended practices; and action plans to improve adherence to recommended infection control practices to prevent MDRO transmission.

Educational Interventions

1. Intensify the frequency of MDRO educational programs for healthcare personnel, especially those who work in areas in which MDRO rates are not decreasing. Provide individual or unit-specific feedback when available.

Antimicrobial Use

1. Review the role of antimicrobial use in perpetuating the MDRO problem targeted for intensified intervention. Control and improve antimicrobial use as indicated. Antimicrobial agents that may be targeted include vancomycin, third-generation cephalosporins, and anti-anaerobic agents for VRE; third-generation cephalosporins for ESBLs; and quinolones and carbapenems.

Surveillance

1. Calculate and analyze prevalence and incidence rates of targeted MDRO infection and colonization in populations at risk. When possible, distinguish colonization from infection.
2. Include only one isolate per resident, not multiple isolates from the same resident, when calculating rates.
3. Increase the frequency of compiling and monitoring antimicrobial susceptibility summary reports for a targeted MDRO as indicated by an increase in incidence of infection or colonization with that MDRO.
4. Develop and implement protocols to obtain active surveillance cultures (ASC) for targeted MDROs from residents in populations at risk (e.g., patients in intensive care, burn, bone marrow/stem cell transplant, and oncology units; residents transferred from facilities known to have high MDRO prevalence rates; roommates of colonized or infected persons; and residents known to have been previously infected or colonized with an MDRO).
5. Obtain ASC from areas of skin breakdown and draining wounds. In addition, include the following sites according to target MDROs:
 - a. For MRSA: Sampling the anterior nares is usually sufficient. Throat, endotracheal tube aspirate, percutaneous gastrostomy sites, and perirectal or perineal cultures may be added to increase the yield. Swabs from several sites may be placed in the same selective broth tube prior to transport.
 - b. For VRE: Stool, rectal, or perirectal samples should be collected.
 - c. For MDR-GNB (gram-negative bacilli): Endotracheal tube aspirates or sputum should be cultured if a respiratory tract reservoir is suspected, (e.g., *Acinetobacter* spp., *Burkholderia* spp.).

continues on next page

6. Obtain surveillance cultures for the target MDRO from residents at the time of admission to high-risk areas, e.g., ICUs, and at periodic intervals as needed to assess MDRO transmission.
7. Conduct culture surveys to assess the efficacy of the enhanced MDRO control interventions.
8. Conduct serial (e.g., weekly, until transmission has ceased and then decreasing frequency) unit-specific point prevalence culture surveys of the target MDRO to determine if transmission has decreased or ceased.
9. Repeat point prevalence culture surveys at routine intervals or at time of resident discharge or transfer until transmission has ceased.
10. If indicated by assessment of the MDRO problem, collect cultures to assess the colonization status of roommates and other residents with substantial exposure to residents with known MDRO infection or colonization.
11. Obtain cultures of healthcare personnel for target MDRO when there is epidemiologic evidence implicating the healthcare staff member as a source of ongoing transmission.

Enhanced Infection Control Precautions

Use of Contact Precautions

1. Implement Contact Precautions routinely for all residents colonized or infected with a target MDRO.
2. Because environmental surfaces and medical equipment, especially those in close proximity to the resident, may be contaminated, don gowns and gloves before or upon entry to the resident's room or cubicle.
3. Modify Contact Precautions to allow MDRO colonized/infected residents whose site of colonization or infection can be appropriately contained and who can observe good hand hygiene practices to enter common areas and participate in group activities.
4. When ASC are obtained as part of an intensified MDRO control program, implement Contact Precautions until the surveillance culture is reported negative for the target MDRO.
5. No recommendation is made regarding universal use of gloves, gowns, or both in high-risk units in acute-care hospitals.

Resident Admission and Room Placement

1. Place MDRO residents in single-resident rooms.
2. Cohort residents with the same MDRO in designated areas (e.g., rooms, bays, resident care areas).
3. When transmission continues despite adherence to Standard and Contact Precautions and cohorting residents, assign dedicated nursing and ancillary service staff to the care of MDRO residents only. Some facilities may consider this option when intensified measures are first implemented.
4. Stop new admissions to the unit of facility if transmission continues despite the implementation of the enhanced control measures described above. (Refer to state or local regulations that may apply upon closure of units or services.)

continues on next page

Enhanced Environmental Measures

1. Implement resident-dedicated or single-use disposable noncritical equipment (e.g., blood pressure cuff, stethoscope), instruments and devices.
2. Intensify and reinforce training of environmental staff who work in areas targeted for intensified MDRO control and monitor adherence to environmental cleaning policies. Some facilities may choose to assign dedicated staff to targeted resident care areas to enhance consistency of proper environmental cleaning and disinfection services.
3. Monitor (i.e., supervise and inspect) cleaning performance to ensure consistent cleaning and disinfection of surfaces in close proximity to the resident and those likely to be touched by the resident and staff (e.g., bedrails, carts, bedside commodes, doorknobs, faucet handles).
4. Obtain environmental cultures (e.g., surfaces, shared medical equipment) when there is epidemiologic evidence that an environmental source is associated with ongoing transmission of the targeted MDRO.
5. Vacate units for environmental assessment and intensive cleaning when previous efforts to eliminate environmental reservoirs have failed.

Decolonization

1. Consult with physicians with expertise in infectious diseases and/or healthcare epidemiology on a case-by-case basis regarding the appropriate use of decolonization therapy for residents or staff during limited periods of time, as a component of an intensified MRSA control program.
2. When decolonization for MRSA is used, perform susceptibility testing for the decolonizing agent against the target organism in the individual being treated or the MDRO strain that is epidemiologically implicated in transmission. Monitor susceptibility to detect emergence of resistance to the decolonizing agent. Consult with a microbiologist for appropriate testing for mupirocin resistance, since standards have not been established.
 - a. Because mupirocin-resistant strains may emerge and because it is unusual to eradicate MRSA when multiple body sites are colonized, do not use topical mupirocin routinely for MRSA decolonization of residents as a component of MRSA control programs in any healthcare setting.
 - b. Limit decolonization of staff found to be colonized with MRSA to persons who have been epidemiologically linked as a likely source of ongoing transmission to residents. Consider reassignment of staff if decolonization is not successful and ongoing transmission to residents persists.
3. No recommendation can be made for decolonizing residents with VRE or MDR-GNB. Regimens and efficacy of decolonization protocols for VRE and MDR-GNB have not been established.

Novel or Targeted MDROs

1. Strategies to identify targeted MDROs include:
 - a. Surveillance of clinical cultures (retrospective and prospective) to identify organisms with patterns of resistance;
 - b. Additional follow-up testing of saved isolates with certain resistance phenotypes; and
 - c. Periodic point prevalence surveys on high-risk units.
2. When a novel or emerging MDRO is identified (facility- or community-based), colonization screening and containment strategies are implemented.

continues on next page

3. Measures to control transmission are based on response tiers (Tier 1, 2, or 3 organisms)(see <https://www.cdc.gov/hai/containment/guidelines.html>) and include:
 - a. Investigation of the resident’s healthcare exposure prior to and after the positive culture;
 - b. Contact investigation; and
 - c. Infection control measures.
4. The infection preventionist consults the health department for assignment of specific organisms to tiers.
5. For MDROs that are not identified as novel or emerging, the following precautions are implemented, as appropriate. Specific precautions indicated by organism are determined by the infection preventionist.

Table 1: Summary of Response Recommendations for Containment of Novel or Targeted MDROs by Tier

Description	Tier 1 Resistance mechanisms never or very rarely identified in the United States; pan-resistant organisms with the potential for wider spread in a region	Tier 2 Mechanisms and organisms not regularly found in a region	Tier 3 Mechanisms and organisms regularly found in a region but not endemic
Healthcare Investigation			
Review the resident’s healthcare exposures prior to and after the positive culture	Always	Always	Always
Contact Investigation			
Screening of healthcare roommates	Always	Always	Always
Broader screening of healthcare contacts	Always	Sometimes	Sometimes
Prospective lab surveillance	Always	Always	Always
Retrospective lab surveillance	Always	Always	Sometimes
Household contact screening	Sometimes	Rarely	Rarely
Environmental sampling	Sometimes	Rarely	Rarely
Healthcare personnel screening	Sometimes	Rarely	Rarely
Evaluate potential spread to healthcare facilities that regularly share residents with the index healthcare facility	Sometimes	Sometimes	Rarely
Infection Control Measures			
Prompt notification of healthcare providers and resident and implementation of appropriate transmission-based precautions	Always	Always	Always
Clear communication of resident status with transferring facilities	Always	Always	Always
On-site infection control assessment with observations of practice	Always	Always	Sometimes

Norovirus Prevention and Control

Policy Statement

This facility will implement strict infection control measures to prevent the transmission of norovirus infection.

Policy Interpretation and Implementation

1. Avoid exposure to vomitus or diarrhea. Place residents on Contact Precautions in a single occupancy room, if possible, when symptoms are consistent with norovirus gastroenteritis.
2. When residents with norovirus gastroenteritis cannot be accommodated in single occupancy rooms, efforts will be made to separate them from asymptomatic residents.
3. Approaches for cohorting residents during outbreaks may include placing residents in multi-occupancy rooms, or designating resident care areas or contiguous sections within the facility for resident cohorts.
4. During outbreaks, residents with norovirus gastroenteritis will be placed on Contact Precautions for a minimum of 48 hours after the resolution of symptoms.
5. Longer periods of isolation or cohorting for medically complex residents may be considered based on clinical judgment.
6. The following may be considered in an effort to prevent or control norovirus transmission during outbreaks:
 - a. Minimizing resident movements within the unit;
 - b. Restricting symptomatic and recovering residents from leaving the resident-care area unless it is for essential care or treatment; and
 - c. Suspending group activities (e.g., dining events) for the duration of an outbreak.
7. During outbreaks, use soap and water for hand hygiene after providing care or having contact with residents suspected or confirmed with norovirus gastroenteritis.
8. Perform routine cleaning and disinfection of frequently touched environmental surfaces and equipment in isolation and cohorted areas, as well as high-traffic clinical areas. Frequently touched surfaces include, but are not limited to, commodes, toilets, faucets, hand/bed railing, telephones, door handles, computer equipment, and kitchen preparation surfaces.
9. Clean and disinfect shared equipment between residents using EPA-registered products with label claims for use in healthcare. Follow the manufacturer's recommendations for application and contact times. The EPA lists products with activity against norovirus on their website.
10. During outbreaks of norovirus gastroenteritis unit level cleaning will be increased to twice daily, with frequently touched surfaces cleaned and disinfected three times daily using EPA-approved products for healthcare settings.
11. Clean and disinfect surfaces starting from the areas with a lower likelihood of norovirus contamination (e.g., tray tables, counter tops) to areas with highly contaminated surfaces (e.g., toilets, bathroom fixtures). Change mop heads when a new bucket of cleaning solution is prepared or after cleaning large spills of emesis or fecal material.

continues on next page

12. All disposable resident-care items will be discarded and unused linens laundered after residents on isolation for norovirus gastroenteritis are discharged or transferred. Minimize waste by limiting the number of disposable items brought into rooms/areas with residents on Contact Precautions.
13. Use Standard Precautions for handling soiled resident-service items or linens, including the use of appropriate PPE.
14. During outbreaks, change privacy curtains when they are visibly soiled and upon resident discharge or transfer.
15. Handle soiled linens carefully, without agitating them, to avoid dispersal of virus. Use Standard Precautions, including the use of appropriate PPE (e.g., gloves and gowns), to minimize the likelihood of cross-contamination.
16. Double bagging, incineration, or modifications for laundering are not indicated for handling or processing soiled linen.
17. Clean surfaces and resident equipment prior to the application of a disinfectant. Follow the manufacturer's recommendations for optimal disinfectant dilution, application, and surface contact time with an EPA-approved product with claims against norovirus.
18. To prevent food-related outbreaks of norovirus gastroenteritis in healthcare settings, food handlers must perform hand hygiene prior to contact with or the preparation of food items and beverages.
19. Personnel who work with, prepare or distribute food will be excluded from duty if they develop symptoms of acute gastroenteritis. Personnel will not return to these activities until a minimum of 48 hours after the resolution of symptoms or longer as required by local health regulations.
20. All shared or communal food items for residents or staff will be removed from clinical areas for the duration of the outbreak.
21. Healthcare personnel who have symptoms consistent with norovirus infection will adhere to sick leave policies.
22. Ill personnel will be excluded from work for a minimum of 48 hours after the resolution of symptoms. Once personnel return to work, the importance of performing frequent hand hygiene will be reinforced, especially before and after each resident contact.
23. In the event of an outbreak of norovirus gastroenteritis, staff will care for one resident cohort on their unit and will not move between resident cohorts (e.g., resident cohorts may include symptomatic, asymptomatic exposed, or asymptomatic unexposed resident groups).
24. Non-essential visitors will be restricted from affected areas of the facility during outbreaks of norovirus gastroenteritis.
25. If it is necessary to have continued visitor privileges during outbreaks, visitors with symptoms consistent with norovirus infection will be screened and excluded. All visitors will comply with hand hygiene and Contact Precautions.

Scabies Identification, Treatment and Environmental Cleaning

Level III

Purpose

The purpose of this procedure is to treat residents infected with and sensitized to *Sarcoptes scabiei* and to prevent the spread of scabies to other residents and staff.

Preparation

1. Obtain or verify the existence of a physician's order for this procedure.
2. Review the resident's care plan to assess for any special needs of the resident.
3. Assemble the equipment and supplies as needed.

General Guidelines

1. Scabies is an itching skin irritation caused by the microscopic human itch mite, which burrows into the skin's upper layers and eventually causes itching, tiny irregular red lines just above the skin and an allergic rash.
2. Secondary bacterial skin infections may result from untreated scabies.
3. Incubation period can be 2–6 weeks before onset of itching for persons with no previous exposure. Persons who have been previously infested develop more rapid symptoms, 1–4 days after re-exposure.
4. Symptoms sometimes include severe itching, which worsens at night.
5. Common locations of scabies:
 - a. Anterior axillary region or under breasts;
 - b. Around the waist;
 - c. Between fingers and palm of hand;
 - d. On the inner thigh, groin, buttocks;
 - e. Anterior surfaces of wrists and elbows;
 - f. On body parts which may come in contact with contaminated linens, bedding, or clothing;
 - g. Upper backs of nursing home residents; and
 - h. On hands of employees.
6. Scabies is spread by skin to skin contact with the infected area, or through contact with bedding, clothing, privacy curtains and some furniture.
7. Diagnosis may be established by recovering the mite from its burrow and identifying it microscopically. Failure to identify scrapings as positive does not necessarily exclude the diagnosis. It is difficult to obtain a positive scraping because only one or two mites may cause multiple lesions. Often diagnosis is made from signs and symptoms and treatment followed without scrapings, although scrapings are preferred.
8. Affected residents should remain on Contact Precautions until twenty-four (24) hours after treatment.
9. Family and friends of residents who have had close contact should be notified and given instructions regarding self-examination and treatment.
10. Staff members who may have been exposed should report any rashes developing on their bodies to the Infection Preventionist or Director of Nursing Services.

continues on next page

11. A resident sharing a room with someone infected with scabies should be examined carefully for scabies. If signs and symptoms are present, the resident should be treated in accordance with these procedures. If symptoms are not present, daily assessments should be made until the case has resolved.
12. Individuals who come into contact with the infected resident or with potentially contaminated bedding or clothing should wear a gown and gloves or other protective clothing as established by the facility's infection and exposure control programs.
13. During a scabies outbreak among residents and/or personnel, the Infection Preventionist or Committee will coordinate interdepartmental planning to facilitate a rapid and effective treatment program.
14. Control of an epidemic depends on treating all residents at risk. Specific drug selection for each resident will depend on that individual's risk factors, possible medication interactions, etc.
15. The use of Ivermectin po should be considered during widespread outbreak and/or when treatment with topical medication is unsuccessful.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure.

1. Magnifying glass;
2. Pen light;
3. Felt tip pen;
4. Alcohol swabs;
5. #15 scalpel blade and handle;
6. Glass slides or curettes (for scraping);
7. Mineral oil;
8. Slides and cover slips;
9. Clear nail polish;
(1) Forceps;
10. Elimite® (or other treatment lotion) or Ivermectin (oral dosage);
11. Disinfectant; and
12. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

Skin Scraping for Microscopic Identification

1. Assess the resident's skin with a magnifying lens and look for lesions suggestive of scabies infestation.
 - a. The shoulders, back, abdomen, hands, wrists, elbows, buttocks, axillae, knees, thighs and breasts are common sites for burrows.
 - b. A bright light and magnifying lens will assist in visualizing the tiny dark speck (the mite) at the end of the burrow.
2. Test for burrows:
 - a. Using a wide felt tip pen (blue or green are best) draw over the burrows and then wipe off with an alcohol swab.
 - b. The alcohol will remove most surface ink, but will not remove the ink taken up by the burrow. Look for a dark irregular line.
3. Apply mineral oil to lesions or scalpel blade, and glass slides.
4. Scrape non-excoriated, non-inflamed areas (burrows and papules) with the scalpel blade or glass slide held at a 90-degree angle to the skin.

continues on next page

5. Scrape while holding the skin taut, until the stratum corneum is removed.
 - a. Vigorous scraping appropriately results in a few red blood cells visible under the microscope, but there should not be frank bleeding.
6. If using a curette.
 - a. Change blades or curettes between scrapings on different persons.
 - b. Blades can be placed on and removed from the handle with a forceps.
7. Place used blades in a sharps container.

Treatment with Permethrin (Elimite®)

1. Bathe the resident, soaping the body completely, rinse well, and then dry thoroughly.
2. Allow his or her body to cool.
3. Apply Elimite® into the skin from the chin to the soles of the feet.
 - a. Scabies rarely infests the scalp of adults, although the hairline, neck, temple, and forehead may be infested in geriatric residents.
 - b. Pay particular attention to skin folds and creases.
 - c. Avoid contact with the eyes.
 - d. Reapply if washed off following use of the toilet, handwashing, etc.
4. Dress the resident with clean clothing. Use freshly laundered bed linens and towels.
5. Leave cream on for at least 8 hours but no more than 12 hours, and then shower or bath the resident in warm water, soaping the body completely, rinsing and drying well.
6. Put on clean clothing. Re-launder towels and bed linens used during treatment.
7. Itching may continue for several days or weeks.
8. A single treatment is generally adequate.

Environmental Control: Typical Scabies

1. Place residents with typical scabies on contact precautions during the treatment period; 24 hours after application of 5% permethrin cream or 24 hours after last application of scabicides requiring more than one application.
2. Wear gloves and a long-sleeved gown for direct hands-on contact.
3. Wash hands after removal of gloves.
4. Place bed linens, towels and clothing used by an affected person during the 4 days prior to initiation of treatment in plastic bags inside the resident's room, handled by gloved and gowned staff without sorting, and washed in hot water for at 10-20 minutes.
5. Use the hot cycle of the dryer for at least 10-20 minutes.
6. Place non-washable blankets and articles in a plastic bag for at least 72 hours. These items can also be dry cleaned or tumbled in a hot dryer for 20 minutes.
7. Change all bed linens, towels and clothes daily.
8. Disinfect multiple residents-use items, such as walking belts, blood pressure cuffs, stethoscopes, wheelchairs, etc., before using on other residents.
9. Discard all creams, lotions or ointments used prior to effective treatment.
10. Vacuum mattresses, upholstered furniture and carpeting. Wrap vacuum cleaner bag in a plastic bag and discard.
 - a. General cleaning and thorough vacuuming of furniture, mattresses or rug is recommended.
 - b. Fumigation is not necessary.
11. For non-fabric items, routine disinfection procedures are adequate.

continues on next page

12. Infected employees can return to work as soon as treatment is completed but should use gowns and gloves for direct resident care to prevent reinfestation until all control measures for affected units/areas have been completed.

Environmental Control: Crusted/Atypical Scabies:

1. Maintain contact precautions until treatment is complete and/or resident is determined (by dermatologist or primary care provider) to be scabies free.
2. Assign resident to a private room, if possible.
3. Restrict visitors until treatment regimen is complete; alternatively, require visitors to gown and glove as required for contact isolation precautions.
 - a. If resources permit, cohort employees to care for this resident only (no other direct care responsibilities) until effective treatment is completed.
4. Employees must wear gloves and a long-sleeved gown with the wrist area covered to attend to resident needs, for housekeeping duties, and handling of laundry. Remove gown and wash hands before leaving the room.
5. Bed linens, towels and clothing used by the affected persons during the 4 days prior to initiation of treatment should be placed in plastic bags inside the resident's room, handled by gloved and gowned laundry staff without sorting, and laundered in hot water for at least 10 minutes.
 - a. The hot cycle of the dryer should be used 50 °C (122 °F) for at least 10-20 minutes.
 - b. Non-washable blankets and articles can be placed in a plastic bag for 7 days, dry cleaned or tumbled in a hot dryer for 20 minutes.
6. Change all bed linens, towels and clothes daily.
7. Blood pressure cuffs, gait belts, stethoscopes, etc. should be designated for single resident use and left in the resident's room. Discard all creams, lotions or ointments used prior to effective treatment.
8. Upholstered furniture containing any cloth fabric should be removed from the room and, if necessary, replaced with plastic or vinyl furniture. Mattresses must be covered with plastic or vinyl.
9. The resident's room should be vacuumed daily with a vacuum cleaner designated for this room alone, followed by routine room cleaning and disinfection.
 - a. The vacuum cleaner bag should be changed daily;
 - b. Seal vacuum cleaner bag in plastic bag and dispose of properly.
10. The room should be terminally cleaned upon discharge or transfer of the resident from the room.

Documentation

The following information should be recorded in the resident's medical record:

1. The date and time that care was given.
2. The name and title of the individual(s) who assisted with the care.
3. If the resident refused the treatment, the reason(s) why and the intervention taken.
4. The signature and title of the person recording the data.

Reporting

1. Notify the supervisor if the resident refuses the care.
2. Report other information in accordance with facility policy and professional standards of practice.

Skin Tears – Abrasions and Minor Breaks, Care of

Level II

Purpose

The purpose of this procedure is to guide the prevention and treatment of abrasions, skin tears, and minor breaks in the skin.

Preparation

1. Obtain a physician's order as needed. Document physician notification in medical record.
2. Review the resident's care plan, current orders, and diagnoses to determine resident needs.
3. Check the treatment record.
4. Generate "Non-Pressure" form and complete.
5. Assemble the equipment and supplies as needed.

General Guidelines

1. An abrasion is an area on the skin that has been damaged by friction, scraping, rubbing or trauma. A skin tear is the disruption of epidermis resulting in a lifting or friction of the skin.
2. If the wound is bleeding, gently apply a compress with pressure over the wound and reinforce the compress as needed to control any bleeding.
3. If the bleeding persists after efforts to stop it, or an object is embedded into the abrasion, or other medical attention is needed, notify the physician.

Equipment and Supplies

The following equipment and supplies may be necessary when performing this procedure:

1. Dressing material, as indicated (i.e., gauze, non-adhesive dressing, bandage, steri-strips tape, scissors, etc.);
2. Compress, as needed;
3. Disposable cloths, as needed;
4. Wound cleanser/normal saline (as ordered); and
5. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

1. Clean bedside stand. Establish a clean field.
2. Place the clean equipment on the clean field. Arrange the supplies so they can be easily reached.
3. Tape a biohazard or plastic bag on the bedside stand or use a waste basket below clean field.
4. Adjust the height of the bed to waist level.
5. Position resident and adjust clothing to provide access to affected area.
6. Wash and dry your hands thoroughly.
7. Put on clean gloves. Loosen tape and remove soiled dressing.
8. Pull glove over dressing and discard into plastic or biohazard bag.
9. Wash and dry your hands thoroughly.

continues on next page

10. Open dry, clean dressing(s) by pulling corners of the exterior wrapping outward, touching only the exterior surface.
11. Label tape or dressing with date, time and initials. Place on clean field.
12. Using clean technique, open other products (i.e., prescribed dressing; dry, clean gauze).
13. Wash and dry your hands thoroughly.
14. Put on clean gloves.
15. Assess the wound and surrounding skin for edema, redness, drainage, tissue healing progress and wound stage.
16. Cleanse the wound with ordered cleanser. Use a syringe to irrigate the wound, if ordered. If using gauze, use a clean gauze for each cleansing stroke. Clean from the least contaminated area to the most contaminated area (usually, from the center outward).
17. Use dry gauze to pat the wound dry.
18. Apply the ordered dressing and secure with tape or bordered dressing per order. (Note: Use non-allergenic tape as indicated.) Label with date and initials to top of dressing.
19. Discard disposable items into the designated container.
20. Remove disposable gloves and discard into designated container. Wash and dry your hands thoroughly.
21. Reposition the bed covers. Make the resident comfortable.
22. Place the call light within easy reach of the resident.
23. Clean the bedside stand.
24. Wash and dry your hands thoroughly.
25. If the resident desires, return the door and curtains to the open position and if visitors are waiting, tell them that they may now enter the room.

Documentation

Record the following information in the resident's medical record:

1. Complete in-house investigation of causation.
2. Generate "Non-Pressure" form.
3. Document physician and family notification, and resident education (if completed) in medical record.
4. How the resident tolerated the procedure.
5. Any problems or resident complaints related to the procedure.
6. Any complications related to the abrasion (e.g., pain, redness, drainage, swelling, bleeding, decreased movement).
7. If the resident refused the treatment, the reason for refusal and the resident's response to the explanation of the risks of refusing the procedure, the benefits of accepting and available alternatives.
8. Interventions implemented or modified to prevent additional abrasions (e.g., clothes that cover arms and legs).
9. When an abrasion/skin tear/bruise is discovered, complete a *Report of Incident/ Accident*.

Reporting

1. Notify the responsible family member. Physician notification may be routine (that is, non-immediate) if the abrasion is uncomplicated or not associated with significant trauma.
2. Notify the physician of any abnormalities (i.e., excessive bleeding, localized swelling, redness, drainage, tenderness, pain etc.).
3. Report other information in accordance with facility policy/guideline and professional standards of practice.

Suctioning

Level III

Purpose

The purpose of this procedure is to help prevent nosocomial infections associated with suctioning and to prevent transmission of such infections to residents and staff.

General Guidelines

1. Wash hands before and after suctioning and before and after manipulating any respiratory therapy equipment.
2. Wear gloves when there is potential exposure to resident's blood, body fluids, secretions, excretions, nonintact skin, or mucous membranes. Change gloves after contamination, before handling clean equipment, and before resident contact.
3. Wear exam gloves on each hand when performing oral or nasal suctioning of residents.
4. Wear sterile gloves on both hands when performing care of a tracheostomy and during endotracheal suctioning of residents, whether through the oropharynx, endotracheal tube or tracheostomy.
5. Masks and/or eyewear may or may not be indicated during suctioning. The use of such barriers will depend on the amount of aerosolization of secretions and likelihood of exposure of the oral or nasal mucous membranes or the eyes to blood or secretions. Generally, masks and/or eyewear would only be indicated while working with intubated residents or during bronchoscopic or other surgical procedures. Each situation must be evaluated for the likelihood of exposure by the nurse performing the suctioning.
6. Suction machines must be available at the bedside of residents who require suctioning because they cannot clear nasal, oral, and/or respiratory secretions by themselves and also at the bedside of all tracheostomy and ventilator residents. Wipe the machine with disinfectant to remove soil, as necessary.
7. When suction machines are available for use, the following items should also be available:
 - a. Supply of exam gloves;
 - b. Supply of sterile gloves, if tracheal suctioning is anticipated;
 - c. Supply of suction catheters;
 - d. Supply of sterile distilled water with which to flush suction catheters; and
 - e. Appropriate trash receptacle for used catheters.
8. Always date and initial multi-use bottles of sterile distilled water used to flush suction catheters when opened, and discard them after twenty-four (24) hours. Pour the solution, as needed, into a sterile container for each use.
9. Only use single-use containers of sterile distilled water found in suctioning kits once and then discard them.
10. Clean, fresh tap water in a disposable container may be used as flush solution for oral or nasal suctioning.
11. Suction tubing may be intermittently flushed with hydrogen peroxide to remove and decontaminate secretions inside connecting tubing. Hydrogen peroxide bottles must be dated and initialed when opened, and discarded after thirty (30) days, or when the integrity of the bottle or solution is suspect.
12. When suction equipment is designated for a particular resident for extended use, suction connecting tubing and suction collecting canister need not be discarded on a regular schedule, but should be cleaned and flushed as necessary when secretions are present. If the suction connecting tubing becomes visibly soiled with secretions that will not flush, new tubing may be attached. The suction collection canister should be emptied and cleaned daily and changed or decontaminated as necessary.

continues on next page

13. Discard suction connecting tubing between residents' use. Take reusable suction collecting canisters to the soiled utility area to be cleaned and disinfected between residents' use. Discard disposable suction collecting canisters after a single resident use.
14. When disconnecting ventilator residents from ventilator breathing circuits to provide suctioning, direct the mist from the ventilator away from the resident's and the employee's faces, to prevent conjunctivitis.
15. Porous surfaces absorb phenolic disinfectants and may cause injury to mucous membranes. Do not use on plastic or rubber items, especially if they will be used near mucous membranes.
16. Alkaline gluteraldehyde must be used under controlled conditions by persons trained in their use.
17. A portable suction machine filter must be inspected weekly and changed as necessary.

Equipment and Supplies

1. Gloves (as indicated);
2. Suction catheters;
3. Masks (as indicated);
4. Goggles/Face Shield (as indicated);
5. Suction machine;
6. Water, sterile or tap water (as indicated);
7. Cup, sterile or clean (as indicated); and
8. Hydrogen peroxide.

Steps in the Procedure

1. Explain the procedure to the resident. (Note: Suctioning can be very uncomfortable for the resident. Only suction as long as you can hold your own breath. Give the resident an opportunity to catch his/her breath between episodes of suctioning. Do not drag suction catheter along mucous membranes while suction machine is on.) Set portable suction machines no higher than ten (10) to fifteen (15) inches of mercury (Hg) and the wall suction no higher than one hundred and twenty (120) millimeters Hg.
2. Wash hands.
3. Assess situation for likelihood of exposure of mucous membranes to blood, body fluids, secretions, or excretions. Put on mask and/or eyewear as indicated.
4. Put gloves on both hands. (Note: Exam gloves may be used for oral or nasal suctioning. However, sterile gloves must be used for endotracheal suctioning.)
5. Use fresh sterile suction catheter for each episode of suctioning. (Note: Each episode of suctioning is defined as a single suctioning or repeated suctioning done with only brief periods intervening to clear or flush the catheter.)
6. Use fresh tap water in disposable container to flush suction catheters used for oral or nasal suctioning. Discard residual solution after use during single episode of suctioning.
7. If using a multi-use bottle of sterile distilled water for source of water for flushing, mark bottle with resident's name, date, and your initials. Discard twenty-four (24) hours after opening or if contamination is suspected.
8. Use fresh sterile distilled water in sterile disposable container to flush suction catheters used for endotracheal suctioning. Discard residual solution after use during single episode of suctioning.
9. Flush the suction connecting tube with hydrogen peroxide as necessary. Mark the bottle of hydrogen peroxide with resident's name, date of opening, and your initials. Discard if the integrity of the bottle or solution is suspect or after thirty (30) days. Do not suction directly from the peroxide bottle.

continues on next page

10. After completing a single episode of suctioning, wrap the suction catheter around a gloved hand. Pull glove over coiled catheter. Discard both into a designated trash receptacle. Remove the other glove and discard. Wash hands.
11. Empty the suction collection canister as necessary for repeated use on the same resident (usually at the end of each shift), and at least daily.
12. Rinse and clean suction collection canister as necessary. If secretions adhere to the canister and cannot be rinsed off, change the canister and discard or disinfect the canister as appropriate.
13. Wash hands after handling any suction equipment.
14. Reusable suction collection canister may be disinfected using the following methods:
 - a. Put on gloves.
 - b. Rinse canister with running water.
 - c. Soak with soapy water until secretions will rinse off.
 - d. If manual cleaning will be performed, decontaminate inside the canister with one of the following germicide solution:
 - (1) An EPA registered disinfectant. Use according to manufacturers' specifications. (If the canister holds 1000 cc, use 1/4 of the measure indicated for one (1) gallon of water. Do not use phenolic disinfectant on plastic items.)
 - (2) A 500–1000 p.p.m. available chlorine solution of sodium hypochlorite (household bleach) (approximately 10–20 cc of bleach in a 1000 cc canister).
 - e. Allow to sit for ten (10) minutes.
 - f. Moisten cleaning cloth with solution.
 - g. Wash inside and outside of the canister.
 - h. Pour the solution into the hopper/toilet. Flush the hopper/toilet.
 - i. Prepare fresh disinfectant solution to the correct dilution. Fill the canister or otherwise completely submerge it into the disinfectant solution for ten (10) minutes.
 - j. Rinse after disinfection is complete.
 - k. Be certain the inside of the canister is visibly clean of secretions. If the inside is still soiled, wash it manually with soap and water and repeat the disinfection.
 - l. Allow to air dry.
 - m. Remove gloves and discard into an appropriate receptacle.
 - n. Wash hands.

Version	1.1 (H5MAPR0264)

Tracheostomy Care

Level III

Purpose

The purpose of this procedure is to guide tracheostomy care and the cleaning of reusable tracheostomy cannulas.

Equipment and Supplies

1. Gloves (clean and sterile);
2. Mask and eyewear (as indicated);
3. Tracheostomy care kit;
4. Hydrogen peroxide;
5. Sterile water or normal saline;
6. Suction catheter;
7. Suction machine;
8. Pulse oximeter; and
9. Extra gauze dressing.

General Guidelines

1. Aseptic technique must be used:
 - a. During cleaning and sterilization of reusable tracheostomy tubes;
 - b. During all dressing changes until the tracheostomy wound has granulated (healed); and
 - c. During tracheostomy tube changes, either reusable or disposable.
2. Gloves must be used on both hands during any or all manipulation of the tracheostomy. Sterile gloves must be used during aseptic procedures.
3. A mask and eyewear must be worn if splashes, spattering, or spraying of blood or body fluids is likely to occur when performing this procedure.
4. Tracheostomy tubes should be changed as ordered and as needed (at least monthly).
5. Tracheostomy care should be provided as often as needed, at least once daily for old, established tracheostomies, and at least every eight hours for residents with unhealed tracheostomies.
6. A replacement tracheostomy tube must be available at the bedside at all times.
7. A suction machine, supply of suction catheters, exam and sterile gloves, and flush solution, must be available at the bedside at all times.

Procedure Guidelines

Preparation and Assessment

1. Check physician order.
2. Explain procedure to resident.
3. Wash hands.
4. Put exam gloves on both hands.
5. Remove supplemental oxygen mask from tracheostomy.
6. Inspect skin and stoma site for signs or symptoms of infection, leakage, subcutaneous crepitus, or dislodged tube.

continues on next page

7. Assess resident for respiratory distress.
 - a. Measure resident's oxygen saturation with pulse oximeter.
 - b. Listen to lung sounds with a stethoscope.
 - c. Observe for asymmetrical chest expansion.
8. Remove old dressings. Pull soiled glove over dressing and discard into appropriate receptacle.
9. Wash hands.

Clean the Removable Inner Cannula

1. Open tracheostomy cleaning kit.
2. Set up supplies on sterile field.
3. Maintaining sterile field, pour equal parts hydrogen peroxide and normal saline in one compartment of opened kit. Pour normal saline in another compartment.
4. Open four gauze pads and saturate with hydrogen peroxide.
5. Open two gauze pads and saturate with antiseptic solution.
6. Open two gauze pads and saturate with sterile saline.
7. Open two gauze pads; keep them dry.
8. Put on sterile gloves.
9. Secure the outer neck plate with non-dominant gloved hand.
10. Unlock the inner cannula with gloved dominant hand.
11. Gently remove the inner cannula, rotating counterclockwise while lifting away from the resident.
12. Soak the cannula in hydrogen peroxide/saline mixture.
13. Clean with brush. Rinse with saline and dry with pipe cleaners.
14. Remove and discard gloves into appropriate receptacle.
15. Wash hands and put on fresh gloves.
16. Replace the cannula carefully and lock in place.
17. Ensure there is an emergency tracheostomy set up at resident's bedside.

Site and Stoma Care:

1. Apply clean gloves.
2. Clean the stoma with two peroxide-soaked gauze pads (using a single sweep for each side).
3. Rinse the stoma with saline-soaked gauze pads (using a single sweep for each side).
4. Wipe with dry gauze (using a single sweep for each side).
5. Disinfect the stoma with the antiseptic-soaked gauze pads (using a single sweep for each side). Allow to air dry or wipe with clean, dry gauze.
6. Remove neck ties and replace with clean ones.
 - a. If the resident's condition is unstable, or if the stoma is less than two weeks old, apply new ties before removing old ones.
7. Apply a fenestrated gauze pad around the insertion site.
8. Replace supplemental oxygen mask over tracheostomy.
9. Remove gloves and discard into appropriate receptacle.
10. Wash hands.
11. Document the procedure, condition of the site, and the resident's response.

Tuberculosis Infection Control Program

Policy Statement

The facility recognizes that tuberculosis (TB) transmission has been identified as a risk in healthcare settings. To try to prevent nosocomial transmission of TB, our facility has instituted a Tuberculosis Infection Control Program.

Policy Interpretation and Implementation

1. This facility's TB Infection Control Program includes the early identification, isolation, and transfer of persons with active tuberculosis. The program incorporates the following components:
 - a. Assignment of responsibility for the oversight of TB infection control to the Infection Control Committee. _____ is designated to oversee the TB program;
 - b. An annual TB risk assessment (TBRA) and TB risk classification based on the information obtained from the TBRA;
 - c. Administrative, environmental, and respiratory controls established in accordance with the current risk classification;
 - d. Screening and surveillance of residents and employees for latent tuberculosis infection (LTBI) and active TB as appropriate for the current TB risk classification;
 - e. A protocol for the prompt recognition and transfer of persons with suspected or identified active TB;
 - f. Administrative procedures and infection control methods to prevent and reduce the generation of infectious droplet nuclei (e.g., staff training on cough hygiene, airborne infection precautions);
 - g. Disinfection and environmental methods that reduce the number of infectious droplet nuclei in contaminated air;
 - h. Guidelines for cleaning, disinfecting, and sterilizing contaminated items; and
 - i. Investigation of any cases of healthcare-associated tuberculosis in collaboration with local or state health departments.
2. The Medical Director, Director of Nursing Services, and Infection Preventionist will review the Tuberculosis Infection Control Program annually with the Infection Control Committee. They shall consider the possible need to change or update current workplace procedures based on CDC and/or state recommendations.
3. The Infection Control Committee will present any recommendations to the facility's Quality Assurance Committee.
4. The Inservice Coordinator will provide annual staff education regarding tuberculosis recognition and prevention.

Version	2.1 (H5MAPL0905)

Tuberculosis Risk Assessment

Level III

Purpose

The purpose of the tuberculosis risk assessment (TBRA) is to help evaluate the risk of transmission of tuberculosis (TB) within the facility, and to help establish appropriate administrative, environmental and respiratory protection controls for the recognition and/or prevention of tuberculosis transmission.

Preparation

1. Obtain current surveillance data on TB prevalence in the community (available from local or community health departments).
2. Obtain current surveillance data on TB prevalence in the state (available on the CDC web site or from the state health department).
3. Obtain current surveillance data on TB prevalence in the country (available on the CDC web site).
4. Obtain facility surveillance data on:
 - a. TB prevalence in the last five years (see infection control surveillance records).
 - b. TB prevalence in the last year (see infection control surveillance records).

General Guidelines

1. A TBRA shall be conducted annually to determine appropriate administrative, environmental, and respiratory protection controls needed for the facility based on the current TB risk classification.
2. The TBRA and risk classification shall be used to help identify lapses in infection control that may have led to the transmission of TB infection, as well as to alert the facility of upward trends in TB prevalence in the community.
3. The TBRA and risk classification shall be used to help determine the frequency of employee and resident screening for TB infection.

Equipment and Supplies

1. Case rate of TB disease per 100,000 population for the state.
2. Case rate of TB disease per 100,000 population for the nation.
3. Number of cases of TB disease in the facility for:
 - a. the previous five years; and
 - b. the previous year.
4. A tuberculosis risk assessment tool/worksheet.

Steps in the Procedure

Using the TB Risk Assessment Worksheet:

1. Record the TB case rate for the nation.
2. Record the TB case rate for the state.
3. Record the TB case rate for the community.
4. Record the number of cases of suspected or confirmed TB disease in the facility five years ago, two years ago, and in the past year.
5. Establish the facility risk classification.

continues on next page

6. Review current environmental, administrative, and respiratory protection controls to determine if there are adjustments that must be made based on the risk classification. For example, an increase in the risk classification may warrant the need for an in-depth respiratory protection program to prevent the spread of TB infection to employees.
7. Record the type and frequency of employee screening for TB infection. Based on the TBRA and risk classification, determine if screening frequency is adequate. For example, if the risk classification for the previous year was “low” but has increased to “medium” for the current assessment, annual TB screening of employees and residents is needed.
8. Review the TB Infection Control Program/Plan in the Infection Control Committee and record applicable findings.
9. Review and record the laboratory processing of TB-related specimens, if applicable.
10. Review and record the current environmental controls in the facility.
11. Review and record the current respiratory protection program, if applicable.
12. Record the frequency of TBRA and any problems identified during the last assessment.
13. Record the actions taken to correct any lapses in infection control or to correct problems identified during the previous TBRA.

Reporting

1. Report the findings of the TBRA and the risk classification to the Infection Control Committee and the Administrator.

Version	1.2 (H5MAPR0272)

Tuberculosis, Screening Residents for

Policy Statement

This facility shall screen all residents for tuberculosis infection and disease (TB). Individuals identified with active TB disease shall be isolated from other residents and ancillary staff, and transported to an appropriate care facility as soon as possible.

Policy Interpretation and Implementation

Screening New Admissions or Readmissions:

1. The admitting nurse will screen referrals for admission and readmission for information regarding exposure to or symptoms of TB.
2. Signs and symptoms of TB, include:
 - a. Coughing for > 3 weeks;
 - b. Loss of appetite;
 - c. Fatigue;
 - d. Weight loss;
 - e. Night sweats;
 - f. Bloody sputum or hemoptysis;
 - g. Hoarseness;
 - h. Fever; and/or
 - i. Chest pain.
3. If a potential resident has been exposed to active TB or is at increased risk of TB infection he or she will be screened for latent tuberculosis infection (LTBI) using tuberculin skin tests (TST) or interferon gamma release assay (IGRA).
4. If the IGRA or TST is positive, the nursing staff will contact the physician to obtain orders for a CXR and the physician will assess the resident prior to admission for possible active TB.
5. Individuals with signs and symptoms of active TB disease shall be isolated from other residents and ancillary staff, and transported to an appropriate care facility as soon as possible.
6. Screening of new admissions or readmissions for tuberculosis infection and disease is in compliance with State regulations.

Handling Residents Suspected to Have Active TB:

1. The nursing staff and/or physician will immediately report to the Infection Preventionist the name of any resident with suspected active TB.
2. The Infection Preventionist will initiate a transfer to the hospital to ensure appropriate TB infection control until the case is clinically confirmed or denied.
3. Nursing staff will place a surgical mask over the mouth and nose of any resident having, or suspected of having, active TB, and will arrange for prompt transfer to an acute care hospital.

continues on next page

4. The resident with suspected TB will remain in a room separate from other residents and visitors with the door closed until the resident is transferred.
5. The facility will not collect sputum specimens on such residents.
6. Only employees who have been fit-tested with HEPA N-95 high particulate filter masks will use such devices in the care for residents who are waiting for transfer.
7. Fit testing of HEPA N-95 masks will be completed annually in accordance with the TB Exposure Control Plan.
8. The Infection Preventionist will follow up and report confirmed cases to appropriate agencies as required by law.

Admitting Residents with Recently Identified Active TB:

1. An individual with known active TB must be treated for at least two weeks prior to admission and be cleared by his or her treating physician before he or she can be admitted or readmitted.
2. Before the facility admits or readmits anyone who has recently been treated as an inpatient or outpatient for active TB, the Medical Director and/or Attending Physician will consult with the treating physician and determine whether treatment was adequate and the admission is appropriate.

Serial Testing of Residents:

1. The facility will conduct an annual risk assessment to determine risk of exposure.
2. Risk factors for exposure to TB are:
 - a. Those born in or who frequently travel to countries where TB is common;
 - b. People who currently (or previously) live in large group settings where TB is common (homeless shelters, prisons, etc.); or
 - c. Those who have spent time with a person who has active TB disease.
3. Residents who have risk factors for exposure to active TB are re-tested for LTBI and symptoms of active TB.
4. Residents who have health conditions or take medications that predispose them to developing active TB disease once infected are tested regularly according to their exposure risk assessment. These conditions include:
 - a. HIV;
 - b. Substance abuse;
 - c. Silicosis;
 - d. Diabetes;
 - e. Kidney disease;
 - f. Low body weight;
 - g. Organ transplants;
 - h. Head and neck cancer;
 - i. Treatment with corticosteroids or organ transplant; and/or
 - j. Certain treatments for rheumatoid arthritis or Crohn's disease.

Level III

Purpose

The purpose of this procedure is to provide guidelines for the prevention of catheter-associated urinary tract infections (CAUTIs).

Preparation

1. Review the *Urinary Tract Infections/Bacteriuria Clinical Protocol* for assessment, recognition, cause identification and management of UTIs and CAUTIs.
2. Follow facility procedures for insertion and care of indwelling urinary catheters.
3. Be able to identify and report the clinical signs and symptoms of a urinary tract infection (with or without catheter), including:
 - a. Acute dysuria;
 - b. Fever;
 - c. Pain, swelling or tenderness of testes, epididymis or prostate;
 - d. Suprapubic tenderness;
 - e. Costovertebral angle tenderness;
 - f. Leukocytosis;
 - g. Hematuria;
 - h. Incontinence;
 - i. Increased urgency or frequency;
 - j. Hypotension;
 - k. Confusion and/or functional decline; and/or
 - l. Purulent discharge around catheter.
4. Diagnosis of a CAUTI will be made by the physician or other practitioner based on the individual resident's signs and symptoms, health history, and laboratory results.

General Guidelines

1. It is the responsibility of the interdisciplinary team to maintain vigilant practices to prevent CAUTIs and to recognize and report early indications that a UTI may be developing.
2. Facility-wide surveillance of infections (as defined by currently adopted definitions of infections for surveillance purposes) is collected as part of the infection control program.
3. Targeted surveillance of UTIs and CAUTIs is performed as indicated by the Infection Control Committee. Surveillance and reporting of confirmed UTIs and CAUTIs through the National Health Safety Network is recommended.
4. Surveillance data gathered on infections is used as part of the overall facility Quality Assurance and Performance Improvement Program.

Steps in the Procedure

The following CAUTI prevention strategies have been adopted and are to be followed by clinical staff:

continues on next page

1. Insert catheters only for indications deemed appropriate for urinary catheter insertion, and as ordered. Appropriate indications for insertion of a urinary catheter are:
 - a. Acute urinary retention or obstruction;
 - b. Strict urinary output measurement;
 - c. To assist healing of perineal and sacral wounds in incontinent residents;
 - d. Hospice or palliative care at end of life; and/or
 - e. Required immobilization due to trauma or surgery.
2. Leave catheters in place only as long as needed.
 - a. Conduct ongoing assessment and monitoring of residents with indwelling catheters to establish continued need. Document every 24 hours or per facility protocol.
 - b. Initiate steps to discontinue order and remove catheter if criteria is no longer met.
3. Do not insert or maintain a urinary catheter unless you have been properly trained and demonstrated competency in this area.
 - a. Insert catheters using sterile equipment and aseptic technique.
 - b. Use the smallest bore catheter that is appropriate.
4. Always practice vigilant hand hygiene and standard precautions when handling catheter systems.
5. After aseptic insertion, maintain a sterile closed drainage system.
 - a. Replace catheter if aseptic technique is broken, the tubing is disconnected, or there is a leak in the system.
 - b. Do not routinely change catheters or drainage bags at fixed intervals.
 - c. Use sampling port to obtain urine samples aseptically.
 - d. Do not allow drainage spigot to contact non-sterile collection container when emptying.
6. Maintain unobstructed urine flow.
 - a. Keep the catheter and tubing free of kinks.
 - b. Secure catheter after insertion to prevent movement.
 - c. Keep drainage bag below the level of the bladder at all times. Do not place the drainage bag on the floor.
 - d. Do not allow bag to overfill. Empty at scheduled intervals (into a clean container) and immediately if more than 2/3 full.
7. Perform daily meatal hygiene with soap and water for residents with indwelling catheter.

Documentation

1. Document (per facility protocol or as ordered) the following information:
 - a. The continued need for the resident's indwelling catheter; and
 - b. Any signs or symptoms of urinary tract infection.

Reporting

1. Report signs or symptoms of urinary tract infection to the physician or provider.

Version	1.2 (H5MAPR0335)

Fever/Septicemia – Clinical Protocol

Assessment and Recognition

1. A nurse will assess a resident with a suspected infection and will document related findings. Assessment data will include:
 - a. Vital signs, including respiratory rate and character of respirations (shallow, labored, rapid);
 - b. Onset (e.g., rapid, gradual) and pattern (e.g., continuous, intermittent) of fever;
 - c. Presence of shaking chills;
 - d. How well the resident is eating and drinking;
 - e. Any concurrent or related abnormal findings or symptoms (for example, cough, dysuria, or warmth and erythema surrounding a wound, etc.);
 - f. Whether antibiotics or antipyretics have been administered;
 - g. Any recent laboratory or diagnostic findings;
 - h. Current diagnoses and medications;
 - i. Recent history of fever before current illness started;
 - j. Known risk factors for recurrent infection or fever (for example, indwelling devices, recent hospitalization for pneumonia, known urinary tract obstruction, immunosuppression due to cancer-related radiation or chemotherapy, etc.); and
 - k. Description of any new or worsening decline in functional status, including confusion, incontinence, falling, decreased mobility, reduced food intake or lack of cooperation with staff.
2. The nurse will report findings to the physician or provider. As needed, the physician or provider will assess the resident to verify or clarify such findings, especially if the diagnosis of infection or source of infection is unclear.
3. The physician will help identify individuals with a recent history of fever and/or infection, and will help identify those at risk for infections or fever.
4. The nurse will discuss with the physician or provider whether a temperature elevation or temperature pattern constitutes a fever, and whether the presence of a fever indicates an infection.
 - a. “Normal” body temperature may range up to 99.5° Fahrenheit(F)/37.5°Celsius (C).
 - b. Daily temperature can vary normally by as much as 0.9° Fahrenheit/0.5° Celsius.
 - c. Fever often – but not always – indicates the presence of infection. It can be caused by other things such as inflammatory and rheumatologic disorders and some medications.
 - d. Relatively sensitive temperature predictors of infection include:
 - (1) an increased temperature of at least 2 degrees F (1.1 degrees C) over baseline; or
 - (2) a single temperature reading above 100°F (37.8°C); or
 - (3) two or more oral temperature readings above 99°F (37.2°C); or
 - (4) rectal temperature readings above 99.5°F (37.5°C).
5. The nurse will identify, document, and report to the physician or provider any evidence of possible infectious complications such as abscess, sepsis, or acute respiratory failure.

Cause Identification

1. Nursing staff will collaborate with the physician or provider to try to identify causes of fever and infection.

continues on next page

2. There are noninfectious causes of fever including rheumatologic and immunologic disorders, medication-related fever, and brainstem stroke.
3. Diagnostic tests should be ordered when they add to an understanding of the condition or are likely to change the treatment strategy. When indicated, appropriate tests may include:
 - a. CBC, including WBC count with differential;
 - b. Urinalysis or urine culture;
 - c. Pulse oximetry and/or chest X-ray for pneumonia evaluation;
 - d. Nasopharyngeal wash or swab samples of the throat and nasopharynx for rapid influenza-A and other virus detection;
 - e. Skin or lesion scraping for culture or viral antigen studies, or examination; or
 - f. Stool specimens for *C. difficile* toxin assay or other enteropathogens.
4. Test results, including positive cultures, do not necessarily indicate that an infection is present. The presence of infection is determined by clinical signs and symptoms that are consistent with identified criteria for infection and may be confirmed by test results.
5. Even if an extensive workup is not appropriate (for example, because of advance directives), a systematic review of the differential diagnosis of likely causes may be appropriate, based on existing information.
6. If causes are not apparent or readily diagnosed on clinical grounds, an additional workup may be appropriate. If an additional workup is not ordered under these circumstances, the staff and practitioner should collaborate to identify and document reasons for not doing so.

Management

1. Nursing staff will implement the physician or provider's orders and general nursing measures for comfort, as indicated.
2. Nursing staff will collaborate with the physician or provider to distinguish individuals whose condition can be managed in the facility without hospital transfer from those requiring hospital transfers.
3. The physician and staff will collaborate to identify individuals who can be managed in the facility without hospital transfer.
 - a. Many individuals with infections, with or without fever, do not need hospitalization. Temperature level, degree of WBC count elevation, or pulse oximetry results alone do not indicate the need to hospitalize, but significantly unstable vital signs and respiratory distress with respirations above 26 per minute may indicate possible need for hospitalization.
4. The physician or provider will prescribe antibiotics judiciously, following CDC recommendations and facility policies regarding antibiotic stewardship, and will promote treatment for the shortest possible time (consistent with the complexity of the infection and related complications).
5. The physician will identify when a resident/patient can be switched from intravenous antibiotics to intramuscular or oral antibiotics based on such factors as the site and severity of the infection and the individual's overall medical stability.
6. The physician will address noninfectious causes of fever; for example, by stopping medications associated with drug fever, treating other underlying causes such as rheumatologic or immunologic disorders, or identifying uncorrectable causes such as central nervous system impairment due to a stroke.

continues on next page

Monitoring and Follow-Up

1. The physician and nursing staff will evaluate the progress of individuals with fever and/or infection until the symptoms resolve.
2. Nursing staff and physician will monitor for other complications of infection, fever, or sepsis (for example, anorexia, fluid and electrolyte imbalance, or delirium).
3. The nurses will communicate with the physician or provider to identify whether the resident needs any special monitoring, precautions, or interventions (for example, contact or airborne precautions).
4. The nursing staff will monitor, document, and report complications related to antibiotic treatment, such as diarrhea and colitis.

Version	2.0 (H5MACL0018)

Infections – Clinical Protocol

Assessment and Recognition

1. The physician or provider will help identify individuals who have had a recent infection or who are at high risk for developing an infection.
2. Infection may be suspected based on clinical signs and symptoms and/or temperature.
3. When a resident is suspected of having an infection (for example, because of an abrupt change in function, appetite, mental status, etc.), nursing staff will obtain a complete set of vital signs (temperature, heart rate, blood pressure, and respiratory rate) and will identify, report and document specific details of symptoms and physical findings.
4. Nursing staff will notify the physician or provider of all pertinent details about the resident's condition.
5. The nursing staff and physician or provider will identify possible complications of infections such as sepsis and delirium.

Cause Identification

1. Based on the preceding information, the physician or provider and staff will discuss and determine whether an infection exists or is likely, whether additional evaluations or testing is indicated, and whether other active conditions related to an infection (for example, urinary retention or COPD) also need to be managed simultaneously.
2. Generally, a workup should focus primarily on low-risk tests that have a reasonable diagnostic yield and are likely to improve resident management; for example, in cases of unusual clinical presentations, where the resident fails to respond to initial therapy, or prolonged microbial therapy is being considered. Testing (for example, urine or wound cultures) may or may not add to the information provided by the clinical assessment.
3. Based on the overall clinical picture, including the severity of the current illness, the physician or provider will help the staff address the following issues:
 - a. Whether an infection is present;
 - b. Whether complications of an infection are present;
 - c. Whether the resident is taking medications that could be problematic while an infection is present (for example, anticoagulants that interact with antibiotics or medications that affect appetite or can cause fluid loss or sedation); and
 - d. Whether hospitalization might be indicated to evaluate or treat the individual.
 - (1) Elevated temperature and WBC count are not necessarily primary indicators of the severity of the illness or the need for hospitalization.
 - (2) If hospitalization is contemplated, the decision should consider the resident's wishes and limitations on care expressed in advance directives.
4. The physician or provider and staff will identify infection transmission risks and (in conjunction with the Infection Preventionist) will implement relevant precautions.

continues on next page

Treatment/Management

1. Based on review of the clinical situation, pertinent lab and diagnostic tests, and any resident medication allergies, the physician or provider and staff will identify whether antibiotics are warranted or whether those that have already been started should continue or change.
2. The staff and physician or provider will identify and document when limited or no antibiotic treatment is indicated because of resident or substitute decision-maker choices declining aggressive or life-sustaining medical interventions.
3. With the physician or provider's guidance, the staff will provide supportive measures as needed, such as supplemental fluids, oxygen, holding or tapering problematic medications, additional assistance with activities of daily living (ADLs), etc.

Monitoring and Follow-Up

1. The nursing staff and physician or provider will monitor the progress of a resident with an infection until it is resolved (i.e., no further significant clinical signs or symptoms).
2. The nursing staff will evaluate and report to the physician or provider at least weekly until the individual is stable or improving, and more often if the individual is not improving as anticipated or is declining unexpectedly. In cases of more severe or prolonged infections, the physician or provider and staff will communicate more frequently if needed.
3. The physician or provider will determine whether any antibiotics should be started, extended, changed, or discontinued.
4. The physician or provider will manage complications such as abscess, sepsis, and delirium.
 - a. If an initial course of antibiotics does not resolve an infection, the physician or provider will review the situation in detail and may need to examine the individual before prescribing a continuation or change in antibiotics.
5. If the resident has been receiving parenteral (intravenous or intramuscular) antibiotics, the physician or provider will consider changing to oral antibiotics once the individual has been afebrile and asymptomatic for at least 48 hours, or will justify continuing parenteral antibiotics (for example, a complicated infection, individual still having significant systemic symptoms, recurrent infection, etc.).
6. The physician or provider will evaluate the duration of any antibiotic treatment and will identify whether antibiotics can be stopped (for example, if an individual with an uncomplicated infection is afebrile and asymptomatic for at least 48 hours).
 - a. In many cases, standard 7- or 10-day durations of antibiotics are only approximations and may be either longer or shorter than the patient actually needs.
7. The physician or provider will identify and address possible complications of antibiotic treatment including adverse drug reactions, allergic reactions, drug interactions, and antibiotic-related colitis or diarrhea.
 - a. If such complications occur, the physician or provider will reassess the situation and identify whether additional treatment is warranted and whether antibiotics should be modified or stopped to address the complications.

Pneumonia, Bronchitis and Lower Respiratory Infections – Clinical Protocol

Assessment and Recognition

1. The physician will help identify residents who have recently had pneumonia or bronchitis and those who are at risk for getting respiratory infections (for example, those with COPD or a history of respiratory failure).
2. The staff will identify residents with symptoms that suggest possible bronchitis or pneumonia (for example, dyspnea [at rest and/or on exertion], tachypnea, increased sputum production, fever, chest pain, cough, or hemoptysis).
3. The staff and physician will identify individual risk, such as significant oral or dental disease, presence of a feeding tube, or clinically significant swallowing abnormalities.

Cause Identification

1. The physician will examine the resident and order appropriate diagnostic tests (such as a chest X-ray and complete blood count [CBC]) as indicated to help verify the clinical diagnosis of pneumonia, differentiate causes of respiratory symptoms, and identify the severity of any infection or related complications.
 - a. In general, a routine sputum gram staining and culture are not likely to be useful in either the outpatient or inpatient settings, as many specimens primarily contain oral flora.
 - b. Sputum gram stain and culture might help in cases of suspected drug-resistant bacteria, non-bacterial or atypical infections such as *Mycobacterium tuberculosis*, or organisms not treated by commonly used empiric antibiotic therapy.
 - c. Pulse oximetry may be helpful for residents with respiratory rate >25 breaths/min.
 - d. A chest X-ray may be helpful for residents with suspected or documented pneumonia and hypoxemia (relative to their usual O₂ saturation levels).

Treatment/Management

1. The physician will order appropriate treatment, including antibiotics, as indicated.
 - a. The staff and physician will indicate when limited or no antibiotic treatment may be indicated; for example, because nonbacterial pneumonia is suspected or confirmed, lack of clear indication for antibiotics, or resident/patient or substitute decision-maker choices declining aggressive or potentially life-sustaining medical interventions.
2. The physician and staff will manage significant comorbidities, complications, and risk factors (for example, adjust or temporarily stop diuretics that may impair hydration status, treat concurrent congestive heart failure, or address anemia).
3. The physician will order, and the staff will provide, interventions to support the individual with pneumonia (for example, administer oxygen to treat hypoxia, encourage coughing and deep breathing, provide nebulizer treatments for bronchospasm, etc.).
4. The physician will identify individuals who need hospitalization because of the severity of pneumonia or the presence of complications.

continues on next page

5. Clinical signs suggesting more severe cases may include tachypnea (respiratory rate in the upper 20’s/minute) with labored respirations, unstable vital signs, and a substantial and persistent decline in pulse oximetry results of greater than 3 percent from baseline.
6. The staff and physician will identify measures to try to prevent recurrent lower respiratory infections (for example, provide oral healthcare, adjust tube feedings, improve mobility, encourage smoking reduction or cessation, provide influenza and pneumococcal pneumonia vaccination, etc.).

Monitoring

1. The staff and physician will monitor the respiratory status and overall condition of a resident with pneumonia, including complications such as recurrent infection, emphysema, pleural effusion, and respiratory failure.
2. If a resident who has received a course of antibiotics to treat pneumonia or bronchitis has not stabilized or improved as anticipated, the physician will see the resident and evaluate the situation before prescribing a second or subsequent course of antibiotics.

Urinary Tract Infections/Bacteriuria – Clinical Protocol

Assessment and Recognition

1. The physician and staff will identify individuals with a history of symptomatic urinary tract infections, and those who have risk factors (for example, an indwelling urinary catheter, kidney stones, urinary outflow obstruction, etc.) for UTIs.
2. The staff and practitioner will identify individuals with possible signs and symptoms of a UTI.
 - a. Signs and symptoms of a UTI may be specific to the urinary tract and/or generalized. The presentation of symptomatic UTIs varies.
 - b. Nurses should observe, document, and report signs and symptoms (for example, fever or hematuria) in detail and avoid premature diagnostic conclusions.
 - c. New onset of nonspecific or general symptoms alone (change in mental status, decline in appetite, etc.) is not enough to diagnose a UTI. Urine odor, color and clarity also are not adequate to indicate bacteriuria or a UTI.
 - d. Acute deterioration in previously stable chronic urinary symptoms may indicate an acute infection. Multiple concurrent findings such as fever with hematuria or catheter obstruction are more likely to be due to a urinary source.
 - e. A positive urine culture in someone with chronic genitourinary symptoms is not enough to diagnose a symptomatic UTI. The presence of either pyuria or a positive leukocyte esterase test alone are not enough to prove that the individual has a UTI, but the absence of pyuria or a negative leukocyte esterase test is fairly strong evidence that a UTI is not present.

Cause Identification

1. The physician will help nursing staff interpret any signs, symptoms, and lab test results. Diagnosis must be based on the entire picture and not just on one or several findings in isolation.
 - a. Before diagnosing a UTI or urosepsis and ordering antibiotics, the physician should consider a resident's overall picture including specific evidence that helps confirm or refute the diagnosis of a UTI (as discussed above).
2. The physician will help identify causes of, and factors contributing to, bacteriuria or UTIs such as bladder outlet obstruction, kidney stones, neurological impairments, and medications that can cause urinary retention.
3. Because nonspecific or systemic symptoms can be due to diverse factors either instead of or along with a UTI, the staff and practitioner will also consider additional or alternative causes regardless of whether bacteriuria or urinary symptoms is present.
 - a. For example, a patient with a UTI could also have confusion caused by fluid and electrolyte imbalance such as hypernatremia as a result of several days of inadequate food and fluid intake.

continues on next page

Treatment/Management

1. The physician will order appropriate treatment for verified or suspected UTIs and/or urosepsis based on a pertinent assessment.
 - a. Empirical treatment should be based on a documented description of an individual's symptoms and on consideration of relevant test results, co-existing illnesses and conditions, and pertinent risk factors.
 - b. Generally, symptomatic UTIs should be treated. Bacteriuria alone (an "asymptomatic UTI") should not be treated routinely, because treating it does not materially change outcomes, improve longevity, or correct underlying problems.
 - c. In select situations, empirical antimicrobial therapy may be warranted if urosepsis or other complications are suspected.
 - d. In select situations, empirical antimicrobial therapy may be warranted for afebrile individuals with non-specific symptoms.
2. The physician will not treat asymptomatic individuals whose urine is colonized with yeast or with multidrug-resistant organisms such as methicillin-resistant *Staphylococcus aureus* or enterococcus without careful review and clinical rationale.
3. The physician should consider stopping antibiotics or switching parenteral to oral antibiotics in individuals with uncomplicated UTIs who have been afebrile and asymptomatic for at least 48 hours.
4. The physician will help the staff identify suspected sepsis related to a UTI and identify whether hospitalization may be warranted.
5. Fever and change in mental status alone do not automatically warrant hospitalization, nor is there compelling evidence that hospitalization improves the ultimate outcomes in individuals with symptomatic UTIs. Sepsis, however, may sometimes warrant more aggressive inpatient treatment.

Monitoring

1. The physician and nursing staff will review the status of individuals who are being treated for a UTI and adjust treatment accordingly.
 - a. Decisions should be made primarily on the basis of clinical signs and symptoms. The goal of treatment in most cases is to control signs and symptoms of infection, not to eliminate bacteriuria.
 - b. Follow-up urine cultures after antibiotic treatment are not indicated routinely, but may be helpful if the symptoms are not resolving or complications are present.
2. When a resident has a persistent or recurrent urinary tract infection after treatment with antibiotics, the physician will review the situation carefully with the nursing staff and consider other or additional issues (such as urinary obstruction or indwelling catheter change or removal) before prescribing additional courses of antibiotics.
 - a. Physicians should justify continuing or resuming antibiotic treatment beyond an initial course.

Coronavirus Disease (COVID-19) – Identification and Management of Ill Residents

Policy Statement

Residents with signs and/or symptoms of COVID-19 will be identified and isolated to help control the spread of infection to other residents, staff and visitors.

Policy Interpretation and Implementation

1. Strategies used for the rapid identification and management of COVID-19 infected residents include:
 - a. Screening and monitoring for symptoms;
 - b. Surveillance and reporting of respiratory illness;
 - c. Testing;
 - d. Clinical care;
 - e. Resident placement and cohorting;
 - f. Transfers; and
 - g. Admissions.

Screening and Monitoring

1. The Infection Preventionist is responsible for establishing and overseeing the active screening and monitoring efforts.
2. Residents are monitored daily for signs of respiratory infection and/or symptoms of COVID-19, including:
 - a. Fever or chills;
 - b. Cough;
 - c. Shortness of breath or difficulty breathing;
 - d. Fatigue;
 - e. Muscle or body aches;
 - f. Headache;
 - g. New loss of taste or smell;
 - h. Sore throat;
 - i. Congestion or runny nose;
 - j. Nausea or vomiting; and/or
 - k. Diarrhea.
3. Less common symptoms of COVID-19 such as new or worsening malaise, headache, dizziness, or more than two temperatures $>99.0^{\circ}\text{F}$ will prompt isolation and further evaluation for COVID-19.
4. If a resident has signs or symptoms that suggest a developing respiratory infection or COVID-19:
 - a. The charge nurse is notified immediately;
 - b. The resident is assessed by a licensed nurse;
 - c. Assessment information is reported to the Infection Preventionist;

continues on next page

- d. The Infection Preventionist notifies the local health department of any new suspected cases of COVID-19 and requests testing; and
- e. Resident information is added to the *Respiratory Surveillance Line List* and included in the Resident Impact data for reporting to the CDC.

Surveillance and Reporting

1. All surveillance findings are collected and reviewed daily by the Infection Preventionist.
2. The health department is notified of any resident with suspected or confirmed COVID-19, severe respiratory infection, or a cluster (3 or more residents or staff with new onset respiratory symptoms within 72 hours).
3. The Infection Preventionist summarizes outbreaks of respiratory illness in the *LTC Respiratory Surveillance Outbreak Summary* and submits this to the local health department.
4. Suspected and confirmed cases of COVID-19 and COVID-19 deaths are reported to the CDC through the National Health Safety Network (NHSN).

Testing

See [Coronavirus Disease \(COVID-19\) – Testing Residents](#).

Clinical Care

1. Residents with suspected or confirmed COVID-19 are medically managed by their attending physician or designee, with supportive care provided by designated nursing staff, until the resident is transferred or recovers.
2. Staff caring for residents with suspected or confirmed COVID-19 must strictly adhere to infection prevention and control practices outlined in *Coronavirus Disease (COVID-19) – Infection Prevention and Control Measures*.
3. Discontinuation of Transmission-Based precautions for residents with confirmed SARS-CoV-2 infection is based on a symptom-based strategy as described in [Discontinuation of Transmission-Based Precautions and Disposition of Patients with COVID-19 in Healthcare Settings \(Interim Guidance\) Discharging COVID-19 Patients](#).

Resident Placement and Cohorting

1. Residents with suspected COVID-19 are placed in a private room, moved to a dedicated unit, or cohorted with another resident who is suspected to have COVID-19 pending the results of SARS-CoV-2 testing.
2. Residents with confirmed COVID-19 are separated from residents who do not have confirmed COVID-19, or have an unknown status. Dedicated units must be able to adhere to strict infection control practices.
3. Consistent staff assignments are exercised for all residents regardless of symptoms or COVID-19 status. Staff members are not assigned to work across floors or units when possible.
4. Residents with known or suspected COVID-19 are cared for using all recommended PPE, including an N95 or higher level respirator (or facemask if respirators are not available), eye protection, gloves and gown.

continues on next page

5. Residents who may have been exposed to someone with COVID-19 are monitored closely and not placed with unexposed residents until 14 days after exposure or until status of COVID-19 is determined.
6. Infection prevention and control practices and specific strategies for residents with suspected or confirmed COVID-19 on Memory Care Units are informed by [Considerations for Memory Care Units in Long-term Care Facilities](#). These practices and strategies are determined by the Infection Preventionist and the Director of Nursing Services, in conjunction with the Medical Director.

Transfers

1. Residents with suspected or confirmed COVID-19 who have fever and/or respiratory symptoms are not automatically transferred to the hospital if their clinical condition and symptoms can be managed at the facility.
2. For the resident who develops severe symptoms of illness and requires transfer for a higher level of care:
 - a. Emergency medical services and the receiving facility are alerted of the resident's diagnosis (suspected or confirmed COVID-19) and notified of precautions to be taken (transferring and receiving staff); and
 - b. A facemask is placed on the resident during transfer (as supply allows).
3. The Infection Preventionist, in conjunction with the local health department, has identified facilities dedicated to residents with suspected or confirmed COVID-19, and those designated as non-COVID facilities, and has established arrangements to transfer residents if necessary.
4. Resident transfer to another certified LTC facility for the purpose of cohorting residents with COVID-19 will be conducted under the *Blanket Transfer Waiver* (QSO-20-25). Transfers or discharges to a non-certified location for the purposes of cohorting will only occur after obtaining permission from the state agency.
5. For residents who need to leave the facility for medically necessary purposes (e.g. dialysis, etc.), the transportation and receiving health care team is notified of the resident's suspected or confirmed COVID-19 status. Regardless of COVID-19 status, a facemask is placed on the resident prior to leaving his or her room.

Procedures for Accepting Admissions from Hospitals

1. The decision to admit new residents to the facility is based on the ability to provide care and to keep current residents safe. Factors that are considered when presented with a potential hospital admission include physical space to provide appropriate distancing, staffing levels, and availability of personal protective equipment.
2. For patients/residents who are tested prior to hospital discharge and are COVID-19 negative (including those who were COVID-19 positive and recovered), ADMIT and:
 - a. cohort (in rooms or wings) with other residents of similar status (e.g., new hospital admissions with negative COVID-19 test, etc.), if possible;
 - b. monitor temperature and respiratory symptoms every shift;
 - c. limit contact with other residents (as much as possible); and
 - d. consistently assign staff and limit number of times staff enter resident room.

continues on next page

3. DO NOT ADMIT patients who have not been tested in the hospital prior to discharge (status unknown) or patients who are presumptive or confirmed COVID-19 positive UNLESS:
 - a. There is a dedicated unit or floor in the facility for COVID-19 residents;
 - b. Staff movement between units is limited as much as possible; and
 - c. There are adequate staffing levels and PPE to manage COVID-19 positive residents.
4. For any resident admitted from the hospital with unknown status:
 - a. Place in a single room or observation area;
 - b. Restrict access to other residents to the extent possible;
 - c. Monitor temperature and respiratory symptoms every shift;
 - d. Place on contact and droplet precautions and wear recommended PPE when caring for the resident; and
 - e. Consistently assign staff and limit number of times staff enter resident room.

Coronavirus Disease (COVID-19) – Specimen Collection, Reporting and Documentation for COVID-19 Testing

Level III

Purpose

The purpose of this procedure is to provide testing and documentation guidelines for COVID-19 viral testing such as Reverse-Transcription Polymerase Chain Reaction (RT-PCR).

General Guidelines

1. All rapid Point of Care (POC) testing must be ordered by a healthcare professional licensed under applicable state law or a pharmacist under HHS guidance.
2. Specimens are collected at the facility and processed by a contracted laboratory unless this facility provides its own laboratory services.
3. Laboratories that can quickly process large numbers of tests with rapid reporting of results (e.g., within 48 hours) are selected for facility-wide testing.
4. Results of tests are reported to the facility and the health department. The contract with the laboratory specifies who is responsible for communicating information and how this is done.
5. The facility is responsible for aggregating positive test results and reporting to the National Health Safety Network and for notifying staff, residents and families of new cases of COVID-19 in the facility (per requirements at §483.80(g)).
6. Testing and reporting is conducted in a way that protects resident and HCP privacy and confidentiality to the extent possible.

Preparation

1. Determine the type of (Emergency Use Authorization or FDA-Approved) viral test that will be used.
2. Verify that the number of test kits and PPE required to perform tests are available.
3. Determine the specimen source (e.g., nasopharyngeal, anterior nares) that will be used.
4. Determine who is responsible for specimen collection from residents and healthcare personnel (HCP).
5. Provide staff training on specimen collection, infection prevention and control and proper use of PPE.
6. Verify that there is a physician or prescriber order for each test.
7. Be familiar with all plans to respond to the results of testing (e.g., notification of results, cohorting, transmission-based precautions, mitigation of staff shortages, etc.).
8. Be familiar with the process for documenting which residents and HCP are tested and the results, and which residents and HCP refused or were unable to be tested.
9. Read and understand the laboratory or manufacturer's collection, handling, storage and transport instructions for the specific type of test PRIOR to beginning the collection. Proper specimen collection ensures accuracy of test results and prevents unnecessary exposure.
10. For CDC guidance on proper specimen collection and handling, see [Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens for COVID-19](#).

continues on next page

11. When handling bulk-packaged swabs, don clean gloves and distribute individual swabs from the bulk container to individual disposable plastic bags before beginning specimen collections. Grasp the swab by the distal end of the handle, using gloved hands only. Otherwise, if accessing single swabs from a bulk package:
 - a. Use only fresh, clean gloves to retrieve a single new swab from the bulk container;
 - b. Close the bulk swab container after each swab removal and leave it closed when not in use to avoid inadvertent contamination;
 - c. Store opened packages in a closed, airtight container to minimize contamination; and
 - d. Keep all used swabs away from the bulk swab container to avoid contamination.

Equipment and Supplies

1. Specimen collection kits (swabs, vials with transport media, labels).
2. Required PPE (gloves, gowns, face shields, face masks or N-95 respirators, eyewear).
3. Documentation tools.

Steps in the Procedure

1. Only allow those essential for care and procedure support to be present during specimen collection.
2. Do not conduct specimen collection on multiple individuals in the same room at the same time unless appropriate separation between stations is maintained.
 - a. Collect resident specimen in the resident's room with the door closed, with no others present.
 - (1) Specimens may be self-collected by residents in order to preserve PPE supplies, as long as the resident is able to correctly self-swab and place the swab in the transport media.
 - (2) HCP and other residents are kept at a minimum of 6 feet from the resident when self-collecting.
 - (3) HCP who are handling specimens (but not directly involved in collection) must wear gloves and face mask for source control.
 - b. Collect HCP specimen on one person at a time in a room with the door closed and no others present.
 - (1) If individual rooms are not available, other considerations include swabbing multiple HCP in succession in a single room, and the use of large spaces or outdoor locations with at least 6 feet between stations.
 - (2) HCP awaiting swabbing must have a face mask or cloth cover in place for source control throughout the process, only removing it during swabbing.
 - (3) HCP will carry a prefilled specimen bag containing a swab and labeled sterile viral transport media container into the testing area from the check-in area.
3. Don PPE (eye protection, face mask or respirator, gloves and gown). Extended use of PPE is permitted if care is taken to avoid touching the face and eyewear.
 - a. Replace if it becomes damaged, soiled, or hard to breathe or see through.
 - b. Perform hand hygiene before and after manipulating PPE.
 - c. Perform hand hygiene and change gloves between each person being swabbed.
4. Collect specimen according to manufacturer or laboratory instructions. The following are acceptable specimens (See [Interim Guidelines for Collecting, Handling, and Testing Clinical Specimens for COVID-19](#) for specific techniques):
 - a. A nasopharyngeal (NP) specimen collected by a healthcare provider; or
 - b. An oropharyngeal (OP) specimen collected by a healthcare provider; or

continues on next page

- c. A nasal mid-turbinate swab collected by a healthcare provider or by supervised onsite self-collection (using a flocked tapered swab); or
 - d. An anterior nares (nasal swab) specimen collected by a healthcare provider or by home or supervised onsite self-collection (using a flocked or spun polyester swab); or
 - e. Nasopharyngeal wash/aspirate or nasal wash/aspirate (NW) specimen collected by a healthcare provider.
5. Place swab immediately into the sterile transport tube containing approved transport medium and seal it.
 6. If resident is self-collecting under clinical supervision:
 - a. Hand a swab or individual bag with swab to the resident while wearing a clean set of protective gloves.
 - b. The resident can then self-swab and place the swab in transport media and seal it.
 - c. If the resident needs assistance, place the swab into transport media and seal it.
 7. Remove PPE and perform hand hygiene.
 8. Document date and time of sample collection on documentation tool.
 9. Clean and disinfect all surfaces within 6 feet of specimen collection when visibly soiled and at least hourly using an EPA-registered disinfectant from [List N](#). Conduct terminal cleaning and disinfection of all surfaces and equipment in the specimen collection area at the end of each day.

Refusal of Testing

1. Symptomatic HCP who refuse testing are prohibited from the building(s) until [Return to Work Criteria](#) have been met.
2. Asymptomatic HCP who refuse testing are prohibited from the building until outbreak testing has been completed. Additional restrictions may be established based on occupational health and safety regulations and/or local jurisdiction.
3. Residents have the right to refuse testing. Staff may explain the importance of testing and encourage participation where appropriate, but may not test the resident without his or her consent. Some residents may be unable to test due to physical or behavioral concerns.
 - a. For a symptomatic or exposed resident who refuses or is unable to test, if there is a facility outbreak, place the resident on transmission-based precautions until he or she meets the [symptom-based criteria for discontinuation](#).
 - b. For an asymptomatic resident who refuses or is unable to test, if outbreak testing has been triggered, ensure that the resident remains physically distanced from other residents, wears a face covering, and practices frequent hand hygiene until the procedures for outbreak testing have been completed.

Documentation

1. For symptomatic residents and staff, document the date(s) and time(s) of the identification of signs or symptoms, when testing was conducted, when results were obtained, and the actions the facility took based on the results. (See Form *Documentation of Symptom-Based Testing for COVID-19*.)
2. Upon identification of a new COVID-19 case in the facility (i.e., outbreak), document the date the case was identified, the date that all other residents and staff are tested, the dates that staff and residents who tested negative are retested, and the results of all tests. (See Form *Documentation of COVID-19 Outbreak Testing*.)
3. For staff routine testing, document the facility's county positivity rate, the corresponding testing frequency indicated (e.g., every week), and the date each positivity rate was collected. Also, document the date(s) that testing was performed for all staff, and the results of each test. (See Form *Documentation of Routine (Asymptomatic) Staff Testing for COVID-19*.)

continues on next page

4. When necessary, such as in emergencies due to testing supply shortages, document that the facility contacted state and local health departments to assist in testing efforts, such as obtaining testing supplies or processing test results. (See Form *Documentation of COVID-19 Testing Supply Shortages*.)
5. Document names of, and procedures followed for, residents or staff who refuse or are unable to take tests. (See Form *Documentation of COVID-19 Test Refused or Not Administered*.)

Reporting

1. Report new cases of COVID-19 in the facility to residents, family, and staff; local or state health departments; and the NHSN according to reporting and notification requirements.

Coronavirus Disease (COVID-19) – Testing Residents

Policy Statement

Residents are tested for the SARS-CoV-2 virus to detect the presence of current infections (viral testing) and to help prevent the transmission of COVID-19 in the facility.

Testing may be provided by this facility (Point of Care testing) or offsite through an approved laboratory that has rapid testing capabilities (the ability to process large numbers of tests and report results within 48 hours).

Resident testing (POC or laboratory) requires a physician (or practitioner, according to state law) order. Standing orders are acceptable based on state scope of practice laws.

Policy Interpretation and Implementation

1. All residents are screened daily for signs and symptoms of COVID-19.
2. Any resident with fever, signs or subjective symptoms of COVID-19 is tested. While results are pending, symptomatic residents are placed on transmission-based precautions.
3. Viral testing of all residents is conducted if there is an outbreak in the facility.
 - a. An outbreak is defined as any single new onset of SARS-CoV-2 infection in a resident or a single case of infection in healthcare personnel.
 - b. Testing is conducted as soon as a new confirmed case is confirmed.
 - c. If testing capacity is limited, testing will be directed initially to residents who have had close contact with the newly confirmed case (e.g., those on the same unit as an infected resident, or those who have been cared for by infected healthcare personnel).
 - d. Residents who test positive, including asymptomatic and pre-symptomatic residents, are cohorted.
 - e. Viral testing of all previously negative residents is repeated every 3 to 7 days until testing identifies no new cases of SARS-CoV-2 infection among residents or healthcare personnel for at least 14 days since the most recent positive result.
4. Routine testing of asymptomatic residents is not conducted unless prompted by a change in circumstances, such as a confirmed case of COVID-19 in the facility.
5. Tests must be able to detect the SARS-CoV-2 virus (e.g., polymerase chain reaction/PCR) with greater than 95% sensitivity, greater than 90% specificity and with results obtained within 48 hours.
6. Antibody tests are not used to diagnose active infection, or to inform the infection prevention and control strategy for COVID-19.
7. The logistics of the facility testing strategy (procurement of tests, management of laboratory relationships, scheduling and documenting tests and results, etc.) are managed by the Infection Preventionist in collaboration with the Director of Nursing.
8. The infection preventionist, or designee reports positive test results to the local or state health department (as appropriate) for contact tracing and to the CDC National Health Safety Network (NHSN).

continues on next page

9. The facility will not relax restrictions (advance through any phase of “reopening”) until all residents and staff have received a baseline test. Asymptomatic residents who refuse (or are unable to complete) baseline testing must remain asymptomatic for 14 days prior to reopening.
10. Testing is not required to confirm resolution of infection before discontinuing transmission-based precautions unless the Infection Preventionist and/or Medical Director determines that the resident’s underlying condition(s) increase the potential to transmit infection beyond 20 days. In all other circumstances, a symptom-based strategy is used to determine when to discontinue transmission-based precautions.
11. Symptomatic residents who refuse or are unable to be tested are maintained on transmission-based precautions until symptom-based criteria for discontinuing are met.

Administering Medications

Policy Statement

Medications are administered in a safe and timely manner, and as prescribed.

Policy Interpretation and Implementation

1. Only persons licensed or permitted by this state to prepare, administer and document the administration of medications may do so.
2. The Director of Nursing Services supervises and directs all personnel who administer medications and/or have related functions.
3. Staffing schedules are arranged to ensure that medications are administered without unnecessary interruptions.
4. Medications are administered in accordance with prescriber orders, including any required time frame.
5. Medication administration times are determined by resident need and benefit, not staff convenience. Factors that are considered include:
 - a. Enhancing optimal therapeutic effect of the medication;
 - b. Preventing potential medication or food interactions; and
 - c. Honoring resident choices and preferences, consistent with his or her care plan.
6. Medications errors are documented, reported, and reviewed by the QAPI committee to inform process changes and or the need for additional staff training.
7. Medications are administered within one (1) hour of their prescribed time, unless otherwise specified (for example, before and after meal orders).
8. If a dosage is believed to be inappropriate or excessive for a resident, or a medication has been identified as having potential adverse consequences for the resident or is suspected of being associated with adverse consequences, the person preparing or administering the medication will contact the prescriber, the resident's Attending Physician or the facility's Medical Director to discuss the concerns.
9. The individual administering medications verifies the resident's identity before giving the resident his/her medications. Methods of identifying the resident include:
 - a. Checking identification band;
 - b. Checking photograph attached to medical record; and
 - c. If necessary, verifying resident identification with other facility personnel.
10. The individual administering the medication checks the label THREE (3) times to verify the right resident, right medication, right dosage, right time and right method (route) of administration before giving the medication.
11. The following information **is** checked/verified for each resident prior to administering medications:
 - a. Allergies to medications; and
 - b. Vital signs, if necessary.
12. The expiration/beyond use date on the medication label **is** checked prior to administering. When opening a multi-dose container, the date opened **is** recorded on the container.

continues on next page

13. Vials labeled as “single dose” or “single use” **are not** used on multiple residents. Such vials **are** used only for one resident in a single procedure.
14. Repackaging single use vials requires compliance with USP <797> standards. If there is a need to repackage unopened single dose/single use vials for use for more than one resident or procedure, the Consultant Pharmacist **is** contacted.
15. Medications that have been repackaged from unopened single-dose vials in accordance with USP <797> standards may be administered as repackaged single-dose/single use vials.
16. Insulin pens containing multiple doses of insulin are for single-resident use only. Changing the needle does not make it safe to use insulin pens for more than one resident.
17. Insulin pens **are** clearly labeled with the resident’s name or other identifying information. Prior to administering insulin with an insulin pen, the Nurse verifies that the correct pen is used for that resident.
18. Post-exposure follow up procedures **are** conducted if an insulin pen is used for more than one resident.
19. During administration of medications, the medication cart **is** kept closed and locked when out of sight of the medication nurse or aide. It may be kept in the doorway of the resident’s room, with open drawers facing inward and all other sides closed. No medications are kept on top of the cart. The cart must be clearly visible to the personnel administering medications, and all outward sides must be inaccessible to residents or others passing by.
20. For residents not in their rooms or otherwise unavailable to receive medication on the pass, the MAR may be “flagged.” After completing the medication pass, the nurse will return to the missed resident to administer the medication.
21. If a drug is withheld, refused, or given at a time other than the scheduled time, the individual administering the medication shall initial and circle the MAR space provided for that drug and dose.
22. The individual administering the medication initials the resident’s MAR on the appropriate line after giving each medication and before administering the next ones.
23. As required or indicated for a medication, the individual administering the medication records in the resident’s medical record:
 - a. The date and time the medication was administered;
 - b. The dosage;
 - c. The route of administration;
 - d. The injection site (if applicable);
 - e. Any complaints or symptoms for which the drug was administered;
 - f. Any results achieved and when those results were observed; and
 - g. The signature and title of the person administering the drug.
24. Topical medications used in treatments are recorded on the resident’s treatment record (TAR).
25. Staff follows established facility infection control procedures (e.g., handwashing, antiseptic technique, gloves, isolation precautions, etc.) for the administration of medications, as applicable.
26. Medications ordered for a particular resident may not be administered to another resident, unless permitted by State law and facility policy, and approved by the Director of Nursing Services.
27. Residents may self-administer their own medications only if the Attending Physician, in conjunction with the Interdisciplinary Care Planning Team, has determined that they have the decision-making capacity to do so safely.

continues on next page

28. If a resident uses PRN medications frequently, the Attending Physician and Interdisciplinary Care Team, with support from the Consultant Pharmacist as needed, shall reevaluate the situation, examine the individual as needed, determine if there is a clinical reason for the frequent PRN use, and consider whether a standing dose of medication is clinically indicated.
29. New personnel authorized to administer medications are not permitted to prepare or administer medications until they have been oriented to the medication administration system used by the facility.
30. The Charge Nurse must accompany new nursing personnel on their medication rounds for a minimum of three (3) days to ensure established procedures are followed and proper resident identification methods are learned.
31. Each nurses' station has a current *Physician's Desk Reference* (PDR) and/or other medication reference, as well as a copy of the surveyor guidance for F755-761 (Pharmacy Services) available. Manufacturer's instructions or user's manuals related to any medication administration devices are kept with the devices or at the nurses' station.

Blood or Body Fluids Exposure

Policy Statement

Any employee exposure to blood or body fluids occurring on our premises must be reported to the Infection Preventionist (or designee).

Policy Interpretation and Implementation

1. Each employee must report any significant cuts or skin wounds that he/she may have to his/her supervisor or to the Infection Preventionist (or designee) prior to performing any task(s) that may involve potential exposure to blood or body fluids.
2. An employee with impairment of normal skin condition (e.g., wounds, cuts, scrapes, dermatitis, chapped skin, rash, etc.) must wear appropriate protective equipment (i.e., occlusive bandages, gloves, gown, masks, etc.) when performing tasks that may involve exposure to blood or body fluids.
3. All blood or body fluids should be considered potentially infectious at all times.
4. Staff must wear protective clothing when providing treatment to a resident with a potentially contagious bloodborne illness.
5. Should skin exposure to blood or body fluids occur, the employee should:
 - a. Stop the procedure as soon as it is safe and/or practical to do so;
 - b. Wash the exposed area thoroughly with soap and running water;
 - c. Report the incident to his/her supervisor, who will report to the Infection Preventionist (or designee);
 - d. Fill out and complete an exposure report form; and
 - e. Obtain further counseling from the Infection Preventionist regarding the exposure.
6. If the skin exposure involves large amounts of blood or prolonged contact with blood, especially if the exposed skin is chapped or otherwise broken, use alcohol or peroxide as an antiseptic after thorough handwashing.
7. Should exposure to blood or body fluids occur to the eyes or mouth, the employee should:
 - a. Flush the exposed area immediately with water;
 - b. If desired, rinse the mouth with peroxide;
 - c. Report the incident to the individual's supervisor, who will report it to the Infection Preventionist (or designee);
 - d. Complete an exposure report form; and
 - e. Obtain further counseling from the Infection Preventionist regarding the exposure.
8. Should an exposure to blood/body fluids occur from a needlestick, cut from a sharp instrument, or contamination of an open wound or broken skin, the employee should:
 - a. Allow the wound to bleed freely;
 - b. Wash the exposed area with soap and water;
 - c. Apply antiseptic as desired:
 - (1) Isopropyl alcohol 70%; or
 - (2) Hydrogen peroxide 3%.
 - d. Report the incident to the Infection Preventionist (or designee);

continues on next page

- e. Complete an exposure report form; and
 - f. Obtain further counseling from the Infection Preventionist regarding the exposure.
9. Our facility follows current CDC Guidelines and Recommendations governing occupational exposure to blood and/or body fluids.

Blood Sampling – Capillary (Finger Sticks)

Level III

Purpose

The purpose of this procedure is to guide the safe handling of capillary-blood sampling devices to prevent transmission of bloodborne diseases to residents and employees.

Equipment and Supplies

1. Alcohol pledgets;
2. Disinfected blood glucose meter (glucometer) with sterile lancet; *or* single-resident use spring-loaded device (e.g., Penlet) *or* automatic or safety type lancet;
3. Disposable lancet;
4. Personal protective equipment (e.g., gloves);
5. Sharps container; and
6. Approved EPA registered disinfectant for cleaning of sampling device.

General Guidelines

1. Always ensure that blood glucose meters intended for reuse are cleaned and disinfected between resident uses. Single-resident use fingerstick devices (pen-like devices) should never be used by more than one resident.
2. The lancets and platforms must always be changed after use on each resident.
3. Handle the lancet as a used needle.

Steps in the Procedure

1. Wash hands.
2. Don gloves.
3. Place blood glucose monitoring device on clean field.
4. Place a new lancet and disposable platform on the spring-loaded finger-stick device.
5. Wipe the area to be lanced with an alcohol pledget.
6. Obtain the blood sample, following the manufacturer's instructions for the device.
7. Discard lancet and platform into the sharps container.
8. Following the manufacturer's instructions, clean and disinfect reusable equipment, parts, and/or devices after each use.
9. Remove gloves, and discard into appropriate receptacle.
10. Wash hands.
11. Replace blood glucose monitoring device in storage area after cleaning.

Cultures

Policy Statement

Cultures will only be performed when necessary to help determine the presence or absence of infection.

Policy Interpretation and Implementation

1. The resident’s Attending Physician or the facility’s Medical Director must order a culture before one is obtained and sent to the laboratory.
2. When cultures are ordered, they should be obtained and completed as soon as practical.
3. All culture results will be reported to the resident’s Attending Physician as soon as the results are obtained.
4. Cultures related to infection control surveillance or monitoring may be done by the Infection Preventionist (or designee) after approval by the Medical Director and/or Infection Prevention Committee. These would only be ordered for special circumstances such as outbreak detection. (NOTE: Routine surveillance cultures are not recommended in the long term care setting.)
5. If needed for infection control reasons, the Infection Preventionist (or designee) may obtain stool cultures following acute diarrheal illness in employees.
6. Based on a physician order, the Infection Preventionist (or designee) may obtain stool cultures for follow-up of *Salmonella* and *Shigella* forty-eight (48) hours after the discontinuance of antimicrobials.
7. In suspected or identified outbreaks, the Medical Director may order screening, surveillance and follow-up cultures as necessary and the Administrator, Infection Preventionist (or designee) may report laboratory findings to the health department, as appropriate.
8. The Infection Preventionist and the Infection Control Committee shall review statistics and other information related to infection control, including culture reports.
9. Culture reports must be filed in the resident’s medical record.

Version	1.3 (H5MAPL0169)

Cultures, Specimen Collection for

Level III

Purpose

Correct collection and handling of culture specimens helps ensure more accurate and timely results and subsequent treatment.

Procedure Guidelines

1. Labeling of the specimen must include:
 - a. Resident name;
 - b. Location of resident (room and bed number);
 - c. Physician ordering;
 - d. Date and time specimen collected;
 - e. Source of specimen;
 - f. Test desired; and
 - g. Name of person collecting specimen.
2. Explain the procedure completely to the resident.
3. Stay with the resident during the specimen collection if practical.
4. Use a sterile container (except for stool cultures).
5. Label the specimen correctly and send it to the laboratory.
6. Avoid contamination of the container.
7. Place all specimens in a secondary plastic bag with an appropriate biohazard label to contain spills.

Equipment and Supplies

For Throat Culture

1. Gloves;
2. Mask and goggles/face shield (if indicated);
3. Sterile culture swab;
4. Tongue blade; and
5. Penlight.

For Nasopharyngeal Culture

1. Flexible cotton tipped wire;
2. Penlight;
3. Lab personnel at bedside with culture plates (or sterile container if lab unavailable); and
4. Clean gloves.

For Nasal Culture

1. Sterile culture swab; and
2. Clean gloves.

continues on next page

For Eye Culture

1. Sterile gloves;
2. Sterile culture swab;
3. Sterile normal saline solution; and
4. Sterile 2 x 2 gauze pads.

For Ear Culture

1. Clean gloves;
2. Sterile culture swab;
3. Sterile normal saline solution; and
4. Sterile 2 x 2 gauze pads.

For Rectal Culture

1. Clean gloves;
2. Sterile culture swab; and
3. Washcloth, soap, and water.

For Wound Culture

1. Sterile gloves;
2. Sterile general purpose tray;
3. Alcohol sponges;
4. Betadine sponges (or ACU-dyne); and
5. Sterile culture swab.

For Vaginal Culture

1. Clean gloves;
2. Sterile culture swab;
3. Sterile normal saline solution; and
4. Antiseptic solution.

Swabs of Skin Surfaces

1. Sterile culture swab;
2. Sterile normal saline solution; and
3. Clean gloves.

Stool Culture

1. Clean specimen container with lid;
2. Bedpan or bedside commode; and
3. Clean gloves.

Urine Culture From Indwelling Catheter

1. Alcohol sponge;
2. Syringe;
3. Sterile needle;
4. Sterile specimen container; and
5. Clean gloves.

continues on next page

Steps in the Procedure

Throat Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands and put on clean gloves. (Use a mask and eyewear if splashing, spraying, or spattering of blood or saliva is likely.)
4. Explain to the resident that he/she may gag during collection.
5. Ask the resident to sit up if possible.
6. Ask the resident to tilt head back, if possible.
7. Depress the tongue using the tongue blade and illuminate the throat using a penlight.
8. Swab the tonsillar areas from side to side, including any inflamed or purulent sites. Do not touch the tongue, cheeks, or teeth with the swab.
9. Withdraw the swab and place it in the sheath, immediately crush the ampule of culture medium at the bottom of the tube. Push the swab into the medium to keep it moist.
10. Label the specimen.
11. Discard gloves and other protective equipment into appropriate receptacles. Wash hands.
12. Label the specimen and send to the lab.

Nasopharyngeal Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands and put on clean gloves.
4. Tell the resident he/she may gag or feel the urge to sneeze during the procedure.
5. Ask the resident to sit up if possible.
6. Ask the resident to blow his/her nose if possible.
7. Tell the resident to occlude one nostril and then the other as he/she exhales. Insert the swab tube into the more patent nostril.
8. Ask the resident to cough.
9. Open the package containing the swab and carefully bend the wire into a curve, maintaining sterility.
10. Ask the resident to tilt his/her head back and then pass the swab through the nostril about 3–4 inches, keeping it near the nasal septum and floor of the nose.
11. Rotate the swab quickly, then withdraw it and give to the lab person standing at bedside, or insert contaminated end of wire into sterile container and break, seal cap.
12. Discard gloves and other protective equipment into an appropriate receptacle. Wash hands.
13. Label the specimen and send to the lab.

Nasal Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands and put on clean gloves.
4. Using your thumb, gently elevate the nares by pushing up on the tip of the nose.
5. Insert a sterile culture swab into the anterior tips of the nares, and rotate the swab to collect any moisture.
6. Remove the swab from the nose and replace in the sheath.
7. Squeeze the capsule to release the culture medium. Be sure the swab is in the medium.
8. Discard gloves and other protective equipment into an appropriate receptacle. Wash hands.
9. Label the specimen and send to the lab.

continues on next page

Eye Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands and put on sterile gloves.
4. Gently clean excess debris from the outside of the eye with sterile normal saline solution and gauze pads, wiping from inner to outer corners.
5. Retract the lower eyelid to expose the conjunctival sac. Gently rub a sterile swab over the conjunctiva (hold the swab parallel to the eye, rather than pointing it directly at the eye).
6. Place the swab immediately into the sheath and squeeze the ampule to release the culture medium.
7. Remove gloves and discard into appropriate receptacle. Wash hands.
8. Label the specimen and send immediately to the lab.

Ear Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands and put on clean gloves.
4. Clean excess debris from the ear with sterile normal saline solution and gauze pads.
5. Insert the swab into the ear canal and rotate it gently along the walls of the canal.
6. Withdraw the swab, being careful not to touch any other surfaces.
7. Place the swab into the sheath and squeeze the capsule to release the culture medium.
8. Remove gloves and discard into an appropriate receptacle. Wash hands.
9. Label the specimen and send to the lab.

Rectal Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands, put on clean gloves.
4. Clean the area around the anus with soap and water.
5. Insert the swab, moistened with sterile normal saline into the anus and advance it (about 1 1/2 inches). While withdrawing the swab, gently rotate it against the walls of the lower rectum.
6. Place the swab into the sheath and squeeze the capsule to release the culture medium. Be sure the swab is in the medium.
7. Remove gloves and discard into appropriate receptacle. Wash hands.
8. Label the specimen and send to the lab.

Wound Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands and put on gloves.
4. Remove the dressings to expose the wound.
5. Cleanse the wound area with normal saline, removing all old drainage from wound bed.
6. Allow the area to dry.
7. Using the sterile culture swab, collect as much fresh drainage as possible, or insert the swab gently into any open, draining area of the wound and rotate it to obtain drainage. Never collect drainage from the outside and then insert the same swab into the wound. Don't just swab the surface of the wound.
8. Place the swab back into the sheath and squeeze the capsule to release the culture medium.

continues on next page

9. Remove the sterile gloves and discard into appropriate receptacle. Wash hands.
10. Label the specimen and send to the lab.

Vaginal Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands and put on gloves.
4. With gloved hand, separate labia and cleanse the area with antiseptic solution (if the resident not allergic).
5. Moisten the swab with sterile saline.
6. Insert the swab into vagina with labia still separated and obtain culture.
7. In withdrawing the swab, take care not to contaminate with rectal organisms.
8. Place the swab in sheath and squeeze capsule to release culture medium. Be sure the swab is in medium.
9. Remove gloves and discard into appropriate receptacle. Wash hands.
10. Label the specimen and send to the lab.

Swabs of Skin Surfaces

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Wash hands and put on clean gloves.
4. Moisten sterile swab with sterile normal saline solution.
5. Roll moistened sterile swab over surface to be cultured.
6. If lesion is purulent, clean it out first with sterile swab sticks, then use a sterile specimen swab to take the specimen.
7. Place the swab in sheath and squeeze capsule to release culture medium. Be sure the swab is in medium.
8. Remove gloves and discard into appropriate receptacle. Wash hands.
9. Label the specimen and send to the lab.

Stool Culture

1. Validate the Physician's order for culture.
2. Explain procedure to resident.
3. Tell the resident to notify you when he has the urge to defecate.
4. Have the resident defecate into a clean, dry bedpan or commode.
5. Instruct the resident to try to avoid contaminating the specimen with urine or toilet tissue.
6. Put on clean gloves.
7. Use a scoop attached to top of stool specimen container to obtain stool. A specimen the size of a pea pod is sufficient.
8. Place the specimen in container and close cap tightly.
9. Label the container.
10. Remove gloves and discard into appropriate receptacle. Wash hands.
11. Label the specimen and send to lab.

Urine Culture From Indwelling Catheter

1. Validate the Physician's order for culture.
2. Approximately 30 minutes prior to collecting the specimen, clamp the collection tube to allow urine to accumulate.
3. Put on gloves.
4. Wipe the sampling port with an alcohol sponge.

continues on next page

5. Connect a needle to a syringe and uncap the needle.
6. Insert the needle into the sampling port at a 90° angle to the tubing.
7. Aspirate the specimen into the syringe.
8. Transfer the specimen to a sterile container.
9. Unclamp the drainage tube.
10. Remove gloves and discard into appropriate receptacle.
11. Wash hands.
12. Label the specimen and send to the lab.

Special Considerations

1. For a wound specimen, although you would normally cleanse the area around the wound to prevent contamination by normal skin flora, do not cleanse a perineal wound area with alcohol, to avoid irritating sensitive tissue.
2. Be sure antiseptic does not enter the wound.
3. Document the time, date, and site of the specimen collection. Note any unusual appearance or odor of the specimen.
4. Dry swabs from dry wounds are not acceptable; surface swabs from wounds are of little if any value.

Departmental (Environmental Services) – Laundry and Linen

Level I

Purpose

The purpose of this procedure is to provide a process for the safe and aseptic handling, washing, and storage of linen.

General Guidelines

Standard Precautions

1. Separate soiled and clean linen at all times.
2. Wash hands after handling soiled linen and before handling clean linen.
3. Consider all soiled linen to be potentially infectious and handle with standard precautions.

Bagging and Handling Soiled Linen

1. All soiled linen must be placed directly into a covered laundry hamper which can contain the moisture.
2. Do not sort or pre-rinse soiled linens in resident-care areas.
3. Place any linen saturated with blood or body fluids into a leak-resistant bag before placing it into the hamper.
4. Handle soiled linen as little as possible to prevent agitation.
5. If laundry chutes are used, only closed and leak-resistant bags will be put into the chute. Loose items will not be placed in the laundry chute.

Sorting Soiled Linen

1. Employees sorting or washing linen must wear a gown and gloves. A mask may be worn if aerosolization is expected.
2. Use heavy-duty rubber gloves for sorting laundry. Always wash hands after completing the task and removing gloves.
3. A sharps container should be available in the soiled linen sorting area to permit the disposal of any syringes found in the soiled laundry.
4. The _____ is responsible for ensuring that a sharps container is present at all times.
5. Pre-wash briefs, underpads and any other items soiled with feces, using the maximum setting of bleach/ EPA registered germicidal, and then process them through a regular cycle.

Washing Linen and other Soiled Items

1. Laundry may be processed in either low-temperature or high-temperature cycles.
 - a. For high-temperature processing, wash linen in water that is at least 160°F, for a minimum of twenty-five (25) minutes.
 - b. For low-temperature processing, wash linen in water that is at least 71-77°F and use a 125-part-per-million (ppm) chlorine bleach rinse if the material being washed can withstand bleach and remain intact.
 - c. Ozone cleaning systems are also acceptable means of processing laundry.

continues on next page

2. Use any detergent designated for laundry processing and follow manufacturer’s instructions. Anti-microbial detergents are not required.
3. Follow any special requests for laundry processing of residents with allergies (hypo-allergenic or unscented detergents, etc.).
4. Do not leave damp linen in washing machines overnight.
5. Follow manufacturer’s instructions for all laundry processing materials (equipment, detergents, rinses, etc.) and label items on clothing and linen.
6. Keep soiled and clean linen, and their respective hampers and laundry carts, separate at all times.
7. Clean linen will remain hygienically clean (free of pathogens in sufficient numbers to cause human illness) through measures designed to protect it from environmental contamination, such as covering clean linen carts.
8. Wash mops separately from linens, using the maximum setting of bleach/EPA registered germicidal.
9. Reprocess any linen that is not visibly clean upon completion of the cycle or any linen that falls onto the floor.
10. Leave washing machine doors open when not in use.
11. Remove barrier attire when leaving the soiled linen area.
12. Wash hands before handling clean linen (i.e., when moving from washer to dryer, moving from dryer to sorting table, and through the sorting process).

Departmental (Maintenance) – Plumbing, HVAC and Related Systems

Level I

Purpose

The purpose of this procedure is to guide the sanitary handling of the plumbing, heating, ventilation, air conditioning, and related systems within the facility.

Preparation

Assemble the equipment and supplies needed.

General Guidelines

1. The plumbing system should be manipulated with caution.
2. Use barriers, including isolation barriers, when indicated to prevent exposure to blood, body fluids, excretions, and secretions. Use isolation barriers as necessary.
3. Wear gloves when there is potential for exposure to infectious material.
4. Disinfect tools that are contaminated with blood, body fluids, excretions, or secretions. (Note: This includes used plumbing snakes, wet-vacs, and similar soiled items.)
5. If there is an overflow due to an occluded pipe, “snake” pipes or drains cautiously. If safety permits, wear heavy-duty gloves. Disinfect or discard gloves at the end of the procedure. Wear appropriate safety eyewear.
6. Flush drains in the janitor’s closet, laundry, showers, tubs, kitchen, etc., at least quarterly.
7. Maintain water fountain coils at least quarterly.
8. Vacuum ice machine coils as necessary. Check the drains and condensate pan at least weekly. Empty, clean, and maintain ice machines at least quarterly.
9. Report any injuries, especially breaks in the skin, to the supervisor immediately.
10. During construction within the facility, use or construct barriers to contain dust.
11. Inspect air-conditioning unit drains and filters weekly. Change filters at least monthly during use. Discard soiled filters.
12. Air-conditioning units should have major cleaning and maintenance performed in the spring and fall before the system is changed over. During the summer months check the unit daily for proper drainage of condensate. Promptly investigate reports of condensation appearing where it doesn’t belong.
13. Clean or discard filters in individual air-conditioning units in the resident rooms at least monthly during the summer. Vacuum and maintain units as necessary.
14. Clean air vents and air handling units at least annually. Maintain exhaust fans at least every six (6) months.
15. Wear masks when handling soiled filters on any system.
16. Maintenance personnel should wash their hands before and after leaving nursing areas, and especially following exposure to plumbing spills.
17. Items to be repaired should be free of visible soil.
18. The dumpster/compactor should be locked after last use in the evening and unlocked in the morning.
19. The pest control vendor should spray monthly (or as necessary) for insects and rodents.
20. Store contaminated waste as outlined in the facility Medical Waste Management Plan.
21. Personal protective clothing (e.g., gowns, gloves, masks, etc.) used during maintenance procedures should be discarded into appropriate receptacles.

continues on next page

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure.

1. Tools necessary to perform the required maintenance.
2. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Related Documents	Environmental Infection Control Policies
Version	1.1 (H5MAPR0098)

Departmental (Physical Therapy) – Prevention of Infection Level I

Purpose

The purpose of this procedure is to prevent the spread of infections in the physical therapy department.

Preparation

1. Review the resident's care plan to assess for any special circumstances or precautions related to the resident.
2. Assemble the equipment and supplies needed.

General Guidelines

1. Therapy workers should follow Standard Precautions for all individuals and Contact Precautions if indicated by a resident's condition, physician orders, or appropriate notification from the nursing staff. If unsure, discuss the situation with a Nursing Supervisor or Charge Nurse before treating a resident.
2. Handle all soiled dressings as infectious waste.

Equipment and Supplies

The following equipment and supplies will be necessary when performing this procedure:

1. Dressings as appropriate and per MD order;
2. Plastic bag or container;
3. Disinfectant (as indicated); and
4. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

Dressing Removal or Change:

1. Wash and dry hands thoroughly.
2. Put on exam gloves.
3. Lift off dressing without having skin contact with the soiled dressing and discard into appropriate receptacle.
4. Handle wet dressings with the no-touch technique or with sterile gloves.
5. Remove gloves and discard into an appropriate receptacle.
6. Wash and dry hands thoroughly.

Whirlpool:

1. Provide whirlpool treatment, as ordered.
2. Remove resident. Drain tank.
3. Wash and dry hands thoroughly.
4. After an individual has used the whirlpool, wash the whirlpool tank with approved disinfectant.
5. Allow turbine to run for ten (10) minutes.
6. Rinse tank thoroughly to remove any chemicals from the tub.

continues on next page

7. Residents with draining wounds, fecal incontinence, or other conditions which present an infection control risk will not ordinarily be treated in whirlpools until their condition(s) is resolved, unless the whirlpool treatment is essential because no other means of adequate wound cleansing is available.
8. After a whirlpool is used to treat residents with the above mentioned conditions, clean and disinfect it as indicated.

Hydroculator:

1. Empty the tank every six (6) months and disinfect it with an approved disinfectant.
2. Place a towel between the resident and any hot pack.
3. Wash hot pack covers when soiled or as indicated.

Paraffin Treatments:

1. Always wash a resident’s hands and arms before immersion into paraffin.

Ultrasonic Treatments:

1. Don’t perform ultrasonic treatments in areas with broken skin unless specifically reviewed and approved by a physician.
2. Wash hands before and after close contact with the resident’s skin.

Tens:

1. Use disposable electrodes on all individuals.

Debridement:

1. Use a sterile suture kit, wear sterile gloves, and use sterile dressings for all debridement.

Documentation

Record the following information in the resident’s medical record:

1. The date and time the physical therapy was performed.
2. The type of physical therapy performed.
3. The name and title of the individual(s) who performed the physical therapy.
4. All assessment data obtained during the physical therapy.
5. If the resident refused the therapy, the reason(s) why and the intervention taken.
6. The signature and title of the person recording the data.

Departmental (Recreational Therapy) – Prevention of Infection

Level I

Purpose

The purpose of this procedure is to guide the prevention of disease transmission in the Recreational Therapy Department.

Preparation

1. Review the resident's care plan to assess for any special circumstances or precautions related to the resident.
2. Assemble the equipment and supplies needed.

General Guidelines

1. Recreational therapy staff should consult with the Charge Nurse, Nursing Supervisor, or other appropriately knowledgeable staff, before they interact with a resident who has any of the following, or before they take a resident to an activity where he/she may interact with others:
 - a. Fever;
 - b. Diarrhea or vomiting;
 - c. Cold or flu symptoms;
 - d. Rashes or undiagnosed skin conditions;
 - e. Open draining areas not contained within dressings;
 - f. Herpetic lesions;
 - g. Lice or scabies; and/or
 - h. A potentially contagious infection with a multi-drug resistant organism such as Methicillin Resistant Staphylococcus Aureus (MRSA) or others.
2. If a resident has cuts or lesions on his/her hands or other exposed parts of the body, these must be covered (e.g., with an adhesive bandage, gloves, or a dressing) before he/she participates in an activity.
3. A resident's hands must be washed when obviously soiled.
4. Recreational therapy staff should use and discard personal protective clothing (e.g., gown, gloves, masks, etc.) per related policies.

Version	1.2 (H5MAPR0100)

Departmental (Respiratory Therapy) – Prevention of Infection

Level I

Purpose

The purpose of this procedure is to guide prevention of infection associated with respiratory therapy tasks and equipment, including ventilators, among residents and staff.

Preparation

1. Review the resident's care plan to assess for any special circumstances or precautions related to the resident.
2. Assemble the equipment and supplies needed.

General Guidelines

1. Distilled water used in respiratory therapy must be dated and initialed when opened, and discarded after twenty-four (24) hours.
2. Condensate in the breathing circuits must be drained back into waste bottles, which must be marked with the resident's name, and emptied into the toilet or hopper at the end of every shift. Condensate should be considered infectious. Condensate should never be drained back into the breathing circuit or cascade.
3. Transport respiratory therapy equipment to designated soiled utility area for decontamination.

Equipment and Supplies

The following equipment and supplies will be necessary when performing tasks related to this procedure:

1. Appropriate equipment/supplies necessary for ordered therapy;
2. Waterless antiseptic handwash (as indicated); and
3. Personal protective equipment (e.g., gowns, gloves, mask, etc., as needed).

Steps in the Procedure

Infection Control Considerations Related to Oxygen Administration

1. Obtain equipment (i.e., oxygen tubing, reservoir, and distilled water).
2. Use distilled water for humidification per facility protocol.
3. Mark bottle with date and initials upon opening and discard after twenty-four (24) hours.
4. Check water levels of refillable humidifier units daily. If the water level falls below the fill line:
 - a. Discard residual solution.
 - b. Pour a small amount of distilled water into the reservoir and swish around to rinse all surfaces.
 - c. Discard water.
 - d. Refill with distilled water to fill line.
 - e. Change the reservoir every forty-eight (48) hours and disinfect with 2% alkaline glutaraldehyde or sterilize.

continues on next page

5. Check water level of any pre-filled reservoir every forty-eight (48) hours.
6. Change pre-filled humidifier when the water level becomes low.
7. Change the oxygen cannulae and tubing every seven (7) days, or as needed.
8. Keep the oxygen cannulae and tubing used PRN in a plastic bag when not in use.
9. Wash filters from oxygen concentrators every seven days with soap and water. Rinse and squeeze dry.
10. Wash hands after manipulation.

Infection Control Considerations Related to Medication Nebulizers/Continuous Aerosol:

1. Obtain equipment (i.e., administration “set-up,” plastic bag, gauze sponges).
2. Wash hands.
3. After completion of therapy:
 - a. Remove the nebulizer container;
 - b. Rinse the container with fresh tap water; and
 - c. Dry on a clean paper towel or gauze sponge.
4. Reconnect to the administration “set-up” when air dried.
5. Take care not to contaminate internal nebulizer tubes.
6. Wipe the mouthpiece with damp paper towel or gauze sponge.
7. Store the circuit in plastic bag, marked with date and resident’s name, between uses.
8. Wash hands.
9. Discard the administration “set-up” every seven (7) days.

Infection Control Considerations Related to Mechanical Ventilators:

1. Obtain appropriate equipment (i.e., breathing circuits (as indicated), sterile water, and waste water bottle).
2. Change the ventilator circuits and cascades every forty-eight (48) hours.
3. Do not disconnect the cascades from the heat supply, even when not in use.
4. Change the cascade reservoir and disinfect using 2% alkaline glutaraldehyde or sterilize it.
5. Fill the cascade with sterile distilled water.
6. When cascades need refilling, discard residual fluid. Pour a small amount of sterile distilled water into the cascade. Swish around to rinse all surfaces. Discard the water and refill with sterile distilled water.
7. Drain condensate from corrugated tubing into waste bottles marked with the resident’s name. Empty bottles into toilet or hopper at the end of the shift, and as necessary. (Note: Never allow condensate to drain back toward resident or into cascade.)
8. When disconnecting tracheostomies from the breathing circuit, direct the mist away from the resident and your face.
9. Check filters once weekly while they are in continuous use. Discard filters or sterilize them between uses for different residents.
10. Clean and disinfect the surface of the ventilator as necessary and between uses for different residents.

Documentation

The following information should be recorded in the resident’s medical record:

1. The date and time the respiratory therapy was performed.
2. The type of respiratory therapy performed.
3. The name and title of the individual(s) who performed the respiratory therapy.
4. All assessment data obtained during the treatment.
5. If the resident refused the therapy, the reason(s) why and what was done as a result.
6. The signature and title of the person recording the information.

Handwashing/Hand Hygiene

Policy Statement

This facility considers hand hygiene the primary means to prevent the spread of infections.

Policy Interpretation and Implementation

1. All personnel shall be trained and regularly in-serviced on the importance of hand hygiene in preventing the transmission of healthcare-associated infections.
2. All personnel shall follow the handwashing/hand hygiene procedures to help prevent the spread of infections to other personnel, residents, and visitors.
3. Hand hygiene products and supplies (sinks, soap, towels, alcohol-based hand rub, etc.) shall be readily accessible and convenient for staff use to encourage compliance with hand hygiene policies.
4. Triclosan-containing soaps will not be used.
5. Residents, family members and/or visitors will be encouraged to practice hand hygiene through the use of fact sheets, pamphlets and/or other written materials provided at the time of admission and/or posted throughout the facility.
6. Wash hands with soap (antimicrobial or non-antimicrobial) and water for the following situations:
 - a. When hands are visibly soiled; and
 - b. After contact with a resident with infectious diarrhea including, but not limited to infections caused by norovirus, salmonella, shigella and C. difficile.
7. Use an alcohol-based hand rub containing at least 62% alcohol; or, alternatively, soap (antimicrobial or non-antimicrobial) and water for the following situations:
 - a. Before and after coming on duty;
 - b. Before and after direct contact with residents;
 - c. Before preparing or handling medications;
 - d. Before performing any non-surgical invasive procedures;
 - e. Before and after handling an invasive device (e.g., urinary catheters, IV access sites);
 - f. Before donning sterile gloves;
 - g. Before handling clean or soiled dressings, gauze pads, etc.;
 - h. Before moving from a contaminated body site to a clean body site during resident care;
 - i. After contact with a resident's intact skin;
 - j. After contact with blood or bodily fluids;
 - k. After handling used dressings, contaminated equipment, etc.;
 - l. After contact with objects (e.g., medical equipment) in the immediate vicinity of the resident;
 - m. After removing gloves;
 - n. Before and after entering isolation precaution settings;
 - o. Before and after eating or handling food;
 - p. Before and after assisting a resident with meals; and
 - q. After personal use of the toilet or conducting your personal hygiene.
8. Hand hygiene is the final step after removing and disposing of personal protective equipment.

continues on next page

9. The use of gloves does not replace hand washing/hand hygiene. Integration of glove use along with routine hand hygiene is recognized as the best practice for preventing healthcare-associated infections.
10. Single-use disposable gloves should be used:
 - a. Before aseptic procedures;
 - b. When anticipating contact with blood or body fluids; and
 - c. When in contact with a resident, or the equipment or environment of a resident, who is on contact precautions.
11. Wearing artificial fingernails is strongly discouraged among staff members with direct resident-care responsibilities, and is prohibited among those caring for severely ill or immunocompromised residents. The Infection Preventionist maintains the right to request the removal of artificial fingernails at any time if he or she determines that they present an unusual infection control risk.

Procedure

Equipment and Supplies

1. The following equipment and supplies are necessary for hand hygiene:
 - a. Alcohol-based hand rub containing at least 62% alcohol;
 - b. Running water;
 - c. Soap (liquid or bar; anti-microbial or non-antimicrobial);
 - d. Paper towels;
 - e. Trash can;
 - f. Lotion; and
 - g. Non-sterile gloves.

Washing Hands

1. Wet hands first with water, then apply an amount of product recommended by the manufacturer to hands.
2. Rub hands together vigorously for at least 15 seconds, covering all surfaces of the hands and fingers.
3. Rinse hands with water and dry thoroughly with a disposable towel.
4. Use towel to turn off the faucet.
5. Avoid using hot water, because repeated exposure to hot water may increase the risk of dermatitis.

Using Alcohol-Based Hand Rubs

1. Apply generous amount of product to palm of hand and rub hands together.
2. Cover all surfaces of hands and fingers until hands are dry.
3. Follow manufacturers' directions for volume of product to use.

Applying and Removing Gloves

1. Perform hand hygiene before applying non-sterile gloves.
2. When applying, remove one glove from the dispensing box at a time, touching only the top of the cuff.

continues on next page

3. When removing gloves, pinch the glove at the wrist and peel away from the hand, turning the glove inside out.
4. Hold the removed glove in the gloved hand and remove the other glove by rolling it down the hand and folding it into the first glove.
5. Perform hand hygiene.

Isolation – Categories of Transmission-Based Precautions

Policy Statement

Transmission-Based Precautions are initiated when a resident develops signs and symptoms of a transmissible infection; arrives for admission with symptoms of an infection; or has a laboratory confirmed infection; and is at risk of transmitting the infection to other residents.

Policy Interpretation and Implementation

1. Standard precautions are used when caring for residents at all times regardless of their suspected or confirmed infection status.
2. Transmission-based precautions are additional measures that protect staff, visitors and other residents from becoming infected. These measures are determined by the specific pathogen and how it is spread from person to person. The three types of transmission-based precautions are contact, droplet and airborne.
3. The Centers for Disease Control and Prevention (CDC) maintains a list of diseases, modes of transmission and recommended precautions.
4. The facility makes every effort to use the least restrictive approach to managing individuals with potentially communicable infections. Transmission-based precautions are used only when the spread of infection cannot be reasonably prevented by less restrictive measures.
5. When a resident is placed on transmission-based precautions, appropriate notification is placed on the room entrance door and on the front of the chart so that personnel and visitors are aware of the need for and the type of precaution.
 - a. The signage informs the staff of the type of CDC precaution(s), instructions for use of PPE, and/or instructions to see a nurse before entering the room.
 - b. Signs and notifications comply with the resident's right to confidentiality or privacy.
6. When transmission-based precautions are in effect, non-critical resident-care equipment items such as a stethoscope, sphygmomanometer, or digital thermometer will be dedicated to a single resident (or cohort of residents) when possible.
 - a. If re-use of items is necessary, then the items will be cleaned and disinfected according to current guidelines before use with another resident.

continues on next page

Contact Precautions

1. Contact Precautions may be implemented for residents known or suspected to be infected with microorganisms that can be transmitted by direct contact with the resident or indirect contact with environmental surfaces or resident-care items in the resident's environment.
2. The decision on whether contact precautions are necessary will be evaluated on a case by case basis.
3. The individual on contact precautions will be placed in a private room if possible. If a private room is not available, the Infection Preventionist will assess various risks associated with other resident placement options (e.g., cohorting, placing with a low risk roommate).
4. Staff and visitors will wear gloves (clean, non-sterile) when entering the room.
 - a. While caring for a resident, staff will change gloves after having contact with infective material (for example, fecal material and wound drainage).
 - b. Gloves will be removed and hand hygiene performed before leaving the room.
 - c. Staff will avoid touching potentially contaminated environmental surfaces or items in the resident's room after gloves are removed.
5. Staff and visitors will wear a disposable gown upon entering the room and remove before leaving the room and avoid touching potentially contaminated surfaces with clothing after gown is removed.
6. When transporting individuals with skin lesions, excretions, secretions, or drainage that is difficult to contain, contact precautions will be taken during resident transport to minimize the risk of transmission.

Droplet Precautions

1. Droplet Precautions may be implemented for an individual documented or suspected to be infected with microorganisms transmitted by droplets (large-particle droplets [larger than 5 microns in size] that can be generated by the individual coughing, sneezing, talking, or by the performance of procedures such as suctioning).
2. Residents on droplet precautions will be placed in a private room if possible.
 - a. When a private room is not available, residents may share a room with a resident infected with the same microorganism or with limited risk factors.
 - b. When a private room is not available and cohorting is not achievable, a curtain will be used and a distance of at least 3 feet of space will be maintained between the infected resident his or her roommate.
 - c. Special air handling and ventilation are unnecessary and the door to the room may remain open.
3. Masks will be worn when entering the room.
4. Gloves, gown and goggles should be worn if there is risk of spraying respiratory secretions.
5. Resident Transport
 - a. A mask will be placed on the resident during transport from his or her room. The resident will be encouraged to follow respiratory hygiene/cough etiquette to minimize dispersal of droplets.
 - b. If the resident can tolerate a mask and control respiratory secretions, some activities outside the room may be acceptable.

continues on next page

Airborne Precautions

1. Airborne precautions are indicated when an individual is infected with a pathogen that is very small (5 microns or smaller in size) and can be transmitted long distances through the air.
2. Preventing the spread of airborne pathogens requires a room with special air handling and ventilation called an airborne infection isolation room (AIIR).
3. If an AIIR is not available, a resident suspected of having an airborne infectious disease shall be masked and transported to a facility with an AIIR.
4. Any individuals who enter the room of a resident placed on airborne precautions must wear approved respiratory protection.
5. A resident on airborne precautions will wear a mask when leaving the room or coming into contact with others. Depending on the organism, a special filtration mask may be necessary.
6. If the resident is transported to another unit within the facility or to another facility, the Infection Preventionist (or designee) will notify the unit or facility of the type of precautions the resident is on and the resident's suspected or confirmed type of infection. The facility is also responsible for notifying transport staff of residents that require special care due to infectious conditions.

Isolation, Discontinuing

Policy Statement

Transmission-based precautions are discontinued when it is determined that the resident’s condition no longer indicates such precautions.

Policy Interpretation and Implementation

1. Residents remain on appropriate transmission-based precautions until discontinued by the Attending Physician or the Infection Preventionist.
2. The criteria for continued transmission-based precautions are evaluated daily, or at intervals established by the interdisciplinary team. Precautions will be discontinued as soon the resident is no longer at significant risk of transmitting the infection, for example:
 - a. Risk factors for transmission (i.e., uncontained excretions or secretions, cognitive deficits, non-compliance, etc.) are reduced or eliminated; or
 - b. Clinical or laboratory results indicate that the infection is resolved.
3. The resident on transmission-based precautions is evaluated for potential negative psychological effects associated with isolation including boredom, anger and depression. Interventions to reduce or minimize the effects are individualized according to the resident’s needs and situation.

Isolation – Initiating Transmission-Based Precautions

Policy Statement

Transmission-Based Precautions are initiated when a resident develops signs and symptoms of a transmissible infection; arrives for admission with symptoms of an infection; or has a laboratory confirmed infection; and is at risk of transmitting the infection to other residents.

Transmission-Based Precautions may include Contact Precautions, Droplet Precautions, or Airborne Precautions.

The facility makes every effort to use the least restrictive approach to managing individuals with potentially communicable infections. Transmission-Based Precautions are used only when the spread of infection cannot be reasonably prevented by less restrictive measures.

Policy Interpretation and Implementation

1. If a resident is suspected of, or identified as, having a communicable infectious disease, the Charge Nurse or Nursing Supervisor notifies the Infection Preventionist and the resident's Attending Physician for evaluation of appropriate Transmission-Based Precautions.
 - a. If the Attending Physician or his/her alternate fails to respond appropriately to notification of a suspected or confirmed communicable infectious disease, the staff informs the Medical Director and Administrator.
 - b. In the event the Attending Physician fails to take appropriate action, the Infection Preventionist or Medical Director has the authority to implement appropriate Transmission-Based Precautions.
2. Transmission-based precautions are utilized when a resident meets the criteria for a transmissible infection AND the resident has risk factors that increase the likelihood of transmission. These may include (but are not limited to):
 - a. Uncontained excretions/secretions;
 - b. Non-compliance with standard precautions; or
 - c. Cognitive deficits that restrict or interfere with the resident's ability to maintain precautions.
3. When Transmission-Based Precautions are implemented, the Infection Preventionist (or designee):
 - a. Clearly identifies the type of precautions, the anticipated duration, and the personal protective equipment (PPE) that must be used;
 - b. Explains to the resident (or representative) the reason(s) for the precautions;
 - c. Provides and/or oversees the education of the resident, representative and/or visitors regarding the precautions and use of PPE;
 - d. Determines the appropriate notification on the room entrance door and on the front of the resident's chart so that personnel and visitors are aware of the need for and type of precautions:
 - (1) The signage informs the staff of the type of CDC precaution(s), instructions for use of PPE, and/or instructions to see a nurse before entering the room.
 - (2) Signs and notifications comply with the resident's right to confidentiality or privacy.
 - e. Ensures that protective equipment (i.e., gloves, gowns, masks, etc.) is maintained outside the resident's room so that anyone entering the room can apply the appropriate equipment;

continues on next page

- f. Ensures that protective equipment and supplies needed to maintain precautions during care are in the resident’s room; and
 - g. Ensures that an appropriate linen barrel/hamper and waste container, with appropriate liner, are placed in or near the resident’s room.
4. Transmission-Based Precautions remain in effect until the Attending Physician or Infection Preventionist discontinues them, which occurs after criteria for discontinuation are met.
 - a. In an emergency (for example, an outbreak), the Infection Preventionist, Administrator and/or Medical Director have the administrative authority, accountability, and responsibility to implement measures to control or prevent infections within the facility;
 - b. Notify the health department of reportable diseases, as appropriate;
 - c. Initiate transmission-based (isolation) precautions;
 - d. Obtain laboratory specimens;
 - e. Restrict or ban admissions; and
 - f. Restrict or temporarily discontinue visitation.
 5. Attending physicians are involved in decisions related to infection control for the residents under their care.

Version	2.1 (H5MAPL0438)

Isolation – Notices of Transmission-Based Precautions

Policy Statement

Notices will be used to alert personnel and visitors of transmission-based precautions, while protecting the privacy of the resident.

Policy Interpretation and Implementation

1. When transmission-based precautions are implemented, the Infection Preventionist (or designee) determines the appropriate notification to be placed on the room entrance door and on the front of the resident's chart so that personnel and visitors are aware of the need for and type of precautions.
2. Signs and notifications comply with the resident's right to confidentiality or privacy. The following may be used to indicate:
 - a. *Airborne Precautions:*
 - (1) A notice at the doorway instructing visitors to report to the nurses' station before entering the room.
 - (2) A sign indicating Airborne Precautions on the door to the resident's room.
 - (3) A precautions sticker on the front of the resident's chart.
 - b. *Contact Precautions:*
 - (1) A notice at the doorway instructing visitors to report to the nurses' station before entering the room.
 - (2) A sign indicating Contact Precautions on the door to the resident's room.
 - (3) A precautions sticker on the front of the resident's chart.
 - c. *Droplet Precautions:*
 - (1) A notice at the doorway instructing visitors to report to the nurses' station before entering the room.
 - (2) A sign indicating Droplet Precautions on the door to the resident's room.
 - (3) A precautions sticker on the front of the resident's chart.

Isolation, Removing a Body from

Policy Statement

Isolation precautions must be continued after a resident on isolation precautions expires.

Policy Interpretation and Implementation

1. Because blood and body fluids are still infectious, the Nurse Supervisor on duty shall be responsible for ensuring that appropriate precautions are implemented when a resident on isolation precautions expires.
2. The Nurse Supervisor on duty shall inform the mortician that isolation precautions apply, and such information shall include the type of precautions that were being implemented when the resident expired.
3. With the exception of masks, the same barriers required prior to death are required postmortem.
4. The staff shall follow this facility's established procedures for terminal cleaning.

Needle Handling and/or Disposal

Level I

Purpose

To guide the safe handling and disposal of used needles.

Objectives

To prevent needlestick injuries and exposure to the HIV (AIDS) and hepatitis B (HBV) viruses or other bloodborne infections through contact with blood or tissues.

Equipment and Supplies

1. Needle box;
2. Recapping device (if a needle box is not available);
3. Gloves (as indicated); and
4. Other as necessary or appropriate.

Safety Precautions

1. After using a needle, if the needle disposal box is directly available, discard the needle without recapping.
2. Place used needles in the needle disposal box. Do not bend, break, or cut needles. When the disposal box is three-quarter filled or at fill line seal the box and store it in a closed, puncture-resistant container marked “Biohazard” until incinerated or picked up by a licensed vendor for proper disposal.
3. Do not discard used or unused needles into trash receptacles.
4. In the event of a needlestick injury, the employee should:
 - a. Immediately wash the wound vigorously with soap and running water;
 - b. If desired, apply alcohol or hydrogen peroxide to the wound; and
 - c. Notify the supervisor or Infection Preventionist of the incident as soon as practical.

Personal Protective Equipment

Policy Statement

Personal protective equipment appropriate to specific task requirements is available at all times.

Policy Interpretation and Implementation

1. Personnel who perform tasks that may involve exposure to blood/body fluids are provided appropriate personal protective equipment (PPE) at no charge.
2. Personal protective equipment provided to our personnel includes but is not necessarily limited to:
 - a. Gowns/aprons/lab coats (disposable, cloth, and/or plastic);
 - b. Gloves (sterile, non-sterile, heavy-duty and/or puncture-resistant);
 - c. Masks; and
 - d. Eye wear (goggles and/or face shields).
3. Not all tasks involve the same risk of exposure, or the same kind or extent of protection. The type of PPE required for a task is based on:
 - a. The type of transmission-based precaution;
 - b. The fluid or tissue to which there is a potential exposure;
 - c. The likelihood of exposure;
 - d. The potential volume of material;
 - e. The probable route of exposure; and
 - f. The overall working conditions and job requirements.
4. A supply of protective clothing and equipment is maintained at each nurses' station. PPE required for transmission-based precautions is maintained outside and inside the resident's room, as needed.
5. Training on the proper donning, use and disposal of PPE is provided upon orientation and at regular intervals.
6. Employees who fail to use personal protective equipment when indicated may be disciplined in accordance with personnel policies.
7. Visitors and residents who are asked to comply with transmission-based precautions are educated on the proper use of PPE and provided with equipment at no charge.

Personal Protective Equipment – Eyewear

Policy Statement

All personnel must use eyewear to protect the mucous membranes of the eyes when splashes from blood or body fluids are likely to occur during treatment.

Policy Interpretation and Implementation

1. Eyewear is available in each treatment or examination room.
2. Protective eyewear must be worn when anticipating splashes of blood or body fluids to the eyes.
3. Regular cleaning and disinfecting procedures are adequate for decontamination of soiled eyewear.
4. Eyewear provided by our facility includes goggles with solid side shields and chin-length face shields.
5. When goggles, eyewear, or face-shields are used, a face mask must also be worn.

Personal Protective Equipment – Using Protective Eyewear Level I

Purpose

To guide the use of protective eyewear.

Objectives

1. To protect employees from splashes, spattering, spraying, or droplets of blood, body fluids, or other potentially infectious materials.
2. To protect the employees’ eyes, nose, and mouth from potentially infectious materials.
3. To prevent occupational exposure to bloodborne pathogens such as the HIV and hepatitis B viruses.

Equipment and Supplies

1. Protective eyewear (disposable or reusable);
2. Goggles (disposable or reusable);
3. Face shield (disposable or reusable); and
4. Masks (disposable or reusable).

Miscellaneous

1. Masks and eye protection devices, such as goggles or glasses with solid side shields or chin-length face shields, shall be worn together whenever splashes, spray, spatter, or droplets of blood or other potentially infectious materials may be generated and eye, nose, or mouth contamination can be expected.
2. Personal eyeglasses should not be considered as adequate protective eyewear.
3. Protective eyewear must have adequate side and top coverage and must fit the employee properly.
4. Hands should be washed after removal of protective eyewear.

Procedure Guidelines

1. Put on eyewear, goggles, mask or face shield per manufacturer’s instructions.
2. Adjust the eyewear to fit properly.
3. Dispose of, or clean, eyewear as applicable.
4. Dispose of masks in a designated container.
5. Wash hands after removing the mask and eyewear.

Personal Protective Equipment – Face Masks

Policy Statement

Facility personnel must wear face masks when performing any task that may involve the splashing of blood or body fluids into the nose or mouth.

Policy Interpretation and Implementation

1. Facility personnel must wear a face mask when performing any task that may involve the splashing of blood or body fluids into the nose or mouth and when the use of eyewear is indicated.
2. A face mask should be used only once and then discarded into the appropriate receptacle located in the room in which the procedure is being performed. Face masks should only be handled by the strings when being removed.
3. Face masks must be changed when they become moist or soiled.

Personal Protective Equipment – Using Face Masks

Level I

Purpose

To guide the use of masks.

Objectives

1. To prevent transmission of infectious agents through the air;
2. To protect the wearer from inhaling droplets;
3. To prevent transmission of some infections that are spread by direct contact with mucous membranes;
4. To prevent the splashing of blood or body fluids into the mouth or nose; and
5. To prevent exposure to the HIV(AIDS) and hepatitis B viruses from blood or body fluids.

Equipment and Supplies

1. High-efficiency disposable masks; or
2. Cotton gauze or paper tissue masks; and
3. Eyewear (e.g., goggles). (Note: When the use of a mask is indicated, appropriate eyewear must also be worn.)

Miscellaneous

1. Put the mask on before entering the room, and after cleaning hands.
2. Be sure that face mask covers the nose and mouth while performing treatment or services for the patient.
3. If the face mask becomes wet, change it. Masks become ineffective when moist.
4. Do not hang the face mask around the neck.
5. Before changing a face mask, wash hands.
6. Do not remove the mask while performing treatment or services for the patient.
7. Use a mask only once and then discard it.
8. Handle mask only by the strings (ties).
9. Never touch the mask while it is in use.
10. Follow established handwashing techniques.

When to Use a Mask

1. When providing treatment or services to a patient who has a communicable respiratory infection;
2. When providing treatment or services to a patient and the use of a mask is indicated; and
3. When performing a task that may involve the splashing of blood or body fluids into the mouth or nose.

Procedure Guidelines

Putting on the Mask

1. Obtain a mask.
2. Wash your hands.

continues on next page

3. Remove the mask from its container. (Note: If gowning procedures are necessary, put the mask on before putting on gown.)
4. Unfold the mask. Do not touch the part of the mask that will cover the face. Hold the mask by the strings only.
5. Place the mask over the nose and mouth. Using a shoelace bow, tie the top strings over the ears, then tie the lower strings.
6. Avoid any unnecessary handling of the mask.

Removing the Mask

1. Wash hands.
2. Untie the lower strings of the mask first. Hold the strings of the mask only.
3. Untie the top strings of the mask. Remove the mask from the face. Handle strings only.
4. Discard the mask into the designated waste receptacle inside the room.
5. Wash hands.

Personal Protective Equipment – Gloves

Policy Statement

Gloves must be worn when handling blood, body fluids, secretions, excretions, mucous membranes and/or non-intact skin.

Policy Interpretation and Implementation

1. All employees must wear gloves when touching blood, body fluids, secretions, excretions, mucous membranes, and/or non-intact skin.
2. Gloves shall be used only once and discarded into the appropriate receptacle located in the room in which the procedure is being performed.
3. The use of gloves will vary according to the procedure involved. The use of disposable gloves is indicated:
 - a. When it is likely that the employee's hands will come in contact with blood, body fluids, secretions, excretions, mucous membranes, and/or non-intact skin while performing the procedure;
 - b. When the employee has any cuts, wounds, or scrapes on his or her hands;
 - c. When the employee's hands are chapped or have a skin rash or skin condition;
 - d. When handling soiled linen or items that may be contaminated;
 - e. During instrumental examination of oropharynx, gastrointestinal tract, and genitourinary tract;
 - f. When examining abraded or non-intact skin or patients with active bleeding;
 - g. During invasive procedures; and
 - h. During all cleaning of blood, body fluids, and decontaminating procedures.
4. Gloves must be made of appropriate material, usually intact latex or intact vinyl, of appropriate quality for the procedures performed and of appropriate size for each employee.
5. Do not wash surgical or examination gloves. Disinfect them for reuse.
6. General purpose utility (rubber) gloves worn by maintenance, environmental services, laundry or other non-medical personnel may be decontaminated and reused in accordance with the manufacturer's instructions.
7. Do not use all-purpose gloves if they are peeling, cracked, or discolored, or if they have punctures, tears, or other evidence of deterioration.
8. Wash your hands after removing gloves.
9. Hypoallergenic gloves, glove liners, powderless gloves, or other similar alternatives are available to those employees who are allergic to the gloves normally provided.
10. Employees must receive training relative to the use of gloves and other protective equipment prior to being assigned tasks that involve potential exposure to blood or body fluids and when new or modified protective equipment or procedures have been introduced into the workplace.

Personal Protective Equipment – Using Gloves

Level I

Purpose

To guide the use of gloves.

Objectives

1. To prevent the spread of infection;
2. To protect wounds from contamination;
3. To protect hands from potentially infectious material; and
4. To prevent exposure to the HIV (AIDS) and hepatitis B (HBV) viruses from blood or body fluids.

Equipment and Supplies

Gloves.

Miscellaneous

1. When gloves are indicated, use disposable single-use gloves.
2. Discard used gloves into the waste receptacle inside the examination or treatment room.
3. Use sterile gloves for invasive procedures to prevent contamination of the patient, and to decrease the risk of infection when changing dressings.
4. Use non-sterile gloves primarily to prevent the contamination of the employee's hands when providing treatment or services to the patient and when cleaning contaminated surfaces.
5. Wash hands after removing gloves. (Note: Gloves do not replace handwashing.)
6. Remove gloves before removing the mask and gown and discard them into the designated waste receptacle inside the room.

When to Use Gloves

1. When touching excretions, secretions, blood, body fluids, mucous membranes or non-intact skin;
2. When the employee's hands have any cuts, scrapes, wounds, chapped skin, dermatitis, etc.;
3. When cleaning up spills or splashes of blood or body fluids;
4. When cleaning potentially contaminated items; and
5. Whenever in doubt.

Procedure Guidelines

Putting on Sterile Gloves

1. Wash hands.
2. Obtain gloves. (Note: If gowning procedures are used, put gloves on after putting on the gown so that the cuff of the gloves can be pulled over the sleeve of the gown.)
3. Open the package. Do not touch the gloves.
4. With one hand, grasp a glove by the inside of the cuff. Insert the opposite hand into the glove. Leave the cuff turned down.

continues on next page

5. Pick up the remaining glove with gloved hand. Insert ungloved hand into the second glove.
6. Pull up cuffs of the glove.

Removing Gloves

1. Using one hand, pull the cuff down over the opposite hand turning the glove inside out.
2. Discard the glove into the designated waste receptacle inside the room.
3. With the ungloved hand, pull the cuff down over the opposite hand, turning the glove inside out.
4. Discard the glove into the designated waste receptacle inside the room.
5. Discard the glove package into a waste receptacle inside the room.
6. Wash hands.

Personal Protective Equipment – Gowns, Aprons, Lab Coats

Policy Statement

All personnel must use gowns, aprons, or lab coats when soiling of the clothing with blood, body fluids, secretions, or excretions is likely to occur during treatments.

Policy Interpretation and Implementation

1. Personnel must wear a gown, apron, or lab coat when performing a task(s) that will likely soil the employee's clothing with blood, body fluids, secretions, or excretions.
2. When gowns are used, they must be used only once and discarded into appropriate receptacles located in the room in which the procedure was performed.
3. Gowns used to protect against soiling with blood must be made of or lined with puncture-resistant material and must protect all areas of exposed skin.
4. Lab coats used to protect clothing from splashing or soiling of body fluids during routine exams must be adequate to contain the soil.
5. If blood or other potentially infectious materials penetrate a garment(s) (e.g., gown, apron, lab coat, etc.), the garment(s) must be removed immediately or as soon as practical and appropriately discarded.
6. For easy access, gowns, aprons, and lab coats are maintained at:
 - a. Central Supply
 - b. Nurses' Stations
 - c. Isolation Rooms
7. Soiled gowns, aprons, and lab coats must be removed prior to leaving the work area and discarded into the appropriate receptacle located in the work area.
8. If clothing becomes soiled with blood or body fluids, it must be removed and bagged before leaving the work area.
9. Employees must receive training relative to the use of gowns, aprons, and lab coats and other protective equipment prior to being assigned tasks that involve potential exposure to blood or body fluids and when new or modified protective equipment or procedures have been introduced into the workplace.

Personal Protective Equipment – Using Gowns

Level I

Purpose

To guide the use of gowns.

Objectives

1. To prevent the spread of infections;
2. To prevent soiling of clothing with infectious material;
3. To prevent splashing or spilling blood or body fluids onto clothing or exposed skin; and
4. To prevent exposure to the HIV (AIDS) and hepatitis B (HBV) viruses from blood or body fluids.

Equipment and Supplies

1. Disposable gowns; or
2. Clean and laundered gowns when disposable gowns are not used.

Miscellaneous

1. Use gowns only once and then discard into an appropriate receptacle inside the exam or treatment room.
2. Clean reusable or disposable gowns may be worn in most circumstances.
3. Use gowns only when indicated or as instructed.
4. Follow established handwashing procedures.
5. Reusable gowns shall be laundered after each use in accordance with established laundry procedures.
6. When use of a gown is indicated, all personnel must put on the gown before treating or touching the resident.
7. Gowns shall be large enough to cover all of the wearer's clothing, and they must be tightly cuffed at the sleeves.
8. After completing the treatment or procedure, gowns must be discarded in the appropriate container located in the room.
9. If blood or another potentially infectious material penetrates a garment(s) (e.g., gown, apron, lab coat, etc.), the garment(s) must be removed immediately or as soon as possible.
10. Soiled gowns must not be worn in break rooms, lobbies, or into any area in which contamination of equipment is likely to occur.

Procedure Guidelines

Putting on the Gown

1. Obtain the gown (disposable or reusable).
2. If long sleeves are being worn, roll the sleeves above the elbows.
3. Wash hands.
4. Unfold the gown so that the opening is at the back.
5. Put your arms into the sleeves of the gown.
6. Fit the gown at the neck.
7. Secure at the neck (tie or Velcro).

continues on next page

8. Overlap the gown at the back. Be sure clothing is completely covered.
9. Secure at the waste (tie or Velcro).

Removing the Gown

1. Untie/unfasten the back of the gown.
2. Remove gloves and discard them into a waste receptacle in the room.
3. Untie/unfasten the neck band. While still holding the neck strings, pull the gown off the shoulders.
4. Remove the gown by rolling it away from the body. Handle the inside of the gown only.
5. Fold the outside (contaminated portion) of gown inward, and roll the gown into a bundle.
6. If the gown is disposable, discard it into the waste receptacle inside the room. If the gown is reusable (washable), discard it into the soiled laundry container inside the room.
7. Wash hands.
8. If a mask was used during the procedure(s) or service, remove it at this time and discard it into the waste receptacle inside the room.
9. Wash hands.

Preventing Foodborne Illness – Food Handling

Policy Statement

Food will be stored, prepared, handled and served so that the risk of foodborne illness is minimized.

Policy Interpretation and Implementation

1. This facility recognizes that the critical factors implicated in foodborne illness are:
 - a. Poor personal hygiene of food service employees;
 - b. Inadequate cooking and improper holding temperatures;
 - c. Contaminated equipment; and
 - d. Unsafe food sources.
2. With these factors as the primary focus of preventative measures, this facility strives to minimize the risk of foodborne illness to our residents.
3. All employees who handle, prepare or serve food will be trained in the practices of safe food handling and preventing foodborne illness. Employees will demonstrate knowledge and competency in these practices prior to working with food or serving food to residents.
4. This facility only accepts prepared foods from suppliers subject to federal, state or local food service inspections and who remain in good standing with such agencies.
5. Functioning of the refrigeration and food temperatures will be monitored at designated intervals throughout the day and documented according to state-specific requirements. Federal standards require that refrigerated food be stored below 41°F, and that freezers keep frozen foods solid.
6. Potentially hazardous foods will be cooked to the appropriate internal temperatures and held at those temperatures for the appropriate length of time to destroy pathogenic microorganisms.
7. Potentially hazardous foods held in the “danger zone” (41°F to 135°F) for more than 4 hours (if being prepared from ingredients at room temperature) or 6 hours (if cooked and then cooled) will be discarded.
8. Food that has been served to residents without temperature controls (e.g., trays, snacks, etc.) will be discarded if not eaten within two hours.
9. All food service equipment and utensils will be sanitized according to current guidelines and manufacturers’ recommendations.
10. No one may bring or house animals in any area used for the storage, preparation, or serving of food.
11. Supervised pets related to specific activities (e.g., formal pet-related activities or guide dogs for visually impaired individuals) will be allowed in the dining area but not in areas used to prepare or store food.
12. Outbreaks (or suspected outbreaks) of foodborne illness will be reported to the local health department.

Quarantine

Policy Statement

The facility will protect the health and well being of our residents and staff during infectious disease outbreaks. Quarantine is generally enacted by governmental authorities.

Policy Interpretation and Implementation

1. Should quarantine be declared, the Administrator, with the input of the Medical Director and Director of Nursing Services, will work with governmental authorities to implement quarantine practices appropriate for the specific threat and as directed by authorities.
2. The requirements of the quarantine directive will determine who may enter or leave the facility.
3. A quarantine directive will initiate the facility's Emergency Management System.

Standard Precautions

Policy Statement

Standard Precautions are used in the care of all residents regardless of their diagnoses, or suspected or confirmed infection status. Standard Precautions presume that all blood, body fluids, secretions, and excretions (except sweat), non-intact skin and mucous membranes may contain transmissible infectious agents.

Policy Interpretation and Implementation

1. Standard Precautions apply to the care of all residents in all situations regardless of suspected or confirmed presence of infectious diseases.
2. Personnel are trained in the various aspects of Standard Precautions to ensure appropriate decision-making in various clinical situations.
3. Residents and family members are provided with information pertaining to Standard Precautions and the prevention of infection upon the resident's admission to the facility.
4. Visitors are reminded and encouraged to maintain hand hygiene and follow instructions regarding infection prevention and control while in the facility.

Standard precautions include the following practices:

1. Hand hygiene
 - a. Hand hygiene refers to handwashing with soap (anti-microbial or non-antimicrobial) or the use of alcohol-based hand rub (ABHR), which does not require access to water.
 - b. Hand hygiene is performed with *ABHR* or *soap and water*:
 - (1) before and after contact with the resident;
 - (2) before performing an aseptic task;
 - (3) after contact with items in the resident's room; and
 - (4) after removing PPE.
 - c. Hands are *washed with soap and water* whenever:
 - (1) visibly soiled with dirt, blood, or body fluids;
 - (2) after direct or indirect contact with dirt, blood or body fluids;
 - (3) after removing gloves; and
 - (4) before eating and after using the restroom.
 - d. Sinks, soap, water, disposable towels and ABHR are available to personnel and visitors in readily accessible and visible locations throughout the facility.
 - e. Except as noted above, ABHR is preferred for hand hygiene.
 - f. Artificial fingernails are discouraged among staff with direct resident contact.
 - g. Personnel assist the residents with hand hygiene before meals, after toileting and when indicated.
 - h. Proper hand washing technique is described in the hand washing/ hand hygiene policy and procedure.
2. Gloves
 - a. Gloves (clean, non-sterile) are worn when in direct contact with blood, body fluids, mucous membranes, non-intact skin, and other potentially infected material.

continues on next page

- b. Gloves are worn when in direct contact with a resident who is infected or colonized with organisms that are transmitted by direct contact. (For specific pathogens, refer to current CDC isolation precautions guidelines.)
 - c. Gloves are worn when handling or touching resident-care equipment that is visibly soiled or potentially contaminated with blood, body fluids, or infectious organisms.
 - d. Gloves with fit and durability appropriate to the task are available to personnel at all times.
 - e. Gloves are changed as necessary, during the care of a resident to prevent cross-contamination from one body site to another (when moving from a “dirty” site to a “clean” one).
 - f. Gloves are not to be reused.
 - g. Gloves are removed promptly after use, before touching non-contaminated items and environmental surfaces, and before going to another resident.
 - h. After gloves are removed, wash hands immediately to avoid transfer of microorganisms to other residents or environments.
3. Masks, Eye Protection, Face Shields
- a. Mask and eye protection or a face shield are worn to protect mucous membranes of the eyes, nose, and mouth during procedures and resident-care activities that are likely to generate splashes or sprays of blood, body fluids, secretions, and excretions.
 - b. Use mouthpieces, resuscitation bags, or other ventilation devices as an alternative to mouth-to-mouth resuscitation methods in areas where the need for resuscitation is predictable.
4. Gowns
- a. Gowns (clean, non-sterile) are worn to protect skin and prevent soiling of clothing during procedures and resident care activities that are likely to generate splashes or sprays of blood, body fluids, secretions, or excretions or cause soiling of clothing.
 - b. Gowns that are appropriate to the task are available to personnel at all times.
 - c. Soiled gowns are removed as promptly as possible and hands washed to avoid transfer of microorganisms to other residents or environments.
 - d. Gowns are not reused.
5. Resident-Care Equipment
- a. Resident-care equipment soiled with blood, body fluids, secretions, and excretions are handled in a manner that prevents skin and mucous membrane exposure, contamination of clothing, and transfer of microorganisms to other residents and environments.
 - b. Reusable equipment is not used for the care of more than one resident until it has been appropriately cleaned and reprocessed.
 - c. Single use items are properly discarded.
6. Environmental Control
- a. Environmental surfaces, beds, bedrails, bedside equipment and other frequently touched surfaces are appropriately cleaned.
7. Linen
- a. Linen soiled with blood, body fluids, secretions, excretions are handled and processed in a manner that prevents skin and mucous membrane exposures, contamination of clothing, and avoids transfer of microorganisms to other residents and environments.

continues on next page

8. Safe Needle Handling
 - a. Used needles are never recapped or otherwise manipulated using two hands, or any other technique that involves directing the point of a needle toward any part of the body.
 - b. Used needles are not removed from disposable syringes by hand, and not bent, broken, or otherwise manipulated by hand.
 - c. Used disposable syringes and needles, scalpel blades, and other sharp items are placed in appropriate puncture-resistant containers located as close as practicable to the area in which the items were used.
9. Safe Injection Practices – The following principles are applied to the use of needles, cannulas that replace needles, and intravenous delivery systems:
 - a. Always use aseptic technique when handling injection equipment.
 - b. Never re-use syringes, even if the needle or cannula on the syringe is changed.
 - c. Use IV administration sets for one resident only and dispose of appropriately after use.
 - d. Do not use bags of IV solution as a common source for multiple residents.
 - e. Use single-dose vials for parenteral medications.
 - f. Do not administer medications from single-dose vials to multiple residents.
 - g. If multi-dose vials are used, both the cannula and the syringe used to access the vial must be sterile. Discard if the sterility of the vial is compromised.
10. Respiratory Hygiene/Cough Etiquette – The following measures are implemented to contain respiratory secretions in residents, staff and visitors at the point of initial entry into the facility:
 - a. Signs posted at entrances in strategic places with instructions to residents, staff, and visitors to cover their mouths and noses when coughing or sneezing; use and dispose of tissues; and perform hand hygiene after hands have been in contact with respiratory secretions.
 - b. Availability of tissues and no-touch (e.g., foot-pedal operated) trash receptacles for the disposal of tissues.
 - c. Written materials and reminders posted in the facility regarding effective hand hygiene practices.
 - d. Availability of conveniently located supplies and equipment for hand hygiene (e.g., sinks, soap, paper towels, and alcohol-based hand rubs).
 - e. Availability of masks for residents and visitors who have symptoms of a respiratory infection.

Visitation, Infection Control During

Policy Statement

The facility shall establish appropriate guidelines for visitors to try to prevent the transmission of communicable diseases.

Policy Interpretation and Implementation

1. Upon admission of the resident to the facility, family members are provided with education that may include an explanation of the facility's infection control practices during visitation. This may include information pertaining to:
 - a. Standard Precautions;
 - b. Hand hygiene;
 - c. Respiratory hygiene;
 - d. Vaccinations; and
 - e. Signs and symptoms of common communicable diseases.
2. Visitors are encouraged to perform hand hygiene upon arrival, before entering a resident's room and when leaving the facility. Sinks and ABHR are easily accessible to visitors.
3. Visitors are instructed on proper cough etiquette/respiratory hygiene through signs posted throughout the facility.
4. Visiting a resident who is under transmission-based precautions is permitted.
 - a. Family members and visitors who are providing care or have very close contact with the resident are trained regarding the appropriate use of infection control barriers such as personal protective equipment.
 - b. Adherence to transmission-based precautions by visitors is required.
5. The Administrator, in conjunction with the Medical Director and Infection Preventionist, has the authority to restrict or ban facility visitation during outbreaks, whether these originate in the facility or in the community.
6. Signs and the facility entrance discourage anyone from visiting when they have potentially contagious infections (for example, upper respiratory infection (URI), influenza, gastroenteritis, or unexplained rashes).
7. Visitors who are symptomatic of communicable diseases may be denied visitation at the discretion of the Charge Nurse until appropriate evaluation and treatment of the visitor has been established.
8. Visitors must follow instructions from the Charge Nurse on duty regarding facility infection control practices and visitation restrictions.
9. The facility does not have an age restriction policy. However, visitors under the age of twelve (12) must be strictly supervised. Violations of these policies must be reported to the Administrator. The Administrator has the right to restrict or ban visitors as indicated.

Coronavirus Disease (COVID-19) – Infection Prevention and Control Measures

Policy Statement

This facility follows recommended standard and transmission-based precautions, environmental cleaning, and social distancing practices to prevent the transmission of COVID-19 within the facility.

Policy Interpretation and Implementation

1. This policy is based on current CDC recommendations for infection prevention and control practices for COVID-19.
2. While in the building, personnel are required to strictly adhere to established infection prevention and control policies, including:
 - a. Hand hygiene;
 - b. Respiratory hygiene;
 - c. Appropriate use of PPE;
 - d. Transmission-based precautions, where indicated;
 - e. Universal source control (using facemasks or cloth coverings as indicated);
 - f. Social distancing when applicable;
 - g. Surveillance and reporting of respiratory infections;
 - h. Environmental cleaning with EPA-registered disinfectants approved for use against SARS-CoV-2; and
 - i. Laundry practices.

Source Control

1. To address asymptomatic and pre-symptomatic transmission, universal source control is required.
 - a. Anyone entering the facility is required to wear a cloth face covering.
 - (1) Cloth face coverings are appropriate for visitors and residents.
 - (a) If someone arrives at the facility without a face covering, a facemask will be provided if supplies are available.
 - (2) Staff are required to wear face coverings upon entering the facility and prior to leaving the building.
 - (a) Cloth face coverings for source control ARE NOT considered PPE. Staff should wear a facemask at all times when in the facility.
 - (b) At the end of shift, staff are required to remove facemask, discard in appropriate receptacle, perform hand hygiene and don a cloth face covering prior to exiting the building.
2. Asymptomatic residents are provided cloth face coverings (or facemasks as supplies permit).
 - a. Residents are asked to wear face coverings or masks when they leave their rooms or are around others.
 - b. Residents are not required to wear cloth face coverings when in their rooms.
 - c. Residents are instructed on proper hand hygiene after touching or removing face covering or mask.
 - d. Residents who are incapacitated, unconscious, have difficulty breathing, or cannot remove face coverings or masks without assistance are not asked to wear them.

continues on next page

3. Resident cloth face coverings are changed if they become soiled, damp, or hard to breathe through. They can be laundered with the resident's belongings and reused.

Screening

1. Points of entry into the facility are temporarily limited. Closed entrances are monitored. Exits and means of egress remain accessible in the event of a fire.
2. Anyone entering the facility (including staff) is screened and triaged for signs and symptoms of and exposure to others with SARS-CoV-2 infection, including:
 - a. Fever (measured temperature > 100°F or subjective fever;
 - b. Cough;
 - c. Shortness of breath or difficulty breathing;
 - d. Fatigue;
 - e. Muscle or body aches;
 - f. Headache;
 - g. New loss of taste or smell;
 - h. Sore throat;
 - i. Congestion or runny nose;
 - j. Nausea or vomiting; and/or
 - k. Diarrhea.
3. Anyone with a fever, signs/symptoms of illness, or who has been advised to self-quarantine due to exposure is not allowed to enter the facility.
4. Residents are screened daily for fever and symptoms of COVID-19. Residents with fever or symptoms of COVID-19 are provided a facemask, immediately isolated and placed on appropriate transmission-based precautions.

Physical Distancing

1. Group outings, group activities, and communal dining are cancelled until further notice.
2. Physical distancing of at least six (6) feet is enforced among residents.
3. Staff are required to practice physical distancing with other staff and residents when possible.
4. Televisits are encouraged and supported by facility staff and devices as outline in the Telehealth and Telemedicine policy.
5. Visitor restrictions and screening are outlined in the COVID-19 Visitors policy.

Personal Protective Equipment

1. Staff wear facemasks at all times while in the facility, except while eating or drinking in designated areas.
2. Staff wear eye protection during any resident-care encounters or procedures.
3. For a resident with known or suspected COVID-19:
 - a. Staff wear gloves, isolation gown, eye protection and an N95 or higher-level respirator if available (a facemask is an acceptable alternative if a respirator is not available); and
 - b. Resident is placed in a private room with a dedicated bathroom (if available) and closed door; OR
 - c. Resident is cohorted per national, state, or local public health authority recommendations.

continues on next page

4. If there is moderate to substantial COVID-19 transmission in the surrounding community:
 - a. Staff wear all recommended PPE (i.e., gloves, gown, eye protection and respirator or facemask) for the care of all residents on the unit (or facility-wide based on the location of affected residents), regardless of symptoms (based on availability).
 - b. Residents are restricted (to the extent possible) to their rooms except for medically necessary purposes.
 - c. When residents have to leave their room, they wear a facemask, perform hand hygiene, limit their movement in the facility, and practice physical distancing.
5. When performing aerosol-generating procedures (AGPs), especially those that induce coughing (open suctioning of airways, sputum induction, etc.):
 - a. Staff in the room will wear an N95 or higher-level respirator (if available), eye protection, gloves, and an isolation gown.
 - b. The number of staff present will be limited to only those essential for resident care and procedure support.
 - c. AGPs will ideally take place in an airborne infection isolation room (AIIR). If an AIIR is not available and the procedure is medically necessary, then it will take place in a private room with the door closed.
 - d. The room surfaces will be cleaned and disinfected promptly and with appropriate disinfectant. (See List N on the EPA website for disinfectants that have qualified under EPA's emerging viral pathogens program for use against SARS-COV-2 or other national recommendations.)
6. Signage on the use of specific PPE (for staff) is posted in appropriate locations in the facility (e.g., outside of a resident's room, wing, or facility-wide).
7. PPE contingency and crisis capacity strategies have been established due to the current demand and supply shortages of PPE.
8. If PPE shortage is an issue, facemasks will be limited to residents diagnosed with or having signs/symptoms of respiratory illness or COVID-19.

Cleaning and Disinfection

1. Dedicated or disposable noncritical resident-care equipment (e.g., blood pressure cuffs, blood glucose monitoring equipment) are used, or if not available, then equipment is cleaned and disinfected according to manufacturers' instructions using an EPA-registered disinfectant for healthcare setting prior to use on another resident.
2. Objects and environmental surfaces that are touched frequently and in close proximity to the resident (e.g., bed rails, over-bed table, bedside commode, lavatory surfaces in resident bathrooms) are cleaned and disinfected with an EPA-registered disinfectant for healthcare setting (effective against the organism identified if known) at least daily and when visibly soiled.
3. Infection prevention and control self-assessment is guided by the *COVID-19 Focused Survey for Nursing Homes*.

Coronavirus Disease (COVID-19) – Visitors

Policy Statement

For the safety of residents and staff, visitation policies are in compliance with current recommendations from the Centers for Disease Control and Prevention and The Centers for Medicare and Medicaid services.

Policy Interpretation and Implementation

1. During a coronavirus disease outbreak, visitors are limited to certain compassionate care situations, such as end of life. These situations are determined at the discretion of the facility and on a case-by-case basis.
2. The Infection Preventionist maintains a list of individuals who have permission to enter the facility as a visitor. This list is updated and made accessible on a daily basis.
3. Notices of the visitation restriction are posted outside the facility entrance. Letters explaining the policies concerning visitation are sent to residents, family members and representatives.
4. Visitor entrances are staffed by personnel who have been trained on the current visitation policies and are qualified to conduct visitor screening.
5. Health screens are conducted on any potential visitor prior to being allowed in the building. Anyone showing signs or symptoms of respiratory infection or other signs/symptoms of possible COVID-19 infection or exposure are not allowed to enter the facility, regardless of the compassionate care situation.
6. If visitation is permitted, strict adherence to infection precautions are required. Any visitors permitted in the facility are required to:
 - a. wear a facemask;
 - b. adhere to all infection precautions;
 - c. restrict their visit to a designated area of the facility; and
 - d. inform the facility if they develop fever or symptoms consistent with COVID-19 within 14 days of visiting the facility.
7. Visitor Logs and Visitor Health Screens are completed with each visitor and archived until further notice.
8. Alternative methods of visitation, including video visitation (e.g., Skype, Zoom, and FaceTime), are facilitated and encouraged.
 - a. Facility devices are available for residents who do not have a personal device to conduct video visitation.
 - b. Families and staff may request video visits by calling the facility. Information regarding scheduling and technical support is coordinated by the Director of Activity Services, or a designee.
9. Families are encouraged to stay in contact with residents and to pursue other methods of communication, such as letters, phone calls, and “window visits.” Families are asked to notify the facility of planned in-person “window visits” so the resident is prepared.
10. Residents who experience memory loss and do not recall why visitation has stopped are frequently oriented to the situation and reminded that other forms of visitation are available.

Personal Protective Equipment – Contingency and Crisis

Use of Eye Protection (COVID-19 Outbreak)

Level I

Purpose

To guide the use of personal protective equipment (PPE) through contingency and crisis capacity strategies when supply is limited.

Objective

To prevent transmission of infectious agents through the use of personal protective equipment.

Equipment and Supplies

1. Eye protection; and
2. Additional PPE as required (e.g., gloves, masks and gowns).

Managing the Supply of PPE

1. Inventory of PPE is managed systematically, based on the facility calculations for [PPE Burn Rate](#).
2. The inventory and supply chain for PPE are established and managed by: _____
3. The facility maintains ongoing communication with local, state and federal public health and disaster preparedness agencies, and healthcare coalitions during surge situations regarding identification of additional supplies.

Optimizing the Supply of PPE:

1. During surges in demand for PPE, the facility reverts to [Strategies for Optimizing the Supply of PPE](#).
2. The Centers for Disease Control and Prevention organizes these strategies according to capacity:
 - a. Conventional Capacity – every day strategies that optimize PPE supplies based on the conventional PPE use rate for the facility.
 - b. Contingency Capacity – measures that are employed during temporary periods of shortage but do not have a significant impact on the care of patients or the safety of healthcare personnel (HCP).
 - c. Crisis Capacity – measures that are not commensurate with standards of care but may need to be employed during periods of known shortages.
3. Contingency and/or crisis capacity measures are implemented after administrative and engineering measures are employed, for example:
 - a. Temporarily halting or reducing the number of new admissions to the facility;
 - b. Reducing the number of face-to-face encounters with residents;
 - c. Limiting or excluding non-essential healthcare personnel and personnel not directly involved in resident care;
 - d. Excluding visitors;
 - e. Cohorting residents (grouping together residents who are infected with the same organism to confine their care to one area);

continues on next page

- f. Cohorting healthcare personnel (assigning designated teams of HCP to provide care for all residents with suspected or confirmed COVID-19);
- g. Providing training and assessing competency of staff utilizing PPE; and
- h. Maximizing the use of telemedicine.

Eye Protection: Contingency Capacity

1. Selectively cancel elective and non-urgent procedures for which protective eyewear is typically used by HCP.
2. Shift eye protection supplies from disposable to re-usable devices (i.e., goggles and reusable face shields).
 - a. Consider preferential use of powered air purifying respirators (PAPRs) or full-face elastomeric respirators which have built-in eye protection.
 - b. Ensure appropriate cleaning and disinfection between users if goggles or reusable face shields are used.
3. Implement extended use of eye protection.
 - a. Remove and reprocess eye protection if it becomes visibly soiled or difficult to see through.
 - (1) If a disposable face shield has been reprocessed, dedicate to one HCP and reprocess whenever it is visibly soiled or removed (e.g., when leaving the isolation area) prior to putting it back on.
 - (2) See **Protocol for Removing and Reprocessing Eye Protection** below.
 - b. Discard eye protection if damaged (e.g., face shield can no longer fasten securely to the provider, if visibility is obscured and reprocessing does not restore visibility).
 - c. Take care not to touch eye protection. Perform hand hygiene immediately after touching or adjusting eye protection.
 - d. Leave patient care area before removing eye protection. See **Protocol for Removing and Reprocessing Eye Protection** below.

Eye Protection: Crisis Capacity

1. Cancel all elective and non-urgent procedures and appointments for which a gown is typically used by HCP.
2. Use eye protection devices beyond the manufacturer-designated shelf life during resident care activities.
 - a. If there is no date available on the eye protection device label or packaging, contact the manufacturer.
 - b. The user should visually inspect the product prior to use and, if there are concerns (such as degraded materials), discard the product.
3. Prioritize eye protection for selected activities such as:
 - a. During care activities where splashes and sprays are anticipated, which typically includes aerosol generating procedures; and/or
 - b. During activities where prolonged face-to-face or close contact with a potentially infectious resident is unavoidable.
4. Consider using safety glasses (e.g., trauma glasses) that have extensions to cover the side of the eyes.
5. Exclude HCP at higher risk for severe illness from COVID-19 from contact with known or suspected COVID-19 patients.
 - a. During severe resource limitations, consider excluding HCP who may be at higher risk for severe illness from COVID-19, such as those of older age, those with chronic medical conditions, or those who may be pregnant, from caring for patients with confirmed or suspected COVID-19 infection.

continues on next page

6. Designate convalescent HCP for provision of care to known or suspected COVID-19 patients.
 - a. It may be possible to designate HCP who have clinically recovered from COVID-19 to preferentially provide care for additional patients with COVID-19. Individuals who have recovered from COVID-19 infection may have developed some protective immunity, but this has not yet been confirmed.

Protocol for Removing and Reprocessing Eye Protection

1. Adhere to recommended manufacturer instructions for cleaning and disinfection.
2. When manufacturer instructions for cleaning and disinfection are unavailable, such as for single use disposable face shields, consider:
 - a. While wearing clean gloves, carefully wipe the inside, followed by the outside of the face shield or goggles using a clean cloth saturated with neutral detergent solution or cleaner wipe.
 - b. Carefully wipe the outside of the face shield or goggles using a wipe or clean cloth saturated with EPA-registered hospital disinfectant solution.
 - c. Wipe the outside of face shield or goggles with clean water or alcohol to remove residue.
 - d. Fully dry (air dry or use clean absorbent towels).
 - e. Remove gloves and perform hand hygiene.

General Procedure for Donning and Doffing Protective Eyewear

1. To put on eyewear, place over face and eyes and adjust to fit.
2. To remove eyewear:
 - a. Outside of goggles or face shield are contaminated! If your hands get contaminated during goggle or face shield removal, immediately wash your hands or use an alcohol-based hand sanitizer.
 - b. Remove goggles or face shield from the back by lifting head band or ear pieces.
 - c. If the item is reusable, place in designated receptacle for reprocessing. Otherwise, discard in a waste container.
 - d. Perform hand hygiene.

Personal Protective Equipment – Contingency and Crisis Use of Facemasks (COVID-19 Outbreak)

Level I

Purpose

To guide the use of personal protective equipment (PPE) through contingency and crisis capacity strategies when supply is limited.

Objective

To prevent transmission of infectious agents through the inhalation of droplets.

Equipment and Supplies

1. Surgical facemasks; and
2. Additional PPE as required (gloves, gown and eyewear).

Managing the Supply of PPE

1. Inventory of PPE is managed systematically, based on the facility calculations for [PPE Burn Rate](#).
2. The inventory and supply chain for PPE are established and managed by: _____
3. The facility maintains ongoing communication with local, state and federal public health and disaster preparedness agencies, and healthcare coalitions during surge situations regarding identification of additional supplies.

Optimizing the Supply of PPE:

1. During surges in demand for PPE, the facility reverts to [Strategies for Optimizing the Supply of PPE](#).
2. The Centers for Disease Control and Prevention organizes these strategies according to capacity:
 - a. Conventional Capacity – every day strategies that optimize PPE supplies based on the conventional PPE use rate for the facility.
 - b. Contingency Capacity – measures that are employed during temporary periods of shortage but do not have a significant impact on the care of patients or the safety of healthcare personnel (HCP).
 - c. Crisis Capacity – measures that are not commensurate with standards of care but may need to be employed during periods of known shortages.
3. Contingency and/or crisis capacity measures are implemented after administrative and engineering measures are employed, for example:
 - a. Temporarily halting or reducing the number of new admissions to the facility;
 - b. Reducing the number of face-to-face encounters with residents;
 - c. Limiting or excluding non-essential healthcare personnel and personnel not directly involved in resident care;
 - d. Excluding visitors;
 - e. Cohorting residents (grouping together residents who are infected with the same organism to confine their care to one area);

continues on next page

- f. Cohorting healthcare personnel (assigning designated teams of HCP to provide care for all residents with suspected or confirmed COVID-19); and/or
- g. Providing training and assessing competency of staff utilizing PPE.

Facemasks: Contingency Capacity

1. Selectively cancel elective and non-urgent procedures for which a facemask is typically used by HCP.
2. Remove facemasks for visitors in public areas.
3. Implement extended use of face masks:
 - a. Wear the same face mask for repeated or consecutive close contacts with different residents, without removing the face mask between resident encounters.
 - b. Remove the face mask and discard it if soiled, damaged or hard to breathe through.
 - (1) If experiencing difficulty breathing, remove the mask temporarily.
 - (2) Leave the resident care areas if mask is removed.
 - c. Do not touch face mask while wearing it. If mask is touched or adjusted at any time, hand hygiene must be performed immediately.

Facemasks: Crisis Capacity

1. Cancel all elective and non-urgent procedures and appointments for which a facemask is typically used by HCP.
2. Use facemasks beyond the manufacturer-designated shelf life during patient care activities.
 - a. If there is no date available on the facemask label or packaging, contact the manufacturer.
 - b. Visually inspect the product prior to use and, if there are concerns (such as degraded materials or visible tears), discard the product.
3. Implement limited re-use of facemasks.
 - a. Limited re-use of facemasks is the practice of using the same facemask by one HCP for multiple encounters with different residents with periods of removing and properly storing the mask between uses.
 - b. As it is unknown what the potential contribution of contact transmission is for SARS-CoV-2, care should be taken to ensure that HCP do not touch outer surfaces of the mask during care, and that mask removal and replacement be done in a careful and deliberate manner.
 - c. The facemask should be removed and discarded if soiled, damaged, or hard to breathe through.
 - d. Not all facemasks can be re-used.
 - (1) Facemasks that fasten to the provider via ties may not be able to be undone without tearing and should be considered only for extended use, rather than re-use.
 - (2) Facemasks with elastic ear hooks may be more suitable for re-use.
 - e. HCP should leave patient care area if they need to remove the facemask.
 - f. Facemasks should be carefully folded so that the outer surface is held inward and against itself to reduce contact with the outer surface during storage. The folded mask can be stored between uses in a clean sealable paper bag or breathable container.
4. Prioritize facemasks for selected activities such as:
 - a. For provision of essential surgeries and procedures;
 - b. During care activities where splashes and sprays are anticipated;
 - c. During activities where prolonged face-to-face or close contact with a potentially infectious patient is unavoidable; or
 - d. For performing aerosol generating procedures, if N95 respirators are no longer available.

continues on next page

When No Facemasks are Available:

1. Exclude HCP at higher risk for severe illness from COVID-19 from contact with known or suspected COVID-19 residents.
2. Designate convalescent HCP (personnel who have clinically recovered) for provision of care to known or suspected COVID-19 residents. Individuals who have recovered from COVID-19 infection may have developed some protective immunity, but this has not yet been confirmed.
3. Use a face shield that covers the entire front (that extends to the chin or below) and sides of the face with no facemask.
4. Consider use of expedient isolation rooms for risk reduction. (See [Methods for Temporary Negative Pressure Isolation.](#))
5. Consider use of ventilated headboards.
6. HCP use of homemade masks:
 - a. In settings where facemasks are not available, HCP might use homemade masks (e.g., bandana, scarf) for care of patients with COVID-19 as a last resort. However, homemade masks are not considered PPE, since their capability to protect HCP is unknown.
 - b. Caution should be exercised when considering this option.
 - c. Homemade masks should ideally be used in combination with a face shield that covers the entire front (that extends to the chin or below) and sides of the face.

General Procedure for Donning and Doffing Masks

1. To put on mask:
 - a. When donning the face mask, do so immediately after hand hygiene.
 - b. Be sure that the face mask covers the nose and mouth while wearing.
 - c. Do not hang the face mask around the neck.
 - d. After touching a facemask or before changing a face mask, perform hand hygiene.
 - e. Do not remove the mask while performing treatment or services for a resident.
 - f. Handle a mask only by the elastic ear loops.
 - g. Refrain from touching the mask while it is in use.
2. To remove mask:
 - a. Front of mask is contaminated — DO NOT TOUCH. If your hands get contaminated during mask/respirator removal, immediately wash your hands or use an alcohol-based hand sanitizer.
 - b. Grasp bottom ties or elastics of the mask, then the ones at the top, and remove without touching the front.
 - c. Discard in a waste container.

Personal Protective Equipment – Contingency and Crisis Use of Isolation Gowns (COVID-19 Outbreak)

Level I

Purpose

To guide the use of personal protective equipment (PPE) through contingency and crisis capacity strategies when supply is limited.

Objective

To prevent transmission of infectious agents through the use of personal protective equipment.

Equipment and Supplies

1. Isolation gowns; and
2. Additional PPE as required (e.g., gloves, masks and eyewear).

Managing the Supply of PPE

1. Inventory of PPE is managed systematically, based on the facility calculations for [PPE Burn Rate](#).
2. The inventory and supply chain for PPE are established and managed by: _____
3. The facility maintains ongoing communication with local, state and federal public health and disaster preparedness agencies, and healthcare coalitions during surge situations regarding identification of additional supplies.

Optimizing the Supply of PPE:

1. During surges in demand for PPE, the facility reverts to [Strategies for Optimizing the Supply of PPE](#).
2. The Centers for Disease Control and Prevention organizes these strategies according to capacity:
 - a. Conventional Capacity – every day strategies that optimize PPE supplies based on the conventional PPE use rate for the facility.
 - b. Contingency Capacity – measures that are employed during temporary periods of shortage but do not have a significant impact on the care of patients or the safety of healthcare personnel (HCP).
 - c. Crisis Capacity – measures that are not commensurate with standards of care but may need to be employed during periods of known shortages.
3. Conventional capacity strategies utilized to maximize the supply of gowns include:
 - a. Use non-sterile, disposable isolation gowns for routine care of residents with suspected or confirmed COVID-19.
 - b. If gown shortages are anticipated, prioritize the use of surgical gowns for surgical and other sterile procedures.
4. Contingency and/or crisis capacity measures are implemented after administrative and engineering measures are employed, for example:
 - a. Temporarily halting or reducing the number of new admissions to the facility;
 - b. Reducing the number of face-to-face encounters with residents;

continues on next page

- c. Limiting or excluding non-essential healthcare personnel and personnel not directly involved in resident care;
- d. Excluding visitors;
- e. Cohorting residents (grouping together residents who are infected with the same organism to confine their care to one area);
- f. Cohorting healthcare personnel (assigning designated teams of HCP to provide care for all residents with suspected or confirmed COVID-19);
- g. Providing training and assessing competency of staff utilizing PPE; and
- h. Maximizing the use of telemedicine.

Isolation Gowns: Contingency Capacity

1. Selectively cancel elective and non-urgent procedures for which a gown is typically used by HCP.
2. Shift gown use toward cloth isolation gowns.
 - a. Reusable (washable) gowns made of polyester or polyester-cotton fabrics can be laundered according to routine procedures and reused.
 - b. Do not touch the outer surfaces of gowns during resident care.
 - c. Augment laundry personnel to compensate for additional laundry processing demands.
 - d. Inspect and maintain reusable gowns and replace when thin, ripped, or otherwise compromised.
3. Consider the use of coveralls.
 - a. Coveralls (drapes) cover the body 360 degrees, including the back and lower legs.
 - b. Level of protection is determined by the material use in the garment, as well as by the seam barriers, and closures.
 - c. Train personnel on the donning and use of coveralls before use.
4. Use gowns beyond the designated shelf life, if indicated by the manufacturer. If no shelf life date is on the packaging, contact the manufacturer.
5. Use gowns and coveralls that conform to international standards of use, possibly reserving these for activities that involve moderate to high amounts of blood or bodily fluids.

Isolation Gowns: Crisis Capacity

1. Cancel all elective and non-urgent procedures and appointments for which a gown is typically used by HCP.
2. Extend use of isolation gowns so that same gown is worn by the same HCP when interacting with more than one resident known to be infected with the same infectious disease, and when these residents are cohorted.
 - a. Do not use this strategy if residents have additional infections that can be transmitted by contact.
 - b. Remove and discard the gown if it becomes visibly soiled or damaged.
3. Re-use cloth non-visibly soiled cloth isolation gowns without laundering in-between.
4. Prioritize gowns for the following activities:
 - a. Surgical and sterile procedures;
 - b. Aerosol-generating activities;
 - c. High-contact resident care activities, including dressing, bathing, showering, assisting with hygiene or toileting, changing linens or briefs, device usage, device care or wound care; and
 - d. Temporarily suspend the use of gowns for endemic multi-drug resistant organisms.

continues on next page

When No Gowns Are Available

1. In situations of severely limited or no available isolation gowns, the following pieces of clothing can be considered as a last resort for care of COVID-19 patients as single use:
 - a. Disposable laboratory coats;
 - b. Reusable (washable) hospital/patient gowns;
 - c. Reusable (washable) laboratory coats;
 - d. Disposable aprons; and/or
 - e. Combinations of clothing:
 - (1) Long sleeve aprons in combination with long sleeve patient gowns or laboratory coats;
 - (2) Open back gowns with long sleeve patient gowns or laboratory coats; and
 - (3) Sleeve covers in combination with aprons and long sleeve patient gowns or laboratory coats.
2. Augment laundry personnel to compensate for additional laundry processing demands.
3. Establish a system to inspect and maintain reusable gowns and replace when thin, ripped, or otherwise compromised.

General Procedure for Donning and Doffing Gowns

1. To put on gown:
 - a. Fully cover torso from neck to knees, arms to end of wrists, and wrap around the back.
 - b. Fasten in back of neck and waist.
2. To remove gown:
 - a. Gown front and sleeves are contaminated. If your hands get contaminated during gown removal, immediately wash your hands or use an alcohol-based hand sanitizer.
 - b. Unfasten gown ties, taking care that sleeves don't contact your body when reaching for ties.
 - c. Pull gown away from neck and shoulders, touching inside of gown only.
 - d. Turn gown inside out.
 - e. Fold or roll into a bundle and discard in a waste container.
 - f. Perform hand hygiene immediately.

Personal Protective Equipment – Contingency and Crisis

Use of N-95 Respirators (COVID-19 Outbreak)

Level I

Purpose

To guide the use of personal protective equipment (PPE) through contingency and crisis capacity strategies when supply is limited.

Objective

To prevent transmission of infectious agents through the inhalation of airborne particles or droplet nuclei.

Equipment and Supplies

1. Respirator masks (disposable N95 filtering facepiece respirators); and
2. Additional PPE as required (gloves, gown and eyewear).

Managing the Supply of PPE

1. Inventory of PPE is managed systematically, based on the facility calculations for [PPE Burn Rate](#).
2. The inventory and supply chain for PPE are established and managed by: _____
3. The facility maintains ongoing communication with local, state and federal public health and disaster preparedness agencies, and healthcare coalitions during surge situations regarding identification of additional supplies.

Optimizing the Supply of PPE:

1. During surges in the demand for PPE, the facility reverts to [Strategies for Optimizing the Supply of PPE](#).
2. The Centers for Disease Control and Prevention organizes these strategies according to capacity:
 - a. Conventional Capacity – every day strategies that optimize PPE supplies based on the conventional PPE use rate for the facility.
 - b. Contingency Capacity – measures that are employed during temporary periods of shortage but do not have a significant impact on the care of patients or the safety of healthcare personnel (HCP).
 - c. Crisis Capacity – measures that are not commensurate with standards of care but may need to be employed during periods of known shortages.
3. Contingency and/or crisis capacity measures are implemented after administrative and engineering measures are employed, for example:
 - a. Temporarily halting or reducing the number of new admissions to the facility;
 - b. Reducing the number of face-to-face encounters with residents;
 - c. Limiting or excluding non-essential healthcare personnel and personnel not directly involved in resident care;
 - d. Excluding visitors;
 - e. Cohorting residents (grouping together residents who are infected with the same organism to confine their care to one area);

continues on next page

- f. Cohorting healthcare personnel (assigning designated teams of HCP to provide care for all residents with suspected or confirmed COVID-19);
- g. Using surgical N95 respirators only for HCP who need protection from both airborne and fluid hazards (e.g., splashes, sprays). If needed but unavailable, using face shield over standard N95 respirator;
- h. Use alternatives to N95 respirators where feasible (e.g., other disposable filtering face piece respirators, elastomeric respirators with appropriate filters or cartridges, powered air purifying respirators); and
- i. Providing training and assessing competency of staff utilizing PPE. Optimization strategies for training and fit testing N95 Respirators includes:
 - (1) Training HCP on indications and proper use of N95 respirators (i.e., fit, donning and doffing, etc.).
 - (2) Implementing just-in-time fit testing (planning larger scale evaluation, training, and fit testing of employees when necessary during a pandemic).
 - (3) Limiting respirators during training: Determine which HCP do and do not need to be in a respiratory protection program and, when possible, allow limited re-use of respirators by individual HCP for training and then fit testing.
 - (4) Implementing qualitative fit testing to assess adequacy of a respirator fit to minimize destruction of N95 respirator used in fit testing and allow for limited re-use by HCP.

N95 Respirators: Contingency Capacity

1. Use N95 respirators beyond the manufacturer-designated shelf life for training and fit testing.
2. Temporarily suspend annual fit testing per [interim guidance from OSHA](#).
3. Extend the use of N95 respirators by wearing the same N95 for repeated close contact encounters with several different residents, without removing the respirator. (See: recommended guidance on implementation of extended use: <https://www.cdc.gov/niosh/topics/hcwcontrols/recommendedguidanceextuse.html>.)
4. To reduce the risk of contact transmission after donning:
 - a. Discard N95 respirators following use during aerosol generating procedures.
 - b. Discard N95 respirators contaminated with blood, respiratory or nasal secretions, or other bodily fluids from residents.
 - c. Discard N95 respirators following close contact with, or exit from, the care area of any resident co-infected with an infectious disease requiring contact precautions.
 - d. Consider use of a cleanable face shield (preferred³) over an N95 respirator and/or other steps (e.g., masking residents, use of engineering controls) to reduce surface contamination.
 - e. Perform hand hygiene with soap and water or an alcohol-based hand sanitizer before and after touching or adjusting the respirator (if necessary for comfort or to maintain fit).
5. To maintain product integrity:
 - a. Follow the manufacturer's user instructions, including conducting a user seal check.
 - b. Follow the employer's maximum number of donnings (or up to five if the manufacturer does not provide a recommendation) and recommended inspection procedures.
 - c. Discard any respirator that is obviously damaged or becomes hard to breathe through.
 - d. Pack or store respirators between uses so that they do not become damaged or deformed.
6. Do not share respirators between users. N95 Respirators must only be used by a single user.
 - a. Label containers used for storing respirators or label the respirator itself (e.g., on the straps between uses with the user's name to reduce accidental usage of another person's respirator).

continues on next page

N95 Respirators: Crisis Capacity (when N95 Respirators are Running Low)

1. Use respirators as identified by CDC as performing adequately for healthcare delivery [beyond the manufacturer designated shelf life](#).
2. Use respirators approved under standards used in other countries that are similar to NIOSH-approved respirators.
3. Implement limited re-use of N95 respirators by one HCP for multiple encounters with different residents, but remove it after each encounter.
4. Use additional respirators identified by CDC as NOT performing adequately for healthcare delivery beyond the manufacturer-designated shelf life.
5. Prioritize the use of N95 respirators and facemasks by activity type with and without masking symptomatic residents.

When No N95 Respirators are Available:

1. Exclude HCP at higher risk for severe illness from COVID-19 such as those of older age, those with chronic medical conditions, or those who may be pregnant from contact with known or suspected COVID-19 residents.
2. Designate convalescent HCP for provision of care to known or suspected COVID-19 residents (those who have clinically recovered from COVID-19 and may have some protective immunity) to preferentially provide care.
3. Use an [expedient resident isolation](#) room for risk-reduction.
4. Use a ventilated headboard to decrease risk of HCP exposure to a resident-generated aerosol.
5. Use masks not evaluated or approved by NIOSH or improvised masks as a last resort.

Procedure for Donning and Doffing N95 Respirator Masks

1. To put on an N95 respirator mask:
 - a. Secure ties or elastic bands at middle of head and neck.
 - b. Fit flexible band to nose bridge and fit mask snug to face and below chin.
 - c. Fit-check respirator.
2. To remove N95 respirator mask:
 - a. Front of mask/respirator is contaminated — DO NOT TOUCH. If your hands get contaminated during mask/respirator removal, immediately wash your hands or use an alcohol-based hand sanitizer.
 - b. Grasp bottom ties or elastics of the mask/respirator, then the ones at the top, and remove without touching the front.
 - c. Discard in a waste container.
 - d. Perform Hand hygiene immediately.

Herpes Zoster Vaccine

Policy Statement

All residents over the age of 60 years will be offered the herpes zoster vaccine unless the resident's clinical condition or situation contraindicates administration of the vaccine.

Policy Interpretation and Implementation

1. Prior to or upon admission, each resident will be assessed for eligibility to receive the herpes zoster vaccine, and when indicated the resident will be offered the vaccine within thirty (30) days of admission to the facility unless medically contraindicated or the resident has already been immunized.
2. Assessments of herpes zoster vaccination status will be conducted within five (5) working days of the resident's admission if not conducted prior to admission.
3. Before receiving the herpes zoster vaccine, the resident or legal representative shall receive information and education regarding the benefits and potential side effects of the herpes zoster vaccine. (See current vaccine information statements at <http://www.cdc.gov/vaccines/hcp/vis/index.html> for educational materials.) Provision of such education shall be documented in the resident's medical record.
4. Residents/representatives have the right to refuse vaccine. If refused, appropriate entries will be documented in each resident's medical record indicating the date of the refusal of the vaccine.
5. For residents who receive the vaccine, the date of vaccination, lot number, expiration date, person administering, and the site of vaccination will be documented in the resident's medical record.
6. Administration of the herpes zoster vaccine will be made in accordance with current Centers for Disease Control and Prevention (CDC) recommendations at the time of the vaccination.
7. Inquiries concerning our facility's policies governing vaccinations should be referred to the Infection Preventionist or Director of Nursing Services.

Influenza Vaccine

Policy Statement

All residents and employees who have no medical contraindications to the vaccine will be offered the influenza vaccine annually to encourage and promote the benefits associated with vaccinations against influenza.

The facility shall provide pertinent information about the significant risks and benefits of vaccines to staff and residents (or residents' legal representatives); for example, risk factors that have been identified for specific age groups or individuals with risk factors such as allergies or pregnancy.

Policy Interpretation and Implementation

1. Between October 1st and March 31st each year, the influenza vaccine shall be offered to residents and employees, unless the vaccine is medically contraindicated or the resident or employee has already been immunized.
2. Employees hired or residents admitted between October 1st and March 31st shall be offered the vaccine within five (5) working days of the employee's job assignment or the resident's admission to the facility.
3. Employees will be offered the influenza vaccine at no charge, at a location onsite.
4. Prior to the vaccination, the resident (or resident's legal representative) or employee will be provided information and education regarding the benefits and potential side effects of the influenza vaccine. (See current vaccine information statements at <http://www.cdc.gov/vaccines/hcp/vis/index.html> for educational materials.) Provision of such education shall be documented in the resident's/employee's medical record.
5. For those who receive the vaccine, the date of vaccination, lot number, expiration date, person administering, and the site of vaccination will be documented in the resident's/employee's medical record.
6. A resident's refusal of the vaccine shall be documented on the *Informed Consent for Influenza Vaccine* and placed in the resident's medical record.
7. If an employee refuses the vaccine for reasons other than medical contraindication, this shall be documented on the *Employee Informed Consent for Influenza Vaccine*.
8. The Infection Preventionist will maintain surveillance data on influenza vaccine coverage and reported rates of influenza among residents and staff. Surveillance data will be made available to staff as part of educational efforts to improve vaccination rates among employees.
9. Only inactivated influenza vaccine will be offered to residents, pregnant employees, and employees who work directly with severely immunocompromised residents.
10. Residents and staff may obtain their influenza vaccines from their personal physicians. Documentation of previous vaccination should be provided to the facility.

continues on next page

11. Administration of the influenza vaccine will be made in accordance with current Centers for Disease Control and Prevention (CDC) recommendations at the time of the vaccination.

Pneumococcal Vaccine

Policy Statement

All residents will be offered pneumococcal vaccines to aid in preventing pneumonia/pneumococcal infections.

Policy Interpretation and Implementation

1. Prior to or upon admission, residents will be assessed for eligibility to receive the pneumococcal vaccine series, and when indicated, will be offered the vaccine series within thirty (30) days of admission to the facility unless medically contraindicated or the resident has already been vaccinated.
2. Assessments of pneumococcal vaccination status will be conducted within five (5) working days of the resident’s admission if not conducted prior to admission.
3. Before receiving a pneumococcal vaccine, the resident or legal representative shall receive information and education regarding the benefits and potential side effects of the pneumococcal vaccine. (See current vaccine information statements at <http://www.cdc.gov/vaccines/hcp/vis/index.html> for educational materials.) Provision of such education shall be documented in the resident’s medical record.
4. Pneumococcal vaccines will be administered to residents (unless medically contraindicated, already given, or refused) per our facility’s physician-approved pneumococcal vaccination protocol.
5. Residents/representatives have the right to refuse vaccination. If refused, appropriate entries will be documented in each resident’s medical record indicating the date of the refusal of the pneumococcal vaccination.
6. For residents who receive the vaccines, the date of vaccination, lot number, expiration date, person administering, and the site of vaccination will be documented in the resident’s medical record.
7. Administration of the pneumococcal vaccines or revaccinations will be made in accordance with current Centers for Disease Control and Prevention (CDC) recommendations at the time of the vaccination.

Vaccination of Residents

Policy Statement

All residents will be offered vaccines that aid in preventing infectious diseases unless the vaccine is medically contraindicated or the resident has already been vaccinated.

Policy Interpretation and Implementation

1. Prior to receiving vaccinations, the resident or legal representative will be provided information and education regarding the benefits and potential side effects of the vaccinations. (See current vaccine information statements at <http://www.cdc.gov/vaccines/hcp/vis/index.html> for educational materials.)
2. Provision of such education shall be documented in the resident’s medical record.
3. All new residents shall be assessed for current vaccination status upon admission.
4. The resident or the resident’s legal representative may refuse vaccines for any reasons.
5. If vaccines are refused, the refusal shall be documented in the resident’s medical record.
6. If the resident receives a vaccine, at least the following information shall be documented in the resident’s medical record:
 - a. Site of administration;
 - b. Date of administration;
 - c. Lot number of the vaccine (located on the vial);
 - d. Expiration date (located on the vial); and
 - e. Name of person administering the vaccine.
7. Certain vaccines (e.g., influenza and pneumococcal vaccines) may be administered per the physician-approved facility protocol (standing orders) after the resident has been assessed by the physician for medical contraindications for each vaccine. The resident’s Attending Physician must provide a separate written order for any other vaccination, and such orders shall be recorded in the resident’s medical record.
8. Inquiries concerning this policy should be referred to the Infection Preventionist or the Administrator.

INFECTION CONTROL

Policy and Procedure Manual

Alphabetical Index

Item # H50045

Using the Index

The following is a list of abbreviations and the names of the chapters to which they correspond in this manual.

Part 1 - Operational

ADM	Administrative Policies
BIO	Bioterrorism and Disaster Preparedness
EMP	Employee Health
ENV	Environmental Infection Control
SUR	Surveillance
OBR	OBRA Regulations and Interpretive Guidelines

Part 2 - Clinical

CLI	Clinical Policies and Procedures
GEN	General Infection Control Practices
IMM	Immunization and Vaccination
MIS	Miscellaneous
GUI	Guidelines and Recommendations

To use the Index, locate the topic about which you need information.

Clinical Protocols/Policies/Procedures Examples:

Biohazard Labeling 3 (ADM)

Information concerning the topic [Biohazard Labeling](#) is located on [page three \(3\)](#) in the chapter entitled [Administrative Policies \(ADM\)](#).

Antibiotic Stewardship 1 (SUR)

Information concerning the topic [Antibiotic Stewardship](#) is located on [page one \(1\)](#) in the chapter entitled [Surveillance \(SUR\)](#).

Coronavirus Disease (COVID-19) – Testing Residents 89 (CLI)

Information concerning the topic [Coronavirus Disease \(COVID-19\) – Testing Residents](#) is located on [page 89](#) in the chapter entitled [Clinical Policies and Procedures \(CLI\)](#).

Appendices Example:

Report of Incident/Accident (MP5415) ii (ADM)

All documents included in chapter appendices are located only on the flash drive. In order to locate these documents according to subject, refer to listings in the appendices tables of content of their respective chapters.

For example; the form entitled [Report of Incident/Accident \(MP5415\)](#) is a document located only on the flash drive and is listed on [page ii of the Administrative Policies \(ADM\) Table of Contents](#). To access the document, navigate to the document files on the flash drive: H50045-Flash Drive/Document Files/Part1/01-Part1-AdminPol/Appendices.

TABLE 2

Definitions for Constitutional Criteria in Residents of Long-Term Care Facilities (LTCFs)

A. Fever

1. Single oral temperature $>37.8^{\circ}\text{C}$ ($>100^{\circ}\text{F}$)

OR

2. Repeated oral temperatures $>37.2^{\circ}\text{C}$ (99°F) or rectal temperatures $>37.5^{\circ}\text{C}$ (99.5°F)

OR

3. Single temperature $>1.1^{\circ}\text{C}$ (2°F) over baseline from any site (oral, tympanic, axillary)

B. Leukocytosis

1. Neutrophilia ($>14,000$ leukocytes/ mm^3)

OR

2. Left shift ($>6\%$ bands or $\geq 1,500$ bands/ mm^3)

C. Acute change in mental status from baseline (all criteria must be present; see [Table 3](#))

1. Acute onset

2. Fluctuating course

3. Inattention

AND

4. Either disorganized thinking or altered level of consciousness

D. Acute functional decline

1. A new 3-point increase in total activities of daily living (ADL) score (range, 0–28) from baseline, based on the following 7 ADL items, each scored from 0 (independent) to 4 (total dependence)¹⁴

a. Bed mobility

b. Transfer

c. Locomotion within LTCF

d. Dressing

e. Toilet use

f. Personal hygiene

g. Eating

HumanGood LTC Diet Manual

Diet Manual – Guidelines

- No CMS regulation in State Operations Manual
- **Follow State Guidelines**
 - Ex. Title 22 - CA

s 72337. Dietetic Service -Diet Manual.

A current therapeutic diet manual, approved by the dietitian and the patient care policy committee, shall be readily available to the attending physician, nursing and dietetic personnel. It shall be reviewed annually and revised at least every five years.

Note: Authority cited: Sections 208(a) and 1275, Health and Safety Code. Reference: Section 1276, Health and Safety Code.

HG adopted Morrison Policy D201

DIET MANUAL

The Diet Manual is used to standardize nutritional care throughout the community and reflects current evidence based nutritional care practices, knowledge, and recommendations.

- The approval process includes:
 - ADAPTATION – The community will modify and adapt the diet manual as necessary to ensure all available diets are recognized, including the correct terminology for ordering diets; and a statement on whether or not the added/altered diet meets the Dietary Reference Intake (DRI).
 - APPROVAL – The community will obtain the necessary signatures on the approval form and place in the front of the manual. The approval form is updated annually and with any changes of staff, including the Medical Director and dietitian.
 - Hospital accounts – The diet manual is reviewed by the appropriate medical committee assigned to Nutrition Services.
 - DISTRIBUTION – A copy of the diet manual is readily available to the attending physician, nursing staff, and food and nutrition personnel.
- The Diet Manual is reviewed and approved annually.

Diet Manual Regulations indicate. . . .

- **Diet Manuals must be immediately available**
 - Healthcare providers plus those that make decisions about diets
 - Ex. Nurses, providers, dietitians, chefs, etc. . . .
- **Hard copy must be available for downtime (loss of power)**
- **Need to be know. . . .**
 - Where it is, What it is, When to use it, How to use it
- **Must be approved annually by Medical Director and Dietitian**

Diet Manual –Where, What, When & How . . .

- Where it is. . .
 - The online version available at www.mydietmanual.com
 - The hard copy is available in Dietitian's or Food Service Directors office
- What it is for. . . .
 - To provide a list of community **Approved Orderable Diets** by Medical Director
 - To make decisions about creating diets for our senior population to be nutritionally adequate
 - To provide guidance for Dietitians to make clinical decisions about assessments

Diet Manual –Where, What, When & How . .

- **When to use it. . .**
 - When determining what facility specific diets include and don't include
 - How to order facility approved diets
 - When creating diets or researching diets not commonly used (ex. clear or full liquid)
 - When making clinical decisions for nutrition assessments by Dietitians
- **How to use it. . .**
 - Next slide will review accessing the online version of the manual

MyDietManual.com – Online Version

MyDiet Manual

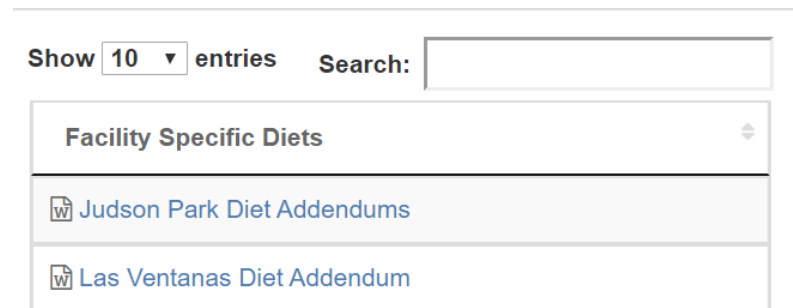

Connecting Great Living to Clinical Excellence

- 2 main areas to focus on within the Diet Manual

- **Long Term Manual** – give decisions about how to create diets

- **Diet Addendums** – community specific diet decisions to make

MyDietManual –Online Version

MyDiet Manual

Connecting Great Living to Clinical Excellence

 - UN: HGRDs
 - PW: humangood
- Please save web address into your favorites
 - All account addendums are uploaded into MyDiet Manual
- One hard copy per community
 - Includes hard copy addendums
 - Located in office of Dietitian or Food Service Director

Facility Specific Diet Addendums

- **Sections of a diet addendum**
 - **How to order the diet**
 - **Description of the diet**
 - **Nutritional Adequacy Statement**
 - **Guide on planning the diet**
 - **Sample Menu**
 - **Foods ALLOWED and NOT ALLOWED on certain diets**

Facility Specific Diet Addendums

Mechanical Soft Ground

How to order the diet:

Order *Diet Type* as **Regular** *Diet Texture* as **Mechanical Soft (ground)**.

Note – if *Fluid Consistency* is modified, these will need to be ordered appropriately in addition to the diet order.

Description:

The diet is a modification of the Regular Diet for the edentulous resident who has difficulty chewing or swallowing. For the greatest variety of foods, all foods that are easily masticated are included in the diet.

Mechanical Soft Ground

Food Group	Foods Allowed	Foods Excluded
Beverages	All	None
Breads and Crackers	Soft breads and rolls Plain crackers softened in soup or beverage Pancakes, plain muffins Biscuits	Breads with nuts, thick crusts Dry bread, toast, or tough bread Breads with raisins if not tolerated Hard crackers
Cereals and Grains	Cooked cereals Dry cereals in milk	Cereals with raisins or nuts Granola-type cereals

Regulatory Call –Diet Manual(32)

TO DO ITEMS

1. Visit www.MyDietManual.com
2. Please in-service those responsible on Diet Manual and it's purpose. Where, What, When & How
3. Utilize Diet Addendums as intended

Why does taking antibiotics lead to antibiotic resistance?

Any time you take antibiotics, they can cause side effects and contribute to the development of antibiotic resistance. Antibiotic resistance is one of the most urgent threats to the public's health.

Always remember:

1. Antibiotic resistance does not mean the body is becoming resistant to antibiotics; it means bacteria are developing the ability to defeat the antibiotics designed to kill them.
2. When bacteria become resistant, antibiotics cannot fight them, and the bacteria multiply.
3. Some resistant bacteria can be harder to treat and can spread to other people.

More than 2.8 million antibiotic-resistant infections occur in the United States each year, and more than 35,000 people die as a result.

WINDSOR 003753

What is the right way to take antibiotics?

If you need antibiotics, take them exactly as prescribed. Never save your antibiotics for later use or share them with family or friends.

Taking antibiotics only when needed helps keep us healthy now, helps fight antibiotic resistance, and ensures that these life-saving drugs will be available for future generations.

Talk with your healthcare professional if you have any questions about your antibiotics, including how they could interact with other medications you are taking, or if you develop any side effects.

What are the side effects?

Common side effects range from minor to very severe health problems and can include:

- Rash
- Diarrhea
- Dizziness
- Yeast infections
- Nausea

Get immediate medical help if you experience:

- **Severe diarrhea**—it could be a symptom of a *C. diff* infection, which can lead to severe colon damage and death.
- **Severe and life-threatening allergic reactions**, such as wheezing, hives, shortness of breath, and anaphylaxis (which also includes feeling that your throat is closing or choking, or your voice is changing).

To learn more about antibiotic prescribing and use, visit www.cdc.gov/antibiotic-use or call 1-800-CDC-INFO.

Accessible content:

Antibiotics Aren't Always the Answer.

BE ANTIBIOTICS AWARE

SMART USE, BEST CARE

Why is it important to *Be Antibiotics Aware?*

Antibiotics are powerful, life-saving drugs. When your healthcare professional prescribes antibiotics, take them as directed. Patients can experience side effects while taking antibiotics. But remember, when antibiotics are needed, their benefits outweigh the risks of side effects and antibiotic resistance.

When antibiotics aren't needed, they won't help you, and the side effects could still cause harm. Reactions from antibiotics cause 1 out of 5 medication-related visits to the emergency room.

In children, reactions from antibiotics are the most common cause of medication-related emergency room visits.

What do antibiotics treat?

Antibiotics are only needed for treating certain infections caused by bacteria. Antibiotics are critical tools for treating life-threatening conditions such as pneumonia and sepsis, which is the body's extreme response to an infection.

What don't antibiotics treat?

Antibiotics do not work on viruses, such as those that cause colds, flu, bronchitis, or runny noses, even if the mucus is thick, yellow, or green. Antibiotics also won't help some common bacterial infections, including most cases of bronchitis, many sinus infections, and some ear infections.

How can I stay healthy?

You can stay healthy and keep others healthy by:

- Cleaning hands by washing with soap and water for 20 seconds or using a hand sanitizer that contains at least 60% alcohol
- Covering your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow
- Getting recommended vaccines, such as the flu vaccine

Talk to your healthcare professional about steps you can take to help prevent illness.

Why does taking antibiotics lead to antibiotic resistance?

Any time you take antibiotics, they can cause side effects and contribute to the development of antibiotic resistance. Antibiotic resistance is one of the most urgent threats to the public's health.

Always remember:

1. Antibiotic resistance does not mean the body is becoming resistant to antibiotics; it means bacteria are developing the ability to defeat the antibiotics designed to kill them.
2. When bacteria become resistant, antibiotics cannot fight them, and the bacteria multiply.
3. Some resistant bacteria can be harder to treat and can spread to other people.

More than 2.8 million antibiotic-resistant infections occur in the United States each year, and more than 35,000 people die as a result.

WINDSOR 003755

What is the right way to take antibiotics?

If you need antibiotics, take them exactly as prescribed. Never save your antibiotics for later use or share them with family or friends.

Taking antibiotics only when needed helps keep us healthy now, helps fight antibiotic resistance, and ensures that these life-saving drugs will be available for future generations.

Talk with your healthcare professional if you have any questions about your antibiotics, including how they could interact with other medications you are taking, or if you develop any side effects.

***Quality Assurance
and
Performance Improvement Plan***

2017

QUALITY ASSURANCE AND PERFORMANCE IMPROVEMENT PLAN

PURPOSE

This Quality Assurance and Performance Improvement (QAPI) program has been developed to help us continually improve the way we care for and engage with our residents, team members, service partners, and the families of residents so that we may realize our ***winning aspiration to be the leading innovator in delivering enriched and engaged experiences with optimal health and measurable life fulfillment.***

This QAPI plan provides a framework by which organizational processes and outcomes are continuously assessed and improved through a systematic, comprehensive, data driven, and proactive approach to performance improvement that focuses on service outcomes related to housing and supportive services, clinical care, quality of life and resident choice.

Furthermore, this plan integrates our mission, vision and values and emphasizes our commitment to maintain a non-punitive or “just culture” of learning from mistakes, openness and fairness, management of systems, and management of behavior wherein all team members participate in promoting individual and team accountability for performance, conformance with relevant laws, regulations and standards, with an aspiration of achieving increasingly high reliability through consistent positive outcomes of care and service over time.

This QAPI effort is not just about meeting minimum standards; rather, it is about aiming higher at achieving leadership in quality control and outcome effectiveness on the part of every HumanGood team member.

SCOPE

This QAPI program is ongoing and applies multilevel and organization-wide, including home office functional areas/service lines as well as community departments/service areas.

PROGRAM GOALS

The primary goal of this program is to achieve continuous quality and performance improvement, with the objectives of achieving the best possible outcomes in health care, supportive services, and housing for our residents, in a safe environment, thereby improving resident, client, and team member satisfaction.

Under the auspices of this program, quality and performance improvement activities are outcome directed and include transparency in reporting outcome and behavioral

deficiencies, learning from our mistakes, accountability, achieving critical thinking and appropriate behavior among team members relative to the key requirements of their job function, and analysis of our systems and work processes to determine efficacy.

These QAPI activities also involve performing any revisions to policies and procedures and conducting continuing education of team members to ensure compliance with procedures and work processes.

HUMANGOOD CORE DIMENSIONS AND BEHAVIORS

(See Appendix A)

OBJECTIVES:

Our organization uses QAPI to make decisions and guide our day-to-day operations.

Objective #1: To define quality in measurable terms, set goals for performance, and measure progress toward those goals to achieve consistent service delivery.

Objective #2: To include team members, functional areas/units, all departments and all services in QAPI processes and goal-setting to improve resident outcomes.

Objective #3: To focus on systems and processes rather than individuals, but in addition, to manage behavior in a professional and objective manner so that learning and conformance is enhanced.

Objective #4: To make decisions based on data that includes input from team members, residents, health care providers, families, and other stakeholders.

Objective #5: To encourage individual and collective accountability for our own practice and performance.

AUTHORITY AND STRUCTURE

The HumanGood Board of Directors authorized development and implementation of this organization-wide, multi-disciplinary QAPI program and has delegated to the Chief Operating Officer, working with the Vice President, Health Care and Quality, the responsibility to ensure its effectiveness. (See Appendix B)

The Corporate Quality Improvement Committee, described below, has been delegated authority by the COO to establish the program, provide program direction, monitor key quality indicators and achievement of QI goals, and recommend resources/support to the COO where appropriate, and provide periodic reports on program activity and outcomes to the Board of Directors.

In addition, management and team members are expected to actively support and participate in the program, with managers requiring that key departmental processes and functions be evaluated, monitored, and improved as appropriate.

The community Quality Improvement Committee serves as the coordinating body for

QAPI activities on each campus, and their QAPI activities will be periodically reported to the Corporate Quality Improvement Committee and the Board.

This program plan shall be reviewed annually by the VP of Health Care and Quality and revisions made as appropriate, upon which time the revised Plan will be re-distributed to all management team members for implementation within their area(s) of responsibility.

DEFINITIONS:

Performance Improvement (PI). Study of and efforts to achieve improvement in outcomes related to human and systems input and output. (See Appendix C)

Performance Improvement Project (PIP). A concentrated focus on a specific problem identified in one or more areas of the organization, whether service or care. The process involves gathering information systematically to clarify issues or problems, and intervening for improvements. PIPs are selected primarily based on intensity and severity of the problem and relative risk to individuals. (See Appendix D)

Performance Improvement Project (PIP) Task Force. A group of multi-skilled team members charged with the responsibility of studying an existing process for the purpose of improving it or designing a new one. (See Appendix D)

Quality Assessment. An evaluation of a process and/or outcomes of a process to determine if a defined standard of quality is being achieved.

Quality Assurance (QA). The organizational structure, processes, and procedures designed to ensure that care and service delivery practices are consistently applied and meet or exceed an expected standard of quality. Principles of continuous quality improvement are utilized to achieve benchmark standards.

Quality Assurance and Performance Improvement (QAPI). A data-driven, proactive approach to improving the quality of life, care, and services in long term care organizations, although the term quality “assurance” is a misnomer. In actuality, no one can “assure” quality because it is in the eyes of the beholder. We use the term because it is federally mandated, but the true effort is not assurance but rather outcome improvement through assessment, identification of problems, and corrective actions taken to resolve the problem in the hope that it will not recur.

Quality Deficiencies. These represent a deficit or an area for improvement. They are potential markers of quality that the community considers to be in need of investigating and which, after investigation, may or may not represent a deviation from quality that results in a potential or actual undesirable outcome.

Quality Improvement (QI). An ongoing interdisciplinary process that is designed to improve the delivery of services and resident outcomes. It is a retrospective process of determining how and why a person or system functioned as it did (root cause analysis), and how humans and systems will function in a new project, program, or purchase of equipment (prospective analysis or failure mode, criticality and effects analysis).

HUMANGOOD APPROACH TO QUALITY IMPROVEMENT

We have adopted the following approach to our QAPI activities - the acronym “PDAC” reflects this four-step approach best. (See Appendix C)

PLAN: Define and understand the process to be analyzed, as well as its customers and their expectations. Develop a clear problem statement. Emphasis will be placed on identifying root cause of system failures, performing a failure mode and effect analysis for new processes and equipment, and identifying weak links in work processes.

DESIGN: Brainstorm ways to reduce or eliminate the problem defined in the planning stage, and explore opportunities for improvement. If a work process is to be studied, design the study methodology.

ACT: Take immediate action as a ‘quick fix’ to the problem. The PIP Task Force Team works on the problem then considers, designs, and implements longer term fixes to prevent or reduce recurrence of the problem.

CHECK: Monitor the new process to ensure it is fully implemented.

PRIORITIZATION

Program goals and objectives will serve as the basis for selection and prioritization of QAPI activities. Within these objectives, departments and communities can identify their own specific annual objectives based on outcomes of their critical job tasks, identified problems or issues, the degree of impact any of these factors have on resident care and services.

In addition, the following criteria will be used to identify and select quality/process improvement activities that will enhance Plan effectiveness:

- ***High-volume:*** A function or work process that represents or impacts a large percentage of customers/production.
- ***High-risk:*** A function or process that can potentially and significantly impact resident or employee safety or health, cost of care or service, regulatory compliance, reputation, etc, in a negative way.
- ***Problem-prone:*** A function or process that because of its complexity or nature may be prone to failure.

In addition to these criteria the following factors should also be considered when determining immediate and future QI activities:

- ***Impact:*** The effect that the process has on the quality of care and service provided, clinical resource utilization, community needs, and the cost to the organization.

- **Applicability:** Refers to the relationship of the process to the strategic goals (customer satisfaction, cost reduction, growth) and customers affected.
- **Requirements:** The nature of the process as it relates to the mandatory requirements of any regulatory or accrediting agency.
- **History:** Any past source of opportunities for improvement in the process.
- **Efficacy:** The degree to which the care for the resident has been shown to accomplish the desired outcome(s).
- **Effectiveness:** The degree to which the care or service is provided in the correct manner, given the current state of knowledge, in order to achieve the desired outcome for the customer.
- **Resources:** The availability of adequate human and financial resources to improve a service or a system.

At a minimum, documentation of department and community specific QI goals shall be submitted to the Corporate Quality Improvement Committee at the beginning of each calendar year, and a quarterly report of activities and progress achieved is to be submitted to that committee both at the mid-year point and at year-end.

Monitoring of important clinical indicators by the community Quality Improvement Committees may result in the development of additional goals and/or measures. For example, important clinical indicators for the skilled nursing and assisted living facilities may include, but not be limited to, the following:

- Dehydration
- Pressure ulcers
- Weight loss
- Use of restraints
- Loss of Activities of Daily Living function
- Incontinence
- Influenza and pneumococcal vaccination rates
- Nosocomial infection (Noro Virus, Food Borne Illness, etc)
- Falls
- Medication errors
- Psychoactive Medications used in absence of psychotic or related condition
- Antianxiety/hypnotic drug use
- Depressive symptoms
- History of wandering/elopement attempts
- Inconsistent advance directive documentation

Additional monitoring indicators for the community Quality Improvement Committees

may include, but not be limited to, the following:

- Resident/agent attendance at care planning conferences
- Resident and team member satisfaction/engagement survey results
- Team member acuity trend analysis
- Theft and loss incidents
- Number of resident grievances filed, issues, and actions taken
- Average response time to call lights
- Number of team member work-related accidents
- Team member retention rate
- Number of team members participating on PIPs
- Team member attendance at HumanGood-sponsored educational classes
- Number of team members with perfect on-the-job attendance
- Team member competency assessment
- Percent completion of team member performance reviews by date due
- Nursing registry shifts used per month
- Operational budget surplus/deficit
- Status of PIP activities

Through their auditing and monitoring processes and related activities, department managers and supervisors may identify additional quality/process improvement projects or monitoring elements. Consultant reports, findings and recommendations from regulatory agencies, community Quality Measure/Quality Indicator Profile reports (CASPER Reports, EHR Analytics – Clinical Key Performance Indicator Dashboard, Quality Matters and PIPs), organization-wide quality initiatives and benchmarks, and marketing studies are some of the other common sources of information that can be used to identify quality improvement opportunities.

GOVERNANCE AND LEADERSHIP STRUCTURE

Oversight of the QAPI program is provided by the Board of Directors and conducted through a committee structure that is accountable to executive leadership through the Corporate Quality Improvement Committee. This Committee is responsible for providing an annual report on the QAPI Program activities and outcomes to the Board.

The community leadership, in concert with the Corporate Quality Improvement Committee, has responsibility for planning, designing, implementing, and coordinating resident care and service and selecting quality/process improvement activities to meet the needs of residents, their families, and our team members. Community leaders are also responsible to ensure that time and resources are provided to the designated

persons that participate on the community Quality Improvement Committee or any other associated task forces or work groups.

Compliance will be monitored formally through internal incident reports, regulatory surveys, consultant audits/reviews, resident/team member engagement/satisfaction surveys, and informally through discussions, team member meetings, brainstorming activities, and PDAC cycles. The community and Health Center Quality Improvement Committees will, at a minimum, meet quarterly and will record minutes and/or status updates on the designated QI work plan. The minutes and/or status updates will be shared with committee members during meetings. (See Appendix F for sample HC QAPI meeting agenda.) The community's Executive Director will advise and oversee the duties and responsibilities of the QI committee in the following capacities:

- Appoint team members to the QI committee.
- Ensure the community's quality/process improvement focus areas are being carried out and clearly communicated to team members in the community.
- Maintain an effective method for measuring progress on QI goals.
- Share data and information on QI progress both vertically and horizontally within the community and the organization.

CORPORATE QUALITY IMPROVEMENT COMMITTEE

The Corporate Quality Improvement Committee is chaired by the COO and includes representatives of the Senior leadership team. This committee reviews and approves annual QI work plans from the communities and synchronizes common system-wide initiatives with Home Office initiatives. The committee also monitors organization-wide quality improvement activities through review of QI reports and other submissions from Home Office departments and/or external consultants. The committee responsibilities include:

- Oversee, coordinate and communicate strategic programmatic improvements to improve the quality of services and experiences for the people we serve.
- Provide support and direction to department managers and community leaders in the development of performance improvement plans and quality improvement goals and objectives to ensure alignment with the corporate mission, vision and core dimensions and behaviors, as well as company goals and objectives.
- Solicit recommendations for organization-wide QAPI opportunities.
- Teach and coach team members through example and involvement in QAPI activities.
- Ensure appropriate allocation of QI resources as needed.
- Report activities on a periodic basis to the Board of Directors.

COMMUNITY QUALITY IMPROVEMENT COMMITTEE

Each Life Plan Community shall establish and maintain a Quality Improvement Committee, which shall be multi-disciplinary in composition. Chaired by the Executive Director and/or the Health Services Administrator, the committee oversees and approves organizational improvement activities and initiatives for the entire campus. Membership of the committee may include, but is not limited to, the Director of Nursing Service, Infection Control and Prevention Representative, Director of Resident Services, Director of Social Services, Director of Human Resources, Activity Director, Dining and Food Services Director, Director of Environmental Services or designee, and Medical Director. Consultants and team member guests may be invited to attend meetings on an as needed basis.

Meetings are to be held at least quarterly and more frequently as needed. Reports of activities will be periodically submitted by each community's Executive Director to the Corporate Quality Improvement Committee.

The primary function of the community Quality Improvement Committee is to:

- Identify and select organizational functions to be assessed and improved.
- Review/approve community annual work plans.
- Obtain key indicator, QI activity and monitoring reports from department managers, regulatory surveys and progress reports from PIP Task Force team leaders.
- Review both resident and team member engagement/satisfaction survey results, and ensure action plans are established, implemented, and re-assessed in a timely fashion based on this feedback.
- Monitor progress toward meeting service and process-related objectives within the organization-wide strategic plan, and achievement of quality benchmarks.
- Prioritize QI initiatives, assign Performance Improvement Project (PIP) Task Force teams to projects, and review/approve PIP recommendations or refer selected recommendations to the Corporate Quality Committee.
- Provide guidance for appropriate QI training for team members.
- Ensure that team members, consultants/independent contractors, and residents are educated regarding new or modified regulations, policies and procedures, and operational practices that may impact them.
- Ensure that a resident/family education process regarding care and quality of life decisions and realistic expectations is established and maintained.
- Present a semi-annual written progress report to the Corporate Quality Committee that contains a summary of QI activities to-date, key indicator monitoring outcomes, recommendations, and corrective actions. The report shall

contain a self-evaluation of the effectiveness of community QAPI activities.

- Annually review and approve the community assessment and any new or revised policies and procedures.

HEALTH CENTER QAPI COMMITTEE

In addition to the community QAPI requirements noted above, as prescribed by federal/state regulations, this committee conducts monthly activities and at a minimum convenes quarterly meetings to:

- Review clinical quality indicator outcome reports and consultant recommendations.
- Identify, report, track, investigate and analyze adverse event data (unusual occurrences and incident reports).
- Recommend corrective actions related to nursing, pharmacy, dietary, laboratory, environmental, therapeutic, and medical services.
- Set clear expectations around resident safety, quality, rights, choice, and respect.
- Oversee and monitor the development, evaluation and implementation of care and system outcomes of QAPI work/corrective action plans to ensure improvements are sustained.
- Report activities, findings, recommendations, and outcomes to the Community Quality Improvement Committee at least twice per year.
- Receive and review consultant reports to include but not be limited to pharmacy, infection control reports, laboratory, and maintenance reports as applicable.
- Review community assessment for CMS guidelines.

DEPARTMENT MANAGERS

While there may be PIP Task Force teams assigned to projects that could affect individual departments, each department manager, regardless of location or department, is responsible for developing and evaluating their department's quality initiatives incorporated in the community QI work plan.

1. Identifies department QI goals and objectives for the year.
2. Defines quality/process improvement objectives for each quarter, selected from event trends, regulatory survey reports, consultant reports, submitted Quality issues or concerns, team member suggestions, resident suggestions as applicable and general customer feedback.
3. Identifies departmental quality controls as a standard for measuring performance of a work process.
4. Incorporates the four-step process to achieve department quality/process

improvement objectives.

In addition, each department manager is responsible for ensuring on-going quality/process improvement activities and team member education in their departments, and for addressing Quality Matters issues or concerns and team member or resident complaints using the QAPI process.

The following **minimum** community departmental activities are on-going and should be considered for inclusion in the QI work plan, along with at least two primary, measurable goals for the year:

1. Health Center:

- Monthly review of CMS Quality Reporting Program (QRP), Quality Measures and Indicator Profiles.
- Key Quality Indicators are reviewed monthly under the direction of the Director of Nursing. Flagged indicators are to be analyzed on a resident-specific basis to ensure that resident needs are being met and are appropriately documented in the medical record. A QAPI team may be convened to correct any identified problems. A summary report of the Quality Indicator Profile, including the problems identified, the corrective action plan for each, and any outcome of corrective action implemented, is submitted to the community's Health Center QAPI Committee at each meeting.
- Monthly Infection Control surveillance reports.
- Monthly environmental rounds completed by community administration in tandem with environmental services line team members, with findings and actions reported to the community's Health Center QAPI Committee at each meeting.
- Social Services, Activities, Medical Records, Dining/Food Services, Therapy, Maintenance, and Housekeeping/Laundry departments QAPI activity reports to the community's Health Center QAPI Committee.
- The Activity Director/Coordinator and/or Director of Resident Services/Social Services summary and recommendations for issues raised at monthly Resident Council meetings.
- Department managers' submission of identified quality deficiencies and corrective action plans to the community's QAPI Committee.
- Department managers' submission of trends of quality issues or concerns from team members, reflecting which triggered implementation of corrective actions suggested by a team member and team member recognition effort.
- A review of end of life, hospice, palliative, and comfort care services.
- The consulting pharmacists shall report results of quality control monitoring on a quarterly basis to the community's Health Center QAPI Committee. This includes monthly reports of drug regimen review by the consulting pharmacist, identified

deficiencies, and corrective action submitted to the community's Health Center QAPI Committee.

- A review of any consultant reports will be conducted. Consultant reports will contain written recommendations, as well as plans for implementation and continuing assessment of quality improvement recommendations.

2. Residential/Assisted Living:

- Monthly environmental rounds to monitor compliance with quality standards and promote a safe environment. Management team members assigned by the Health Services Administrator share surveillance responsibility. Rounds are completed in tandem with environmental services line team members. Identified concerns are presented to the appropriate individuals for resolution, if immediate correction is not possible. Findings are summarized and presented to the community Quality Improvement Committee.
- Assisted Living assessments, service plans and resident advance directives should be reviewed monthly for accuracy and compliance with applicable state licensing regulations. Random review of records related to all levels of care shall be conducted on a monthly basis. The Director of Residential Services or designee shall submit a summary of findings and actions report to the community Quality Improvement Committee at each meeting. Names of specific residents and employees are not to be included in this summary report.
- The Activity Director/Coordinator or Director of Resident Services/Social Services will present a summary of issues raised at monthly Resident Council meetings.
- A review of end of life, hospice, palliative, and comfort care services.
- Department managers will present their QI monitoring activities, and a summary of findings and corrective actions to the community Quality Improvement Committee.

3. Community Residential Health Clinic:

- Random monthly review of records related to health care services provided to residential living residents shall be conducted to identify areas of deficiency and implement corrective action as appropriate.
- The Director of Residential Services or designee shall report a summary of findings and corrective actions to the community Quality Improvement Committee at each meeting.

4. Affordable Housing:

- Monthly environmental rounds to monitor compliance with housing quality standards and promote a safe environment. Management team members assigned by the Housing Administrator share surveillance responsibility. Prior to a REAC inspection, the Housing Administrator and Maintenance supervisor will

attend the rounds and make recommendations regarding needed maintenance. Identified concerns are presented to the appropriate individuals for resolution if immediate correction is not possible. Findings are summarized and presented to the Regional Supervisor and Vice President of Operations, Affordable Housing QI Committee.

- Annual resident record reviews to ensure compliance with Department of Housing and Urban Development regulations, with a summary report of findings and corrective actions submitted by the Housing Administrator or designee to the Regional Supervisor and Vice President of Operations, Affordable Housing QI Committee. Names of specific residents and employees are not to be included in this summary report.
- Submission of a summary report of issues raised at resident meetings, and actions taken to address them, to the Regional Supervisor and Vice President of Operations, Affordable Housing QI Committee.
- Community Housing Administrators will present their initial Quality Improvement work plan, their monitoring activities, and a summary of findings and corrective actions to the Corporate Risk Management and Quality Improvement committees on an annual basis.
- Resident Service Coordinators will assess affordable housing residents semi-annually for ability to remain safely independent. Concerns and actions taken to address them are reported to the Regional Supervisors and Vice President of Social Services.

QUALITY ISSUE OR CONCERN FEEDBACK REPORTS

Quality Matters feedback forms (See Appendix E) are widely available for residents, resident representatives and team members as a tool for them to report any issues or concerns related to department operations and/or the delivery of care or services to residents.

Residents, resident representatives may complete the Quality Matters form, without fear of retaliation or punishment, and return it to administration or social services for confidential Quality Improvement Committee consideration. Any team member may complete the Quality Matters form and submit it to their immediate supervisor without fear of retaliation or punishment. This form provides space for to identify the issue, what, if anything was already done to correct the situation, and recommendations for preventing similar circumstances in the future. Information on these forms may help trigger formation of a special PIP to address the issues or concerns, particularly if they are systemic.

Trends of Quality Matters issues or concerns, findings, and corrective actions are to be summarized on the community QI work plan and incorporated into the performance

improvement activities as appropriate.

QAPI CONFIDENTIALITY

All reports, work tools, and studies required by and submitted to department, community, or corporate committees for quality improvement purposes are confidential and protected under state law. Similarly, minutes of these committees are confidential and protected under state law. To enjoy this protection, all such documents must reflect the following language: "For Quality Improvement Discussion Only, Protected by CA H & S Code §1370 and CA Evidence Code §1167 and other states' laws".

This QAPI Plan may be provided to regulatory surveyors upon request. ***The QI internal work plans and corrective action plans are confidential and not available for regulatory review or disclosure.*** Minutes of any QI Committee meeting must not be circulated to members prior to the meeting and may not be removed from the meeting room by committee participants after the meeting is finished. The exception to this rule is that the designated secretary or chairperson of the committee may remove such documents so that the document can be filed in the confidential QI file system.

Minutes of community Quality Improvement Committee meetings may be made available to a surveyor only for the on-site review verification of quality improvement activities; however, no copy is to be given to any surveyor.

RISK/QUALITY/SAFETY/COMPLIANCE OVERLAP

Risk management, safety and compliance activities can overlap with quality activities in the following ways:

- Risk managers perform investigations into unexpected events that result in harm to a resident or team member. They develop corrective action plans to address issues that if not corrected, can potentially cause the same or similar incident to happen again. Working with insurance, they may conduct case reviews in potentially compensable cases to both identify liability exposures and to identify quality deficiencies that require correction.
- Environmental safety rounds are conducted to assess and prevent potential hazards that may impact residents, team members or visitors. These activities will also include organizational emergency preparedness planning and response.
- Compliance activities monitor federal, state and local regulatory compliance per applicable licensure requirements.

The Risk Management Program is also organization-wide in scope and requires the participation of team members in the identification and reporting of unusual occurrences, participation in corrective actions, and identification and correction of system issues and/or resident/employee behavior to minimize the risk of injury to

residents, visitors, and team members. All reported occurrences are evaluated for trending and significance. A summary of findings is presented and discussed at the Corporate Risk Management Committee meeting. Non-identifiable trend reports of resident and team member accidents are reviewed and discussed at the Community Safety Committee meetings. Occurrences are investigated and analyzed through root cause analysis in concert with Risk Management Program requirements. Per policy and as directed by HumanGood's General Counsel, all incident reports and investigation documentation are maintained as confidential and forwarded to Risk Management/Legal department at the Home Office.

UNUSUAL OCCURRENCE INVESTIGATIONS AND CORRECTIVE ACTIONS

Following any unusual occurrence, an investigation will be undertaken by appropriate management team members under the auspices of the Risk Management program and with direction by the community Risk and/or Quality Manager. Analyses of incident cause are to be performed using root cause analysis processes whenever possible.

Any information generated by this analytical process is to be kept confidential. In addition, occurrence reports and investigation findings are confidential and privileged under state law, and must be submitted to Home Office Risk Management and not to the community Quality Improvement Committee or any other community committee. When a corrective action plan is necessary to help reduce the potential for the same or similar incident from occurring in the future, the community Quality Improvement Committee oversees that the corrective action plan process is performed, outcomes monitored and system change implemented as indicted.

Where it is necessary and/or appropriate to generate initial and closure Quality Improvement letters to an outside third party or to a resident who was involved in an incident, these must be reviewed and authorized by Home Office Risk Management before sending.

Only non-individually identifiable summaries of incident trends may be presented to the community Quality Improvement Committee. This summary report must be labeled with the following language "For Quality Improvement Discussion Only, Protected by CA H & S Code § 1370 and other states' laws".

TEAM MEMBER COMMUNICATION

Although specific case information and QAPI work tools are confidential and protected from discovery by state statutes, we will communicate the general outcomes of our QAPI processes, program successes, and program activities to our team members from time to time. This communication can take place in various formats, such as:

- Team member newsletters and memos.
- Communication briefings and team meetings within departments or service

areas.

- Management team meetings.
- Team member appreciation meetings.
- HumanGood-sponsored education sessions.
- In-service education classes.
- QI initiatives in our communities.
- Annual QI summaries of care, service and satisfaction outcomes.

RESIDENT COMMUNICATION

To inform and educate our residents about how our QAPI program works and how to submit any concerns or complaints about care or service, we communicate information about our Program in a variety of ways:

- Resident Council and Advisory Committee meetings.
- Resident Floor/Town Hall Meetings.
- Resident newsletters.
- QI initiatives in our communities.

TEAM MEMBER EDUCATION

Team members receive orientation and training necessary to perform their jobs effectively. Topics covered in the training program include, but are not limited to:

- QAPI Orientation & Reporting Procedures.
- Compliance Training & Reporting.
- Orientation to include mandatory training for all team members and unit-specific training.
- Orientation to job-specific functions and applicable policies and procedures.
- Regulatory required training by community (HIPPA and additional Federal, State & Local Requirements).
- Recurring and continuation training to all team members includes mandatory competency updates addressing topics such as changes in policies and procedures and regulatory requirements.
- Clinical competency updates for clinical team members addresses topics, new technologies in the long-term care industry, and clinical topics that are identified as necessary to keep team members current in long-term care.

In addition, to help team members understand their quality/process improvement responsibilities; HumanGood provides education regarding this QAPI program and, on a

departmental and community basis, team meetings provide an excellent vehicle for communicating QAPI program updates and advising about changes in work processes, policy/procedures and performance improvement.

Newly hired team members are introduced to the QAPI program during the employee orientation period, and may be given a copy of this QAPI Plan. This introduction to quality improvement familiarizes them with the goals and objectives of the organization, of their department, and of their role in the quality improvement process. To the extent possible, all team members will be provided with an annual review of the QAPI program and our program successes.

Managers and supervisors discuss with each team member their strengths, challenges, and educational needs during their annual performance evaluation. To promote active involvement by team members in QI activities, performance reviews should include an assessment of how effectively each person has participated in creating the HumanGood Experience.

SUMMARY

This QAPI program is an essential element of our business practices intended to enhance our ability to meet HumanGood's mission, vision and core values statements, and to help us achieve our winning aspiration to be the leading innovator in delivering enriched and engaged experiences with optimal health and measurable life fulfillment.

The active participation and support of management and their assigned team members is a vital ingredient for program success. All team members are encouraged to provide input to this program at any time without fear of retribution or penalty.

Senior leadership extends their appreciation for the efforts of each team member made in the interest of pursuing our QAPI program goals and achieving optimum program outcomes.

APPENDIX A

The HumanGood Experience

Creating positive and memorable experiences in every interaction.

Deliver a Personalized Experience

1. Maintain a professional appearance.
2. Create eye contact, smile, and greet people by name.
3. Anticipate customer needs and wants and seek to exceed expectations.
4. Engage in activities and conversations that are meaningful to customers.
5. Learn about, share, and deliver on customer preferences.

Be Responsible for Results

6. Be accountable for achieving standards and goals.
7. Show up on time and ready to serve.
8. Take action to maintain safety of self and others.
9. Own every problem you see.

Be Curious and Adaptable

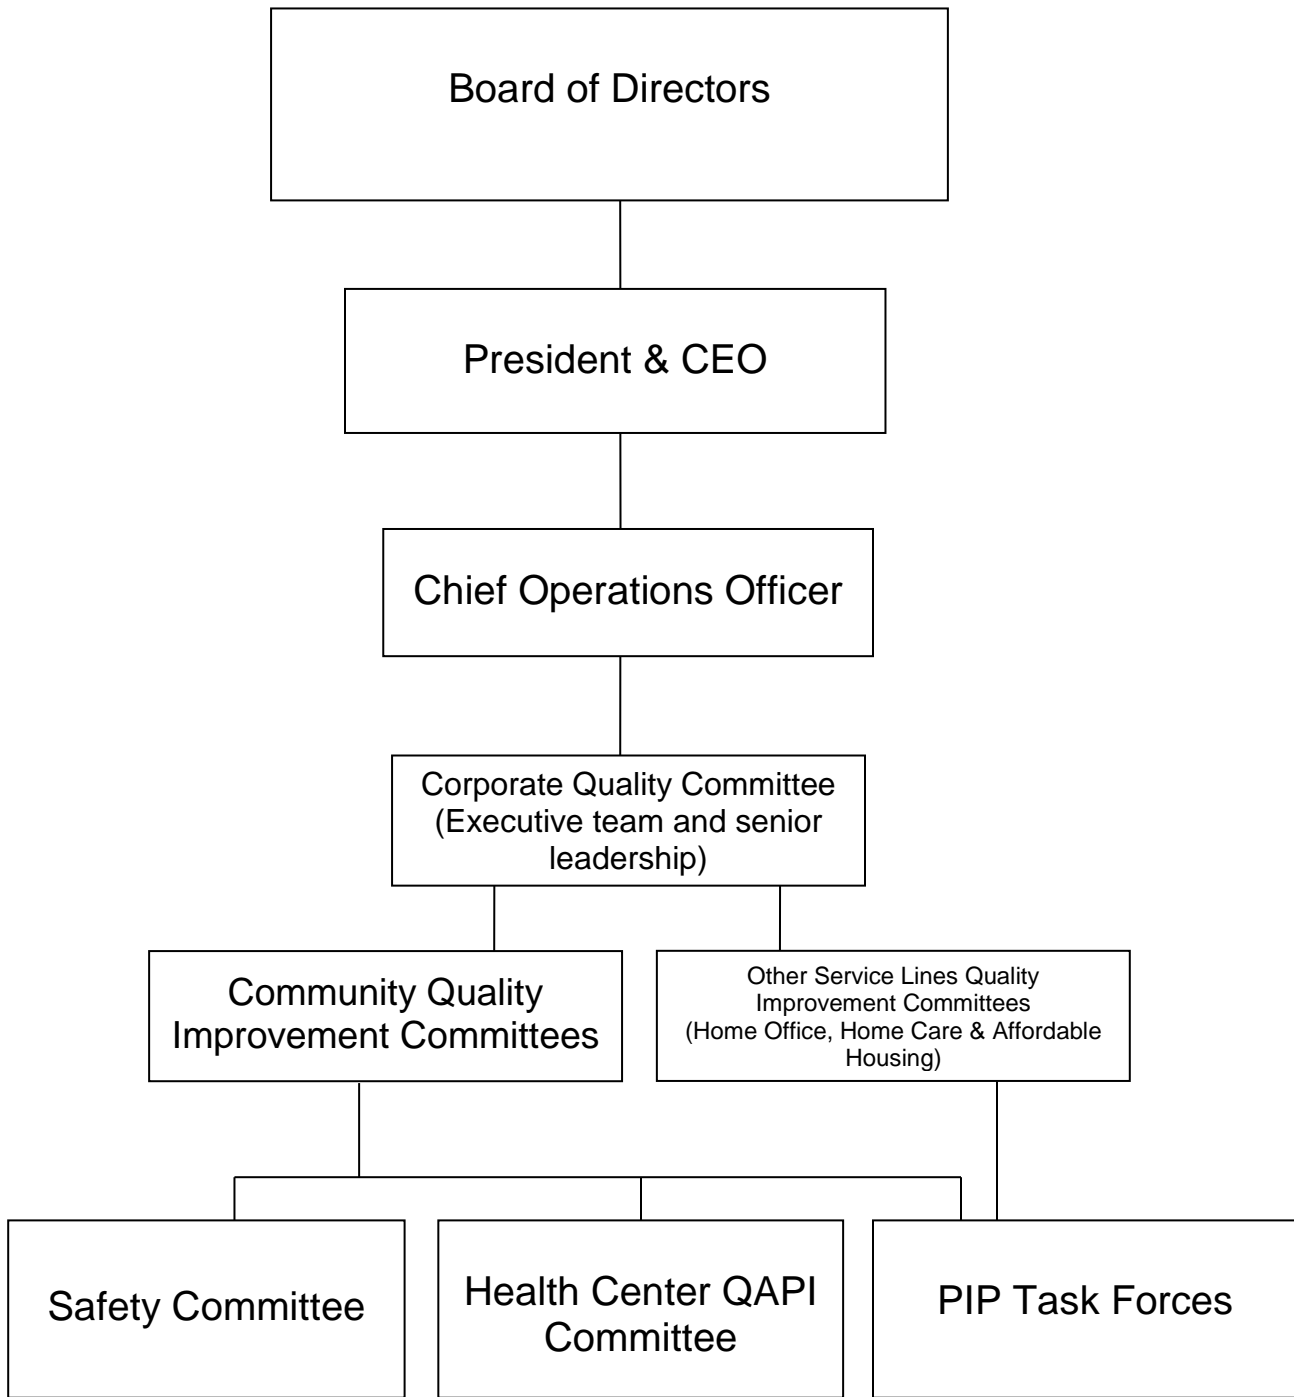

10. Seek and act on opportunities to learn and improve.
11. Be curious and explore better ways to get work done.
12. Speak up, respectfully sharing ideas, opinions, and feedback.
13. Share your knowledge and expertise.
14. Adapt to changes in the work environment.
15. Accept and learn from mistakes.

Perform as One Team

16. Communicate in a respectful, open, and honest manner.
17. Take time to listen and understand.
18. Proactively help and support others within and across departments.
19. Recognize and share successes of the HumanGood Experience in action.
20. Speak positively about each other, our company, and those we serve.
21. Bring joy and fun to the work environment.

Quality Improvement Program Organization Chart

APPENDIX C

PROCESS IMPROVEMENT

Quality improvement (QI) is an on-going process initiated when work processes are being analyzed to determine where changes are needed. Specific improvement processes begin at any point that a new service or system is designed and implemented, or equipment is purchased for use in care delivery or services, or quality issues are reported or identified. And, it is a process used when measuring resident outcomes; comparing performance to other organizations; selecting areas for priority attention; and even when experimenting with new ways of carrying out a function. We have adopted the four-step process using the Acronym PDAC for our QI initiatives:

PLANNING

DESIGNING

ACTING

CHECKING

I DEFINE & UNDERSTAND THE PROBLEM	II ELIMINATE ERRORS	III MEASURE & REDUCE VARIATION	IV DEVELOP A PLAN FOR IMPROVEMENT
1. Identify and describe the process to be analyzed.	1. Identify opportunities for improvement.	1. Reduce variation in measurement systems and process.	1. Develop a plan for monitoring the improved process.
2. Identify the customers impacted.	2. Develop a standard process.	2. Bring the measurement systems and process under statistical control.	2. Insure compliance by monitoring changes.
3. Identify customer needs and concerns.	3. Error-proof the process.	3. Determine whether revised process delivers service to customer requirements.	3. Check and evaluate the results of the improved process.
4. Define your problem statement.	4. Streamline the process.	4. Implement the improved process throughout the system.	4. Establish ongoing feedback mechanisms with customers.

PROBLEM STATEMENTS

A problem statement is used to identify obstacles to providing customer-focused, high quality care or services. Problem statements can be documented on a Quality Matters form (Appendix E). They can also be submitted verbally during team member or committee meetings.

A problem statement *should*:

- Provide information about how the issue came to be viewed as a problem.
- Describe how the problem relates to team member or organization performance.
- State the problem in terms that are visible, specific, and if possible, measurable.
- Generally the problem should be manageable for study purposes.

A problem statement *should not*:

- Present pre-conceived indications of the root cause.
- State or imply a solution.
- Affix blame for the problem.

Examples of correct problem statements:

“Approximately 75% of residents attending the last Resident Council meeting reported that their call lights are not answered timely.”

“In the past 3 months, 50% of the full and part time team members have missed more than ___ days of work. The increasing rate of absenteeism has resulted in a 25% increase in nursing registry usage and a 10% increase in overtime pay.”

“Observation of mealtimes reflects that, on two shifts during the day, 50% of residents that required meal assistance waited more than 15 minutes for assistance, 25% waited more than 15 minutes, and 25% were fed within 5 minutes of receiving their meal.”

Example of incorrect problem statements:

“Some of the medical records are missing timely physician progress notes because the records are not being flagged by the medical records designee due to a lack of a computerized tracking system.”

“We don’t have enough team members to answer call lights when they are lit.”

“Dr. Smith never returns our calls.”

Take time to identify the real issue(s):

Until the facts of an issue are fully investigated, a workable solution is difficult to establish. The incorrect problem statement above is an example of how premature blame may be cast on the incorrect cause. When this occurs, the group might focus on the wrong elements and develop corrective action that would not resolve the issue.

Work process evaluation tools and other devices developed by the industry will help reduce the time it takes to drill down to the actual root cause. Assigning the problem to a PIP Task Force team will enable a careful evaluation of the issue and the possible corrective actions.

APPENDIX D

PERFORMANCE IMPROVEMENT PROJECT (PIP) TASK FORCE TEAM DESCRIPTION

The Quality Improvement Committee chairs may assign a Performance Improvement Project (PIP) Task Force Team to selected issues.

The team membership may include:

- A. A management liaison to provide support and guidance to the team. The management designee will appoint a team leader.
- B. A team leader from the area involved to lead the team and facilitate meetings. The team leader will select members of the team with the support and guidance of the management designee.
- C. Team members, consultants, and members of the corporate Risk Management/Quality Improvement committees who are knowledgeable about the service or process to be improved.
- D. The team shall appoint a timekeeper and scribe for each meeting. The scribe shall distribute minutes to all team members.

PIP Task Force Team Responsibilities:

- A. Identify the problem. The team shall utilize the four-stage PDAC process for identifying the underlying cause(s) of the problem.
- B. Develop measurements to determine baseline.
- C. Measure the essential elements.
- D. Develop and implement a corrective action plan.
- E. Monitor the revised work process to determine if desired outcomes are achieved.
- F. A scribe accurately records discussion, action plans, and assignments, and distributes action plan information to the team.
- G. If the recommendations require additional support and/or resources, the team leader shall bring this information to the next QI committee meeting for discussion and approval.
- H. The team leaders will provide progress reports as appropriate.
- I. Members of the team are expected to arrive to meetings on time with assignments completed, participate in discussions and listen to the ideas of others, support the team's activities, and participate in educating and supporting co-workers during the implementation phase of performance improvement process.

**Sample
Health Center QAPI Agenda**

- I. Review minutes of past meeting
- II. Review current QAPI action/work plans
 - a. PIP status/report back/resolution
- III. Clinical Review:
 - a. Quality Scorecard review (review of complete scorecard); benchmark against other communities; need for process improvement team; action plan. Includes Quality Metrics and/or Quality Indicators.
 - b. CASPER Reports/Quality Measure Reports
 - c. Other care system or clinical reviews/consultant reports
 - d. Infection Control – Lab report, surveillance, etc.
- IV. Health, Safety and Environment
 - a. Fall review
 - b. Other safety issue review
 - c. Environmental reviews (includes kitchen)
 - d. Community assessment
- V. Dietary Management
- VI. Rehabilitation
- VII. Pharmacy
 - a. Pharmacy review
 - b. Medication administration or other issues
- VIII. Resident and Employee Quality of Life
 - a. Complaint / compliment review
 - b. Resident and Employee satisfaction/engagement
 - c. Therapeutic Activities/ person centered care
 - d. Behavioral Management/other psychosocial issues
- IX. Survey Management and POC review and follow-up as needed
- X. Quality Issue/Suggestions Review

RECORD RETENTION-CALIFORNIA SKILLED NURSING TRAINING RECORDS	Effective Date:	March 17, 2022
	Revision Dates:	
	Departments Approving	Clinical, Operations
Departments Affected	Operations, Skilled Nursing	

Introduction and Background

In California Skilled Nursing communities must retain, store and destroy records of team member training (In-Service) based on applicable legal, regulatory and business requirements.

Policy

The Health Services Administrator or designee is responsible for ensuring appropriate maintenance of skilled nursing training records.

The records must be maintained for a minimum of 7 years.
Records will be retained in either paper or digital form as appropriate.

The records to be retained include:

- Sign in sheets for in-person training, or attendance list of classes completed electronically
- A copy of exam or questions used to evaluate results of the training (if applicable)
- A copy of any handouts provided to team members

Records will be available for review at the community.

Location where records can be reviewed:

Community Name: _____

Community Address: _____

Refer to HumanGood Record Retention, Storage and Destruction for disposition of other types of records.

Be Smart About Antibiotics

PREVENT
HAIs
Healthcare-
Associated
Infections

Taking antibiotics when you don't need them is like leaving the lights on all the time.

- The lights may burn out, leaving you in the dark when you most need them.
- **If you use antibiotics when you don't need them, they may not work when you get sick.**

Antibiotics can help the body fight infections caused by germs called bacteria, but they are not miracle drugs for everything.

When antibiotics are NOT needed:

- You have an infection caused by a virus (such as a cold, bronchitis, the flu, or most types of diarrhea). **Antibiotics don't work on viruses.**
- You don't have an infection but instead have some other medical problem (such as anemia).
- You are not actually sick (except in rare cases where antibiotics have been shown to prevent infection).
- You have decided against them (such as near the end of life).

Why doctors may give antibiotics when they are NOT needed:

- Doctors are not always sure what is causing an illness and may feel they have to provide treatment right away.
- Some patients and families think they are not getting good care unless they get an antibiotic and insist that they want one.

Agency for Healthcare Research and Quality
Advancing Excellence in Health Care • www.ahrq.gov

WINDSOR 003783

**“I got better
on my own!”**

What you can do:

- Talk with the doctor about the benefits and harms of antibiotics.
- Take medicine exactly the way the doctor says. Don't skip doses.
- Take care of yourself: get rest, eat and drink enough, and take over-the-counter medicines as needed.
- If you are on hospice or thinking about hospice, talk with your doctor about whether you need antibiotics anymore.

What not to do:

- **Don't ask for an antibiotic when the doctor says it isn't needed.**
- Don't take an antibiotic for a virus (cold, cough, or flu).

How antibiotics can hurt you:

- Antibiotics normally work by killing bacteria. Sometimes not all of the germs are killed, and the strongest ones can grow and spread. A person can get sick again, and this time the germs are harder to kill because the antibiotics no longer work. **This is called resistance and makes some infections very hard to control.** Resistance can make you sick longer, requiring more doctor visits and drugs that are even stronger. The more often you use an antibiotic, the greater the chance that the germs will become resistant.
- Antibiotics can save lives, but they can cause problems, too. **Older people have more side effects**, which can cause problems all over the body. In addition to resistance, antibiotics can cause nausea, dizziness, diarrhea, rash, kidney damage, and allergic reactions.

Don't Take Antibiotics for Granted:

Antibiotics are helpful, but now you know why sometimes you or a family member may not need them. You can help yourself and others by taking antibiotics only when they are needed.

ROOM TO ROOM TRANSFERS	Effective Date	6/26/17
	Revision Dates	
	Departments Approving	Operations Clinical
	Departments Affected	Health Centers

Policy:

Health Center nursing supervisors have sole discretion to make room transfers after review by the Director of Nursing or designee of the resident’s medical, physical, and emotional needs and desires. To the extent possible, a request by a resident for a roommate of choice will be honored. Room transfers based on racial or other discriminatory elements shall not be made except where the resident is married or has a domestic partner; in that case a mixed gender room is acceptable.

Procedure:

1. Unless imminently necessary for the medical or nursing needs of a resident, transfer from room to room will be a planned event.
2. In a planned transfer that involves a medical, physical, or emotional need, the resident and/or his or her authorized representative receives advance notice in writing that includes the reason(s) why the transfer is necessary.
3. If the resident requests the transfer, no notice is required except that the authorized representative will be notified by telephone and the resident’s request and destination room relayed.
4. The resident is oriented to the new room prior to transfer, where practicable.
5. Furniture owned by the resident may be moved to the new room if there is room for it. If not, an explanation of why we cannot move the furniture to the new room is given to the resident and/or the authorized representative.
6. A licensed nurse will document in the resident’s health record the reasons for the transfer, what information was provided to the resident and/or his or her authorized representative, and the date and time of the move.

3) SNF Quality Assessment and Performance Improvement (“QAPI”) Plan

***Quality Assurance and
Performance Improvement Plan***

2021-22

QUALITY ASSURANCE AND PERFORMANCE IMPROVEMENT PLAN

PURPOSE

This Quality Assurance and Performance Improvement (QAPI) program has been developed to help us continually improve the way we care for and engage with our residents, team members, service partners, and the families of residents so that we may realize our ***winning aspiration to be the leading innovator in delivering enriched and engaged experiences with optimal health and measurable life fulfillment.***

This QAPI plan provides a framework by which organizational processes and outcomes are continuously assessed and improved through a systematic, comprehensive, data driven, and proactive approach to performance improvement that focuses on service outcomes related to housing and supportive services, clinical care, quality of life and resident choice.

Furthermore, this plan integrates our mission, vision and values and emphasizes our commitment to maintain a non-punitive or “just culture” of learning from mistakes, openness and fairness, management of systems, and management of behavior wherein all team members participate in promoting individual and team accountability for performance, conformance with relevant laws, regulations and standards, with an aspiration of achieving increasingly high reliability through consistent positive outcomes of care and service over time.

This QAPI effort is not just about meeting minimum standards; rather, it is about aiming higher at achieving leadership in quality control and outcome effectiveness on the part of every HumanGood team member.

SCOPE

This QAPI program is ongoing and applies multilevel and organization-wide, including home office functional areas/service lines as well as community departments/service areas.

PROGRAM GOALS

The primary goal of this program is to achieve continuous quality and performance improvement, with the objectives of achieving the best possible outcomes in health care, supportive services, and housing for our residents, in a safe environment, thereby improving resident, client, and team member satisfaction.

Under the auspices of this program, quality and performance improvement activities are outcome directed and include transparency in reporting outcome and behavioral deficiencies, learning from our mistakes, accountability, achieving critical thinking and appropriate behavior among team members relative to the key requirements of their job function, and analysis of our systems and work processes to determine efficacy.

These QAPI activities also involve performing any revisions to policies and procedures and conducting continuing education of team members to ensure compliance with procedures and work processes.

HUMANGOOD WINNING ASPIRATION, MISSION, VISION and VALUES

(See Appendix A)

OBJECTIVES:

Our organization uses QAPI to make decisions and guide our day-to-day operations.

Objective #1: To define quality in measurable terms, set goals for performance, and measure progress toward those goals to achieve consistent service delivery.

Objective #2: To include team members, functional areas/units, all departments and all services in QAPI processes and goal-setting to improve resident outcomes.

Objective #3: To focus on systems and processes rather than individuals, but in addition, to manage behavior in a professional and objective manner so that learning and conformance is enhanced.

Objective #4: To make decisions based on data that includes input from team members, residents, health care providers, families, and other stakeholders.

Objective #5: To encourage individual and collective accountability for our own practice and performance.

AUTHORITY AND STRUCTURE

The HumanGood Board of Directors authorized development and implementation of this organization-wide, multi-disciplinary QAPI program and has delegated to the Chief Operating Officer, working with the Vice President, Health Care and Quality, the responsibility to ensure its effectiveness. (See Appendix B)

The Corporate Quality Improvement Committee, described below, has been delegated authority by the COO to establish the program, provide program direction, monitor key quality indicators and achievement of QI goals, and recommend resources/support to the COO where appropriate, and provide periodic reports on program activity and outcomes to the Board of Directors.

In addition, management and team members are expected to actively support and participate in the program, with managers requiring that key departmental processes and functions be evaluated, monitored, and improved as appropriate.

The community Quality Improvement Committee serves as the coordinating body for QAPI activities on each campus, and their QAPI activities will be periodically reported to the Corporate Quality Improvement Committee and the Board.

This program plan shall be reviewed annually by the VP of Health Care and Quality and revisions made as appropriate, upon which time the revised Plan will be re-distributed to all management team members for implementation within their area(s) of responsibility.

DEFINITIONS:

Performance Improvement (PI). Study of and efforts to achieve improvement in outcomes related to human and systems input and output. (See Appendix C)

Performance Improvement Project (PIP). A concentrated focus on a specific problem identified in one or more areas of the organization, whether service or care. The process involves gathering information systematically to clarify issues or problems, and intervening for improvements. PIPs are selected primarily based on intensity and severity of the problem and relative risk to individuals. (See Appendix D)

Performance Improvement Project (PIP) Task Force. A group of multi-skilled team members charged with the responsibility of studying an existing process for the purpose of improving it or designing a new one. (See Appendix D)

Quality Assessment. An evaluation of a process and/or outcomes of a process to determine if a defined standard of quality is being achieved.

Quality Assurance (QA). The organizational structure, processes, and procedures designed to ensure that care and service delivery practices are consistently applied and meet or exceed an expected standard of quality. Principles of continuous quality improvement are utilized to achieve benchmark standards.

Quality Assurance and Performance Improvement (QAPI). A data-driven, proactive approach to improving the quality of life, care, and services in long term care organizations, although the term quality “assurance” is a misnomer. In actuality, no one can “assure” quality because it is in the eyes of the beholder. We use the term because it is federally mandated, but the true effort is not assurance but rather outcome improvement through assessment, identification of problems, and corrective actions taken to resolve the problem in the hope that it will not recur.

Quality Deficiencies. These represent a deficit or an area for improvement. They are potential markers of quality that the community considers to be in need of investigating and which, after investigation, may or may not represent a deviation from quality that results in a potential or actual undesirable outcome.

Quality Improvement (QI). An ongoing interdisciplinary process that is designed to improve the delivery of services and resident outcomes. It is a retrospective process of determining how and why a person or system functioned as it did (root cause analysis), and how humans and systems will function in a new project, program, or purchase of equipment (prospective analysis or failure mode, criticality and effects analysis).

HUMANGOOD APPROACH TO QUALITY IMPROVEMENT

We have adopted the following approach to our QAPI activities - the acronym “PDAC” reflects this four-step approach best. (See Appendix C)

PLAN: Define and understand the process to be analyzed, as well as its customers and their expectations. Develop a clear problem statement. Emphasis will be placed on identifying root cause of system failures, performing a failure mode and effect analysis for new processes and equipment, and identifying weak links in work processes.

DESIGN: Brainstorm ways to reduce or eliminate the problem defined in the planning stage, and explore opportunities for improvement. If a work process is to be studied, design the study methodology.

ACT: Take immediate action as a ‘quick fix’ to the problem. The PIP Task Force Team works on the problem then considers, designs, and implements longer term fixes to prevent or reduce recurrence of the problem.

CHECK: Monitor the new process to ensure it is fully implemented.

PRIORITIZATION

Program goals and objectives will serve as the basis for selection and prioritization of QAPI activities. Within these objectives, departments and communities can identify their own specific annual objectives based on outcomes of their critical job tasks, identified problems or issues, the degree of impact any of these factors have on resident care and services.

In addition, the following criteria will be used to identify and select quality/process improvement activities that will enhance Plan effectiveness:

- ***High-volume:*** A function or work process that represents or impacts a large percentage of customers/production.
- ***High-risk:*** A function or process that can potentially and significantly impact resident or employee safety or health, cost of care or service, regulatory compliance, reputation, etc., in a negative way.
- ***Problem-prone:*** A function or process that because of its complexity or nature may be prone to failure.

In addition to these criteria the following factors should also be considered when determining immediate and future QI activities:

- ***Impact:*** The effect that the process has on the quality of care and service provided, clinical resource utilization, community needs, and the cost to the organization.
- ***Applicability:*** Refers to the relationship of the process to the strategic goals (customer satisfaction, cost reduction, growth) and customers affected.
- ***Requirements:*** The nature of the process as it relates to the mandatory requirements of any regulatory or accrediting agency.
- ***History:*** Any past source of opportunities for improvement in the process.
- ***Efficacy:*** The degree to which the care for the resident has been shown to accomplish the desired outcome(s).
- ***Effectiveness:*** The degree to which the care or service is provided in the correct manner, given the current state of knowledge, in order to achieve the desired outcome for the customer.
- ***Resources:*** The availability of adequate human and financial resources to improve a service or a system.

At a minimum, documentation of department and community specific QI goals shall be submitted to the Corporate Quality Improvement Committee at the beginning of each calendar year, and a quarterly report of activities and progress achieved is to be submitted to that committee both at the mid-year point and at year-end.

Monitoring of important clinical indicators by the community Quality Improvement Committees may result in the development of additional goals and/or measures. For example, important clinical indicators for the skilled nursing and assisted living facilities may include, but not be limited to, the following:

- Dehydration
- Pressure ulcers
- Weight loss
- Use of restraints
- Loss of Activities of Daily Living function
- Incontinence
- Influenza and pneumococcal vaccination rates
- Nosocomial infection (Noro Virus, Food Borne Illness, etc.)
- Falls
- Medication errors
- Psychoactive Medications used in absence of psychotic or related condition
- Antianxiety/hypnotic drug use
- Depressive symptoms
- History of wandering/elopement attempts
- Inconsistent advance directive documentation

Additional monitoring indicators for the community Quality Improvement Committees may include, but not be limited to, the following:

- Resident/agent attendance at care planning conferences
- Resident and team member satisfaction/engagement survey results
- Team member acuity trend analysis
- Theft and loss incidents
- Number of resident grievances filed, issues, and actions taken
- Average response time to call lights
- Number of team member work-related accidents
- Team member retention rate
- Number of team members participating on PIPs
- Team member attendance at HumanGood-sponsored educational classes
- Number of team members with perfect on-the-job attendance
- Team member competency assessment
- Percent completion of team member performance reviews by date due
- Nursing registry shifts used per month
- Operational budget surplus/deficit
- Status of PIP activities

Through their auditing and monitoring processes and related activities, department managers and supervisors may identify additional quality/process improvement projects or monitoring elements. Consultant reports, findings and recommendations from regulatory agencies, community Quality Measure/Quality Indicator Profile reports (CASPER Reports, EHR Analytics – Clinical Key Performance Indicator Dashboard, Quality Matters and PIPs), organization-wide quality initiatives and benchmarks, and marketing studies are some of the other common sources of information that can be used to identify quality improvement opportunities.

GOVERNANCE AND LEADERSHIP STRUCTURE

Oversight of the QAPI program is provided by the Board of Directors and conducted through a committee structure that is accountable to executive leadership through the Corporate Quality Improvement Committee. This Committee is responsible for providing an annual report on the QAPI Program activities and outcomes to the Board.

The community leadership, in concert with the Corporate Quality Improvement Committee, has responsibility for planning, designing, implementing, and coordinating resident care and service and selecting quality/process improvement activities to meet the needs of residents, their families, and our team members. Community leaders are also responsible to ensure that time and resources are provided to the designated persons that participate on the community Quality Improvement Committee or any other associated task forces or work groups.

Compliance will be monitored formally through internal incident reports, regulatory surveys, consultant audits/reviews, resident/team member engagement/satisfaction surveys, and informally through discussions, team member meetings, brainstorming activities, and PDAC cycles. The community and Health Center Quality Improvement Committees will, at a minimum, meet quarterly and will record minutes and/or status updates on the designated QI work plan. The minutes and/or status updates will be shared with committee members during meetings. (See Appendix F for sample HC QAPI meeting agenda.) The community's Executive Director will advise and oversee the duties and responsibilities of the QI committee in the following capacities:

- Appoint team members to the QI committee.
- Ensure the community's quality/process improvement focus areas are being carried out and clearly communicated to team members in the community.
- Maintain an effective method for measuring progress on QI goals.
- Share data and information on QI progress both vertically and horizontally within the community and the organization.

CORPORATE QUALITY IMPROVEMENT COMMITTEE

The Corporate Quality Improvement Committee is chaired by the COO and includes representatives of the Senior leadership team. This committee reviews and approves annual QI work plans from the communities and synchronizes common system-wide initiatives with Home Office initiatives. The committee also monitors organization-wide quality improvement activities through review of QI reports and other submissions from

Home Office departments and/or external consultants. The committee responsibilities include:

- Oversee, coordinate and communicate strategic programmatic improvements to improve the quality of services and experiences for the people we serve.
- Provide support and direction to department managers and community leaders in the development of performance improvement plans and quality improvement goals and objectives to ensure alignment with the corporate mission, vision and core dimensions and behaviors, as well as company goals and objectives.
- Solicit recommendations for organization-wide QAPI opportunities.
- Teach and coach team members through example and involvement in QAPI activities.
- Ensure appropriate allocation of QI resources as needed.
- Report activities on a periodic basis to the Board of Directors.

COMMUNITY QUALITY IMPROVEMENT COMMITTEE

Each Life Plan Community shall establish and maintain a Quality Improvement Committee, which shall be multi-disciplinary in composition. Chaired by the Executive Director and/or the Health Services Administrator, the committee oversees and approves organizational improvement activities and initiatives for the entire campus. Membership of the committee may include, but is not limited to, the Director of Nursing Service, Infection Control and Prevention Representative, Director of Resident Services, Director of Social Services, Director of Human Resources, Activity Director, Dining and Food Services Director, Director of Environmental Services or designee, and Medical Director. Consultants and team member guests may be invited to attend meetings on an as needed basis.

Meetings are to be held at least quarterly and more frequently as needed. Reports of activities will be periodically submitted by each community's Executive Director to the Corporate Quality Improvement Committee.

The primary function of the community Quality Improvement Committee is to:

- Identify and select organizational functions to be assessed and improved.
- Review/approve community annual work plans.
- Obtain key indicator, QI activity and monitoring reports from department managers, regulatory surveys and progress reports from PIP Task Force team leaders.
- Review both resident and team member engagement/satisfaction survey results, and ensure action plans are established, implemented, and re-assessed in a timely fashion based on this feedback.
- Monitor progress toward meeting service and process-related objectives within the organization-wide strategic plan, and achievement of quality benchmarks.

- Prioritize QI initiatives, assign Performance Improvement Project (PIP) Task Force teams to projects, and review/approve PIP recommendations or refer selected recommendations to the Corporate Quality Committee.
- Provide guidance for appropriate QI training for team members.
- Ensure that team members, consultants/independent contractors, and residents are educated regarding new or modified regulations, policies and procedures, and operational practices that may impact them.
- Ensure that a resident/family education process regarding care and quality of life decisions and realistic expectations is established and maintained.
- Present a semi-annual written progress report to the Corporate Quality Committee that contains a summary of QI activities to-date, key indicator monitoring outcomes, recommendations, and corrective actions. The report shall contain a self-evaluation of the effectiveness of community QAPI activities.
- Annually review and approve the community assessment and any new or revised policies and procedures.

HEALTH CENTER QAPI COMMITTEE

In addition to the community QAPI requirements noted above, as prescribed by federal/state regulations, this committee conducts monthly activities and at a minimum convenes quarterly meetings to:

- Review clinical quality indicator outcome reports and consultant recommendations.
- Identify, report, track, investigate and analyze adverse event data (unusual occurrences and incident reports).
- Recommend corrective actions related to nursing, pharmacy, dietary, laboratory, environmental, therapeutic, and medical services.
- Set clear expectations around resident safety, quality, rights, choice, and respect.
- Oversee and monitor the development, evaluation and implementation of care and system outcomes of QAPI work/corrective action plans to ensure improvements are sustained.
- Report activities, findings, recommendations, and outcomes to the Community Quality Improvement Committee at least twice per year.
- Receive and review consultant reports to include but not be limited to pharmacy, infection control reports, laboratory, and maintenance reports as applicable.
- Review community assessment for CMS guidelines.

DEPARTMENT MANAGERS

While there may be PIP Task Force teams assigned to projects that could affect individual departments, each department manager, regardless of location or department, is responsible for developing and evaluating their department's quality initiatives incorporated in the community QI work plan.

1. Identifies department QI goals and objectives for the year.
2. Defines quality/process improvement objectives for each quarter, selected from event trends, regulatory survey reports, consultant reports, submitted Quality issues or concerns, team member suggestions, resident suggestions as applicable and general customer feedback.
3. Identifies departmental quality controls as a standard for measuring performance of a work process.
4. Incorporates the four-step process to achieve department quality/process improvement objectives.

In addition, each department manager is responsible for ensuring on-going quality/process improvement activities and team member education in their departments, and for addressing Quality Matters issues or concerns and team member or resident complaints using the QAPI process.

The following *minimum* community departmental activities are on-going and should be considered for inclusion in the QI work plan, along with at least two primary, measurable goals for the year:

1. Health Center:

- Monthly review of CMS Quality Reporting Program (QRP), Quality Measures and Indicator Profiles.
- Key Quality Indicators are reviewed monthly under the direction of the Director of Nursing. Flagged indicators are to be analyzed on a resident-specific basis to ensure that resident needs are being met and are appropriately documented in the medical record. A QAPI team may be convened to correct any identified problems. A summary report of the Quality Indicator Profile, including the problems identified, the corrective action plan for each, and any outcome of corrective action implemented, is submitted to the community's Health Center QAPI Committee at each meeting.
- Monthly Infection Control surveillance reports.
- Monthly environmental rounds completed by community administration in tandem with environmental services line team members, with findings and actions reported to the community's Health Center QAPI Committee at each meeting.
- Social Services, Activities, Medical Records, Dining/Food Services, Therapy, Maintenance, and Housekeeping/Laundry departments QAPI activity reports to the community's Health Center QAPI Committee.
- The Activity Director/Coordinator and/or Director of Resident Services/Social Services summary and recommendations for issues raised at monthly Resident Council meetings.
- Department managers' submission of identified quality deficiencies and corrective action plans to the community's QAPI Committee.
- Department managers' submission of trends of quality issues or concerns from team members, reflecting which triggered implementation of corrective actions suggested by a team member and team member recognition effort.

- A review of end of life, hospice, palliative, and comfort care services.
- The consulting pharmacists shall report results of quality control monitoring on a quarterly basis to the community's Health Center QAPI Committee. This includes monthly reports of drug regimen review by the consulting pharmacist, identified deficiencies, and corrective action submitted to the community's Health Center QAPI Committee.
- A review of any consultant reports will be conducted. Consultant reports will contain written recommendations, as well as plans for implementation and continuing assessment of quality improvement recommendations.

2. Residential/Assisted Living:

- Monthly environmental rounds to monitor compliance with quality standards and promote a safe environment. Management team members assigned by the Health Services Administrator share surveillance responsibility. Rounds are completed in tandem with environmental services line team members. Identified concerns are presented to the appropriate individuals for resolution, if immediate correction is not possible. Findings are summarized and presented to the community Quality Improvement Committee.
- Assisted Living assessments, service plans and resident advance directives should be reviewed monthly for accuracy and compliance with applicable state licensing regulations. Random review of records related to all levels of care shall be conducted on a monthly basis. The Director of Residential Services or designee shall submit a summary of findings and actions report to the community Quality Improvement Committee at each meeting. Names of specific residents and employees are not to be included in this summary report.
- The Activity Director/Coordinator or Director of Resident Services/Social Services will present a summary of issues raised at monthly Resident Council meetings.
- A review of end of life, hospice, palliative, and comfort care services.
- Department managers will present their QI monitoring activities, and a summary of findings and corrective actions to the community Quality Improvement Committee.

3. Community Residential Health Clinic:

- Random monthly review of records related to health care services provided to residential living residents shall be conducted to identify areas of deficiency and implement corrective action as appropriate.
- The Director of Residential Services or designee shall report a summary of findings and corrective actions to the community Quality Improvement Committee at each meeting.

4. Affordable Housing:

- Monthly environmental rounds to monitor compliance with housing quality standards and promote a safe environment. Management team members assigned by the Housing Administrator share surveillance responsibility. Prior to a REAC inspection, the Housing Administrator and Maintenance supervisor will attend the rounds and make recommendations regarding needed maintenance. Identified

concerns are presented to the appropriate individuals for resolution if immediate correction is not possible. Findings are summarized and presented to the Regional Supervisor and Vice President of Operations, Affordable Housing QI Committee.

- Annual resident record reviews to ensure compliance with Department of Housing and Urban Development regulations, with a summary report of findings and corrective actions submitted by the Housing Administrator or designee to the Regional Supervisor and Vice President of Operations, Affordable Housing QI Committee. Names of specific residents and employees are not to be included in this summary report.
- Submission of a summary report of issues raised at resident meetings, and actions taken to address them, to the Regional Supervisor and Vice President of Operations, Affordable Housing QI Committee.
- Community Housing Administrators will present their initial Quality Improvement work plan, their monitoring activities, and a summary of findings and corrective actions to the Corporate Risk Management and Quality Improvement committees on an annual basis.
- Resident Service Coordinators will assess affordable housing residents semiannually for ability to remain safely independent. Concerns and actions taken to address them are reported to the Regional Supervisors and Vice President of Social Services.

QUALITY ISSUE OR CONCERN FEEDBACK REPORTS

Quality Matters feedback forms (See Appendix E) are widely available for residents, resident representatives and team members as a tool for them to report any issues or concerns related to department operations and/or the delivery of care or services to residents.

Residents, resident representatives may complete the Quality Matters form, without fear of retaliation or punishment, and return it to administration or social services for confidential Quality Improvement Committee consideration. Any team member may complete the Quality Matters form and submit it to their immediate supervisor without fear of retaliation or punishment. This form provides space for to identify the issue, what, if anything was already done to correct the situation, and recommendations for preventing similar circumstances in the future. Information on these forms may help trigger formation of a special PIP to address the issues or concerns, particularly if they are systemic.

Trends of Quality Matters issues or concerns, findings, and corrective actions are to be summarized on the community QI work plan and incorporated into the performance improvement activities as appropriate.

QAPI CONFIDENTIALITY

All reports, work tools, and studies required by and submitted to department, community, or corporate committees for quality improvement purposes are confidential and protected under state law. Similarly, minutes of these committees are confidential and protected under state law. To enjoy this protection, all such documents must reflect the following

language: “For Quality Improvement Discussion Only, Protected by CA H & S Code §1370 and CA Evidence Code §1167 and other states’ laws”.

This QAPI Plan may be provided to regulatory surveyors upon request. ***The QI internal work plans and corrective action plans are confidential and not available for regulatory review or disclosure.*** Minutes of any QI Committee meeting must not be circulated to members prior to the meeting and may not be removed from the meeting room by committee participants after the meeting is finished. The exception to this rule is that the designated secretary or chairperson of the committee may remove such documents so that the document can be filed in the confidential QI file system. Minutes of community Quality Improvement Committee meetings may be made available to a surveyor only for the on-site review verification of quality improvement activities; however, no copy is to be given to any surveyor.

RISK/QUALITY/SAFETY/COMPLIANCE OVERLAP

Risk management, safety and compliance activities can overlap with quality activities in the following ways:

- Risk managers perform investigations into unexpected events that result in harm to a resident or team member. They develop corrective action plans to address issues that if not corrected, can potentially cause the same or similar incident to happen again. Working with insurance, they may conduct case reviews in potentially compensable cases to both identify liability exposures and to identify quality deficiencies that require correction.
- Environmental safety rounds are conducted to assess and prevent potential hazards that may impact residents, team members or visitors. These activities will also include organizational emergency preparedness planning and response.
- Compliance activities monitor federal, state and local regulatory compliance per applicable licensure requirements.

The Risk Management Program is also organization-wide in scope and requires the participation of team members in the identification and reporting of unusual occurrences, participation in corrective actions, and identification and correction of system issues and/or resident/employee behavior to minimize the risk of injury to residents, visitors, and team members. All reported occurrences are evaluated for trending and significance. A summary of findings is presented and discussed at the Corporate Risk Management Committee meeting. Non-identifiable trend reports of resident and team member accidents are reviewed and discussed at the Community Safety Committee meetings. Occurrences are investigated and analyzed through root cause analysis in concert with Risk Management Program requirements. Per policy and as directed by HumanGood’s General Counsel, all incident reports and investigation documentation are maintained as confidential and forwarded to Risk Management/Legal department at the Home Office.

UNUSUAL OCCURRENCE INVESTIGATIONS AND CORRECTIVE ACTIONS

Following any unusual occurrence, an investigation will be undertaken by appropriate management team members under the auspices of the Risk Management program and with direction by the community Risk and/or Quality Manager. Analyses of incident cause are to be performed using root cause analysis processes whenever possible.

Any information generated by this analytical process is to be kept confidential. In addition, occurrence reports and investigation findings are confidential and privileged under state law, and must be submitted to Home Office Risk Management and not to the community Quality Improvement Committee or any other community committee. When a corrective action plan is necessary to help reduce the potential for the same or similar incident from occurring in the future, the community Quality Improvement Committee oversees that the corrective action plan process is performed, outcomes monitored and system change implemented as indicated.

Where it is necessary and/or appropriate to generate initial and closure Quality Improvement letters to an outside third party or to a resident who was involved in an incident, these must be reviewed and authorized by Home Office Risk Management before sending.

Only non-individually identifiable summaries of incident trends may be presented to the community Quality Improvement Committee. This summary report must be labeled with the following language "For Quality Improvement Discussion Only, Protected by CA H & S Code § 1370 and other states' laws".

TEAM MEMBER COMMUNICATION

Although specific case information and QAPI work tools are confidential and protected from discovery by state statutes, we will communicate the general outcomes of our QAPI processes, program successes, and program activities to our team members from time to time. This communication can take place in various formats, such as:

- Team member newsletters and memos.
- Communication briefings and team meetings within departments or service areas.
- Management team meetings.
- Team member appreciation meetings.
- HumanGood-sponsored education sessions.
- In-service education classes.
- QI initiatives in our communities.
- Annual QI summaries of care, service and satisfaction outcomes.

RESIDENT COMMUNICATION

To inform and educate our residents about how our QAPI program works and how to submit any concerns or complaints about care or service, we communicate information about our Program in a variety of ways:

- Resident Council and Advisory Committee meetings.

- Resident Floor/Town Hall Meetings.
- Resident newsletters.
- QI initiatives in our communities.

TEAM MEMBER EDUCATION

Team members receive orientation and training necessary to perform their jobs effectively. Topics covered in the training program include, but are not limited to:

- QAPI Orientation & Reporting Procedures.
- Compliance Training & Reporting.
- Orientation to include mandatory training for all team members and unit-specific training.
- Orientation to job-specific functions and applicable policies and procedures.
- Regulatory required training by community (HIPPA and additional Federal, State & Local Requirements).
- Recurring and continuation training to all team members includes mandatory competency updates addressing topics such as changes in policies and procedures and regulatory requirements.
- Clinical competency updates for clinical team members addresses topics, new technologies in the long-term care industry, and clinical topics that are identified as necessary to keep team members current in long-term care.

In addition, to help team members understand their quality/process improvement responsibilities; HumanGood provides education regarding this QAPI program and, on a departmental and community basis, team meetings provide an excellent vehicle for communicating QAPI program updates and advising about changes in work processes, policy/procedures and performance improvement.

Newly hired team members are introduced to the QAPI program during the employee orientation period, and may be given a copy of this QAPI Plan. This introduction to quality improvement familiarizes them with the goals and objectives of the organization, of their department, and of their role in the quality improvement process. To the extent possible, all team members will be provided with an annual review of the QAPI program and our program successes.

Managers and supervisors discuss with each team member their strengths, challenges, and educational needs during their annual performance evaluation. To promote active involvement by team members in QI activities, performance reviews should include an assessment of how effectively each person has participated in creating the HumanGood Experience.

SUMMARY

This QAPI program is an essential element of our business practices intended to enhance our ability to meet HumanGood's mission, vision and core values statements, and to help

us achieve our winning aspiration to be the leading innovator in delivering enriched and engaged experiences with optimal health and measurable life fulfillment.

The active participation and support of management and their assigned team members is a vital ingredient for program success. All team members are encouraged to provide input to this program at any time without fear of retribution or penalty.

Senior leadership extends their appreciation for the efforts of each team member made in the interest of pursuing our QAPI program goals and achieving optimum program outcomes.

APPENDIX A

Our Vision

All adults 55 and older have the opportunity to live their lives with enthusiasm, confidence and security, regardless of their physical, social, or economic circumstances.

Our Values

Our values define how and why we serve our mission, but our team members make up our HumanGood culture. Each and every day, our team members inspire our residents to live their best lives possible, providing the care and support they deserve. These values are:

Passion

We care deeply about the success of our team, those we serve and HumanGood.

- We inspire, energize and challenge our team members in a respectful manner.
- We anticipate customer needs and seek to exceed expectations.
- We are committed to the support and success of our team.

Inclusion

We are better when we include people of different backgrounds and perspectives.

- We seek out different viewpoints to improve our ideas and plans.
- We make decisions based on an understanding of team member and resident needs.
- We create positive and memorable experiences that honor and reflect our diversity.

Courage

We do what's right, even when it's hard.

- We evaluate our options and take informed risks.
- We speak up, sharing our ideas, opinions, feedback and knowledge.
- We acknowledge our mistakes and use them to improve and learn.

Innovation

We find new and better ways to serve our residents and team members and each new generation of older adults.

- We keep an open mind and ask questions to explore new possibilities.

- We share and test new ideas to create better solutions.
- We look for ways to make things simpler whenever possible.

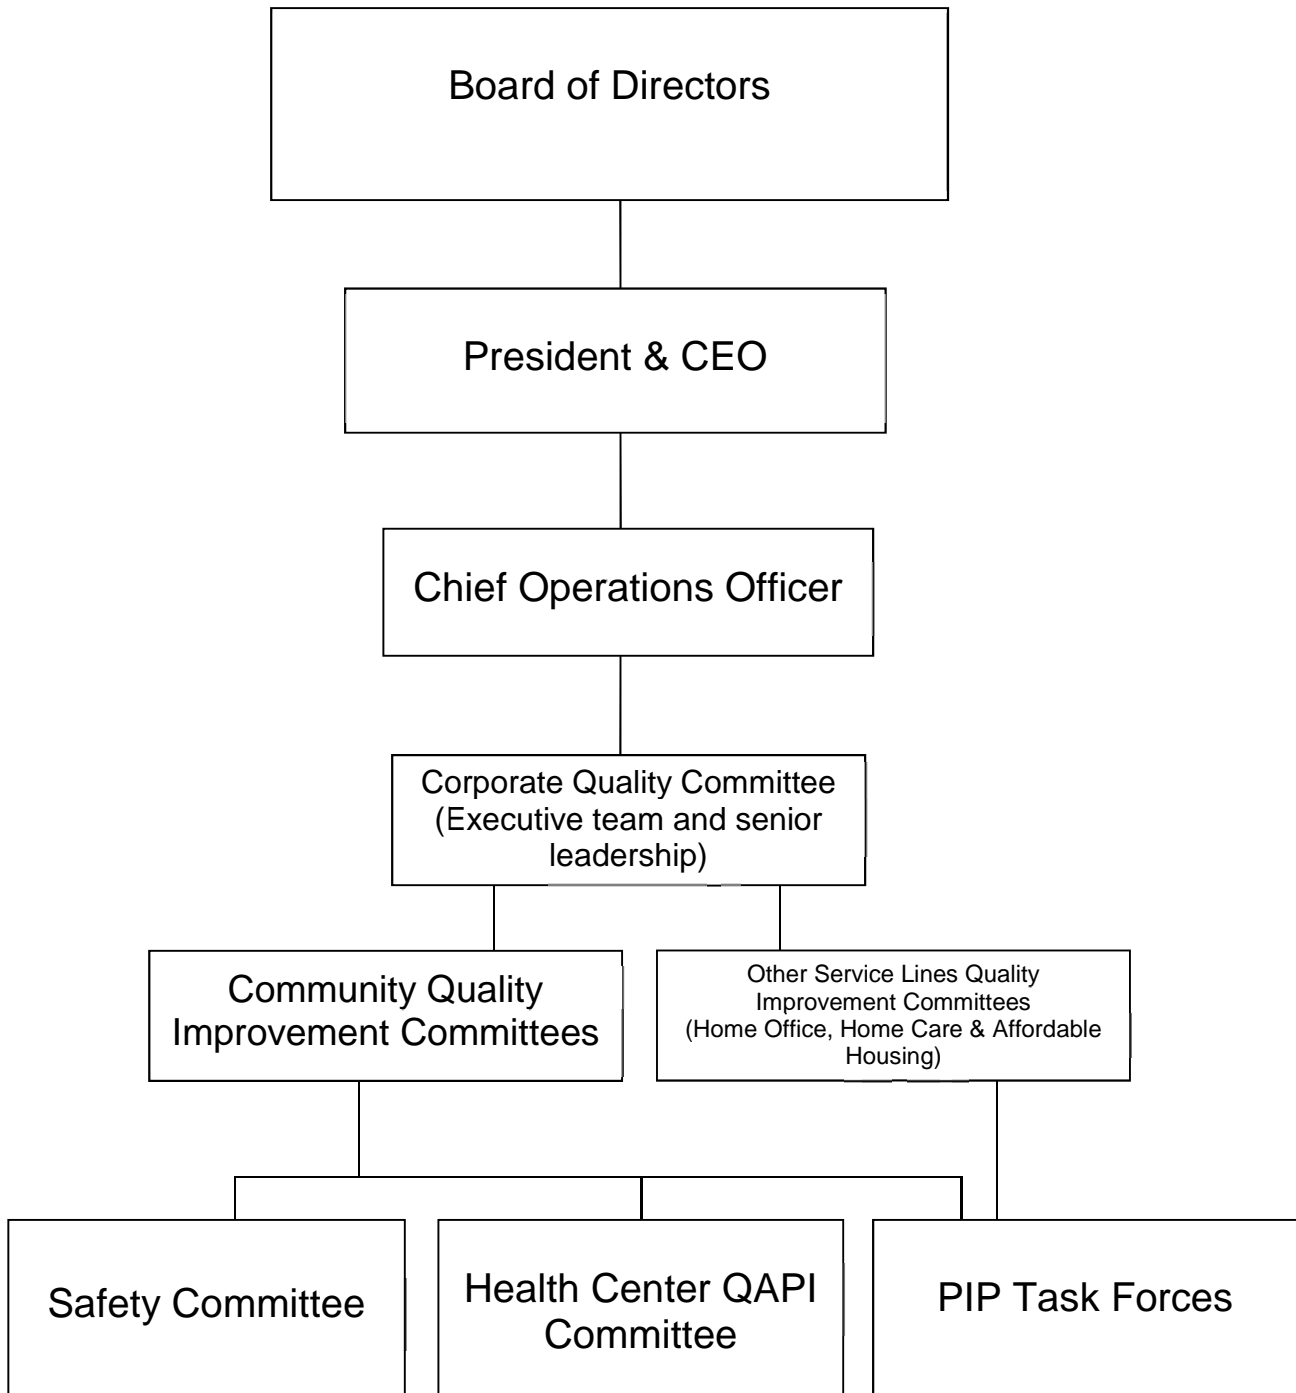

Impact

We judge ourselves based on our ability to move our mission forward.

- We hold ourselves and each other accountable for results.
- We prioritize our work to focus on what matters most.
- We act decisively with knowledge and speed.

Quality Improvement Program Organization Chart

APPENDIX C

PROCESS IMPROVEMENT

Quality improvement (QI) is an on-going process initiated when work processes are being analyzed to determine where changes are needed. Specific improvement processes begin at any point that a new service or system is designed and implemented, or equipment is purchased for use in care delivery or services, or quality issues are reported or identified. And, it is a process used when measuring resident outcomes; comparing performance to other organizations; selecting areas for priority attention; and even when experimenting with new ways of carrying out a function. We have adopted the four-step process using the Acronym PDAC for our QI initiatives:

PLANNING	DESIGNING	ACTING	CHECKING
I DEFINE & UNDERSTAND THE PROBLEM	II ELIMINATE ERRORS	III MEASURE & REDUCE VARIATION	IV DEVELOP A PLAN FOR IMPROVEMENT
1. Identify and describe the process to be analyzed.	1. Identify opportunities for improvement.	1. Reduce variation in measurement systems and process.	1. Develop a plan for monitoring the improved process.
2. Identify the customers impacted.	2. Develop a standard process.	2. Bring the measurement systems and process under statistical control.	2. Insure compliance by monitoring changes.
3. Identify customer needs and concerns.	3. Error-proof the process.	3. Determine whether revised process delivers service to customer requirements.	3. Check and evaluate the results of the improved process.
4. Define your problem statement.	4. Streamline the process.	4. Implement the improved process throughout the system.	4. Establish ongoing feedback mechanisms with customers.

PROBLEM STATEMENTS

A problem statement is used to identify obstacles to providing customer-focused, high quality care or services. Problem statements can be documented on a Quality Matters form (Appendix E). They can also be submitted verbally during team member or committee meetings.

A problem statement *should*:

- Provide information about how the issue came to be viewed as a problem.
- Describe how the problem relates to team member or organization performance.
- State the problem in terms that are visible, specific, and if possible, measurable.
- Generally, the problem should be manageable for study purposes.

A problem statement *should not*:

- Present pre-conceived indications of the root cause.
- State or imply a solution.
- Affix blame for the problem.

Examples of correct problem statements:

“Approximately 75% of residents attending the last Resident Council meeting reported that their call lights are not answered timely.”

“In the past 3 months, 50% of the full and part time team members have missed more than ___ days of work. The increasing rate of absenteeism has resulted in a 25% increase in nursing registry usage and a 10% increase in overtime pay.”

“Observation of mealtimes reflects that, on two shifts during the day, 50% of residents that required meal assistance waited more than 15 minutes for assistance, 25% waited more than 15 minutes, and 25% were fed within 5 minutes of receiving their meal.”

Example of incorrect problem statements:

“Some of the medical records are missing timely physician progress notes because the records are not being flagged by the medical records designee due to a lack of a computerized tracking system.”

“We don’t have enough team members to answer call lights when they are lit.”

“Dr. Smith never returns our calls.”

Take time to identify the real issue(s):

Until the facts of an issue are fully investigated, a workable solution is difficult to establish. The incorrect problem statement above is an example of how premature blame may be cast on the incorrect cause. When this occurs, the group might focus on the wrong elements and develop corrective action that would not resolve the issue.

Work process evaluation tools and other devices developed by the industry will help reduce the time it takes to drill down to the actual root cause. Assigning the problem to a

PIP Task Force team will enable a careful evaluation of the issue and the possible corrective actions.

APPENDIX D

**PERFORMANCE IMPROVEMENT PROJECT (PIP) TASK FORCE
TEAM DESCRIPTION**

The Quality Improvement Committee chairs may assign a Performance Improvement Project (PIP) Task Force Team to selected issues.

The team membership may include:

- A. A management liaison to provide support and guidance to the team. The management designee will appoint a team leader.
- B. A team leader from the area involved to lead the team and facilitate meetings. The team leader will select members of the team with the support and guidance of the management designee.
- C. Team members, consultants, and members of the corporate Risk Management/Quality Improvement committees who are knowledgeable about the service or process to be improved.
- D. The team shall appoint a timekeeper and scribe for each meeting. The scribe shall distribute minutes to all team members.

PIP Task Force Team Responsibilities:

- A. Identify the problem. The team shall utilize the four-stage PDAC process for identifying the underlying cause(s) of the problem.
- B. Develop measurements to determine baseline.
- C. Measure the essential elements.
- D. Develop and implement a corrective action plan.
- E. Monitor the revised work process to determine if desired outcomes are achieved.
- F. A scribe accurately records discussion, action plans, and assignments, and distributes action plan information to the team.
- G. If the recommendations require additional support and/or resources, the team leader shall bring this information to the next QI committee meeting for discussion and approval.
- H. The team leaders will provide progress reports as appropriate.
- I. Members of the team are expected to arrive to meetings on time with assignments completed, participate in discussions and listen to the ideas of others, support the team's activities, and

participate in educating and supporting co-workers during the implementation phase of performance improvement process.

APPENDIX F

**Sample
Health Center QAPI Agenda**

- I. Review minutes of past meeting
- II. Review current QAPI action/work plans
 - a. PIP status/report back/resolution
- III. Clinical Review:
 - a. Quality Scorecard review (review of complete scorecard); benchmark against other communities; need for process improvement team; action plan. Includes Quality Metrics and/or Quality Indicators.
 - b. CASPER Reports/Quality Measure Reports
 - c. Other care system or clinical reviews/consultant reports
 - d. Infection Control – Lab report, surveillance, etc.
- IV. Health, Safety and Environment
 - a. Fall review
 - b. Other safety issue review
 - c. Environmental reviews (includes kitchen)
 - d. Community assessment
- V. Dietary Management
- VI. Rehabilitation
- VII. Pharmacy
 - a. Pharmacy review
 - b. Medication administration or other issues
- VIII. Resident and Employee Quality of Life
 - a. Complaint / compliment review
 - b. Resident and Employee satisfaction/engagement
 - c. Therapeutic Activities/ person centered care
 - d. Behavioral Management/other psychosocial issues
- IX. Survey Management and POC review and follow-up as needed
- X. Quality Issue/Suggestions Review

Your benefits enrollment resources:

- Read this guide for a benefits overview and helpful tips.
- Call Health Advocate at 866.799.2728 for additional support and to estimate medical and prescription costs.
- There are 3 ways to enroll in benefits:
 1. Enroll online through www.myhumangood.org and click on the UKG link. Then choose Life Events under the Myself menu.
 2. Schedule a dedicated enrollment appointment for a time convenient for you. (Reference QR code at the back of this guide.) You can also navigate to this link: https://book.appointment-plus.com/d4p02rz0/?employee_id=8367#/.
 3. Enroll by phone with a benefits counselor at 866.486.1417.
- Benefits Counselors are available by phone Monday through Friday, 11 a.m. to 8 p.m. Eastern Time and 8 a.m. to 5 p.m. Pacific Time. To schedule an appointment with a call center benefits counselor, call 866.486.1417.

Welcome to HumanGood, where your health matters!

We offer a full package of benefits, and benefits choices — along with resources and tools to help you use them wisely. Take advantage of the resources and tools so you can make the best benefits and wellness decisions for you and your family.

Learn about your benefits

Start by going to the Benefits Document Library on www.myhumangood.org, under the My Worklife section then Benefits.

Get advice and ask questions

We want to help take the guesswork out of choosing and using your benefits.

- Call a Benefits Counselor at 866.486.1417. They can answer your questions or even assist with enrolling for your benefits.
 - Benefits Counselors are available Monday through Friday, 11 a.m. to 8 p.m. Eastern Time and 8 a.m. to 5 p.m. Pacific Time. Representatives are also available to assist with other language needs.
- Call Health Advocate at 866.799.2728. They can help you estimate your medical and prescription costs under each medical plan for the coming year and explain Medicare.
- Call Anthem at 833.954.1076. If you have specific questions about what type of medical benefits are covered, contact an Anthem customer service representative.
- Contact your local HR Representative. They can answer questions, facilitate calls and point you in the right direction about other resources.

Enroll for your benefits

There are 3 ways to enroll in benefits:

1. Enroll online through www.myhumangood.org and click on the UKG link. Then choose Life Events under the Myself menu.
2. Schedule a dedicated enrollment appointment for a time convenient for you. (Reference QR code at the back of this guide.) You can also navigate to this link: https://book.appointment-plus.com/d4p02rz0/?employee_id=8367#/.
3. Enroll by phone with a benefits counselor at 866.486.1417.

The site will walk you through your options, help you compare plans, and show your cost for each plan.

Eligibility

Here's how eligibility and enrollment works:

- Who's eligible: Regular full-time team members who work at least 30 hours per week.
- When benefits begin: The first day of the month following the completion of 60 days of employment. If your 60th day of employment lands on the first of the month, your coverage will begin on your 60th day.
- What you need to do: You must take action to enroll in coverage and submit the appropriate supporting documentation within the 45-day enrollment window starting on your date of hire or status change date.

Eligibility requirements for the 401(k) retirement plan differ; see the "401(k) Retirement Plan" on page 29 for details.

Eligible dependents for medical, dental, and vision coverage include:

- Your spouse or domestic partner.
- Your dependent child up to age 26 (regardless of marital or student status).
- Your dependent child who is incapable of self support due to a mental or physical disability.

WANT TO COVER A DOMESTIC PARTNER?

If you cover a domestic partner and they qualify as a "tax dependent" under IRS rules, you need to complete the Domestic Partner Civil Union Tax Status Form. Otherwise, your domestic partner's coverage will be subject to additional taxes, called imputed income. This means you may have to pay state and federal taxes, including Social Security and Medicare (FICA) taxes on the cost of your domestic partner's coverage. Request, complete, and return the form to your local HR Representative. If this form is not completed, you will be taxed.

Dependent documentation required

You're required to provide appropriate supporting documentation to your local HR representative for each eligible dependent under your medical, dental, and/or vision coverage. If documentation is not provided, your dependent(s) will not be covered. If you're not sure what qualifies as documentation, refer to the table below.

To cover your:	You need to submit to your local Human Resources Representative:
Spouse	Marriage license or certificate
Domestic partner	Domestic Partner Affidavit; go to the Benefits Document Library on www.myhumangood.org , under the My Worklife section then Benefits.
Child under age 26	<ul style="list-style-type: none"> ■ For your own children, one of the following: Birth certificate, hospital letter, midwife letter, legal custody papers, or adoption papers ■ For a child of your spouse (such as through marriage): One of the child documents noted above AND your marriage license AND documentation of responsibility (for example, tax forms) ■ For a child through legal guardianship: Child's birth certificate AND guardianship papers

Your dependent(s) will not be covered if appropriate documentation is submitted to your local HR representative within 45 days from start date.

Adding new dependents

When you add a new family member, the family member won't be added to your benefits automatically. On the Verify Beneficiary and Dependent Screen, please verify and/or correct all dependent and beneficiary information for each qualified dependent you will be enrolling and each beneficiary you will designate.

To add new, click the Add button. You must click on the box beside Dependent to qualify them as a dependent for coverage before the system will allow you to enroll them in a specific benefit plan. You must click on the box beside Beneficiary to designate the individual as a beneficiary to your life plans.

Please be sure and include full legal names, Social Security numbers, genders, relationships, and dates of birth for dependents that will be covered under our health plans.

Submit the appropriate dependent documentation (birth certificate, marriage license, etc.) to your local HR representative.

Note: If you add a dependent and do not follow the instructions listed above, your dependent will NOT be covered.

Qualifying life events

In general, the coverage you elect is effective until the next scheduled annual Benefits Open Enrollment (normally in November — changes are effective the following January 1). However, you can cancel or make changes to your benefits if you have a qualifying life event, as defined by the IRS. You can enroll or make changes to your HSA and commuter benefits any time during the year. If you have a qualifying life event, as defined by the IRS, you can enroll or make changes to your health care insurance (medical, dental, vision) outside the annual Benefits Open Enrollment period.

You have a **31-day window**, starting on the day of a qualifying life event, to submit your life event and provide the appropriate supporting documentation to your local HR representative.

Qualifying life events include:

- Marriage or divorce;
- Birth, adoption, or custody change of an eligible dependent;
- Death of a dependent;
- Change in your spouse's or domestic partner's employment or insurance status;
- Unpaid leave of absence by you, your spouse, or your domestic partner;
- Moving into or out of your medical plan's service area;
- A change in employment status (either yours, your spouse's, or your domestic partner's) from non-benefited to benefited, or benefited to non-benefited;
- A cost increase for medical, dental, and/or vision coverage for you, your spouse, or your domestic partner due to your spouse's or domestic partner's employment;
- A cost increase or reduction for your HumanGood health care benefits; and
- Gaining or losing other health care coverage.

You can learn more about which situations allow you to change your benefits by visiting the Benefits Document Library on www.myhumangood.org, under the My Worklife section then Benefits or calling a Benefits Counselor at 866.486.1417, Monday through Friday, 8 a.m. to 5 p.m. Pacific Time/11 a.m. to 8 p.m. Eastern Time. (Navigate to page 3 and follow the steps to enroll to submit your life event.)

Medical plan

You have three medical plan options through Anthem and one medical plan option through Kaiser. All three Anthem plans are PPO plans, which means you can use any doctor, but you receive the highest level of coverage when you stay inside the network. All three Anthem plans use the same Anthem network of doctors and hospitals. Beyond that, they each work differently.

In addition to the three Anthem plans, HumanGood provides employees with a fourth medical plan option through Kaiser. The Kaiser HMO plan offers a different network from the Anthem plans with access to the HSA. The Kaiser plan design is similar to the Anthem \$2,800 deductible plan. You can find complete detail about coverage in the Kaiser summary. This section will help you find the plan that fits your needs for coverage and cost.

Here are some key features that make each of the plans unique:

Plan name	Key feature
Anthem \$1,000 Deductible Plan	Copay plan
Anthem \$2,800 Deductible Plan	Anthem HSA plan
Anthem \$6,550 Deductible Plan	Free team member-only coverage (no paycheck deductions)
Kaiser \$2,800 Deductible Plan	Kaiser HSA plan

KEY WORDS

COPAY: A flat dollar amount that you pay for a covered service each time you use that service. It does not apply toward the deductible.

COINSURANCE: The percentage of the charge for medical care that you pay.

DEDUCTIBLE: The amount you pay each calendar year before the plan begins to pay.

OUT-OF-POCKET MAXIMUM: The maximum amount you pay for covered services in a calendar year.

PRESCRIPTIONS:

Tier 1 generic medications are similar to more costly alternatives, and are not sold using a brand name.

Tier 2 medications are generally brand medications that are available at a lower cost to you than Tier 3 brand medications.

Tier 3 medications are generally brand medications with the highest cost to you.

Medical insurance options

This table provides a summary of in-network benefits; you'll find complete details about coverage and cost at www.myhumangood.org, click on the UKG link, then choose Life Events under the Myself menu.

Plan	Anthem \$1,000 deductible	Anthem \$2,800 deductible	Anthem \$6,550 deductible	Kaiser \$2,800 deductible
HSA eligible	No	Yes (only if not enrolled in Medicare or TRICARE) ¹ HumanGood contributes: <ul style="list-style-type: none"> Individual — \$325/quarter (\$1,300/year) Family — \$650/quarter (\$2,600/year) 	No	Yes (only if not enrolled in Medicare or TRICARE) ¹ HumanGood contributes <ul style="list-style-type: none"> Individual — \$325/quarter (\$1,300/year) Family — \$650/quarter (\$2,600/year)

Tier 2	\$100 copay	up to \$750	30% (max. \$150)	\$70 copay after ded.
Tier 3	\$175 copay	(except for Preventive Rx medications, 30% no deductible, max. \$750)	30% (max. \$250)	30% after ded. up to \$250 max

If you enroll in one of the Anthem medical plans, you will also have access to the following:

- 24/7 NurseLine: You can connect with a registered nurse who'll answer your health questions. They can help you decide where to go for care and find providers in your area. All you have to do is call 1-800-700-9184.
- LiveHealth Online: You can have a video visit with a doctor using your smartphone, tablet or computer with a webcam. Doctors are available 24/7 for advice, treatment and prescriptions if needed. The cost is usually \$59 or less. Register at www.livehealthonline.com.
- Sydney text a doc: Allows you to connect to a doctor online or through you mobile device. Features a chat features with a doctor to ask questions and seek guidance for \$19.

Please see your Anthem E-Kit for full details!

¹Federal rules allow HumanGood to offer an HSA only to team members who are not enrolled in Medicare or TRICARE. Once you enroll in Medicare or TRICARE, you'll have access to your HSA balance, but you and HumanGood will no longer be allowed to make additional contributions.

²The Mandatory Generic Program applies to all of the medical plans. If you choose to buy a brand-name (Tier 2 or Tier 3) prescription medication when a generic (Tier 1) version is available, you'll pay the cost of the brand-name medication plus the difference in cost between the generic and brand-name prescription. However, if the prescribing physician indicates "Dispense as Written" or "DAW" on the prescription, you will not be responsible for the cost difference. Keep in mind, any cost difference that you pay will not be applied to the annual out-of-pocket maximum.

ANTHEM AND KAISER MEDICAL ID CARDS

After you enroll in an Anthem or Kaiser medical plan, new medical ID cards will be mailed to your address of record.

WINDSOR 003822

How prescription medications work

If you frequently use prescription medications, that may be a factor in deciding which medical plan is right for you. Below are some important considerations that you need to know about.

When purchasing prescription medications...

Under the Anthem \$1,000 Deductible Plan: You pay a copay, with no annual deductible.

Under the Anthem \$2,800 Deductible Plan:

You pay out of pocket until you meet the annual deductible (unless it's a PreventiveRx medication) — and after that you pay coinsurance (30% of the medication cost). There's also a cap on the coinsurance amount you pay, which varies based on whether it's a generic or brand-name medication.

Under the Anthem \$6,550 Deductible Plan: You pay coinsurance (30% of the medication cost), with no annual deductible. There's also a cap on the coinsurance amount you pay, which varies based on whether it's a generic or brand name medication.

Under the Kaiser \$2,800 Deductible Plan:

You pay out of pocket until you meet the annual deductible (unless it's a PreventiveRx medication) — and after that you will either pay a copay (tier 1 and tier 2) or coinsurance (30% of the medication cost to a \$250 max).

IN-NETWORK VS. OUT-OF-NETWORK

All Anthem plans allow you to see any provider of your choice; however, you'll typically save money with in-network care. The Kaiser \$2,800 deductible plan offers in-network coverage only. Visit www.anthem.com/ca or www.kp.org/newmember to search for in-network providers.

Find a medical provider

Go to www.anthem.com/ca/find-care or www.kp.org/newmember

Anthem

1. You can look for a doctor by using either:
 - Search as a member: Log in with a username and password or with the member number on your ID card.
 - Search as guest: Select a plan or network, * or search by all plans and networks. The network HumanGood utilizes is the National PPO (BlueCard PPO).
2. Once you log in, select the Find Care option on the welcome menu.
3. Next, choose who you would like to see. You can search for a doctor nearby or use the doctor's name.
4. Select a provider to see more details, such as:
 - Specialties
 - Gender
 - Languages spoken
 - Training
 - A map of their office location
 - Phone number

Kaiser

1. Go to www.kp.org/ca or www.kp.org/wa.
2. On the top tab, select "Find a Doctor."
3. Select "Sign in and Search" if you are already a member or Select one of the choices below "Welcome, visitor."
4. Create your online account:
 - You can create your account through the Kaiser Permanente app or at www.kp.org/newmember.

NEED HEALTH CARE ADVICE?

Call Health Advocate anytime during the year at 866.799.2728 to:

- Find qualified providers
- Estimate costs
- Schedule appointments
- Resolve medical and prescription claims or billing issues

Which medical plan is right for you?

Use this chart to help you compare and contrast some key features of each medical plan.

Do you . . .	Then consider . . .				Why?
	Anthem \$1,000 deductible	Anthem \$2,800 deductible	Anthem \$6,550 deductible	Kaiser \$2,800 deductible	
Want preventive care benefits covered at 100% with no deductible?	✓	✓	✓	✓	All four plans pay 100% for in-network preventive care with no deductible.
Want a plan with the lowest cost for office visits?	✓				For PCP and specialist visits, the Anthem \$1,000 Deductible Plan is the only plan where you pay a copay, with no annual deductible.
Want prescriptions that aren't subject to the deductible?	✓		✓		<ul style="list-style-type: none"> Under the Anthem \$1,000 Deductible Plan, you pay a copay with no annual deductible. Under the Anthem \$6,550 Deductible Plan, you pay coinsurance with no annual deductible.
Want a plan where you pay copays for prescription medications?	✓				The Anthem \$1,000 Deductible Plan is the only plan where you pay a copay for pharmacy and mail order prescriptions. For your other plan options, you pay coinsurance.
Want team member-only coverage with no paycheck deductions?			✓		The Anthem \$6,550 Deductible Plan is provided at no cost for team member-only coverage if certain wellness activities are completed.
Want a plan with the lowest deductible?	✓				The Anthem \$1,000 Deductible Plan has the lowest deductible and higher per-paycheck costs compared to your other plan options.
Want a pre-tax savings account?	✓ FSA	✓ HSA ✓ Limited Purpose FSA	✓ FSA	✓ HSA ✓ Limited Purpose FSA	There is a pre-tax savings account option no matter which plan you sign up for.
Want the HSA with HumanGood contribution?		✓		✓	HumanGood contributes to your HSA in the Anthem \$2,800 or Kaiser \$2,800 Deductible Plan, making it easier for you to pay for services before you meet the deductible (or you can save your HSA money for later).
Want flexibility to see any provider?	✓	✓	✓		All three Anthem plans let you choose between in-network and out-of-network providers, however, your out-of-pocket costs are generally lower when you stay inside the network. The Kaiser plan offers in-network services only.

Tax-advantaged accounts: HSA and FSA

You can save money on your health care and dependent care costs through tax-advantaged accounts, administered through Optum Financial, that allow you to use pre-tax dollars to pay for eligible expenses. For additional details about the following accounts, visit the Benefits Document Library on www.myhumangood.org, under the My Worklife section then Benefits.

Health savings account

Plan features	How it works
Who's eligible	<ul style="list-style-type: none"> Available only to participants in the Anthem \$2,800 or Kaiser \$2,800 Deductible Plan. An HSA is not allowed if you're enrolled in Medicare or TRICARE. Once you enroll in Medicare or TRICARE, you'll have access to your existing HSA balance; however, you and HumanGood will no longer be allowed to make additional contributions.
Eligible expenses	The HSA works like a bank account that you manage to pay for your health care expenses not covered by your plans including medical, prescription, dental, and vision copays, deductibles, and coinsurance.
HumanGood contributions	HumanGood contributions for 2022: <ul style="list-style-type: none"> For individual coverage: \$325/quarter (\$1,300/year) For family coverage: \$650/quarter (\$2,600/year) HumanGood contributes three months worth of the total annual contribution to your HSA at the beginning of every quarter. Your annual amount will be pro-rated based on the month in which you're hired (or the month in which your status change date occurs) and in which you open an HSA.
Your optional contributions	You have the option to make pre-tax contributions of your own for 2022, up to: <ul style="list-style-type: none"> For individual coverage: \$2,350 For family coverage: \$4,700 If you're age 55 or older, or will turn 55 in 2022, you can contribute up to an additional \$1,000 to your HSA in 2022 as a "catch-up" contribution.
When funds are available	Once funds are deposited into your account, they are yours to use.
How to pay expenses	You can use a debit card to pay for eligible expenses or reimburse yourself for payments you've made (only money you've already contributed can be spent). Debit cards are issued when you first enroll in an HSA and are valid for three years. Replacement cards are sent by Optum Financial in advance of the expiration date.
Making changes	You can change your contribution amount or stop contributing at any time.
No use it or lose it rule	Unused money can be carried over each year and invested for the future — you can even take it with you if you leave HumanGood.
Choosing your beneficiary	It's important to choose who you want to receive your HSA benefit in the event of your death. Go to the Optum Financial website to designate to select your HSA beneficiary.

DON'T FORGET TO OPEN YOUR HSA!

In order to receive HumanGood's contribution, you'll need to enroll in the HSA through UKG and register your account through Optum Financial. The HSA must meet the requirements of the U.S. Patriot Act (name, Social Security number, date of birth, and address — a P.O. Box will not be accepted). Check with your tax advisor regarding the withdrawal of HSA funds.

Health care flexible spending account (FSA)

Plan features	How it works
Who's eligible	Available only if don't have a health savings account (HSA).
Annual contribution maximum	You can contribute up to \$2,750 in pre-tax money.
Eligible expenses	Use this FSA for medical, prescription, dental, and vision expenses not covered by your plans, including copays, deductibles, and coinsurance. Note: You can use these accounts to purchase over-the-counter (OTC) drugs and medicines, without a prescription, as well as menstrual care products.
When funds are available	Your entire annual contribution is available to you from the beginning of the plan year.
How to pay for expenses	You can use your Optum Financial debit card to pay for eligible expenses or reimburse yourself for payments you've made up front. Debit cards are issued when you first enroll in an HSA and are valid for three years. Replacement cards are sent by Optum Financial in advance of the expiration date.
Use it or lose it	Unused money does not carry over to the next year and will be forfeited.
Making changes	You choose your contribution amount for the year during annual Benefits Open Enrollment. You may only make a change during the year if your personal situation changes, such as getting married or having a baby. Note: If you start the plan year with an FSA and experience a qualifying life event and you elect the Anthem \$2,800 or Kaiser \$2,800 Deductible Plan, you will not be eligible to participate in the HSA and must continue with the FSA.

Limited purpose flexible spending account (FSA)

Plan features	How it works
Who's eligible	Available only if you have a health savings account (HSA).
Annual contribution maximum	You can contribute up to \$2,750 in pre-tax money.
Eligible expenses	This FSA pairs with your HSA. Use this limited purpose FSA only for dental and vision expenses not covered by your plans, including copays, deductibles, and coinsurance.
When funds are available	Your entire annual contribution is available to you at the beginning of the plan year.
How to pay for expenses	You can use your Optum Financial debit card to pay for eligible expenses or reimburse yourself for payments you've made up front. Debit cards are issued when you first enroll in an FSA and are valid for three years. Replacement cards are sent by Optum Financial in advance of the expiration date.
Use it or lose it	Unused money does not carry over to the next year and will be forfeited.
Making changes	You choose your contribution amount for the year during annual Benefits Open Enrollment. You may only make a change during the year if your personal situation changes, such as getting married or having a baby.

Dependent care FSA

Most people are in favor of having a larger paycheck, right? If you routinely pay for child care expenses, you can make that a reality if you use the dependent care FSA.

Did you know?

1. You could be paying up to \$5,000 for your child's day care completely tax free. Child care can add up to a lot of money throughout the year. But you'll avoid taxes on those costs if you pay for them using a dependent care FSA.
2. Think day care when using this FSA — not medical. This account is specifically for child day care expenses (or care for a disabled or elderly dependent). However, it's not for medical expenses — you can use a health care FSA for that.
3. Your child must be under age 13. Be sure to only estimate day care expenses for children through age 12. Once they turn 13, you can't use this account for them.
4. You have to plan ahead for reimbursements. Using this FSA takes a little planning, since you must first pay your day care provider up-front, and then submit a claim to be reimbursed. But once you get the hang of it, you'll be saving money all year long!

Below is a summary of how the dependent care FSA works.

Plan features	How it works
Annual contribution maximum	You can contribute up to \$5,000 in pre-tax money.
Eligible expenses	Use this FSA for qualified dependent care expenses, including child care for children up to age 13 and care for disabled or elderly dependents.
When funds are available	When you make a claim, you'll receive a reimbursement from the money you have in your account at that time. For instance, if you have \$300 in eligible expenses, but only have \$200 in your account, you can only be reimbursed for \$200. You'll receive the remainder of the reimbursement for your eligible expenses once you contribute additional funds to your account.
How to pay for expenses	You pay for eligible expenses up front. Then, you submit a reimbursement claim and attach any bills or receipts for reimbursement.
Use it or lose it	Unused money does not carry over to the next year and will be forfeited.
Making changes	You choose your contribution amount for the year during annual Benefits Open Enrollment. You may only make a change during the year if your personal situation changes, such as getting married or having a baby.

IRS NONDISCRIMINATION RULES

The HumanGood FSA plans are subject to IRS nondiscrimination rules, which exist to prevent plans from being designed in such a way that they discriminate in favor of "highly compensated employees." If the HumanGood FSA plans should fail to pass the required IRS nondiscrimination testing, team members defined as highly compensated employees according to the IRS definitions may lose the tax benefits of participating in the plan (that is, they must include the benefits or compensation in their income). You'll be notified if this applies to you.

Take a look: HSA vs. FSAs

See how these accounts compare:

	Health savings account (HSA)	Health care FSA	Limited purpose FSA	Dependent care FSA
Available if you enroll in this medical plan...	<ul style="list-style-type: none"> Anthem \$2,800 deductible plan Kaiser \$2,800 deductible plan 	<ul style="list-style-type: none"> Anthem \$1,000 deductible plan Anthem \$6,550 deductible plan 	<ul style="list-style-type: none"> Anthem \$2,800 deductible plan Kaiser \$2,800 deductible plan 	Any medical plan
2022 contributions	HumanGood contributes: <ul style="list-style-type: none"> Individual: \$325/quarter (\$1,300/year) Family: \$650/quarter (\$2,600/year) You can also contribute up to: <ul style="list-style-type: none"> Individual: \$2,350 Family: \$4,700 	You can contribute up to \$2,750	You can contribute up to \$2,750	You can contribute up to \$5,000 (per individual or married couple)
How to use your balance	Eligible out-of-pocket medical, prescription, dental, and vision expenses	Eligible out-of-pocket medical, prescription, dental, and vision expenses	Eligible out-of-pocket dental and vision expense.	Eligible out-of-pocket dependent care expenses
“Use it or lose it?”	No. It’s yours to keep. The money in your account at year-end carries over to the next year.	Yes. Unused money does not carry over to the next year and will be forfeited.	Yes. Unused money does not carry over to the next year and will be forfeited.	Yes. Unused money does not carry over to the next year and will be forfeited.

Supplemental medical insurance

Supplemental medical insurance through Aetna can help protect you from significant or unexpected out-of-pocket expenses. Keep in mind that these plans are intended to supplement a medical plan.

Consider your anticipated medical needs along with the cost of the insurance plans available to you. Adding a supplemental plan to a lower-cost medical plan may help you save money while providing important coverage.

The following three supplemental medical plans are available to you with no pre-existing condition limitations. Complete details about coverage and cost can be found by visiting the Benefits Document Library on www.myhumangood.org, under the My Worklife section then Benefits.

Accident

Accident insurance supplements your medical plan by providing cash benefits in cases of accidental injuries. You can use this money to help pay for uncovered medical expenses, such as your deductible or coinsurance, or for ongoing living expenses such as your mortgage or rent.

Critical illness

Critical illness insurance helps protect against the financial impact of certain illnesses, such as heart attack, cancer, Alzheimer's disease, and more. You receive a lump-sum payment to use as you choose.

The critical illness insurance also includes a health screening benefit. This pays a lump sum of \$50 if you or any dependent receive any of the approved health screening tests. A charge must be incurred and there is a maximum of one screening per plan year.

Hospital indemnity

Hospital indemnity insurance provides supplemental payments that you can use to cover expenses that your medical plan doesn't cover for hospital stays, ambulance service, surgery, and certain inpatient or outpatient treatments. When you're eligible for a benefit under this plan, you receive a lump-sum payment to use as you choose.

Dental insurance

The following dental plans are available to you through United Concordia. This table provides a summary of in-network benefits; you'll find complete details about coverage and cost at www.unitedconcordia.com or by visiting the Benefits Document Library on www.myhumangood.org, under the My Worklife section then Benefits.

Plans	United Concordia Standard Plan	United Concordia Enhanced Plan
Annual maximum benefit (in-network and out-of-network)	\$1,500	\$2,000
In-network		
Individual/family deductible (waived for preventive services)	\$50/\$150	\$50/\$150
Preventive services	You pay 0%	You pay 0%
Basic services	You pay 20%	You pay 20%
Major services	You pay 50%	You pay 50%
Orthodontia services (for children up to age 19; not subject to the deductible)	Not covered	You pay 50%
Orthodontia maximum lifetime (in-network and out-of-network)	Not covered	\$2,500

KEY WORDS

DEDUCTIBLE: The amount you pay before the plan begins to pay.

PREVENTIVE SERVICES: Services designed to prevent or diagnose dental conditions that include oral evaluations, routine cleanings, X-rays, and fluoride treatments.

BASIC SERVICES: Services that include basic restorations, some oral surgery, endodontics, periodontics, and sealants.

MAJOR SERVICES: Services that include crowns, dentures, implants, and some oral surgery.

ORTHODONTIA: Services that include straightening or moving misaligned teeth and/or jaws with braces and/or surgery.

Vision insurance

The following vision plans are available to you through Vision Service Plan (VSP). This table provides a summary of in-network benefits; you'll find complete details about coverage and cost including possible discounts on costs that exceed the retail allowance at www.vsp.com or by visiting the Benefits Document Library on www.myhumangood.org, under the My Worklife section then Benefits.

Plans	VSP Standard Plan		VSP Enhanced Plan	
	Copay	Frequency	Copay	Frequency
WellVision exam	\$10	1 per 12 months	\$10	1 per 12 months
Lenses	\$25	1 per 12 months	\$10	1 per 12 months
Contact lens exam	Up to \$60	1 per 12 months	Up to \$60	1 per 12 months
	Retail allowance	Frequency	Retail allowance	Frequency
Frames	\$130 (plus additional \$50 for VSP featured frame brands)	1 per 24 months	\$175 (plus additional \$50 for VSP featured frame brands)	1 per 12 months
Contact lenses (in lieu of frames and lenses)	\$130	1 per 12 months	\$175	1 per 12 months

KEY WORDS

COPAY: An amount you pay for a covered service each time you use that service.

RETAIL ALLOWANCE: Maximum allowance paid toward the cost of vision materials. Amounts in excess of the retail allowance are your financial responsibility.

Life and AD&D insurance

Life and accidental death and dismemberment (AD&D) insurance through Mutual of Omaha provides important financial protection for you and your family.

For additional details, visit the Benefits Document Library on www.myhumangood.org, under the My Worklife section then Benefits.

Plans	Who can enroll	Amount of coverage
Coverage paid by HumanGood		
Employer-paid term life	You; enrollment is automatic	2 x earnings up to \$600,000
Employer-paid AD&D	You; enrollment is automatic	2 x earnings up to \$600,000
Coverage paid by you		
Employee-paid term life	You	5 x earnings up to \$650,000
Spouse term life ¹	Spouse/domestic partner	\$5,000 increments up to the lesser of \$250,000 or 100% of the team member-elected amount
Child term life ¹	Your children	\$2,000 increments up to \$10,000
Employee paid AD&D	You	5 x earnings up to \$650,000
Spouse AD&D ²	Spouse/domestic partner	\$5,000 increments up to the lesser of the team member-elected amount
Child term AD&D ²	Your children	\$2,000 increments up to \$10,000

¹These plans are only available if you first elect employee-paid term life coverage.

²These plans are only available if you first elect employee-paid AD&D coverage.

In addition to the life and AD&D insurance, Mutual of Omaha includes a Living Care Benefit. For coverage paid for by HumanGood, the Living Care Benefit will pay a sum equal to 80% of the term life insurance benefit, up to a maximum of \$480,000, if you are affected with a terminal illness. This amount is subtracted from the term life insurance benefit amount prior to payment of a death benefit.

If you elect additional employee-paid term life insurance, the Living Care Benefit will pay a sum equal to 80%, up to a maximum of \$500,000, if you are affected with a terminal illness. The employer-paid term life insurance also provides free will preparation.

The employer-paid term life insurance also provides free will preparation. In just a few clicks you can complete a basic will or other documents to protect your family and property. To get started, visit www.willprepservices.com.

IMPUTED INCOME FOR EMPLOYER-PAID LIFE INSURANCE

The IRS requires you to be taxed on the value of employer-provided group term life insurance over \$50,000. The taxable value of this life insurance coverage is called imputed income. This amount will appear as an earning and a deduction on your paycheck.

WINDSOR 003832

Evidence of insurability (EOI)

Life insurance over a certain amount may require you to complete a health questionnaire and be approved by medical underwriting. After electing coverage, you'll receive more information from Mutual of Omaha if Statement of Health is required.

Plans	Evidence of insurability
Employee-paid term life	Not required for lesser of 5 x earnings or \$330,000
Employee-paid AD&D	Not required
Spouse term life	Not required for amounts up to \$50,000
Child term life	Not required

**IF YOU WANT
COVERAGE LATER**

If you waive coverage during this period and choose to elect coverage later, statement of health will be required. If you experience a qualified life event and choose to elect or change coverage, evidence of insurability will also be required.

Permanent whole life

Atlantic American Employee Benefits offers group whole life insurance, which provides cash value accumulation, guaranteed premiums, guaranteed coverage with no medical questions, and coverage that can be taken with you if you change jobs or retire. This also provides living benefits that can afford you the ability to take care of critical medical events, such as a nursing home, home health care, assisted living facility, and adult daycare.

Plans	Amount of coverage
Employee whole life	In increments of \$10,000 up to \$100,000 coverage
Spouse whole life	In increments of \$10,000 up to \$30,000 coverage (employee must be enrolled in Whole Life)
Child whole life	\$10,000 coverage (employee must be enrolled in Whole Life)

Disability insurance

Short term disability

Short term disability (STD) is available through Mutual of Omaha to all benefits-eligible team members. If you need to miss work due to a non-work-related illness or accident, STD benefits can replace a percentage of your lost income, as listed in the chart below. If elected, you pay the cost of coverage.

	Benefit waiting period	Benefit percentage	Maximum benefit duration
Employer-paid STD ¹ (for all Non-California team members)	14 calendar days	30% up to \$250/week	Up to 24 weeks per disability

If you and your family determine that you need additional short term disability coverage to help you cover expenses while you are unable to work, you have the opportunity to purchase additional short term disability coverage.

	Benefit waiting period	Benefit percentage	Maximum benefit duration
Employee-paid buy-up STD ²	14 calendar days	30% up to \$500/week	Up to 24 weeks per disability

¹The STD plan has a pre-existing condition limitation, meaning any injury or sickness for which you incurred medical expenses or received medical treatment three months prior to your effective date of coverage may not be covered under the plan for twelve months after the effective date.

²For California team members, this is a “buy-up” option. California State Disability Insurance (CA SDI) provides 60%-70% income replacement up to a maximum of \$1,357/week, as of early 2022. If you elect employee-paid STD coverage through HumanGood, you’ll be purchasing an additional 30% benefit (the buy-up amount), giving you up to an additional \$500 a week in coverage.

WHAT IS CALIFORNIA STATE DISABILITY INSURANCE?

California State Disability Insurance (CA SDI) is a mandatory state disability program for California team members in which a small portion of income is taken out of each paycheck. CA SDI benefits may continue up to 52 weeks.

Long term disability

If you're unable to work for longer than 26 weeks due to a covered disability, long term disability (LTD) insurance through Mutual of Omaha replaces a portion of your income. There are two types of LTD coverage:

- **Employer-paid LTD:** Available to salaried team members at no cost. There is no need to enroll.
- **Employee-paid LTD:** Available to all team members. If you would like this benefit, you must enroll and pay for the cost of coverage. If you're an exempt team member, this coverage is a "buy-up" option to enhance and supplement your employer-paid LTD coverage.

	Benefit waiting period	Benefit percentage	Maximum benefit duration
Employer-paid LTD¹ (for all benefits-eligible salaried team members)	180 calendar days of disability	Salaried: 60% up to \$5,000/month	If you become disabled prior to age 62, benefits may continue for as long as you remain disabled, or until the greater of your Social Security normal retirement age or four years. If your disability occurs at age 62 or above, the number of payments may reduce.
Employee-paid LTD² (for all benefits-eligible team members)	180 calendar days of disability	<ul style="list-style-type: none"> ■ Hourly (those eligible for overtime): 50% up to \$5,000/month ■ Salaried: 66 2/3% up to \$10,000/month² 	

¹ The LTD plan has a pre-existing condition limitation, meaning any injury or sickness for which you incurred medical expenses or received medical treatment three months (for salaried) and six months (for hourly) prior to your effective date of coverage may not be covered under the plan.

² For salaried team members, this is a "buy-up" option. 60% of this benefit is your employer-paid LTD that's provided at no cost to you by HumanGood (you're automatically enrolled for coverage when you meet the eligibility requirements). If you elect employee-paid LTD coverage, you'll be purchasing an additional 6 2/3% benefit (the buy-up amount), giving you a combined total LTD benefit of 66 2/3% up to a monthly maximum of \$10,000.

Commuter benefits

Commuter benefits allow you to pay for your work-related transit and parking costs tax free with a debit card, administered through Optum Financial. If you have an HSA or FSA, your commuter benefits are loaded onto the same debit card and these purchases are tracked separately from your health care expenses. This could save you up to 40% in taxes! You decide how much you want to set aside for your commuter expenses, within these guidelines:

- Transit account: Up to \$270 per month for bus, subway, train, ferry, streetcar, or vanpool expenses.
- Parking account: Up to \$270 per month for parking at or near work, or for Park and Ride expenses.

IMPORTANT NOTE! You have complete flexibility to enroll or change your contribution for commuter benefits any time during the year.

For more information, visit the Benefits Document Library on www.myhumangood.org, under the My Worklife section then Benefits.

Legal assistance

MetLife Legal Plans offer economical access to attorneys for you, your spouse, and your eligible dependents.

For \$18 a month, you can receive legal advice and services for a wide range of personal matters, including:

- Court appearances and defense of civil lawsuits.
- Financial, family, and real estate matters.
- Immigration assistance.
- Estate planning.
- Traffic offenses (except DUI).
- Document review and preparation.
- Consumer protection.

Please note: Divorce and employment-related matters are not covered.
For more information, go to www.legalplans.com.

Pet insurance

Nationwide offers a cost-effective way to protect you from unexpected veterinary expenses. You can choose from two plans, each which cover things like accidents, injuries, serious/chronic illnesses, and surgeries. And one of the plans additionally covers wellness (such as exams, dental cleanings, flea and tick prevention, and more). Note, some exclusions apply.

Key features of the plans include:

- \$250 annual deductible.
- \$7,500 annual maximum.
- Range of 50% to 70% reimbursement on vet bills.
- No age limits.

Here's how it works:

1. Visit the vet of your choice.
2. Submit a claim.
3. You'll receive a reimbursement check in the mail.

IMPORTANT NOTE! You have complete flexibility to enroll in or change your pet insurance any time during the year. Your coverage will be effective with the next applicable payroll cycle following your election date.

If you have an existing policy with Nationwide, you may want to contact Nationwide to review your options. For more details and cost information, go to <https://benefits.petinsurance.com/humangood> or call 877-738-7874.

Identity theft protection

You can purchase identity theft protection benefits through Allstate Identity Protection for you and/or your family members who live with you. Here's a few of the services included in your coverage:

- Credit report monitoring.
- Monitoring of public and private databases for activity associated with your personal information.
- Monitoring of social media sites for reputational damage.
- Wallet/card replacement assistance.
- Password safety.
- Identity restoration services if you're the victim of identity theft.

Allstate Identity Theft Protection pricing:

- Team member only: \$9.95 per month.
- Team member and family members who live with you: \$17.95 per month.

For more details and cost information, go to www.myaip.com or call 800.789.2720.

Other benefits

Patient advocacy, EAP, and work/life services

Health Advocate™ provides HumanGood's patient advocacy, EAP, and work/life services. Health Advocate is available 24 hours a day, 365 days a year, to you, your spouse/partner, your children to age 26, your parents, and your parents-in-law.

- **PATIENT ADVOCACY SERVICES.** (Only available to team members enrolled in a HumanGood medical plan.) Health Advocate can help you to navigate your health care and benefits, including:
 - Answering questions about your health benefits.
 - Resolving health care claims and billing issues.
 - Handling retiree and elder care issues.
 - Finding qualified health care providers anywhere in the U.S.
 - Answering questions about Medicare and Social Security.
 - Scheduling appointments and arranging for specialized treatments and tests.
 - Getting unbiased information about complex medical conditions so you can make informed decisions.
- **EAP SERVICES.** Health Advocate provides personal support, including:
 - Five free counseling sessions per year, per issue.
 - Access to a licensed EAP counselor who will help you learn coping skills for stress, depression, parenting issues, substance abuse, and other temporary setbacks.
- **WORK/LIFE SERVICES.** Health Advocate provides unlimited telephonic and online access to a variety of work-life services, including:
 - Child care and elder care consultation and referrals.
 - Legal and financial referrals and resources.
 - Parenting and adoption information and resources.
 - Child and adult education resources.
 - Information on buying or selling a home.
 - Home improvement resources.
 - Resources for managing stress, anxiety, and anger.
- **A SINGLE TELEPHONE NUMBER TO CALL.** When you or an eligible family member encounters a health care or insurance-related issue or needs help with personal and/or family issues, call Health Advocate at **866.799.2728** (toll-free). You may be asked to complete a medical information release form. Please be assured that your personal information will be kept strictly confidential by Health Advocate; this information is never shared with HumanGood.

Wellness

(Only available to team members enrolled in a HumanGood medical plan.) To help you feel your best, you can take advantage of wellness services by accessing the wellness website and employer-paid biometric screenings and health quality assessments. This program is administered by Wellworks.

HumanGood team members must complete certain requirements to receive the wellness discount from their 2023 health insurance premiums. As a reminder, new hires must complete three (3) requirements by November 30, 2022, to be eligible for the 2023 incentive.

- New hires with a benefit effective date between December 1, 2021-March 31, 2022, will need to complete the Biometric Screening and Know Your Number (KYN) Assessment to earn the wellness discount beginning the first of the following month through December 31, 2022.
- New hires with a benefit effective date between April 1, 2022-December 31, 2022, will need to complete the Biometric Screening and Know Your Number Assessment to earn the wellness rate discount beginning the first of the following month through December 31, 2023.

Benefit effective date	Requirements	Incentive
December 1, 2021-March 31, 2022	Step 1: Biometric Screening Step 2: KYN Assessment Step 3: 3/5 Healthy Ranges or 3 LNA Calls	Premium discount applied the first of the following month through December 31, 2022. Premium discount applied through December 31, 2023.
April 1, 2022-December 31, 2022	Step 1: Biometric Screening Step 2: KYN Assessment	Premium discount applied the first of the following month through December 31, 2023.

TO SCHEDULE A SESSION WITH THE NURSE ADVOCATE, FOLLOW THE INSTRUCTIONS BELOW:

1. Log into your wellness portal and click Menu>ResultsNow.
2. Select Meet 3/5 Healthy Ranges OR Three (3) Nurse Advocate Calls.
3. Click the + sign next to the Three (3) Nurse Advocate Calls sub-component.
4. Click the Nurse Advocate Session Sign Up link.
5. Choose a time and enter the required information (be sure to enter the phone number to be called at the time of the appointment).
6. Your nurse advocate will reach out to you on the date and time of your appointment.

Please Note: Nurse advocate calls must be at least one (1) month apart and each call has a deadline. Please see a list of all deadlines below.

- Call 1 must be completed by July 31, 2022.
- Call 2 must be completed by September 30, 2022.
- Call 3 must be completed by November 30, 2022.

Contact your Nurse Advocate team!

Your Nurse Advocate is here to work with you to align available resources, provide education and collaborate with your health care team to support you in achieving positive results. The nurse will guide you in making informed health care decisions, along with helping you understand how to use your health insurance to keep you healthy and minimize your health costs.

Your Nurse Advocate's contact information is provided below:

- Phone: 888.251.2260
- Email: mynurseadvocate@lockton.com

Contact your Wellworks team!

All questions regarding your Wellness Program structure, status in the program, deadlines, etc. should be directed to your Wellness Team via the Wellworks For You Portal. Simply select Contact Us from the Portal homepage. You can also call Wellworks For You at 800.425.4657.

- To learn more, go to www.wellworksforyou.com, and enter your username and password.
 - Username: HG_LastName_EmployeeID
 - ▲ For example: HG_Smith_546143
 - Password: If you are logging on for the first time please use the temporary password "Welcome1." You will then be prompted to update your password upon initial login.

Paid time off

HumanGood provides you with paid time off (PTO) to recover from sickness, care for an ill family member, to observe a religious holiday, or to just get a short break from work. The amount you accrue is based on your date of hire, as follows:

Length of service	Annual day equivalent	Maximum accrual
Less than 4 years	20	30 days/240 hours
4 through 5 years	22	33 days/264 hours
6 through 10 years	25	37.5 days/300 hours
11 through 15 years	30	45 days/360 hours
16 through 20 years	32	48 days/384 hours
21 years or more	35	52.5 days/420 hours

Eligible team members may use PTO once it’s accrued.

Holidays

HumanGood provides seven company-paid holidays as follows:

- New Year’s Day
- Independence Day
- Thanksgiving Day
- Martin Luther King, Jr. Day
- Labor Day
- Christmas Day
- Memorial Day

Jury duty

HumanGood encourages you to fulfill your civic responsibilities by serving as a juror when required. You may request up to 22 days of paid jury duty leave over any one-year period.

Bereavement

In the event of a death of an immediate family member, you may receive up to five days of paid leave.

Educational assistance

HumanGood proudly offers educational assistance program financial repayment to team members who pursue professional growth and development through higher education.

Who can participate

The program is available to:

■ FULL-TIME TEAM MEMBERS:

- If you've completed one year of service and have a satisfactory job performance rating.
- Team members must be on active payroll from the date of enrollment through the date the reimbursement request is submitted.

How it works

Program type	Tuition amount per fiscal year
Graduate degree program	\$5,250
Undergraduate degree program	\$4,250
Secondary schools, certifications, and license programs	\$2,250
English as a second language (ESL)	Up to \$300

IMPORTANT

Contact your supervisor for an application and approval before you register for a program or course.

Student loan forgiveness

As a HumanGood team member, you may be eligible for forgiveness on your outstanding student loans through the federally funded Public Service Loan Forgiveness (PSLF) program.

Through PSLF, full-time employees of a non-profit organization like HumanGood may receive forgiveness on the remaining balance of their direct loans after they have made 120 qualifying monthly payments and completed 10 years of services under a qualifying repayment plan.

PSLF can be beneficial to team members. The average student loan balance in the U.S. is more than \$35,000, adding up to more than \$1.41 trillion in borrowed education funds in 2019. This may impact many of us, who budget for each month to make payments in order to reduce our student loan debt.

Visit the program website at www.studentaid.gov/manage-loans/forgiveness-cancellation/public-service to learn about the PSLF program and to determine if you qualify.

PerkSpot

The HumanGood discount program by PerkSpot offers exclusive discounts on popular brands and from your favorite retailers. You can get deals on things like:

- Travel and hotels (Expedia, Avis, Budget Rent-a-Car, Choice Hotels)
- Tickets and entertainment (Disneyland, Six Flags, AMC Theatres, Regal movie tickets)
- Cell phones and electronics (Verizon, Sprint, AT&T, Apple, HP, Dell)
- Retail purchases (Costco, Best Buy, Walmart)
- Gym and fitness services (24 Hour Fitness, Crunch Fitness, Jenny Craig)
- Auto purchases (Ford, Hyundai, Toyota, Jeep)
- All previous discounts from CPS
- ... and more!

Visit humangood.perkspot.com/login to sign up and start saving!

401(k) retirement plan

The 401(k) retirement plan through Transamerica gives you an excellent opportunity to build your retirement security. Below is a summary of how the plan works.

SELECT A BENEFICIARY

It's important to choose who you want to receive your 401(k) benefit in the event of your death. Go to www.transamerica.com/portal/home to select your 401(k) beneficiary.

Plan features	401(k) highlights
Eligibility	You may participate in the plan immediately and are eligible to contribute if you're at least age 21.
Enrolling and making changes	You can enroll, start/stop, and/or change contributions at any time by visiting www.transamerica.com/portal/home or calling Transamerica at 800.755.5801
Your contributions (traditional, Roth, catch-up)	<ul style="list-style-type: none"> ■ You can contribute up to 100% of your eligible compensation, up to the IRS limit of \$20,500 for 2022, in either traditional or Roth contributions: <ul style="list-style-type: none"> ● Traditional contributions are made on a tax-deferred basis each pay period. You reduce your taxable income now, but pay taxes down the road when you withdraw the funds. ● Roth contributions are made on an after-tax basis. That means you pay taxes while you're funding the account, in exchange for not paying taxes later (assuming you meet the age requirement and other criteria when you withdraw funds). ■ If you're age 50 or older, you can make "catch-up" contributions, up to an additional \$6,500 in 2022. ■ Your contributions are deducted from your regular earnings and any bonuses.
HumanGood matching contributions	<ul style="list-style-type: none"> ■ You're eligible after you've completed one year of service and 1,000 hours. ■ HumanGood matches 100% of the first 3% of pay that you contribute, plus 50% of the next 2%. So, if you contribute 5% or more of pay, HumanGood adds a 4% matching contribution. ■ Matching contributions are deposited on a quarterly basis. ■ HumanGood also matches on catch-up contributions.

Plan features	401(k) highlights
Vesting	You're always 100% vested in your own contributions, in addition to the contributions made by HumanGood. This means you always own contributions as soon as they're deposited into your account.
Investment options	<ul style="list-style-type: none"> The plan offers many investment options to help you build a portfolio that meets your goals. You can change your investment mix at any time.
Loans	<ul style="list-style-type: none"> You can borrow up to 50% of your vested account balance (minimum loan is \$1,000, maximum is \$50,000). There can be only one outstanding loan at a time; repayments are made via payroll deduction. Personal loans have a maximum duration of five years, residential loans are 15 years
Rollover rules	<ul style="list-style-type: none"> This plan accepts rollovers from other qualified plans, like another 401(k) plan, a conduit IRA, or other qualified retirement plan. Voluntary after-tax contributions from another plan are not allowed.

If you contribute...	HumanGood will contribute...
1%	1%
2%	2%
3%	3%
4%	3.5%
5% or more	4%

Team member contributions

The amounts below are per-paycheck amounts shown separately for medical, dental, and vision coverage — deducted 24 times a year. HumanGood will give you a \$15 per paycheck discount on your medical premiums for completing certain activities within the wellness program such as a biometric screening and health quality assessment. If you do not complete the wellness program activities, you will pay the non-wellness rate.

Team member and family	\$7.00	\$11.50

For cost information about other plans described in this guide, go online to www.myhumangood.org and click on the UKG link. Then choose Life Events under the Myself menu.

When benefit deductions occur

In 2022, HumanGood will have a biweekly payroll cycle (26 paychecks a year); however, benefits will only be deducted on 24 of those paychecks.

More details, including a detailed payroll calendar, will be posted on www.myhumangood.org under the My Worklife section, then Pay.

Steps to enroll

Enroll (or waive coverage) within the 45-day window starting on your date of hire or eligible status change date (to full-time status).

Qualifying life events have a 31-day window to enroll or make changes.

1. There are 3 ways to enroll in benefits:

- Enroll online through www.myhumangood.org and click on the UKG link. Then choose Life Events under the Myself menu.
- Schedule a dedicated enrollment appointment for a time convenient for you by scanning the QR code. You can also navigate to this link:
https://book.appointment-plus.com/d4p02rz0/?employee_id=8367#/.
- Enroll by phone with a benefits counselor at 866.486.1417.

2. Open an HSA (if applicable). If you elect the Anthem \$2,800 Deductible Plan or Kaiser \$2,800 Deductible Plan with HSA, enroll in the HSA through UKG and register your account through Optum Financial.

- If you haven't opened an HSA before — you must enroll and certify that you meet the eligibility criteria.

3. Submit dependent documentation. When you add a new family member, the family member won't be added to your benefits automatically. You will need to add your dependents to each and every benefit you want them to have. If you are adding dependent(s) coverage, you will need to provide your local HR representative with appropriate dependent documentation within your 45-day window (31-day window for life events).

- Appropriate documentation (such as a birth certificate or marriage license) for any dependents you enroll.
- If you cover a domestic partner and that person qualifies as a "tax dependent" under IRS rules, you need to complete the Domestic Partner or Civil Union Partner Tax Status Form. Otherwise, your domestic partner's coverage will be subject to additional taxes, called imputed income.

4. Don't forget to choose your beneficiaries. They apply to your basic life, accidental death and dismemberment (AD&D) insurance, and critical illness. There is a separate beneficiary designation form for your HSA and retirement plans.

5. Save or print your benefits confirmation statement. If you enroll by phone, you can request that your enrollment confirmation be emailed to you.

Your benefits checklist

Take time to learn about the great HumanGood benefits that are available to you, which are detailed in this Benefits Guide. As you review your options, use this worksheet to take notes and keep track of the benefit elections that work best for you. Please note, you must enroll through UKG, which can be accessed on www.myhumangood.org. **This worksheet is NOT an enrollment form.**

FINAL NOTES

This summary of benefits is not intended to be a complete description of HumanGood's insurance benefit plans. Please refer to the plan document(s) for a complete description. Each plan is governed in all respects by the terms of its legal plan document rather than by this or any other summary of the insurance benefits provided by the plan.

In the event of any conflict between a summary of the plan and the official document, the official document will prevail. Although HumanGood maintains its benefit plans on an ongoing basis, HumanGood reserves the right to terminate or amend each plan in its entirety or in any part at any time.

Please contact your HumanGood human resources representative with questions regarding the information provided in this overview.

0.1 WELCOME

Welcome!

It's my pleasure to welcome you to our HumanGood family. You are joining a uniquely talented group of dedicated professionals who are deeply committed to making an impact in the lives of those we serve and we are glad to have you on board. (Impact is one of our core values, but you probably know that already).

If you are reading this, you know it is not an easy process to get hired here. We like it that way. We are very careful in who we hire. The work we do is important and the team we have is united, focused, and energized. Great teams can't afford to hire anyone other than great people, that's why we take our time and it's why we are glad you are here.

At HumanGood, our brand promise is inspiring the best life possible for all we serve. As a team member, you play a valuable role in our success by creating exceptional experiences and living our values of courage, innovation, inclusion, impact and passion. These values aren't just nice words. These are the words we live by. These are the words that guide our decisions: who we hire, who we promote, and who we celebrate. These values define how and why we do the important work each and every day.

Our brand promise of inspiring the best life starts with you. We are committed to the well-being and development of all of our team members and I encourage you to learn about the opportunities and benefits available to you as part of joining our team. As our newest team member, you can help to shape our culture and create an organization that lives up to our name and our mission.

I am so proud to be a part of this wonderful organization and serve alongside team members who care so deeply about making a difference in what we do. As you learn more about our team and those we serve, I hope that you will share this sense of pride and that you will join me in saying, "We are HumanGood."

Sincerely,

John H. Cochrane III
President and CEO, HumanGood

0.2 ABOUT US

HumanGood was founded on the belief that everyone should have the opportunity to live life with enthusiasm, confidence and security, regardless of physical, social or economic circumstances. Our mission is to ensure that those we serve have every opportunity to become their best selves as they define it. This extends to those who live in our communities, their family and friends and those who serve them. With approximately 5,000 team members serving more than 13,000 residents in our 21 Life Plan Communities and 96 Affordable Housing communities, HumanGood is the sixth largest nonprofit senior living provider in the country. To learn more, please visit [HumanGood.org](https://www.humangood.org).

0.3 OUR VALUES

Our values define how and why we serve our mission, but you make up our HumanGood culture. Each and every day, you inspire our residents to live their best lives possible by providing the care and support they deserve.

PASSION: We care deeply about the success of our team, those we serve and HumanGood.

- We inspire, energize and challenge our team members in a respectful manner
- We anticipate customer needs and seek to exceed expectations.
- We are committed to the support and success of our team.

INCLUSION: We are better when we include people of different backgrounds and perspectives.

- We seek out different viewpoints to improve our ideas and plans.
- We make decisions based on an understanding of team member and resident needs.
- We create positive and memorable experiences that honor and reflect our diversity.

COURAGE: We do what's right, even when it's hard.

- We evaluate our options and take informed risks.
- We speak up, sharing our ideas, opinions, feedback and knowledge.
- We acknowledge our mistakes and use them to improve and learn.

INNOVATION: We find new and better ways to serve our residents and team members and each new generation of older adults.

- We keep an open mind and ask questions to explore new possibilities.
- We share and test new ideas to create better solutions.
- We look for ways to make things simpler whenever possible.

IMPACT: We judge ourselves based on our ability to move our mission forward.

- We hold ourselves and each other accountable for results.
- We prioritize our work to focus on what matters most.
- We act decisively with knowledge and speed

0.4 TEAM MEMBER HANDBOOK ACKNOWLEDGEMENT (May be completed electrically in Human Resource Information or Training Systems)

HumanGood Affiliated Employers (“HumanGood”) are identified in Exhibit A.

I have received instruction on how to access the Team Member Handbook on the company intranet. I accept responsibility for accessing the Handbook electronically. I understand and accept it is my responsibility to read and familiarize myself with the policies and practices contained in the Handbook. I understand that a printed copy of the Team Member Handbook is available for review in the Human Resources department and a printed version will be provided upon request.

I understand and acknowledge that nothing in the Team Member Handbook creates or is intended to create a contract, promise or representation of continued employment and that employment at HumanGood is employment at-will; employment may be ended at the will of either HumanGood or me, with or without cause or advance notice. My signature certifies that I understand the foregoing agreement on at-will status is the sole and entire agreement between HumanGood and me about the duration of my employment and the circumstances under which my employment may be terminated.

Further, I understand that

My HumanGood Employer, in its sole discretion, may change any policy or practice at any time with written notice.

The information contained in this Handbook is not all-inclusive, that many of the policies and team member benefits have been treated only briefly in this Handbook and that it is my responsibility to learn and abide by my HumanGood Employer’s policies.

HumanGood reserves the right to change my hours, wages, benefits, and terms and conditions of employment at any time in its sole discretion.

No executive, supervisor or representative of HumanGood, including the President and Chief Executive Officer has authority to enter any agreement, express or implied, for employment for any specific period of time, or to make any agreement for employment other than at-will, and that only Board of Directors has the authority to make any such agreement, which will be binding only if it is in writing and signed by both HumanGood’s Board Chair and the President and Chief Executive Officer.

I should contact Human Resources if I have difficulty reading or understanding the terms of the Handbook. Human Resources will help me understand and access my HumanGood Employer’s policies. If I fail to ask for help, HumanGood will assume I fully understand the Team Member Handbook.

I understand and acknowledge that nothing in the Employee Handbook creates or is intended to create a contract, promise or representation of continued employment and that employment at HumanGood is employment at-will; employment may be ended at the will of either HumanGood or me, with or without cause or advance notice. My signature certifies that I understand the

foregoing agreement on at-will status is the sole and entire agreement between HumanGood and me about the duration of my employment and the circumstances under which my employment may be terminated.

I understand HumanGood will not construe or apply the policies in this Handbook in a manner that interferes with my rights under Section 7 or 8 of the National Labor Relations Act, including concerted activity about wages, hours, or other terms and conditions of employment.

I understand that my failure to comply with the policies and practices stated and referenced in the Team Member Handbook may result in disciplinary action, including my separation from HumanGood.

SIGNED:

DATE:

_____/_____
Team Member Printed Name Signature

I understand that my refusal to sign this acknowledgment does not excuse me from complying with the policies and practices set forth in the HumanGood Team Member Handbook.

EXHIBIT A

“HumanGood Employer” means the following corporations:

- HumanGood NorCal
- HumanGood Arizona, Inc.
- HumanGood Washington
- HumanGood Nevada
- HumanGood Fresno
- HumanGood Idaho
- HumanGood SoCal
- Redwood Senior Homes and Services, a California nonprofit public benefit corporation
- Westminster Gardens, a California nonprofit public benefit corporation
- HumanGood Foundation South
- HumanGood Foundation West
- HumanGood Affordable Housing
- Beacon Development Group, LLC, a Washington limited liability company
- HumanGood Pennsylvania

0.5 TEAM MEMBER RIGHTS

HumanGood will not construe or apply the policies in this Handbook in a manner that interferes with team members' rights under Section 7 or 8 of the National Labor Relations Act, including concerted activity about wages, hours, or other terms and conditions of employment.

HumanGood's Team Member Handbook provides team members an overview of the Company's policies, benefits, and rules to help ensure a positive experience for everyone. This Handbook familiarizes you with important information about HumanGood, as well as information about your rights and responsibilities. It is important that you read, understand and follow the provisions of this Handbook. **Violation of any of these policies may lead to discipline, up to and including termination.**

It is not possible to anticipate every situation that may arise in the workplace or to provide information that answers every conceivable question. HumanGood expects that team members will use good judgment and act appropriately as representatives of the Company. This Handbook outlines the primary work expectations, but is not all-inclusive. Violations of any Company policies, practices or procedures, whether or not detailed in this Handbook, may be grounds for disciplinary action, up to and including termination of employment. Team members are encouraged to ask if they need clarification on appropriate workplace behavior. In addition, circumstances will undoubtedly require that policies, practices, and benefits described in this Handbook change from time to time. As a result, HumanGood reserves the right to modify, supplement, rescind or revise provisions of this Handbook, other than the employment-at-will provisions, as it considers necessary or appropriate. The Company will inform you of changes that occur, so you may review and follow the updated provisions.

HumanGood constantly strives to improve our policies, positive relations with our team members, and the services and products we provide to our residents. Please bring suggestions for improvements to the attention of your supervisor or department head. By working together, we hope you will share a sincere pride in our workplace and the care and services we provide to our residents.

0.6 RIGHT TO REVISE TEAM MEMBER HANDBOOK

This Team Member Handbook contains the employment policies and practices of HumanGood in effect at the time of publication. This handbook supersedes all previously issued handbooks and any inconsistent policy statements or memoranda.

HumanGood reserves the right to revise, modify, delete or add to any and all policies, procedures, work rules, conditions of employment, or benefits stated in this handbook or in any other document, except for the policy of at-will employment.

Team members will be notified via an online acknowledgement when changes are made to the Handbook. No oral statements or representations can alter, in any way, the provisions of this handbook.

0.7 REGISTERED DOMESTIC PARTNER

For purposes of this Handbook, a registered domestic partner means a domestic partner who has filed a declaration of domestic partnership with the applicable Office of the Secretary of State in states that have a domestic partner program. A registered domestic partner in Arizona means a domestic partner who has filed a declaration of domestic partnership with the applicable Arizona City Clerk Department.

0.8 RESIDENT / CUSTOMER RELATIONS

Residents/customers are the heart of our organization's mission. Every team member represents HumanGood to our residents/customers and the public. Since individual residents/customers tend to think in terms of the individual team members with whom they come in contact, the way you perform your duties and treat the individual resident/customer will determine, in part, the resident's/customer's satisfaction and image of our entire organization. Residents/customers judge all of us by how they are treated with each team member contact and residents/customers will only choose HumanGood if they are treated with patience, courtesy, and the appropriate deference. Therefore, one of our first business priorities is to help any current or potential resident/customer. Nothing is more important than being courteous, friendly, helpful, and prompt in the attention you give to residents/customers.

Our personal contact with the public, our manners on the telephone, and the communications we send to residents/customers are a reflection not only of ourselves, but also of the professionalism of HumanGood. Positive resident/customer relations fulfills our brand promise and increases customer loyalty.

SECTION 1: EMPLOYMENT PRACTICES

1.1 EQUAL EMPLOYMENT OPPORTUNITY / REASONABLE ACCOMMODATION

HumanGood commits to provide equal employment and advancement opportunities to all individuals. In furtherance of this policy, we will continue to recruit, employ, train, promote and compensate our team members without regard to race, traits typically associated with race, color, religious creed, sex, gender, gender appearance or identity or expression, marital status, physical disability, mental disability, medical condition, pregnancy or related conditions, childbirth or related conditions, breastfeeding or related conditions, age, national origin, ancestry, genetic characteristics, sexual orientation, political affiliation, military or veteran status, citizenship status, or any other basis made unlawful by applicable law. We also prohibit discrimination based on the perception that anyone has any of those characteristics, or is associated with a person who has or is perceived as having any of those characteristics.

Disability and Pregnancy Accommodations

In compliance with the Americans with Disabilities Act (ADA) and other applicable federal, state and local laws providing nondiscrimination in employment, HumanGood will make reasonable accommodations for known or obvious physical or mental disabilities or medical conditions of qualified applicants or team members and for qualified applicants or team members affected by

pregnancy, childbirth, or medical conditions related to pregnancy or childbirth. A qualified applicant or team member who may require an accommodation should notify a supervisor, manager, or Human Resources. The Company will engage in a timely, good-faith, interactive process with the applicant or team member to assess reasonable accommodations. Team members are expected to fully cooperate in the accommodation process. The duty to cooperate includes making every effort to provide HumanGood with current medical information concerning their restrictions. Team members who do not meaningfully cooperate in the accommodation process will waive the right to an accommodation. If a reasonable accommodation exists and will not impose an undue hardship on the Company, an accommodation will be made. The Company retains the ultimate discretion to choose between reasonable accommodations where more than one (1) accommodation exists.

Religious Accommodations

A qualified applicant or team member who may require a religious accommodation should notify a supervisor, manager, or Human Resources. The Company will engage in a timely, good-faith, interactive process with the applicant or team member to assess reasonable accommodations. Team members are expected to fully cooperate in the accommodation process. Team members who do not meaningfully cooperate in the accommodation process will waive the right to an accommodation. If a reasonable accommodation exists and will not impose an undue hardship on the Company, an accommodation will be made. The Company retains the ultimate discretion to choose between reasonable accommodations where more than one (1) accommodation exists.

Reporting Violations of this Policy

If you believe you have been subjected to conduct inconsistent with this policy, please follow the complaint procedure discussed in the *Anti-Harassment and Non-Discrimination Policy* below. HumanGood will promptly investigate and attempt to resolve the situation.

If HumanGood determines this policy has been violated, it will take effective remedial action commensurate with the severity of the offense, up to and including termination. Appropriate action also will be taken in an effort to deter any future violations of this policy.

HumanGood will not retaliate against you for bringing a good-faith complaint and will not permit retaliation by management, team members, or your co-workers. If you believe that you are being retaliated against, please follow the complaint procedure discussed in the *Anti-Harassment and Non-Discrimination Policy* contained in this Handbook. HumanGood will promptly investigate and take appropriate responsive action.

1.2 AT WILL EMPLOYMENT

Employment with HumanGood is voluntarily entered into, and the team member is free to resign at any time, with or without cause, for a good reason or no reason, and with or without notice. Similarly, HumanGood may end the employment relationship at will at any time, with or without cause, for a good reason or no reason, and with or without notice, so long as there is no violation of applicable federal or state law.

Nothing in this Team Member Handbook or in any other personnel document, including benefit plan descriptions, offer letters, or job descriptions creates or is intended to create a contract, promise, or representation of continued employment for any team member. Please understand that no manager or team member of HumanGood has any authority to enter into an agreement for employment with any team member for any specific period of time or to make an agreement for employment on other than at-will terms. Only HumanGood's Board of Directors has the authority to make any such agreement on behalf of the Company, which will be binding only if it is in writing and signed by HumanGood's Board Chair, the President and Chief Executive Officer, and the team member.

1.3 OPEN DOOR POLICY

The purpose of our Open-Door Policy is to encourage open communication, feedback, and discussion about any good-faith matter of importance to a team member. Our Open-Door Policy means that team members are free to talk with any manager at any time.

If any area of your work is causing you concern, you have a responsibility to address your concern with a manager. Whether you have a problem, a complaint, a suggestion, or an observation, our Company managers want to hear from you. By listening to you, HumanGood is able to improve, to address complaints and to foster team member understanding of the rationale for practices, processes, and decisions.

Most problems can and should be solved in discussion with your immediate supervisor. Thus, for issues other than prohibited harassment, discrimination, and/or retaliation, you are encouraged to first take your concerns to your immediate supervisor, who will investigate and provide a solution or explanation. (For complaints of harassment, discrimination, and/or retaliation, team members should follow the reporting procedures outlined in the *Anti-Harassment and Anti-Discrimination Policy* of this Handbook.) If the problem is still not resolved, you may present it to the next level of management or Human Resources, preferably in writing, who will address your concerns. However, the Open-Door Policy means that you may also discuss your issues and concerns with the next level of management and/or Human Resources at any time. No matter how you approach your problem, complaint or suggestion, you will find managers at all levels of the organization willing to listen and to help bring about a solution or a clarification.

While we provide team members with this opportunity to communicate their views, please understand that not every concern, problem, complaint or suggestion can be resolved to the team member's satisfaction. Even so, we believe that open communication is essential to a successful work environment and all team members should feel free to raise issues of concern without fear of reprisal to their direct supervisor or any manager or Human Resources member they feel comfortable speaking with.

1.4 EMPLOYMENT CLASSIFICATIONS

The following definitions clarify employment classifications so that team members understand their employment status and benefit eligibility. These classifications do not guarantee employment

for any specified period of time. Accordingly, the right to terminate the employment relationship at will at any time is retained mutually by both the team member and HumanGood.

The following designations are used throughout this Team Member Handbook.

Exempt Team Members

Exempt team members are team members whose job assignments meet specific tests established by the federal Fair Labor Standards Act (FLSA) and applicable state and local wage and hour laws and who are exempt from minimum wage and overtime pay requirements. Exempt team members are compensated on a salary basis.

Nonexempt Team Members

Nonexempt team members are team members whose job positions do not meet FLSA or applicable state and local wage and hour exemption tests and who are *not* exempt from minimum wage and overtime pay requirements. Accordingly, nonexempt team members are required to accurately report their time (see Section 4.2 of this Handbook). Nonexempt team members are eligible to receive overtime pay in accordance with federal, local and state laws. Nonexempt team members are also entitled to meal and rest breaks in accordance with state law (see Section 4.3 of this Handbook).

Team Members will be informed whether their status is exempt or nonexempt and should consult their supervisor or local human resource representative with any questions or concerns regarding this status.

Any team member, exempt or nonexempt, who believes that an improper deduction or violation of the legal standards has occurred, must immediately notify their supervisor and Human Resources. The matter will be promptly investigated and, if a mistake occurred, it will be corrected. All team members should feel free to file complaints without fear of any retaliation.

Based on a team member's position, duties and responsibilities, a team member's exempt or nonexempt classification may warrant a change. Such a change may only occur upon written authorization by HumanGood Community Support Center Human Resources office.

All team members of HumanGood, whether exempt or nonexempt and whether Full-Time, Part Time, Per Diem or temporary, are employed at-will.

1.5 EMPLOYMENT CATEGORIES

Besides employment classifications of either exempt or non-exempt, each team member will belong to an employment category from those listed below. When initially hired or when assigned a new position all team members start as introductory team members.

Periodically, management may decide to increase the scheduled hours of any team member in order to meet short-term business demands. This may be done temporarily, up to a maximum of six (6) pay periods. If management foresees the scheduled hours for a such a position needs to be increased to at least thirty (30) hours a week for more than six (6) pay periods, then the position

will be reclassified and posted according to the Job Posting policy. On reclassification, the team member will become eligible for any HumanGood benefits available to team members in such new classification for which the team member was previously not eligible.

FULL-TIME team members are those who are not in a temporary or introductory status and who are regularly scheduled to work HumanGood’s full-time schedule of at least thirty (30) hours a week on a continuing basis. Generally, regular full-time team members are eligible for HumanGood’s sponsored benefit package, subject to the terms, conditions and limitations of each benefit program. **(Formerly Full Time and Part Time more than 30 hours)**

PART- TIME team members are those who have a regular schedule of fewer than thirty (30) hours a week for the Company. Part Time team members receive all legally mandated benefits (such as Workers’ Compensation insurance and Social Security). Part Time team members who are considered full-time team members under the Employer Shared Responsibility provisions of the Patient Protection and Affordable Care Act (“PPACA”) are eligible for health benefits sponsored by HumanGood. All Part Time team members may participate in the HumanGood 401(k) Plan if they meet the eligibility requirements. **(Formerly Casual)**

PER DIEM team members are those who are assigned to work on an intermittent and/or unpredictable basis. Per Diem team members receive all legally mandated benefits (such as Workers’ Compensation insurance and Social Security). Per Diem team members who are considered full-time team members under the Employer Shared Responsibility provisions of PPACA are eligible for health benefits sponsored by HumanGood. **(Formerly On-Call, Pool, PRN, or PT less than 42 hours)**

Regular team members are those who are hired within one of the categories above, Full Time, Part Time, Per Diem.

TEMPORARY team members are those who are hired to work as interim replacements, to supplement temporarily the workforce, or to help in completing a specific project. Employment assignments in this category are of a limited duration. A temporary team member may work on an intermittent schedule dependent on staffing needs. Normally, a temporary assignment will not last beyond ninety (90) days, but may be extended up to 120 days, maximum, with approval from the Community Support Center Human Resources office. Employment beyond any initially stated period does not in any way imply a change in employment status. Temporary team members retain that status until notified of a change. While temporary team members receive all legally mandated benefits, they are not eligible for all of HumanGood’s voluntary benefit programs and generally are not eligible for any other benefits offered by the Company. Temporary team members from an agency may be eligible for health and other benefits sponsored by their agency through which they are employed. Temporary team members may not be rehired as temporary team members without Community Support Center HR approval.

1.6 INTRODUCTORY PERIOD

The first ninety (90) days of continuous employment at HumanGood is considered the Introductory Period. During the Introductory Period, team members will learn their

responsibilities, get acquainted with fellow team members, and determine whether they are content with their jobs. This is also an opportunity for the Company to evaluate whether or not the team member is right for the position. Completion of the Introductory Period does not guarantee continued employment nor otherwise change the at-will nature of employment.

Team members who are promoted or transferred within HumanGood must complete an Introductory Period of the same length with each reassignment to a new position in order for HumanGood to evaluate performance and fit for the position. Any significant absences or questions in performance during an Introductory Period may lead to an extension of the Introductory Period. The introductory period length is not tied to benefits eligibility, benefits eligibility is determined by hours worked using the Affordable Care Act look back period of 6 months.

1.7 REEMPLOYMENT & BRIDGING SERVICES

HumanGood may consider reemploying former team members who apply for open positions. A reemployed team member whose break in service is less than six (6) months will have their prior employment considered in determining an adjusted service date. Breaks of employment of six (6) months or less result in the reinstatement of the previous employment date for purposes of retirement service credit and for benefit eligibility, to the extent allowed by the terms of the benefit plan. Approved leaves of absence do not constitute a break in service.

To bridge breaks in service the following conditions must be met:

1. The previous team member must have a minimum of one year with HumanGood prior to the break of service
2. The previous team member must have left the organization in good standing, meaning their performance must have been a minimum of “Meets All Requirements” or above.
3. The reinstatement must be approved by the VP of Human Resources.
4. Team members rehired are subject to all new hire screens (background checks; Department of Justice (DOJ) clearance, drug test, medical tests, etc.) and are also subject to the introductory period as described in section 1.6 above.

Team members that join HumanGood via an affiliation, acquisition or merger will have their service anniversary date based on their initial service anniversary date from their original company.

1.8 BACKGROUND CHECKS

Prior Employment History and References

HumanGood recognizes the importance of maintaining a safe, secure workplace with team members who are qualified, reliable, and nonviolent. To promote these concerns and interest, HumanGood will investigate an individual’s prior employment history, personal references and educational background prior to hiring.

Post-Offer, Pre-Employment Credit History, Driving Records and Criminal Records

Background checks will be conducted for all job positions after an employment offer has been made, and employment with HumanGood will be contingent upon successful completion of a background check. The scope of the background check will be determined by the work duties HumanGood anticipates will be assigned to you. A background check may consist of reference checks, criminal record checks, your driving record, and credit checks to the extent permitted by law. Third-party services may be retained to perform these checks.

A pending criminal matter may be considered in appropriate circumstances for business-related reasons, consistent with applicable law. All background checks will be conducted in strict conformity with the federal Fair Credit Reporting Act (FCRA), applicable state fair credit reporting laws, and state and federal antidiscrimination and privacy laws. All pre-employment checks are in accordance with Fair Chance Ordinances. HumanGood is an equal opportunity employer and will comply with applicable federal, state and local laws relating to the use of background checks for employment purposes.

1.9 DRUG TESTING

Post-Offer, Pre-Employment Drug Testing

HumanGood is committed to providing a safe, efficient and productive workplace. To achieve this objective, HumanGood requires all applicants who receive offers of employment to successfully complete a post-offer, pre-employment drug screening examination, subject to all applicable legal requirements, before they begin work. The examination will be performed at HumanGood's expense. All offers of employment are contingent upon successful completion of this examination.

Candidates who refuse to submit to a drug test or who fail to show up for a drug test within the specified time frame (72 hours from offer) will no longer be considered for employment.

Reasonable Suspicion Testing

Team members may be required to immediately submit to alcohol and/or drug testing when a supervisor or any other HumanGood manager has reasonable suspicion that they are under the influence of alcohol and/or controlled/illegal substance(s), including cannabis. "Reasonable suspicion" means that a supervisor has observations concerning the appearance, behavior, speech, or odor of the employee that may indicate alcohol or drug use or even chronic effects of drug/alcohol withdrawal.

Testing may also be required if a team member is found to be in possession of, alcohol, a controlled/illegal substance or paraphernalia possibly connected with the use of cannabis or an illegal drug. Testing may also be required if cannabis, illegal drugs, and/or alcohol are found in the team member's immediate work area. However, it should be emphasized that possession of a controlled/illegal substance, including cannabis, or alcohol while on duty is prohibited whether or not it is determined that the team member also used such substances.

Team members who refuse to submit to a drug or alcohol test will no longer be eligible for employment with HumanGood.

DOT Cannabis and THC (Tetrahydrocannabinol) Testing

Marijuana and THC testing are required for team members whose job functions include driving commercial motor vehicles and are subject to the rules and regulations of the Department of Transportation (DOT). These team members will be subject to post-offer/pre-employment as well as random drug testing in compliance with DOT drug and alcohol testing rules and applicable law.

For applicants and team members that reside in a state where cannabis is legal and are not in jobs subject to testing requirements under the federal Department of Transportation standards, positive results for cannabis and THC will not be considered failure of a drug screen for purposes of post-offer, pre-employment drug testing. Positive results for cannabis and THC upon reasonable suspicion testing or work-related injury testing will be considered failure of a drug screen.

Work-Related Injury

When a team member is involved in a work-related “accident” that may be attributed to the team member being under the influence of alcohol or drugs, alcohol and/or drug testing is required.

1.10 TEAM MEMBER HEALTH EXAMINATIONS

To help ensure that team members are able to perform their duties safely, medical examinations may be required as a condition of employment or for continued employment in certain circumstances. A medical examination and communicable disease testing, not limited to but including COVID-19 and tuberculosis, by a health professional of HumanGood’s choice and expense may be required, after a conditional offer of employment has been made to an applicant in certain job positions. In addition, HumanGood may require a medical examination to determine whether the team member is able to perform the essential functions of the position or in certain situations to assess the team member’s fitness for duty in accordance with applicable laws.

Information on a team member’s medical condition or history will be kept separate from other team member information and maintained confidentially. Access to this information will be limited to those who have a legitimate need to know.

1.11 PROOF OF LEGAL AUTHORIZATION TO WORK

HumanGood is committed to employing only individuals who are authorized to work in the United States and who comply with applicable immigration and employment laws. As a condition of employment, every individual must provide satisfactory evidence of their identity and legal authority to work in the United States within 72 hours of commencing employment. If the team member cannot verify their right to work in the United States within 72 hours of employment, the Company will be required to terminate their employment immediately.

Former team members who are rehired must also comply with providing satisfactory evidence of their identity and legal authority to work in the United States within 72 hours if they have not completed it within three (3) years or if their previous I-9 form is no longer valid or on file at HumanGood.

1.12 MINIMUM AGE REQUIREMENT

A minor is defined as anyone under the age of eighteen (18) years old. Team members may be asked at any time to provide proof that they are at least eighteen (18) years old.

Minors are not allowed to work unless they are legally able to do so under all applicable state and federal laws. In states that have minor work permits, a minor must have a valid work permit that specifically authorizes the minor to work for HumanGood. The minor may be allowed to work only under the terms, restrictions, and limitations set forth in the work permit.

Where a difference exists between the standards set forth in the work permit and the rules established by the federal, state and local laws, the strictest standard shall apply. Therefore, a minor may not be allowed to work in violation of any legal standard, whether the standard is incorporated in a work permit, a federal, state or local law.

Supervisors must make certain that minors work only in accordance with the terms of the work permit and the applicable local, state and federal rules. Supervisors will be subject to disciplinary action, including the possibility of immediate termination, if they schedule or permit minors to work in a manner that violates any applicable legal standards.

1.13 WORK WEEK & HOURS OF OPERATION

For purposes of calculating overtime for nonexempt team members, the workweek at the Company begins Sunday at 12:00:00 a.m. and ends Saturday at 11:59:59 p.m., and each workday begins at 12:00:00 a.m. and ends at 11:59:59 p.m.

Hours of operation vary by location and community. Life Plan Communities (LPC) are continuous seven-(7)-day-a-week operations. Affordable Housing Communities (AHCs) generally operate Monday through Friday from 8:00 a.m. to 5:00 p.m., with a designated team member available to respond to after-hours emergencies. The HumanGood Community Support Center hours are Monday through Friday from 8:00 a.m. to 5:00 p.m. local time.

Your supervisor will assign your work schedule. Work schedules are subject to change based on business needs. Team members are not guaranteed a work schedule. On occasion, to meet business needs, team members may be required to work beyond their regularly scheduled workday or workweek. In such cases all applicable wage and hour federal and state laws will be adhered to.

1.14 LACTATION ACCOMODATION

HumanGood recognizes the immediate and long-term health advantages of breast-feeding for infants and mothers and desires to provide a supportive environment for any team member to

express milk for her infant child upon her return to work following the birth of her child. The Company prohibits discrimination, harassment and/or retaliation against any team member who chooses to express breast milk for her infant child while at work.

HumanGood will provide reasonable accommodations and a reasonable number of breaks for expressing breast milk. The Company will provide a private area for a nursing mother to express milk in accordance with local, state and federal laws. This break time shall coincide with the team member's regularly scheduled break time to the extent possible. Rest periods taken under this policy that do not run concurrently with the team member's regularly scheduled break time shall be unpaid, and the team member must clock in and out during such a break.

Team members are encouraged to notify their supervisor or other appropriate personnel before they make use of the accommodations offered for team members who are nursing mothers. As needed, the supervisor shall work with the team member to address arrangements and scheduling to ensure the team member's essential job duties are covered during the break time.

If the team member feels that the lactation accommodation is not being provided by the employer, the team member has the right to file a complaint with the Labor Commissioner.

1.15 ANTI-HARASSMENT & NON-DISCRIMINATION POLICY

HumanGood is committed to providing a work environment that is free of illicit harassment and discrimination.

Our anti-harassment and non-discrimination policy applies to all persons involved in our operations and prohibits discriminatory and/or harassing conduct by any team member of HumanGood including nonsupervisory team members, supervisors, and managers. This policy also protects team members from prohibited discrimination and/or harassment by third parties, such as vendors, clients, temporary or contract workers, residents, and resident's family members and guests. If such discrimination and/or harassment occurs on the job by someone not employed by HumanGood, the procedures in this policy should be followed.

Prohibited Discrimination

HumanGood will not tolerate discrimination and/or harassment based on race, traits typically associated with race, color, religious creed, sex, gender, gender appearance or identity or expression, marital status, physical disability, mental disability, medical condition, pregnancy or related conditions, childbirth or related conditions, breastfeeding or related conditions, age, national origin, ancestry, genetic characteristics, sexual orientation, political affiliation, military or veteran status, citizenship status, or any other basis made unlawful by applicable law. HumanGood also will not tolerate discrimination and/or harassment based on the perception that anyone has any of those characteristics, or is associated with a person who has or is perceived as having any of those characteristics.

Prohibited Harassment

Prohibited harassment includes but is not limited to the conduct set forth below. However, only harassment that unreasonably interferes with your work performance or creates an intimidating, hostile or offensive work environment is unlawful. **Prohibited harassment will not be tolerated, whether or not it rises to the level of unlawful conduct and regardless of the circumstances.**

Prohibited conduct includes all unwelcome conduct, whether verbal, physical or visual, inflicted on someone because of that person's legally protected status. Conduct that is prohibited under this policy includes, but is not limited to:

- Verbal conduct such as epithets, derogatory comments, slurs, or unwanted sexual advances, invitations or comments.
- Visual conduct such as derogatory posters, photography, cartoons, drawings, emails, internet sites or gestures.
- Physical conduct such as unwanted touching, blocking normal movement or interfering with work, directed at you because of your sex or any other prohibited basis.
- Threats and demands to submit to sexual requests in order to keep your job or avoid some other loss, and offers of job benefits in return for sexual favors.
- Other threats and demands based upon any other prohibited or unlawful basis.
- Retaliation for opposing, reporting or threatening to report prohibited harassment, or for participating in an investigation, proceeding or hearing conducted by a local, state or federal agency.

Sometimes harassment, particularly sexual harassment, can arise in very subtle ways and too often the "offenders" may not even know that they are doing anything wrong. "Offenders" sometimes think that because they have a friendly relationship with another team member, such conduct is acceptable. However, this is not true. If you are unsure whether a particular action or conduct may be interpreted as harassment, then you should not engage in that particular action or conduct. Sexual harassment includes unwanted sexual advances, requests for sexual favors or visual, verbal or physical conduct of a sexual nature when:

- Submission to such conduct is made a term or condition of employment; or
- Submission to, or rejection of, such conduct is used as a basis for employment decisions affecting the individual; or
- Such conduct has the purpose or effect of unreasonably interfering with a team member's work performance or creating an intimidating, hostile or offensive working environment.

Sexual harassment also includes various forms of offensive behavior based on sex. The following is a partial list:

- Unwanted sexual advances.
- Offering employment benefits in exchange for sexual favors.
- Making or threatening reprisals after a negative response to sexual advances.
- Visual conduct: leering, making sexual gestures, displaying of sexually suggestive objects or pictures, cartoons, posters, websites, emails or text messages.

- Verbal conduct: making or using derogatory comments, epithets, slurs, sexually explicit jokes or comments about a team member's body or dress.
- Verbal sexual advances or propositions.
- Verbal abuse of a sexual nature, graphic verbal commentary about an individual's body, sexually degrading words to describe an individual, suggestive or obscene letter, notes or invitations.
- Physical conduct: touching, assault, impeding or blocking movements.
- Retaliation for making reports or threatening to report sexual harassment.

Policy on Retaliation

Retaliation is prohibited against any person by another team member or by HumanGood for using the Company's complaint procedure, reporting proscribed harassment or discrimination, objecting to such conduct or filing, testifying, assisting or participating in any manner in any investigation, proceeding or hearing conducted by a governmental enforcement agency. Prohibited retaliation includes, but is not limited to, termination, demotion, suspension, failure to hire or consider for hire, failure to give equal consideration in making employment decisions, failure to make employment recommendations impartially, adversely affecting working conditions, or otherwise denying any employment benefit.

Team Members should report any retaliation to their supervisor, any management team member or Human Resources or Corporate Compliance at (888) 740-4636. Any report of retaliatory conduct will be investigated in a thorough and objective manner. If a report of retaliation prohibited by this policy is substantiated, appropriate disciplinary action, up to and including termination of employment, will be taken.

Reporting Procedures and Investigation

Any team member who believes that they have been subjected to prohibited harassment, discrimination or retaliation by a co-worker, supervisor, agent, client, vendor or customer of HumanGood or who is aware of such harassment, discrimination, and/or retaliation of others, should immediately provide a written or verbal report to their supervisor, any other member of management, Human Resources or Corporate Compliance at (888) 740-4636, regarding such incidents.

Your complaint should include the details of the incident or incidents, the name(s) of the individual(s) involved, the name(s) of any witness(es), and any documentary evidence (notes, pictures, cartoons, etc.). If you feel uncomfortable providing such a complaint in writing, please communicate orally with Human Resources, HumanGood's Corporate Compliance Hotline, or a supervisor regarding any harassment, discrimination, and/or retaliation to which you believe you have been subjected. Supervisors must refer all complaints of prohibited harassment, discrimination, and/or retaliation to Human Resources.

Human Resources will conduct an impartial, timely and thorough investigation of the discrimination, harassment, and/or retaliation allegations. Certain interim measures, such as a leave of absence or transfer, may be put in place while the investigation proceeds. This

investigation will be completed and a determination regarding the discrimination, harassment, and/or retaliation alleged will be made and communicated to you as soon as practicable.

Because of the seriousness of a complaint of prohibited discrimination, harassment, and/or retaliation and the need to conduct a full and fair investigation, team members must fully cooperate with any such investigation and to speak with all candor to the investigating officer regarding the questions and issues presented. Individuals who make false complaints, allegations, claims, reports or statements, or who refuse to cooperate during the course of an investigation are subject to discipline, up to and including termination of employment.

If Human Resources determines that prohibited discrimination, harassment, and/or retaliation has occurred, HumanGood will take remedial action commensurate with the severity of the offense, up to and including termination of employment. Action will also be taken to deter any future discrimination, harassment, and/or retaliation. Whatever action is taken against the alleged offender will be made known to you. HumanGood will not retaliate against a team member for filing a complaint or participating in an investigation and will not knowingly permit retaliation by anyone. In investigating and in imposing any discipline, HumanGood will attempt to preserve confidentiality to the extent that the needs of the situation permit.

Complaints of unlawful discrimination, harassment, and/or retaliation can be filed with the Arizona Attorney General's Civil Rights Division (team members working in Arizona), the California Department of Fair Employment and Housing (team members working in California), the Delaware Division of Human Relations (team members working in Delaware), the Idaho Human Rights Commission (team members working in Idaho), the Nevada Equal Rights Commission (team members working in Nevada), Pennsylvania Human Relations Commission (team members working in Pennsylvania), the Washington State Human Rights Commission (team members working in Washington), and/or the federal Equal Employment Opportunity Commission (all team members). These agencies may accept, investigate, prosecute, and remedy complaints. The telephone number for the nearest offices for each of these agencies and other agency telephone numbers are listed on these agencies' websites.

1.16 WORKPLACE VIOLENCE PREVENTION

HumanGood is committed to providing its team members a safe work environment. HumanGood will not tolerate any violent or threatening behavior by or toward our team members. Therefore, HumanGood has adopted a zero-tolerance policy concerning workplace violence. This policy prohibits threats or acts of violence – intimidation, bullying, physical or mental abuse and/or coercion. The prohibition against threats and acts of violence applies to all persons involved in the operation of our business, including, but not limited to, Company team members and other personnel, contract and temporary workers, consultants, contractors, customers, vendors, visitors and anyone else on the Company's premises. This policy is intended for actual or threatened violence against any person on HumanGood premises, at any company-sponsored event, and/or while engaging in any company-related activity. Safety and security in the workplace is every team member's responsibility. HumanGood relies upon team members' compliance with this policy to achieve our goal of providing a violence-free workplace.

Some examples of conduct that violates this policy include:

- Threats or acts of violence occurring on Company premises, regardless of the relationship between the parties involved in the incident;
- Threats or acts of violence occurring off Company premises involving someone who is acting in the capacity of a representative of the Company;
- Threats or acts of violence occurring off Company premises involving a team member if the threats or acts affect the business interests of the Company;
- All threats or acts of violence occurring off Company premises, of which a team member is a victim, if we determine that the incident may lead to an incident of violence on Company premises; and
- Threats or acts of violence resulting in the conviction of a team member or agent of the Company, or an individual performing services for the Company on a contract or temporary basis, under any criminal code provision relating to violence or threats of violence when that act or the conviction adversely affect the legitimate business interests of the Company.

Examples of conduct that may be considered threats or acts of violence under this policy include, but are not limited to:

- Threatening physical contact directed toward another individual;
- Threatening an individual or their family, friends, associates or property with harm;
- The destruction or threat of destruction of HumanGood property or another individual's property;
- Menacing or threatening phone calls, emails, text messages, or other electronically transferred messages;
- Stalking;
- Veiled threats of physical harm or similar intimidation; and/or
- Communicating an endorsement of the inappropriate use of firearms or weapons.

Additionally, HumanGood strictly prohibits the possession of any weapon, firearm, or other dangerous objects or material of any kind on Company premises or at any Company-related event.

HumanGood will promptly and appropriately assess all reports of threats or acts of violence and of suspicious individuals or activities. The identity of the individual making a report will be protected as much as is practical. In order to maintain workplace safety and the integrity of its investigation, HumanGood may suspend team members, either with or without pay, pending investigation.

Anyone determined to be responsible for inappropriate conduct that violates these guidelines will be subject to prompt disciplinary action up to and including termination of employment. Full cooperation by all team members is necessary for HumanGood to accomplish its goal of maximizing the security and safety of its team members. HumanGood encourages team

members to bring their disputes or differences with other team members to the attention of their supervisors or the Human Resources Department before the situation escalates into potential violence. HumanGood is eager to assist in the resolution of team member disputes, and will not discipline or retaliate against team members for raising such concerns. In addition, team members can report any violations of this policy or raise any questions regarding their obligations of this policy without fear of reprisal of any kind.

1.17 VOLUNTARY & INVOLUNTARY TERMINATION OF EMPLOYMENT

Employment at HumanGood is employment at-will, which means your employment may be terminated with or without cause and with or without notice at any time by you or the Company. Termination of employment is an inevitable part of personnel activity within any organization. Common circumstances under which employment is terminated include the following:

Resignation: Voluntary employment termination initiated by the team member.

Termination: Involuntary employment termination initiated by the Company.

Layoff: Involuntary employment termination initiated by the Company, generally due to reductions in force.

Retirement: Voluntary team member termination upon eligibility for retirement.

If you decide to leave your employment with HumanGood, we ask that you give us at least two (2) weeks' written notice. This will give us an opportunity to make the necessary adjustments in our operation. Your status as an at-will team member does not require that you give advance notice, but team members who give less than two (2) weeks' notice are not eligible for re-hire. The Company may exercise its right to accept a resignation immediately and to accelerate the final date of employment. The Company reserves the right to accept a resignation and recognize the termination date as any date it chooses between the date the resignation is submitted and the date designated by the team member as the last day of employment. Whether the date designated by the team member or a date selected by the Company becomes the team member's last day of work, the team member's personnel records will normally reflect the fact that the team member resigned voluntarily.

Upon termination of employment, final pay will be issued in accordance with applicable federal, state and local law. Similarly, all accrued, unused and vested team member benefits that are due and payable at termination will be paid in accordance with applicable federal, state and local law.

Upon termination of employment, whether voluntary or involuntary, team members shall immediately return all files, records, keys, and any other materials or property of HumanGood.

If a team member resigns, an exit interview is scheduled before a team member's departure to discuss the reasons for resignation, if applicable, the effect of the separation on benefits, and the return of all Company-owned property.

Any questions regarding this policy should be directed to Human Resources.

SECTION 2: GUIDANCE

2.1 RELATIONSHIPS BETWEEN TEAM MEMBERS

A familial, intimate relationship or cohabitation among team members can create an actual or at least potential or perceived conflict of interest in the employment setting, especially if one relative, spouse, partner or member of such a relationship supervises another relative, spouse, partner or member. To avoid this problem, we may refuse to hire or place a relative or other intimately associated individual in a position where the potential for favoritism or a conflict exists. Therefore, the following guidelines have been established to help avoid such situations:

- No team member may occupy a position that requires the team member to work directly for or with a relative or other intimately associated individual.
- No team member may indirectly work for or supervise a relative or other intimately associated individual.
- No team member may occupy a position that could result in an actual or potential conflict of interest.
- Executive Directors may not have any relatives working in a community they supervise.
- Human Resources personnel may not conduct or be involved in any part of any family member's or other intimately associated individual's selection or onboarding, pay or performance, investigations or discipline or any other personnel actions.

A direct working relationship is defined as one relative directly supervising the other relative or when the nature of the relatives' job requires coordination of work in a non-supervisory capacity. An indirect working relationship is defined as one team member holding a position in the organizational chain-of-command to which a relative of that team member reports with less than three levels of reporting separation. Three levels of separation in reporting are required. The following example using Life Plan Community (LPC) Operations shows the Chief of Operations could have a relative work in the chain-of-command at the supervisor or individual contributor level.

Chief of Operations

VP of Operations – Direct report to Chief of Operations, no level of separation

Executive Director – First level of separation

Department Head – Second level of separation

Supervisor – Third level of separation

Individual Contributor – Fourth level of separation

Individuals involved in an intimate relationship with a current team member may also not occupy a position that will be working directly or indirectly for or supervising the team member with whom they are involved in an intimate relationship. HumanGood reserves the right to take prompt action if an actual or potential conflict of interest arises involving relatives or individuals involved in an intimate relationship who occupy positions at any level (higher or lower) in the same line of authority that may affect the review of employment decisions.

Present team members who marry or become registered domestic partners will be permitted to continue working in the job held only if they do not work in a direct or indirect supervisory relationship with one another or in jobs involving a conflict of interest.

Any team member involved in a relationship covered by this policy must immediately and fully disclose the nature of the relationship to management or Human Resources so a determination can be made as to whether an actual or potential conflict of interest exists, and if so, Management along with Human Resources will determine the next best steps under the specific relationship situation.

In other cases where a conflict or the potential for conflict arises because of the relationship between team members, even if there is no line of authority or reporting involved, the team members may be separated by reassignment or terminated from employment. Team members in a close personal relationship should refrain from public workplace displays of affection or excessive personal conversation. (See also HumanGood's *Conflicts of Interest Policy*.)

For purposes of this policy, a relative is any person who is related by blood or marriage, or whose relationship with the team member is similar to that of persons who are related by blood or marriage. An intimate relationship is defined as a relationship that may be reasonably expected to lead to the formation of a consensual "romantic" or sexual relationship. This policy applies to all team members without regard to the gender or sexual orientation of the individuals involved.

Team Members who are involved in a relationship covered by this policy and who fail to inform the Company will be subject to remedial action, including not only reassignment of duties and responsibilities, limiting of job functions and/or access to confidential information, but also disciplinary action, up to and including termination of employment.

2.2 CONFLICTS OF INTEREST

HumanGood respects and understands that we all have interests, both business and personal outside of our jobs. However, outside activities (second jobs, side business, clubs, personal relationships, etc.) must not interfere with your ability to fully perform your job duties nor should they create a conflict of interest with your duties at HumanGood.

A "conflict of interest" generally means a situation where the Company's interests and a team member's interest are actually or potentially at odds. Personal, social and economic relationships with competitors, suppliers, customers, residents, or other HumanGood team members that may impair a team member's ability to exercise good judgment on behalf of the Company or which give the appearance of such an impairment creates an actual or potential conflict of interest. We rely on the integrity and good judgment of all team members and trust them to observe ethical, professional and legal standards and to use common sense business practices when conducting Company affairs. Team members must take care to avoid not only actual impropriety, but also the appearance of impropriety. Any team member involved in a relationship that is an actual or potential conflict of interest must immediately and fully disclose the nature of the relationship to Human Resources so a determination can be made as to whether an actual or potential conflict of interest exists, and if so, how to correct the situation.

Pursuant to your duty to avoid conflicts of interest with the Company, during your employment you are prohibited from directly or indirectly soliciting or enticing any other team member of HumanGood, alone or in concert with others, to leave the Company to work for any person or entity in competition with HumanGood. You are likewise prohibited from directly or indirectly soliciting, enticing in any way or otherwise diverting any HumanGood clients or residents, alone or in concert with others, to do business with any person or entity engaged in a business that is competitive with the Company.

An actual or potential conflict of interest also occurs when a team member is in a position to influence a decision that may result in a personal gain for that team member or for a relative as a result of HumanGood business dealings. For the purposes of this policy, a relative is any person who is related by blood or marriage, or whose relationship with the team member is similar to that of persons who are related by blood or marriage.

Personal gain may result not only in cases where a team member or relative has a significant ownership in a firm with which HumanGood does business, but also when a team member or relative receives any kickback, bribe, substantial gift, or special consideration as a result of any transaction or business dealings involving HumanGood. No “presumption of guilt” is created by the mere existence of a relationship with outside firms. However, if team members have any influence on transactions involving purchases, contracts, or leases, it is imperative that they immediately and fully disclose the relative circumstances to HumanGood Community Support Center Human Resources office as soon as possible. Human Resources will determine the existence of any actual or potential conflict of interest and decide the safeguards to protect all parties. Failure to disclose facts implicated by this provision is a serious violation of Company policy.

If you are unsure about whether you may be involved in an actual or potential conflict of interest, or for any other information regarding conflicts of interest, please contact Human Resources.

Team members who are involved in a relationship covered by this policy and who fail to inform the Company will be subject to remedial action, up to and including reassignment of duties and responsibilities, limiting of job functions and/or access to confidential information, but also possible disciplinary action, up to and including termination.

2.3 INSPECTION OF PERSONNEL RECORDS

HumanGood maintains a personnel file on each team member. The personnel file includes such information as your job application, resume, training records, documentation of performance, appraisals, pay increases, and other employment records. The information recorded in your personnel file is extremely important to you and HumanGood. It is your responsibility to make sure that the personal data in the file is accurate and up to date. Report any change of personal or contact information, *e.g.*, marital status, address, phone number, etc. to the Human Resources Department in writing immediately or in the Human Resource Information System Team Member Self-Service.

Personnel files are the property of HumanGood and access to the information they contain is restricted. Generally, only supervisors and management personnel of HumanGood who have a legitimate reason to review information in a file are allowed to do so. Any request for information from personnel files must be directed to Human Resources. Disclosure of personnel information to outside sources will be limited. However, the Company will cooperate with requests from authorized law enforcement or local, state or federal agencies conducting official investigations and as otherwise legally required.

As a team member, you have a right to inspect your personnel file as provided by law, on the company premises, in the presence of an individual appointed by HumanGood to maintain the files, at a time mutually convenient for you and the company. Reasonable advance notice is required. If you wish to review your personnel file, you should contact Human Resources. You may add to the file your version of any disputed item in your personnel file.

You also have a right to receive copies of materials in your personnel file by providing 30 days' written notice to the Human Resources Department. All team members have access to payroll records and pay statements through the online timekeeping system and the Human Resource Information System and may print those at any time. You may also inspect your payroll records upon written or oral request, and may obtain a copy of these records at your own expense. HumanGood will comply with written payroll records requests as soon as practicable, but no later than 21 calendar days.

2.4 EMPLOYMENT VERIFICATION & REQUESTS FOR INFORMATION ABOUT CURRENT OR FORMER TEAM MEMBERS

HumanGood strives to provide accurate information to individuals outside the Company regarding current or former team members when it is requested or required to do so in accordance with applicable laws. The Corporate Human Resources office is responsible for responding to all reference check inquiries from other employers. All team members are responsible to direct such inquiries to the Community Support Center Human Resources office.

Team members can use and direct outside resources to, "The Work Number Employment Verification Services", at www.theworknumber.com or 1-800-604-6572. The Work Number is an automated service that provides you with the ability to quickly provide proof of your employment or income Employer Access Code: 14582. (HumanGood Pennsylvania team members please contact the Community Support Center Human Resources office for employment verification inquiries.)

Consequently, team members may not provide any information about current or former team members or volunteers, nor may supervisors provide professional references for any current or former team members to any outside agency, organization, institution or person who is not employed by HumanGood. Any team member who receives a request for any information concerning a past or present team member or volunteer of HumanGood should refer the person making the request to the Community Support Center Human Resources office without engaging in any "on" or "off the record" conversation about the person.

Disclosure of current and former team member information to outside sources will be limited and in compliance with federal and state privacy laws. Responses to such inquiries are limited to factual information that can be substantiated by HumanGood's records; only the dates of employment and job title are verified. A written disclosure authorization and release may be required before any further information is furnished. All requests for information on current or former team members must be forwarded to the Community Support Center Human Resources office. HumanGood may use a third-party administrator to receive and respond to employment verification requests.

The Company will also cooperate with requests from authorized law enforcement or local, state, or federal agencies conducting official investigations and as otherwise legally required.

2.5 PROHIBITED CONDUCT & DISCIPLINARY ACTION

HumanGood will not construe or apply any of this section in a manner that interferes with team members' rights under Section 7 and 8 of the National Labor Relations Act, including concerted activity about wages, hours, or other terms and conditions of employment.

Team members of HumanGood must conduct themselves in a manner consistent with HumanGood's mission, vision, values, and ethics. HumanGood will comply with all applicable laws and regulations and expects its directors, officers and team members to conduct business in accordance with the letter, spirit and intent of all relevant laws and to refrain from any illegal, dishonest or unethical conduct.

In general, the use of good judgment based on high ethical principles will guide you with respect to lines of acceptable conduct. If a situation arises where it is difficult to determine the proper course of action, the matter should be discussed openly with your immediate supervisor and, if necessary, with Human Resources for consultation and advice.

The following conduct is prohibited and is not tolerated by HumanGood. It is not an all-inclusive list, but rather a list designed to give examples of the types of conduct prohibited by the Company. This list in no way modifies the at-will employment relationship between you and HumanGood.

Attendance:

- Irregular attendance, which includes but is not limited to: excessive tardiness, unreported or unexcused absences or abuse of Paid Time Off (PTO) or Paid Sick Leave, failure to timely notify your supervisor when you are unable to report to work, violation of the Attendance and Punctuality policy in this handbook. Approved leaves of absence are not considered irregular attendance.
- Unauthorized absence(s)
- Leaving Company premises or one's job area without permission during working hours (excluding meal periods or breaks).
- Failure to return to work on a timely basis at the end of an approved leave of absence, unless prior written authorization is received.
- Failure to observe working schedules, including the required meal and break periods.

- Working overtime without prior approval of your supervisor or refusing to work assigned overtime.
- Failure to follow timekeeping rules and/or altering or falsifying any timekeeping record, either your own or another's.
- Failure to provide a physician's certificate when requested or required to do so.

Harassment/Discrimination:

- Engaging in sexual or other harassment or discrimination.
- Any violation of the Anti-Harassment and Anti-Discrimination Policy and/or the Equal Employment Opportunity Policy; or using profane or abusive language at any time on Company premises.
- Making malicious, false or derogatory remarks, or using insults or epithets that may damage the integrity or reputation of the Company or its team members.
- Any communication or interaction with customers/residents that is deemed as disrespectful, vulgar or unprofessional.
- Failure to promote cooperative working relationships with any other Company team member, customer or vendor.
- Workplace Bullying

Performance:

- Inefficient or careless performance of job responsibilities or inability to perform duties satisfactorily.
- The needless sabotage or undermining of a person's work performance.
- Insubordination, including but not limited to, improper conduct or refusal to perform tasks assigned by a manager in the appropriate manner, or the use of abusive or threatening language toward a supervisor or member of management.
- Failure to maintain any condition of employment (Example: Required licensure and certifications)
- Making or accepting excessive personal telephone calls during working hours except in emergencies.
- Sleeping or malingering on the job.
- Failure to promote cooperative working relationships with any other Company team member, customer or vendor.

Prohibited Conduct:

- Violation of any safety, health, security or Company policy, practice, or procedure, whether or not detailed in this handbook.
- Failure to report any violations of the handbook, policies, regulations, statutes or laws, to management or human resources.
- Any action that is detrimental to the orderly conduct of business.
- Failure to be honest and forthright, which may include omission of relevant information.
- Dishonesty of any kind in dealing with the Company.
- Refusing to take or successfully pass any assigned drug and alcohol testing as a condition of employment.

- Falsifying or making a material omission on any Company record (Application, Medical or Patient Records, Time or Payroll, etc.)
- Release of confidential information or trade secrets about the Company or its customers/residents.
- Participating in dangerous activity, fighting, provoking a fight, horseplay, acts or threats of violence during working hours or on Company property.
- Carrying dangerous or unauthorized materials, such as explosives, firearms, weapons or other similar items on Company premises at any time.
- Engaging in criminal conduct whether or not related to job performance.
- Wearing extreme, unprofessional or inappropriate styles of dress or hair while working or failure to adhere to dress code. (This does not include protected hairstyles under applicable laws, including hair texture and protective hairstyles include braids, dreadlocks, twists, and other unspecified hairstyles associated with race.)
- Destruction, damage, theft or unauthorized removal or possession of Company property, or property belonging to fellow team members, customers/residents, or anyone on Company property.
- Unauthorized use of Company equipment, time, materials, facilities or the Company name.
- Soliciting other team members or residents for membership, funds, or other similar activity in connection with any outside organization during your working time or the working time of the team member solicited.
- Distributing unauthorized literature or any written or printed material during working time or in work areas. “Working time” does not include your meal and break periods.
- Posting or removing material on bulletin boards without proper authorization.
- Recording conversations without all parties consent
- Digitally capturing any resident or HIPAA protected information through any means, to include video, audio or photos (resident/patient photos or conversations).
- Possession, distribution, sale, use or being under the influence of alcoholic beverages or illegal drugs while on the Company’s property, while on duty, or while operating a vehicle or potentially dangerous equipment leased or owned by the Company. This includes impairment by legal or prescribed drugs that adversely affects job performance, safety or conduct.

Abuse/Resident Care:

- Physical, verbal or emotional abuse of HumanGood team members, visitors, customers and residents. Abuse is conduct, with malice, that a reasonable person would find hostile, offensive and unrelated to legitimate business interests.
- Failure to report known or suspected physical, verbal or emotional abuse of HumanGood team members, visitors, customers and residents.
- Improper resident care.

- Accepting solicited or unsolicited gifts or tips from HumanGood residents, family members or vendors.
- Negligence that results in injury to personnel, a visitor or any action that endangers the health or safety of others.
- Any communication or interaction with customers/residents that is deemed as disrespectful, vulgar or unprofessional.

Safety:

- Failure to observe safety rules as posted and common-sense safety in the operation of equipment and general performance of duties.
- Failure to report a condition that may endanger a person or Company property.
- Failure to immediately report a work-related injury or illness.
- Failure to report an accident that caused damage to Company property or equipment.
- Possession, distribution, sale, use or being under the influence of alcoholic beverages or illegal drugs while on the Company’s property, while on duty, or while operating a vehicle or potentially dangerous equipment leased or owned by the Company. This includes impairment by legal or prescribed drugs that adversely affects job performance, safety or conduct.
- Inappropriate or unsafe use of communication devices while driving a Company vehicle or while using a vehicle on Company time.
- Negligence that results in injury to personnel, or a visitor or any action that endangers the health or safety of others.

HumanGood reserves the absolute right to terminate your employment at any time without notice and without cause. HumanGood may provide notice and/or counseling regarding your conduct or performance so that you may take corrective action. This notice and/or counseling may be verbal or written and may include suspension or other forms of disciplinary action, up to and including termination of employment. However, the use of any corrective or disciplinary action in no way modifies the at-will employment relationship between you and HumanGood. Team members involuntarily terminated due to noncompliance with HumanGood’s policies are not eligible for rehire.

2.6 DRESS CODE & OTHER PERSONAL STANDARDS

HumanGood desires to maintain and promote a professional and caring image to those we serve and to the community at large, as well as to provide for safe and comfortable delivery of care. Dress, grooming and personal hygiene standards support this objective and contribute to the morale of all team members.

During business hours or when representing HumanGood, team members are expected to present a clean, neat, and professional appearance. Team members should appropriately dress and groom for the nature of our business and the type of work performed. In addition, strong-smelling perfumes, colognes, and body lotions are discouraged. Avoid clothing that can create a safety hazard. This is particularly true if your job involves interacting in person with customers/residents or visitors. Likewise, if your job involves interacting in person with customers/residents or

visitors, facial piercings/rings, ornaments, or jewelry such as tongue, lip, nose, and eyebrow rings and clips are prohibited. Tattoos, depending on size, content and location may be permitted.

HumanGood provides uniforms to all designated team members who are required to wear uniforms as a condition of employment. Cleaning of issued uniforms that require special care above normal washing will be provided by the community. The Company will not incur the cost if a team member chooses to launder their uniform at a different location.

If your supervisor feels your personal appearance or lack of grooming is inappropriate, you may be asked to leave the workplace until you are properly dressed and/or groomed. Under such circumstance, team members will not be compensated for the time away from work. You should contact Human Resources with any requests for religious or disability-related accommodations regarding anything contained in this policy.

Detailed dress code policy and attachments for select business units are located on myhumangood.org. Contact your supervisor for your local dress code or uniform requirements.

2.7 LIMITATIONS ON SOLICITATIONS, DISTRIBUTION & ACCESS

HumanGood will not construe or apply provision of any this section in a manner that interferes with team members' rights under Section 7 and 8 of the National Labor Relations Act, including protected concerted activity about wages, hours, or other terms and conditions of employment.

In order to maintain and promote efficient operations, discipline, and security, HumanGood maintains rules applicable to all team members that govern the solicitation and distribution of written material and entry onto the premises and work areas. All team members are expected to comply with these rules, which will be strictly enforced. Any team member who is in doubt concerning the application of these rules should consult with their supervisor immediately. These rules are:

- No team member shall sell merchandise or solicit or promote support for any cause or organization during their working time or during the working time of the team member(s) at whom such activity is directed. As used in these rules, "working time" excludes meal and break periods.
- No team member shall distribute or circulate any written or printed material, other than those approved by management for business purposes, in work areas at any time or during their working time or during the working time of the team member(s) at whom such activity is directed. "Work area" does not include the Company parking lots, gates or other similar outside areas where team members do not generally perform work-related duties.
- No team member shall enter or remain in HumanGood work areas for any purpose except to report for, be present during, and to conclude a work period.
- Under no circumstances will non-team members be permitted to solicit or distribute written material for any purpose on HumanGood property.

Non-team members are forbidden from entering upon HumanGood property at any time except on official business with the Company.

2.8 PERFORMANCE EVALUATION

HumanGood encourages supervisors and team members to discuss job performance and goals on an informal, regular basis throughout the year. HumanGood requires supervisors to check-in with their team members on a quarterly basis to help set expectations and goals, check on attainment of those expectations and goals, discuss barriers to success, discuss long and short-term career development and keep the lines of communication open.

Documented performance evaluations are conducted on a team member's completion of the ninety (90) day Introductory Period and annually in accordance with the Human Good Performance Management Policy. An evaluation will also be given within ninety (90) days after a transfer or a change in a team member's job classification. The purpose of evaluations is to let team members know how well they are performing their assigned job duties, identify and correct weaknesses, encourage and recognize strengths, outline goals, and discuss approaches for meeting goals. Evaluations will be reviewed in a private meeting between the team member and their immediate supervisor. Team members will have the opportunity to add their own written comments, and will be asked to sign the written evaluation. Signing the evaluation form does not mean the team member agrees or disagrees with the evaluation, but simply acknowledges the team member has seen the evaluation and received a copy.

Favorable evaluations do not guarantee increases in pay or promotions. Pay increases and promotions are solely within HumanGood's discretion and depend on many factors, including performance factors. Other factors include but are not limited to current market trends, the level and pay rate at which the team member was hired into the Company, etc. If the Company decides a pay increase is justified, the team member will be notified of the amount and when the increase will take effect.

2.9 OUTSIDE EMPLOYMENT

HumanGood respects each team member's right to engage in activities outside of employment such as those that are of a personal or private nature, to the extent that such activities do not create a conflict of interest as described in the Conflicts of Interest policy set forth in this Handbook, or adversely affect the team member's ability to perform their job. Under certain circumstances, if a team member's personal conduct begins to adversely affect their performance on the job, or begins to make it impossible for him or her to carry out any or all of their job duties while at work, appropriate disciplinary action up to and including termination of employment may be appropriate. For the purposes of this policy, self-employment is considered outside employment.

An example of an activity that might adversely affect a team member's ability to perform their job duties is outside employment. While HumanGood does not prohibit team members from holding other jobs, the following types of outside employment are prohibited:

Employment where a team member works directly for a resident. As such, you may not care for a resident beyond your employment relationship with HumanGood (including "private duty" through a third-party agency);

Employment where a team member works directly for any other team member, which would create a potential financial conflict;

Employment that conflicts with the team member's work schedule, duties and responsibilities or creates an actual conflict of interest;

Employment that impairs or has a detrimental effect on the team member's work performance with the Company or poses an increase safety or health risk for residents or other team members;

Employment that requires team members to conduct work or related activities during working times or using any of the Company's tools, materials or equipment; and

Employment that directly or indirectly competes with the business or the interests of the Company.

HumanGood will not assume any responsibility for team members' outside employment. Specifically, the Company will not provide workers' compensation coverage or any other benefit for injuries occurring from, or arising out of, such outside employment.

2.10 TEAM MEMBERS WHO ARE REQUIRED TO DRIVE

HumanGood provides Company-owned vehicles for approved selected team members to drive on Company-designated business. HumanGood will also reimburse team members for business use of personal vehicles in accordance with the standard mileage rate defined by the Internal Revenue Service.

All team members are expected to comply with all local, state, and federal laws while operating HumanGood vehicles and other equipment or driving a personal vehicle for business purposes. The Company may discipline team members who engage in unlawful conduct. For example, team members who are assigned to drive a Company-owned vehicle or otherwise required to drive as part of their job duties are required to have and maintain a valid driver's license, wear seat belts and travel at a safe speed. The improper, careless, negligent, destructive, or unsafe use or operation of equipment or vehicles, as well as excessive or avoidable traffic and parking violations, may result in disciplinary action, up to and including termination of employment. Team members will be responsible for all liabilities, fines, etc., that result from such traffic and parking violations, to the extent permissible under the law.

All team members who operate a personal or Company vehicle as part of their essential job functions must authorize HumanGood to obtain a Motor Vehicle Report in accordance with the Driver Pull Notice Policy. HumanGood may conduct periodic checks of the DMV records of all team members required to drive to perform their job duties. HumanGood retains the right to suspend or terminate a team member whose license is revoked, or who fails to maintain personal automobile insurance coverage, or who is uninsurable under the Company's insurance policy.

Team Members are to use their Company-owned vehicle for work-related purposes only, but may run incidental, personal errands during their commute to and from work or during their meal break.

This commuting and meal break time is the team member's time. Team members are not allowed to use HumanGood vehicles outside of normal work hours unless specifically authorized by senior management. Team members who have been assigned HumanGood-owned vehicles and are authorized to use the vehicle for personal reasons outside of normal work hours must account for all personal use miles for tax purposes.

Company vehicles are to be driven by authorized team members only, except in the case of repair testing by a mechanic. Any accidents in a Company vehicle or in a personal vehicle while driving on Company business, regardless of severity, must be reported immediately to the police and to the Human Resources department. Failing to stop after an accident and/or failing to report an accident may result in disciplinary action, up to and including termination of employment.

Drivers are responsible for the security of Company vehicles assigned to them. The vehicle engine must be shut off, ignition keys removed and vehicle doors locked whenever the vehicle is left unattended.

Driving and Mobile Phone Usage

If a team member's job requires the team member to keep a mobile phone turned on while they are driving, the team member is required to avoid all unnecessary distractions. The team member is expected to follow all state traffic and safety laws related to the use of communication and/or electronic devices. The team member is required to use a hands-free device. In emergency situations, when a team member is required to make or take a call, the team member is required to follow all applicable laws and proceed in the safest manner possible, which may require the team member to stop the vehicle during the call. Team members driving for Company purposes are prohibited from sending or receiving text messages or other electronic communications while driving.

Team members that are required to drive must review and sign the acknowledgement in the Auto Business Travel Safety Policy on my humangood.org.

2.11 MOBILE PHONE USE

Business Use

HumanGood provides mobile telephones ("cell phones") or cell phone stipends to select team members that require a mobile communication device in order to efficiently conduct business for HumanGood. Team members who are provided a Company mobile phone may use the phone for personal reasons only in case of an emergency, other personal use is prohibited. All mobile phone users must review the Cell Phone Policy on myhumangood.org and review and sign the Working with Technology Agreement.

Non-exempt mobile phone users must follow all time reporting requirements and any other policies governing hours worked. Nonexempt team members must refrain from checking emails, texts or performing any other work duties on their phone when not on-duty. If a nonexempt team member conducts any work, they must account for their time and report it to their supervisor as soon as

possible but no later than twenty-four (24) hours after engaging in the aforementioned work or prior to the end of the pay period.

Team Members should have no expectation of privacy in their workplace communications or in any communications when using Company phones. All messages sent and received, including personal messages, and all data and information stored on a Company phone are HumanGood's property, regardless of the content of the messages. HumanGood reserves the right to monitor, access, or inspect all Company phones, voicemail, text messages and related documents, including invoices, at any time in its sole discretion. Because the Company reserves this right, team members must understand that they have no right to privacy with respect to any messages or information created or maintained on HumanGood's technology resources, including personal information or messages, and no message or data placed on a Company-issued mobile phone should be considered private or confidential.

A team member that receives a stipend in order to use their personal cell phone for business use must guard against unauthorized access and use. All personal mobile devices used by HumanGood team members for business purposes must be password-protected.

Whether using a mobile phone issued by HumanGood or a personal mobile phone, business-related emails sent through the company server email system are subject to the Team member Handbook Technology Use – No Expectation of Privacy.

Personal Mobile Phones for Non-Business Use

In general, unless required by the job responsibilities and approved by the team member's manager, the use of personal mobile phones by team members is prohibited during work hours unless the team member is on an authorized break or meal period. If a team member abuses the use of their personal mobile phone, management may prohibit the team member from bringing their mobile phone into the work area or having the mobile phone in the team member's possession during working hours.

Other than in emergencies, personal mobile phones may only be used during work hours if the team member has been asked by management to use their personal mobile phone for company purposes and is being reimbursed for the business usage as stated above.

Personal cell phones must remain on silent or vibration or be turned off during normal working hours unless the team member is being reimbursed to use their personal cell phone for Company purposes or the team member is on their break or meal period. Cell phones with cameras must never have the camera turned on at work, photographs or videos taken with personal cell phone cameras may violate an individual's expectation of privacy, residents' rights or the Health Insurance Portability and Accountability Act. Team members must have prior permission to engage in any picture taking or videos on HumanGood property.

2.12 USE OF PHONE SYSTEM

HumanGood understands the importance of keeping in touch with family during the day and the occasional necessity of dealing with personal business. However, the company discourages

making or receiving excessive personal calls during work hours. Family and friends should be discouraged from calling team members while they are working and personal use of HumanGood telephones should be kept to a minimum. Continued abuse of Company telephones for personal use will not be tolerated and will result in disciplinary action, up to and including termination of employment.

Telephone invoices and logs are subject to review and team members may be required to reimburse HumanGood for any charges resulting from their personal use of Company-provided telephones or cell phones.

2.13 TECHNOLOGY USE

HumanGood's computer and other electronic systems ("Technology Resources"), including but not limited to, all computer, data, and telecommunication hardware and software, internal computer systems, file services, Intranet, external computer systems, Internet, telephone systems, voicemail systems, electronic mail systems, document transmission systems and handheld data processing devices, are critical to the Company's success. HumanGood's Technology Resources are considered Company property and are provided for business use only. All communications made using HumanGood's Technology Resources are subject to review and monitoring by the Company. The purpose of this policy is to explain how team members of HumanGood should use the Company's Technology Resources in ways that maximize the benefits of the technology to HumanGood and reduce the risk of loss or misuse of these resources and/or creation of liability for the Company.

Using Technology Resources

All Technology Resources should be used only in furthering HumanGood's business and never in violation of applicable laws. To this end, team members should not use any Technology Resources for the conduct of business other than the Company's business. Notwithstanding the above, team members may use the HumanGood's Technology Resources to:

- Prepare and store incidental personal data (such as personal calendars, personal address lists, and similar incidental personal data) in a reasonable manner provided such use does not conflict with any purpose or need of the Company; and
- Send and receive necessary personal communications through e-mail or text messaging; and
- Use the telephone system for brief and necessary personal calls, such as in the case of an emergency.

HumanGood's Technology Resources may not be used for transmitting, retrieving, or storing any communications of a discriminatory or a harassing nature. Harassment of any kind is prohibited. No messages with derogatory or inflammatory remarks about an individual's race, traits typically associated with race, color, religious creed, sex, gender, gender appearance or identity or expression, marital status, physical disability, mental disability, medical condition, pregnancy or related conditions, childbirth or related conditions, breastfeeding or related conditions, age, national origin, ancestry, genetic characteristics, sexual orientation, political affiliation, military

or veteran status, citizenship status, or any other basis protected by law, shall be transmitted or received. HumanGood prohibits the use of abusive, profane or offensive language received or transmitted through the Company's Technology Resources. HumanGood's Technology Resources may not be used for any purpose that is illegal, against Company policy, causes discredit to the Company or is contrary to the best interests of the Company. Use of the HumanGood's Technology Resources for personal gain or profit, or for personal reasons that would impede the Company's ability to conduct business, is prohibited.

Each team member is responsible for the content of all text, audio or images that the team member places on or sends over the HumanGood's Technology Resources. No electronic communication may be sent which hides the sender or represents the sender as someone else.

HumanGood's Technology Resources are not for personal communications or use unless with prior authorization. Where authorized, personal communications or use should be kept to a minimum. The Company assumes no liability for loss, damage, destruction, alteration, disclosure, or misuse of any personal data or communications transmitted over or stored on the HumanGood's Technology Resources. The Company further accepts no responsibility or liability for the loss or non-delivery of any personal e-mail communication and suggests that team members avoid storing private or confidential personal information on any of the HumanGood's Technology Resources.

Team members are not allowed to record conversations on human good property. It was

Team Members should never permanently delete or transfer any data, communication or other materials from HumanGood's Technology Resources systems, including its email servers, unless permission is granted by the IT and Human Resources.

2.14 NO PRIVACY RIGHTS

As a standard practice the Company provides Technology Resources only to further its own business aims. Thus, team members should not expect and do not have any privacy rights when using HumanGood's Technology Resources. Although passwords may be utilized to restrict access to certain systems, the passwords are designed to protect against unauthorized access—not access by authorized HumanGood representatives. The Company retains the right to enter into any of its Technology Resources to inspect and review any and all data placed in the systems at any time. Because HumanGood reserves this right, no message or data placed using the Company's Technology Resources should be considered private or confidential. As such, all information, documents and messages stored using the HumanGood's Technology Resources, should be related to the business of the Company.

2.15 RISK MANAGEMENT

Managing risk in a technology environment is a complex task. However, individuals can contribute significantly to reduced risk by exercising care when using Technology Resources. Exercising care means protecting the interests of HumanGood when working with or transmitting documents over computer systems. Exercising care also involves remembering that any activity carried on while using outside networks through e-mail, internet access, or other service providers reflects on

HumanGood when it is carried out using the Company's Technology Resources. Following are some examples of behavior that reduces risk:

- Always consider the confidentiality of documents and information transmitted over outside services. This involves faxing, use of e-mail, cellular calls, text messaging, diskettes/CDs, and other technology options. Substantial damage can be done by routing documents to the wrong person or organization, exposing documents or messages to interceptions and theft, inadvertently sending information on dirty diskettes/CDs, transmitting confidential information during cellular calls, etc.
- Always verify addresses such as e-mail and fax numbers before sending information so that it does not fall into the wrong hands.
- Be aware of the rights of others to their own copyrighted information. Respect all copyrights and do not copy, retrieve, modify or forward copyrighted materials, except where expressly allowed by the copyright law or with express written permission from the owner.
- Always use appropriate fax cover pages that contain all the information necessary to see that delivery is made to the proper person.
- When transferring documents outside the Company, use "clean" diskettes/CDs. Documents deleted from diskettes/CDs may leave residual data that can be "scavenged." To prevent this, use new diskettes/CDs.
- USB and External Drives should not be used unless encrypted and approved by the Information Technology department.

2.16 INTERNET & E-MAIL USE

Access to the Internet is provided to team members to accomplish job responsibilities more effectively. Internet usage, unless otherwise authorized, must be limited to that required by HumanGood business necessity. The use of the Internet is a privilege, not a right, which may be revoked at any time for inappropriate conduct. HumanGood expects that its team members will use these resources in a responsible manner and for business-related purposes only. Team members should not use the internet or intranet for personal, frivolous or inappropriate use, such as accessing, downloading from, or contributing to the following (except in relation to a specific Company matter):

- Indecent or sexually-oriented materials
- Sports sites
- Job-search, house-search/sales sites
- Entertainment sites
- Gambling sites
- Games, humor
- Drug-oriented sites
- Personal pages of individuals
- Chat rooms
- Politically-oriented sites or sites devoted to influencing the course of legislation or public policy
- Email from a personal email account
- Social networking sites (such as Facebook, Instagram, Twitter, and Tik Tok)

Downloading of software applications, even if they are free, is not allowed unless it is necessary for Company business and approved by the Information Technology department.

HumanGood reserves the right to monitor the amount of time spent using online services and the sites visited by team members. The Company reserves the right to limit Internet access to include or exclude certain Internet sites and/or services.

E-mail is not private communication because others may be able to read or access the message. E-mail may best be regarded as a postcard rather than as a sealed letter. In addition to risk management issues surrounding the use of e-mail, team members are expected to abide by the following guidelines:

- E-mail messages are considered business records and may be subject to discovery. Be aware of this possibility when using HumanGood's Technology Resources to send e-mail both to other Company team members and to persons not employed by the Company. Formulate the message accordingly.
- Never send abusive, sexist, racist or defamatory e-mail messages that could be considered in violation of HumanGood's Anti-Harassment and Anti-Discrimination, Prohibited Conduct, or Workplace Violence Prevention Policies.
- Do not use e-mail for sensitive or time critical matters. If speed is essential, use the telephone. E-mail does not convey emotion well. If the subject matter is sensitive, do not risk misunderstandings – use the telephone.
- Team Members should never send an e-mail message unless they are sure of the correct address of the recipient.

Personal Web sites and Web logs (blogs) have become prevalent methods of self-expression in our culture. Team members may not use Company computers to engage in blogging while at work. HumanGood respects the right of team members to use these mediums during their personal time. If a team member chooses to identify himself or herself as a Company team member on a Web site or Web log, they must adhere to the 6.5 Social Media section of this Handbook.

2.17 SOCIAL MEDIA POLICY

In the rapidly expanding world of electronic communications, *social media* can mean many things. Social media includes all means of communicating or posting information or content of any sort on the Internet, including to your own or someone else's web log or blog, journal or diary, personal web site, social networking or affinity web site, web bulletin board or a chat room, whether associated or affiliated with HumanGood.

The same principles and guidelines found in the Team Member Handbook and other Company policies, practices, and procedures apply to your online posts as they do to your in-person behavior. You are solely responsible and accountable for what you post online. Before creating online content, consider the risks. Any content you post that adversely affects your job performance, other

team members, residents, family members, suppliers, or contractors who work for the Company or the Company's business interests may result in disciplinary action up to and including termination.

Know and follow the rules

Carefully review and understand all of HumanGood's policies and procedures, especially in the Team Member Handbook policies *Prohibited Conduct and Disciplinary Action, Technology Use – No Expectation of Privacy, Ethics, Corporate Compliance, HIPAA, Anti-Harassment and Discrimination, and Workplace Violence Prevention*. Ensure your online postings are consistent with these policies. HumanGood will not tolerate postings that violate these policies, especially those that contain discriminatory or harassing remarks, threats of violence or similar inappropriate or unlawful conduct.

Be respectful

Always be fair and courteous to other team members, residents, family members, suppliers, and contractors who work for the Company. You are more likely to resolve work-related complaints by speaking directly with your fellow team members or by using the *Open Door* procedures or the Human Resources Department rather than by posting complaints to a social media site. If you choose to post criticisms, avoid using statements, photographs, and video or audio that others could perceive as malicious, obscene, threatening, or intimidating; disparaging residents or their family members, team members, or suppliers, or that might constitute harassment or bullying. Also avoid posting any content about residents or any content that reveals private medical information (HIPAA). Examples of inappropriate conduct include offensive posts meant to harm a somebody's reputation or posts that could contribute to a hostile work environment based on race, sex, disability, religion or any other status protected by law or Company policy.

Be honest and accurate

Make sure you are honest and accurate when posting information or news. If you make a mistake, correct it quickly. Disclose any previous posts you have altered. Remember, the internet archives almost everything; therefore, even deleted posts can be searched. Never post false information or rumors about HumanGood, team members, customers, suppliers, or other individuals working for the Company.

Post only appropriate and respectful content

Maintain confidentiality about HumanGood trade secrets and other private or confidential information. Trade secrets may include information about developing systems, processes, products, know-how and technology. Do not post internal reports, policies, procedures or other Company-related confidential communications.

Do not create a link from your blog, website or other social networking site to any of the HumanGood or the Company affiliate's website without identifying yourself as a Company team member.

Express only your personal opinions. Never represent yourself as a spokesperson for HumanGood. If the Company is a subject of the content you are creating, be clear and open that you are a team member. Make it clear that your views do not represent those of HumanGood, other team members, residents, family members, contractors, suppliers or other individuals working for the Company. If you publish an online blog or post related to your work or subjects associated with the senior living industry, make it clear you are not speaking for the Company. Consider including a disclaimer such as, “The ideas expressed in this post are my own and do not necessarily reflect the views of HumanGood.”

Using social media at work

Refrain from using social media while on work time or with equipment HumanGood provides, unless it is necessary for work and allowed by your manager and consistent with HumanGood policies and procedures. The use of InspireMe and www.myhumangood.org is authorized during work time. Do not use Company email addresses to register on social networks, blogs or other online tools for personal use. Do not use Company logos in a manner that might create commercial confusion.

Retaliation is prohibited

HumanGood forbids taking a negative action against any team member for reporting a possible deviation from this policy or for cooperating in an investigation.

Media contacts

You should not speak to the media on HumanGood’s behalf without prior written permission HumanGood’s General Counsel and the responsible corporate office senior executive. Direct all media inquiries to HumanGood’s Corporate Compliance Hotline, the General Counsel or the responsible senior executive.

Nothing in this policy restricts communications protected under any applicable federal or state law, including concerted activity about wages, hours, or other terms and conditions of employment under the National Labor Relations Act.

Any team member who violates any part, or the intent, of this policy will be subject to disciplinary action, up to and including termination.

2.18 COMPANY PROPERTY & FACILITIES

All HumanGood property and facilities, including but not limited to, desks, storage areas, work areas, lockers, file cabinets, computer systems, computers, telephone systems, telephones (including any Company-issued cell phones or other electronic devices), voicemail systems, tools, equipment and Company-owned vehicles are Company property and must be properly used and maintained according to Company rules and regulations. All HumanGood property must be kept clean and is to be used only for Company business. HumanGood reserves the right, at any time and without prior notice, to inspect any and all of the Company’s property or facilities to ensure compliance with Company rules and regulations. Such inspections may be

conducted during or after business hours and in your presence or absence. Thus, team members should not expect, and do not have, any privacy rights with respect to HumanGood property and facilities. The Company may periodically need to assign and/or change “passwords” and personal codes for voicemail, e-mail, and computers. These communication technologies and related storage media and databases are to be used only for Company business and they remain the property of the Company. HumanGood reserves the right to keep a record of all passwords and codes used and/or to override any such password system in its sole discretion.

Prior authorization must be obtained before any HumanGood property may be removed from the premises.

Office equipment such as photocopiers, fax machines, computers, printers, postage meter, and supplies are not to be used for any personal business of any kind. All equipment and supplies are to be used for business purposes only. Discovery of team members using equipment and supplies for personal business not related to HumanGood will be cause for disciplinary action, up to and including termination.

2.19 SMOKING

In keeping with HumanGood's intent to provide a safe and healthful work environment and to abide by all state and local ordinances dealing with smoking in the workplace, the Company allows smoking only in designated smoking areas outside the building. Team members may smoke but only during authorized breaks and meal periods. This policy applies to smoking in any form using tobacco products (pipes, cigars and cigarettes) and “vaping” with e-cigarettes.

Communities and work locations may designate the entire work site as a smoke-free location, check with your supervisor for your local smoking policy.

2.20 DRUG & ALCOHOL POLICY

HumanGood strives to provide a safe environment for team members and others and to minimize the risk of accidents and injuries. Accordingly, each team member has a responsibility to co-workers and the public to deliver services in a safe and conscientious manner. Continuing research and practical experience have proven that even limited quantities of illegal drugs, abused prescription drugs or alcohol can impair reflexes and judgment. This impairment, even when not readily apparent, can have catastrophic consequences. Moreover, studies have shown that impairment by controlled substances may last long after the user believes the effects have worn off. For these reasons, HumanGood has adopted a policy that all team members must report to work and, remain while at work, completely free of illegal drugs, abused or non-prescribed prescription drugs and alcohol.

2.21 DRUG USE / DISTRIBUTION / POSSESSION / IMPAIRMENT

HumanGood strictly prohibits the use, sale, attempted sale, conveyance, distribution, manufacture, purchase, attempted purchase, possession, cultivation and/or transfer of illegal drugs or other unlawful intoxicants at any time, and in any amount or any manner, regardless of occasion. “Illegal drugs” means all drugs whose use or possession is regulated or prohibited by federal, state or local law. These include prescription medication that is used in a manner inconsistent with the prescription or for which the individual does not have a valid prescription.

Team Members are also prohibited from having any such illegal or unauthorized controlled substances in their system while at work.

Included within this prohibition are lawful controlled substances that have been illegally or improperly obtained.

HumanGood treats medical cannabis the same as any other altering drug and will not tolerate team members being impaired at work.

2.22 ALCOHOL USE / DISTRIBUTION / POSSESSION / IMPAIRMENT

All team members are prohibited from distributing, dispensing, possessing or using any beverage or medicine containing alcohol while at work or on duty and from coming onto HumanGood premises, reporting to work or working with alcohol in their systems. Furthermore, lawful off-duty alcohol use, while generally not prohibited by this policy, must not interfere with a team member's job performance.

2.23 CANNABIS USAGE AT WORK

While the use of cannabis for medicinal purposes is legal in some states, the use or possession of cannabis during work time and/or on Company property is strictly prohibited and will be treated the same as alcohol. Team members may not be under the influence of cannabis at work under any circumstances. HumanGood may, at Company expense, conduct reasonable suspicion testing and testing after on-the-job accidents.

Team members requesting a medical cannabis accommodation should contact human resources to engage in the Americans with Disabilities Act (ADA) interactive accommodation process.

2.24 PRESCRIPTION & OVER-THE-COUNTER DRUGS

This policy does not prohibit the possession and proper use of lawfully prescribed or over-the-counter drugs. However, a team member taking medication should consult with a health care professional or review dosing directions for information about the medication's effect on the team member's ability to work safely, and promptly disclose any work restrictions to a supervisor or Human Resources. Team members are not required to reveal the name of the medication or the underlying medical condition, unless such would impact the team member's ability to work safely.

HumanGood reserves the right to transfer, reassign, place on leave of absence or take other appropriate action regarding any team member during the time the team member uses medication

that may affect their ability to perform safely. The Company will comply with all requirements pertaining to providing reasonable accommodations to the extent required by applicable law.

2.25 COUNSELING & REHABILITATION

Team Members who voluntarily seek help for substance abuse (self-referral) by contacting the Company will be provided an opportunity to pursue counseling and rehabilitation. HumanGood will make available to these team members information about counseling and rehabilitation services. A team member who is receiving counseling and/or treatment for substance abuse may use available PTO or, if eligible, family and medical leave. Health insurance often covers the costs of such services, but costs not covered must be paid by the team member. The team member may not return to work until released by a treatment provider to do so and the team member receives a negative result on a return-to-work drug and/or alcohol test (as appropriate for that individual).

A team member's decision to seek help voluntarily will not be used as a basis for disciplinary action, although the individual may need to be transferred, given work restrictions or placed on leave, as appropriate. A request for help is considered voluntary only if it is made before the team member is asked to submit to any drug or alcohol test, is discovered to have otherwise violated this policy, or has had job performance deficiencies or behavioral issues, even if related to the substance abuse problem, that must be addressed through the disciplinary process.

In certain situations, outlined below, team members may be subject to a drug and/or alcohol test. If the results of the test are positive, disciplinary action will be taken, up to and including termination of employment. HumanGood will pay the full cost of any drug/alcohol testing that it requires of a team member, including the reasonable cost of any transportation to and from the designated testing facility.

For information on the types of drug testing conducted during employment please refer to Drug Testing in this Handbook.

2.26 AUTHORIZED USE OF ALCOHOLIC BEVERAGES

From time to time, the use of alcohol beverages may be permitted at company-sponsored social events, subject to the approval by the Company. The permissible use of alcohol at these events does not constitute a violation of this policy. However, team members are expected to use their discretion and good judgment in participating in these events. In addition, the drinking of alcoholic beverages by persons under the legal drinking age will not be tolerated, and will be subject to appropriate disciplinary action.

2.27 GIFTS, TIPS & FINANCIAL DEALINGS WITH RESIDENTS

HumanGood aims to treat each resident equally well. Team members must never give preferred treatment to a resident. At no time should a team member's relationship with a resident be other than fulfilling their job duties for a resident or residents.

HumanGood allows the disbursement of cash gifts to team members only from, where applicable, the community Residents' Council annual team member appreciation fund. This is an honorarium and does not constitute financial elder abuse. In some communities, this occurs twice a year.

All team members are strictly prohibited from accepting any gifts, gratuities (tips), favors, loans, assets, property, or personal payment from financial dealings from a resident or their family members or friends. Gifts include, but are not limited to, cash, checks, property, gift cards, and items of value. Knowingly receiving assets from a deceased resident by gift or bequest is also prohibited. Any of these things from a resident must be politely refused.

Team members may not enter into any real estate arrangements with a resident such as leases, acquisitions or dispositions. Similarly, team members should never enter into any business arrangement with a resident.

Team members may purchase assets from a resident if they have prior permission from the Executive Director. Occasionally, residents may be interested in disposing of certain assets by selling those assets to team members. Such sales are arranged by the Executive Director or their designee and are available to all team members on an equal basis. The acquiring team member must obtain a bill of sale from the resident and give a copy of the bill of sale to the Executive director.

Team members may only receive a cash or monetary gift from the Residents' Council team member appreciation fund at applicable Life Plan Community locations where there is a fund established. HumanGood allows cash or monetary gifts to team members only from their community's Residents' Council team member appreciation fund. Residents may express their appreciation to team members who have served them throughout the year by contributing to a fund shared by all team members through an equitable system of distribution up to a maximum distribution of twice a year, typically once during the holiday season at the end of a year. This gift constitutes in aggregate a sum which might have been given as tips throughout the year, and is greatly appreciated by team members. The fund is collected and allocated by a committee of residents under the general direction of the Residents' Council and the community's Human Resources Department. These payments are not coming from HumanGood, but this tip from the residents is considered taxable income by the IRS. Therefore, the Company will adjust team members' taxable income during the pay period they receive the tip to ensure their taxes are appropriate. If there are insufficient funds in a team member's paycheck to cover the required taxes, the Company will issue a W-2c Corrected Wage and Tax Statement.

Team members may not work directly for a resident. If a resident asks a team member to work directly for them (either once or on a continuing basis), the team member should politely refuse and advise the resident they will notify their supervisor to assist in arranging for the requested service. Team members also may refer the resident to their supervisor to assist the resident in obtaining outside services. HumanGood does not allow team members to work directly for a resident. A team member may not care for a resident beyond their employment relationship with the Company ("private duty" through a third-party agency). HumanGood considers this a conflict of interest.

Any team member who has knowledge of any gifts, tips or financial dealings with residents, their family members or friends MUST report it immediately to a supervisor or on the Compliance Hotline at (888) 740-4636.

SECTION 3: ATTENDANCE AND TIME-OFF

3.1 ATTENDANCE & PUNCTUALITY

HumanGood expects team members to be reliable and to be punctual in reporting for scheduled work. Absenteeism and tardiness place a burden on other team members and on HumanGood. In rare instances when you cannot avoid being late to work or are unable to work as scheduled, you should notify your supervisor as soon as possible in advance of the anticipated tardiness or absence.

3.2 TARDINESS

Team members should clock in no more than seven (7) minutes before their scheduled start times and should be at their workstation and ready to work within the amount of time it would reasonably take a person to traverse the distance from the time clock to the workstation. Frequent patterns of arriving at the workstation after your scheduled start time or arrival to the workstation more than (7) seven minutes or more is considered tardy.

3.3 UNPLANNED ABSENCES

If you find that you must be out due to illness or other compelling personal matter, you must notify your supervisor within two (2) hours of your scheduled working time of the reason for such absence. In addition, you must call in at the beginning of each day that you are scheduled to work unless you are on an approved leave of absence. Any team member who is on an excused absence for three (3) or more days due to illness or injury may be required to submit a physician's release prior to returning to work.

If you become ill while at work or find it necessary to stop working before the end of your scheduled shift, you must first report to your supervisor. Unless there are extenuating circumstances, do not leave before the end of your schedule without first securing approval from your supervisor. If your supervisor is not available, contact someone in authority for approval before leaving. Team members who leave the premises for reasons that are not related to their job must clock out when they leave.

In all instances of absence, the team member is responsible to advise their supervisor or department manager when they will return to work. Team members must not assume the supervisor will know.

3.4 NO CALL / NO SHOW & JOB ABANDONMENT

If you fail to report to work without any notification to a supervisor and the absence continues for a period of three (3) business days, the Company will consider that you have abandoned and terminated your employment. A team member with excessive and/or unauthorized absences or tardiness that otherwise are not related to an approved medical leave may be subject to disciplinary action, up to and including termination of employment.

3.5 DISCIPLINARY ACTION FOR ATTENDANCE

A team member with excessive and/or unauthorized absences or tardies that otherwise are not related to a protected leave may be subject to disciplinary action, up to and including termination of employment. In addition to excessive tardiness and unplanned absences, other attendance issues include unauthorized overtime and missed meals, missed time punches, excessive use of PTO for unplanned absences, exhaustion of paid time off/sick leave, patterns of absences around days off.

Absences due to approved leave categories (e.g., Military leave, Family and Medical Leave, California Family Rights Act Leave, Pregnancy Disability Leave, Washington Family Leave, and Washington Family Care Act, COVID-19, etc.) will not subject a team member to disciplinary action under this policy. Notifications to management is required for protective leaves when possible is required.

In all instances of absence, the team member is responsible to advise their supervisor or department manager when they will return to work. Team members must not assume the supervisor will know.

3.6 HOLIDAYS

HumanGood grants paid time off to full-time team members on the holidays listed below:

- New Year's Day
- Martin Luther King, Jr. Day
- Memorial Day
- Independence Day
- Labor Day
- Thanksgiving Day
- Christmas Day

How HumanGood Observes Holidays

HumanGood observes nationally-recognized holidays on the days listed above, except when the holiday falls on a Saturday or Sunday. A nationally-recognized holiday that falls on Saturday is observed on the preceding Friday. A nationally recognized holiday that falls on Sunday is observed on the following Monday.

How HumanGood Pays Holidays

Holiday pay is calculated based on the team member's straight-time pay times (8) eight hours for full time benefitted team members. Holiday pay and time worked on a nationally recognized holiday is always paid on the day our nation recognizes the holiday, rather than the day the Company observes the holiday.

When full-time nonexempt team members work on the day of the nationally recognized holiday, they are paid as follows:

- Holiday pay plus the regular rate of pay for all hours worked on the Martin Luther King Jr. Day, Memorial Day, Independence Day, and Labor Day.
- Holiday pay plus one-and-one-half times the regular rate of pay (1.5 x the regular rate) for all hours worked on New Year's Day, Thanksgiving Day, and Christmas Day.

When Part Time or Per Diem team members work on the day of the nationally recognized holiday, they are paid as follows:

- One-and-one-half times the regular rate of pay (1.5 X the regular rate) for all hours worked on Martin Luther King Jr. Day, Memorial Day, Independence Day, and Labor Day.
- Two times the regular rate of pay (2 X the regular rate) for all hours worked on New Year's Day, Thanksgiving Day and Christmas Day.

If a nationally recognized holiday falls during an eligible team member's approved paid absence, and the team member uses Paid Time-Off (PTO), holiday pay will be provided instead of using PTO. If the paid absence is using Extended Sick Leave (ESL), the team member does not receive holiday pay.

Holiday pay is not considered hours worked when computing overtime, but is considered premium pay under applicable federal and/or state wage and hour law.

3.7 PAID TIME OFF (PTO) & PAID SICK LEAVE

Paid Time Off (PTO) is a single bank of hours to use when you need time off for a variety of reasons including vacation, if you or a family member is sick, you need time to handle personal issues, you want to observe religious holidays, or you just need a short break from work.

Full-time team members are eligible to accrue PTO on the first day of employment. Temporary, Part Time and Per Diem team members do not accrue PTO, however may accrue sick leave based on location (refer to Paid Sick Leave section).

Full-time team members accrue PTO from the first day of employment in accordance with the accrual schedule below. PTO accrues on a prorated basis. To accrue the Max Accrual Hours Per Pay Period listed in the chart below a team member must work at least 75 hours during the pay period, for those that work less than 75 hours in a pay period the PTO accruals are prorated. For those that work in excess of 75 hours, the Max Accrual Hours Per Pay Period are the maximums that can be earned.

PTO Accrual Schedule

Length of Service	Accrual Rate Per Paid Hour (Exclude ESL)	Max Accrual Hours Per Pay Period	Annual Days Equivalent	Maximum Accrual
Less than 3 years	0.082051282	6.15	20	30 days / 240 hours
4 through 5 years	0.090256410	6.77	22	33 days / 264 hours
6 through 10 years	0.102564103	7.69	25	37.5 days / 300 hours
11 through 15 years	0.123076923	9.23	30	45 days / 360 hours
16 through 20 years	0.131282051	9.85	32	48 days / 384 hours
21 years or more	0.143589744	10.77	35	52.5 days / 420 hours

For Example:

- Jill is new hire and she worked 75 hours, therefore 75 times (.082051282) is equal to 6.15 hours for the pay period.
- Jack is a new hire and he worked 60 hours, therefore 60 times (.082051) is equal to 4.92 hours for the pay period.

Team members may use PTO once it is accrued, subject to this policy. PTO will continue to accrue to a maximum of the days and hours noted above based on the team member’s length of service. Once a team member reaches the maximum accrual, no further PTO will accrue until PTO usage reduces the accrual below the maximum accrual.

Team members must have a positive accrued PTO balance to receive pay during an approved PTO. A supervisor may authorize, in advance, a team member’s request for unpaid time off up to a maximum of three (3) days, and only if a team member does not have accrued PTO available. Unpaid time off beyond three (3) days must be requested as a Personal Leave. Such approvals are at the sole discretion of the supervisor based on legitimate business needs at the time of the request.

If a holiday occurs during a team member’s PTO period, the team member will not be charged PTO for that day, but will be paid holiday pay for their regularly scheduled hours. Team members who are required to interrupt their PTO to report to work will be allowed to take the unused PTO at a later date.

Team Members are required to use available PTO or Paid Sick Leave (if applicable) before any unpaid time off will be authorized in accordance with applicable laws, except when team members are denied work for safety reasons such as a positive COVID test, company, health department or medically directed quarantine.

Team members on an approved leave of absence will accrue PTO on a pro-rata basis only if receiving PTO during the leave of absence. If a team member is on a leave of absence and using only Extended Sick Leave (ESL) or is an unpaid status, the team member will not accrue PTO.

Upon termination of employment, team members will be paid for unused PTO that has been accrued through the last day of paid employment. Team members will not be paid for unused PTO except on separation of employment or during the once-a-year PTO cash out detailed in the PTO cash out policy. PTO is earned and paid out based on base pay.

PTO must be scheduled with and approved by the team member's manager in advance. Although efforts will be made to accommodate team members' requests to take PTO at a specified time, the manager will consider business needs when evaluating PTO requests. If two (2) or more team members request PTO at the same time, but the manager determines it is not feasible to grant both requests, the manager ordinarily will grant PTO requests based on the earlier documented PTO request.

If sickness occurs immediately before planned PTO time, causing absence from work, PTO time may be rescheduled. For unplanned absences that extend a planned time off HumanGood may require a physician's verification of hospitalization, accident or illness.

HumanGood does not grant PTO or pay advances.

In order to be absent from an entire work day, all scheduled hours must be accounted for, therefore a full-time team member must take sufficient PTO to cover their normal scheduled shift.

For nonexempt team members, PTO time must be taken in one (1) minute increments. Exempt team members must take full day increments of PTO time for absence, unless otherwise allowed by law.

3.8 PAID SICK LEAVE (PART TIME & PER DIEM TEAM MEMBERS ONLY)

Eligibility & Accrual

Part Time and Per Diem team members who do not accrue PTO are eligible to accrue and use paid sick leave (PSL) in accordance with state and local laws and ordinances. When there are multiple PSL laws governing a HumanGood location, HumanGood will adopt the most generous application of the laws. Contact your local Human Resources representative if you have questions regarding paid sick leave laws applicable to your location. PSL accruals are also identified on your wage and earning statement.

Full-time team members do not accrue sick leave, however, may have sick leave or paid sick leave available based on a prior classification or program. Any sick leave or paid sick leave available and identified on their wage statement may be used in accordance with this policy.

Use of Paid Sick Leave

For more information on state-specific accrual rates and permitted uses of PSL, please refer to Appendix A. If you have additional questions, contact your local Human Resources representative to determine which paid sick leave law is applicable to your location and to determine your accruals and permitted uses for PSL.

Team Members who wish to use PSL must submit a request to their supervisor, including the expected duration of the absence if possible. When the need for leave is foreseeable, team members must make a good-faith effort to provide advance notice. When the need for leave is not foreseeable, team members must provide notice as soon as practicable. If available, accrued PSL will be applied to any unscheduled absences or tardiness.

Extended Sick Leave (ESL) (Grandfathered ABHOW & Be.Group)

Team members that were employed prior to adoption of a Paid Time Off (PTO) program may have Extended Sick Leave in a separate bank from the PTO bank, which is comprised only of sick leave time you had accumulated but not used prior to the PTO conversion. The ESL bank is exclusively for use during:

The ESL bank may be used for an absence of greater than 3 (three) consecutive sick days with a medical justification, any COVID leave or medically protected leave. ESL can only be approved in the system by the local HR Director.

Requested use of ESL that cannot be validated will automatically be converted to any other forms of paid leave that the team member has available such as PSL or PTO. Team members that have no available balance, and are unable to provide justification for their ESL requests, will be considered absent without leave for disciplinary purposes. The ESL bank cannot be used for a personal leave. ESL hours aren't considered hours worked when calculating overtime.

ESL hours may be used for partial days. Your ESL hours will be available to use as long as you remain in a benefited status. ESL hours cannot be cashed out while you are actively employed, and they will not be paid out if your employment with HumanGood ends. Your ESL bank will not accumulate any additional hours.

Payment of Accrued Sick Leave Upon Separation

Team members are not entitled to payment for accrued but unused sick leave upon separation, whether voluntary or involuntary. However, if the team member separates from the company and is rehired, previously accrued, but unused, sick leave shall be reinstated in accordance with applicable laws.

3.9 FAMILY / MEDICAL LEAVE

HumanGood recognizes that a team member may need to be absent from work for an extended period of time for family and/or medical reasons. In that regard, the Company complies with

federal and state law provisions for family, medical, and pregnancy disability leaves. HumanGood will grant these leaves to team members as required by state and federal law in effect at the time leave is granted. The Company intends to grant leave benefits only to the extent the law requires. For more information on state-specific leave entitlements, please refer to Appendix A.

You must request leave in writing as far in advance as possible. HumanGood may also require that you contact a third party leave administrator. A team member on leave must contact their supervisor or Human Resources before the end of their scheduled leave to arrange for their return and to provide any necessary medical release. If you have not contacted your supervisor or Human Resources before the end of your scheduled leave, we will assume that you do not plan to return and you have terminated your employment. If you are unwilling or unable to return to work with or without an accommodation at the conclusion of the leave you are allowed, your employment may be terminated.

3.10 FAMILY & MEDICAL LEAVE ACT (FMLA)

Team Members Who May Take Leave: Before you may seek a leave of absence under FMLA you must:

- Have been employed HumanGood for at least a total of twelve (12) months; and
- Have worked at least 1,250 hours in the previous twelve (12) months; and
- Work within seventy-five (75) miles of fifty (50) or more of the Company's other team members.

Reasons for Taking Leave: You may request an unpaid leave for any of the following reasons:

- For your own serious medical condition which makes you unable to perform your job duties; or
- For incapacity due to pregnancy, prenatal medical care, or child birth; or
- To care for your child after birth, the placement of a child with you in connection with the adoption or foster care of the child by you, or the serious medical condition of your child; or
- To care for your spouse, registered domestic partner, or parent who has a serious medical condition; or
- To care for a current member of the Armed Forces, including the U.S. National Guard or Reserves, who is your spouse, child, parent, or next-of-kin and who is undergoing medical treatment, recuperation, or therapy, is otherwise in outpatient status, or is otherwise on the temporary disability retired list, for a serious injury or illness incurred in the line of duty on active duty (or a serious illness or injury that existed before the beginning of the service member's active duty which was aggravated by service in the line of duty on active duty) that may render the service member medically unfit to perform their duties; or
- To care for a veteran who is your spouse, child, parent, or next-of-kin and was discharged or released under conditions other than dishonorable, and who is undergoing medical treatment, recuperation, or therapy, for a serious illness or illness incurred in the line of duty on active duty (or a serious illness or injury that existed before the beginning of the service member's active duty which was aggravated by service in the line of duty on active

duty), that manifested itself before or after the service member became a veteran, and who was a member of the Armed Forces, including the U.S. National Guard or Reserves, at any time during the period of five (5) years preceding the date on which the veteran undergoes that medical treatment, recuperation, or therapy; or

- For a qualifying exigency, including attending certain military events, arranging for alternative childcare, addressing certain financial and legal arrangements, attending certain counseling sessions, and attending post-deployment reintegration briefings, arising out of the fact that your spouse, child, or parent is on active duty in a foreign country (or has been notified of an impending call or order to active duty in a foreign country) in the Armed Forces, including the U.S. National Guard or Reserves, in support of a contingency operation.

Length of Leave Allowed: The maximum time you will be allowed to take family leave or a “qualifying exigency” leave, if you are eligible, is twelve (12) workweeks in a twelve (12) month period. Team Members must use any accrued Paid Time-Off (PTO), Paid Sick Leave and/or Extended Sick Leave (ESL) for FMLA leave. This paid time counts against your FMLA entitlement. You are required to follow the Company’s paid leave policies with respect to use of that leave.

The maximum time you will be allowed to take family leave to care for an active duty member of the Armed Forces as described above, if you are eligible, is twenty-six (26) workweeks in a twelve (12) month period. HumanGood may require or you may elect to use any accrued PTO, family leave, or medical or ESL for any part of the twenty-six (26) week period. This paid time counts against your FMLA entitlement. You are required to follow the Company’s paid leave policies with respect to use of that leave.

HumanGood will use a “rolling” twelve (12) month period measured backward from the date you begin a leave to determine how much leave time is available to you, unless another calculation is required by law.

Serious Medical Condition: A serious medical condition is an illness, injury, impairment, or physical or mental condition that involves either an overnight stay in a medical care facility, or continuing treatment by a health care provider for a condition that either prevents you from performing the functions of your job, or prevents the qualified family member from participating in school or other daily activities.

Subject to certain conditions, the continuing treatment requirement may be met by a period of incapacity of a more than three (3) consecutive calendar days combined with at least two (2) visits to a health care provider or one (1) visit and a regimen of continuing treatment, or incapacity due to pregnancy of either yourself or your spouse, or incapacity due to a chronic condition. Other conditions may meet the definition of continuing treatment. Check with Human Resources if you are unsure whether the treatment you are receiving for your condition meets the definition of continuing treatment.

Use of Leave: You do not need to use this leave entitlement in one (1) block. Leave can be taken intermittently or on a reduced leave schedule when medically necessary. You must make reasonable efforts to schedule leave for planned medical treatment so as not to unduly disrupt

HumanGood's operations. Leave due to qualifying exigencies may also be taken on an intermittent basis.

Advance Notice and Medical Certification: You may be required to provide HumanGood advance leave notice and medical certification. Your leave request may be denied or your leave delayed if these requirements are not met.

- You must provide us thirty (30) days' notice of your need for leave if such need is foreseeable. If your need for leave is not foreseeable, you must notify us as soon as possible and comply with HumanGood's normal call-in procedures. This means that you must call your supervisor prior to the time you are scheduled to begin working for that date. Absent extenuating circumstances, you must call in on any day you are scheduled to work and will not report to work.
- You must provide sufficient information for us to determine if the requested leave may qualify for FMLA protection. Sufficient information may include that you are unable to perform job functions, your family member is unable to perform daily activities, the need for hospitalization or continuing treatment by a health care provider, or circumstances supporting the need for military family leave. You also must inform us if the requested leave is for a reason for which FMLA leave was previously taken or certified.
- HumanGood requires medical certification if you request leave because of your own or a family member's serious medical condition. The Company may also require periodic recertification supporting the need for leave. The Company may also require a second or third medical opinion, at the Company's expense, regarding your own serious condition. You are required to cooperate with the Company in obtaining any additional medical opinions it may require.
- HumanGood will inform you if your leave will be designated as FMLA-protected and, if so, the amount of leave counted against your leave entitlement, your rights and responsibilities, and any other additional information required. If your leave is not FMLA-protected, the Company will provide you with a reason for your ineligibility.
- If you take a leave because of your own medical condition, you must obtain a release from your health care provider before you return to work.

Benefits and Job Protection

HumanGood will continue its contributions for your health care coverage during the duration of your leave. You must continue to make any premium payments for health care coverage for yourself or your dependents that you are now required to make, if you want the coverage to continue during your leave. If paid leave is substituted for unpaid leave, HumanGood will deduct the team member's portion of the health plan premium as a regular payroll deduction. If the leave is unpaid, the team member must pay their portion of the premium as directed by the Company. If the team member's payment is more than thirty (30) days late, the Company will send the team member a letter to this effect. If the Company does not receive the team member's co-payment within fifteen (15) days of sending that letter, the team member's coverage may cease.

Premium Cost Repayment: If you choose not to return to work from a leave allowed by this policy, you will be required to repay.

Team Members will normally be restored to their original or equivalent position with equivalent pay, benefits, and other employment terms when they return from leave. Your use of leave will not result in the loss of benefits accrued prior to the start of your leave. However, you may be required or permitted to use your accrued paid leave benefits, and you will not continue to accrue PTO during your leave of absence.

Key team members may be subject to reinstatement limitations in some circumstances. If you are a key team member, you will be notified of such limitations on reinstatement at the time you request a leave.

It is unlawful for an employer to interfere with, restrain, or deny the exercise of any right provided under the FMLA or equivalent state law, or for an employer to discharge or discriminate against any person for opposing any practice made unlawful by, or for involvement in any proceeding under or relating to, the FMLA or equivalent state law. The FMLA does not affect any federal or state law prohibiting discrimination, or supersede any state or local law or collective bargaining agreement that provides greater family or medical leave rights.

Compensation During FMLA Leave

FMLA leave is unpaid. During periods that team members are not receiving any wage-replacement benefits through programs such as disability insurance or workers' compensation, the Company requires the team member to use available PTO or other paid leave benefits except during a COVID leave.

The substitution of paid leave for unpaid leave does not extend the maximum FMLA leave period. Further, in no case may the substitution of paid leave for unpaid leave result in the team member receiving more than 100% of their salary.

Team Members on unpaid or Extended Sick leave will not continue to accrue PTO and will not be paid for holidays during the leave. However, team members substituting PTO during the leave of absence will accrue PTO on a pro-rata basis and receive holiday pay.

3.11 NON-FMLA MEDICAL LEAVE

Team Members who require leave for a serious health condition but who have exhausted their FMLA leave and/or state-specific family and medical leave (*see* Appendix A), or who are ineligible for FMLA leave or state-specific family and medical leave (*see* Appendix A), or any additional protected leave, may be granted, upon request to Human Resources, a short-term leave of absence as a reasonable accommodation. Leave for an indefinite period of time will not be approved. Such requests are considered on a case by case basis and must be supported by a doctor's certification of the need for leave. If a team member does not return to work on the originally scheduled return date and/or does not request in advance an extension of the agreed upon leave with appropriate documentation, the team member may be deemed to have voluntarily resigned employment with the Company. Extended leave past an initial short-term leave of absence will be considered so long as it does not cause an undue hardship to the Company, and provided that the Team Member provides documentation from their medical provider supporting the need for further leave. Leave for an indefinite period of time will not be approved

Team members on non-FMLA medical leave will not continue to accrue PTO and will not be paid for holidays during the leave. However, team members using PTO or Paid Sick Leave (ESL is excluded) during the leave of absence will accrue PTO on a pro-rata basis and receive holiday pay. Additionally, team members on non-FMLA medical leave will not be eligible for continued health care benefits; team members may be eligible to continue health care coverage through COBRA.

3.12 PERSONAL LEAVE

At HumanGood's discretion, the Company provides leaves of absence without pay to regular full-time team members who may need extended time away from work duties to fulfill personal obligations of medical or a non-medical nature. A team member must exhaust all applicable paid and protected leave options to be eligible for personal leave.

As soon as an eligible team member becomes aware of the need for a personal leave, he or she should request a leave from their supervisor and contact the Company's leave of absence vendor, AbsencePro at 1-877-365-2666.

A team member is required to use available Paid Time-Off (PTO) or sick leave (if applicable) before any unpaid time off will be authorized. HumanGood supervisors may approve up to three (3) unpaid days off. Unpaid time off requests beyond three (3) days must be requested through the Company's leave of absence process.

Personal leave may be granted in periods of up to thirty (30) calendar day increments at one time, and up to a maximum of ninety (90) calendar days. Personal leave is granted at the Company's discretion, and requests for personal leave will be evaluated based on several factors, including anticipated workload requirements and staffing considerations during the proposed period of absence.

Benefits During Unpaid Leave

Benefit accruals, such as Paid Time-Off (PTO) and holiday pay, will be suspended during a personal leave and will resume on return to active employment.

The team member must pay their portion of the premium as directed by HumanGood. The team member's health care coverage will cease on the last day of the month. Basic Life/Accidental Insurance and voluntary plans end when the personal leave begins. On termination of health benefits, the Company will initiate benefit continuation through the Company's COBRA Administrator. Other plans may be continued direct through the various carriers.

If an approved medical or personal leave is due to pregnancy or testing positive for a HumanGood designated disease associated to a pandemic, HumanGood will continue health care employer contributions for the duration of the approved personal leave. In order to maintain health coverage during a leave of absence, the team member is required to make the same contributions which they would be making as if they were not on leave. The use of leave will not result in the loss of benefits accrued prior to the start of the leave. The team member is responsible for continuing to pay premiums on their benefits by either personal check or money

order. HumanGood will send billing statements to the team member who owes arrears on their premiums once a month. If the premiums are not paid in a timely manner, benefits will be terminated.

Failure to Return after Expiration of Personal Leave

When a personal leave ends, every reasonable effort will be made to return the team member to the same position, if it is available, or to a similar available position for which the team member is qualified. However, HumanGood cannot guarantee reinstatement.

If a team member fails to report to work promptly at the expiration of the approved personal leave period, the team member will be considered to have voluntarily resigned their position with HumanGood.

3.13 TIME OFF TO VOTE

HumanGood encourages team members to fulfill their civic responsibilities by participating in elections. Generally, team members should be able to find time to vote either before or after their regular work schedule. However, if team members are unable to vote in a statewide election during their nonworking hours, in compliance with the law, the Company will grant up to the individual state requirement of paid time off to vote.

Team members should request time off to vote from their supervisor at least two (2) working days prior to Election Day. Advance notice is required so that the necessary time off can be scheduled at the beginning or end of the work shift, whichever provides the least disruption to the normal work schedule. Team members must submit a voter's receipt on the first working day following the election to qualify for the paid time off to vote in the statewide election.

3.14 JURY DUTY

HumanGood encourages team members to fulfill their civic responsibilities by serving as a juror when required. All regularly scheduled team members (Per Diem excluded) who have completed a minimum of ninety (90) calendar days of service in an eligible classification may request up to twenty-two (22) days of paid jury duty leave over any one (1)-year period. Jury duty pay will be calculated on the team member's base pay rate times the number of hours the team member would otherwise have worked on the day(s) of absence. Exempt team members will be paid for any week in which they have performed some work while on jury duty, as required by law. Any jury duty taken beyond the initial twenty-two (22) days of paid leave shall be unpaid. If team members are required to serve on jury duty beyond the period of paid jury duty leave, they may use available Paid Time-Off (PTO) or may request an unpaid jury duty leave of absence. Team members may retain any mileage allowance or other fee paid by the court for jury services.

Team members must show the jury duty summons to their supervisor as soon as possible so that the supervisor may arrange to accommodate their absence. If work time remains during any day of jury selection or jury duty, team members are required to return to work for the remainder of the work schedule. The Jury Summons itself and telephone jury check in time are not considered

time served. After serving as a juror, a receipt from the court must be submitted to HR in order for jury duty leave to be paid.

HumanGood will continue to provide health insurance benefits throughout the duration of a team member's jury duty. The team member will be responsible for paying the team member contribution for Company provided health care benefits. Benefit accruals for PTO or holiday benefits will be suspended during jury duty unless the team member is in a paid leave status and will resume upon return to active employment.

Non-exempt team members who do not qualify for paid jury duty under this policy will be allowed time off for jury duty leave. Exempt team members who do not qualify for paid jury duty under this policy will be paid their full salary unless the jury service prevents the exempt team member from performing any work for a full week.

3.15 TIME OFF FOR ATTENDING CHILD'S SCHOOL ACTIVITIES OR DISCIPLINE

Time Off for Attending Child's School Activities

If you are a parent, guardian, or grandparent with custody of a child attending a licensed day care facility, kindergarten or grades one through twelve (1-12) and wish to take unpaid time off to visit the school of your child for a school activity, you may take off up to eight (8) hours each calendar month, up to a maximum of forty (40) hours each year, provided you give reasonable notice to the Company of your planned absence. Team members wishing to take such leave may utilize their existing unused Paid Time-Off (PTO) time or other accrued paid time off. The Company requires documentation from the school noting the date and time of your visit.

If both parents of a child work for HumanGood, only one (1) parent – the first to provide notice – may take the time off, unless the Company approves both parents taking time off simultaneously.

Time Off for Attending Child's School Discipline

If you are the parent or legal guardian of a child who lives with you, and you receive written notice from the school of the child's school requiring your attendance at a disciplinary conference, you are entitled to take an unpaid leave to attend the conference, though team members may also elect to use accrued, unused PTO to attend such conferences. Check with your supervisor or Human Resources for eligibility and scheduling before taking any leave to attend a disciplinary conference.

3.16 WITNESS DUTY

HumanGood encourages team members to appear in court for witness duty when subpoenaed to do so. If team members have been subpoenaed or otherwise requested to testify as witnesses by the Company, they will receive paid time off for the entire period of witness duty.

Team members will be granted unpaid time off to appear in court as a witness when requested or subpoenaed by a party other than the Company. Team members may use accrued Paid Time-Off (PTO) to receive compensation for the period of this otherwise unpaid absence.

The subpoena must be shown to the team member's supervisor immediately after it is received so that operating requirements can be adjusted, as necessary, to accommodate the team member's absence. The team member is expected to report for work whenever the court schedule permits.

3.17 VICTIMS OF VIOLENT CRIME

A team member who is a victim of certain crimes (violent felonies, felony thefts and serious felonies as defined by the law) and/or is the immediate family member, spouse, or registered domestic partner of such a victim will be given time off as necessary in accordance with the law to attend judicial proceedings in relation to the crime. An immediate family member is defined as a spouse, child, stepchild, brother, stepbrother, sister, stepsister, mother, stepmother, father or stepfather.

As a condition of taking time off, team members may be required to provide reasonable advance notice, if feasible, and documentation establishing the right to such time off. Such documentation is typically given to the victim of the crime by a court or government agency setting the hearing, a district attorney or prosecuting attorney's office, or a victim/witness office. If advance notice is not possible, the team member must provide appropriate documentation within a reasonable time, usually one (1) week, following the absence.

A team member who is a victim of domestic violence, sexual assault, or stalking may take time off from work to (1) seek medical attention for injuries; (2) obtain services from a domestic violence shelter, program, or rape crisis center; (3) obtain psychological counseling; or (4) participate in safety planning and take other actions to increase safety, including temporary or permanent relocation. The Company may request reasonable verification of the employee's reason for leave. The Company will not discharge, discriminate, or retaliate against a team member because of the team member's known status as a victim of domestic violence, sexual assault, or stalking or for taking domestic violence leave.

Any absence from work under this section will be unpaid, unless the team member elects to use paid time off, such as accrued Paid Time-Off (PTO) or accrued Paid Sick Leave (PSL), if applicable. HumanGood will make every effort to maintain the confidentiality of any team member requesting crime victim leave.

3.18 MILITARY LEAVE

HumanGood complies with all rights and protections under all applicable federal, state and local laws granting time off for service, training and other obligations in the military and uniformed services. This includes, but is not limited to, leaves of absence, benefits entitlement and continuation, notice and recertification requirements, and reemployment application requirements.

Any team member who is a member of the National Guard or any reserve unit of any branch of the Armed Forces of the United States will be given a military leave of absence from work for annual active duty requirements or training. Military leave will not affect paid leave or other staff benefits. This leave will be without pay, unless the team member requests paid leave from their earned leave bank.

Any team member who needs time off for uniformed service should immediately notify their supervisor who will provide details regarding military leave. If a team member is unable to provide notice prior to leaving for uniformed service, then a family member should notify the team member's supervisor as soon as practicable.

Group insurance benefits will be maintained as required by COBRA during the extended military leave. The team member must continue to pay their portion of group insurance premiums while on leave. If practicable, arrangements for payment should be made prior to the commencement of the leave.

All military leave-related questions should be directed to Human Resources.

Family Military Leave

In addition to leave provided under the FMLA, Team Members may take up to 10 days of unpaid leave if they work an average of 20 or more hours per week and their spouse (including a same-sex spouse) or registered domestic partner is on leave from deployment as a member of: (1) the Armed Forces of the United States deployed to an area of military conflict designated as a combat theater or combat zone by the President of the United States; or (2) the National Guard or Reserves deployed during a period of military conflict. For purposes of this policy "military conflict" includes "a period of war declared by the United States Congress" or a period of deployment for which a member of the Reserves is ordered to active duty either by the Governor or the President of the United States.

Team Members must provide the Company with notice of their intention to take leave within two business days of receiving official notice that their spouse or registered domestic partner will be on leave from deployment. The Company may also request that team members submit written documentation certifying that their spouse or registered domestic partner will be on military leave from deployment during the time of the requested leave.

Eligible team members may use all available accrued paid leave, such as Paid Time Off, during a period of unpaid family military leave. Leave taken under this policy will not affect a team member's right to any other benefits.

The Company will not discriminate against, or tolerate discrimination against, any team member who requests and/or takes leave under this policy.

3.19 VOLUNTEER CIVIL SERVICE LEAVE

If you are a registered volunteer firefighter, reserve peace officer, or emergency rescue person, you are eligible for unpaid leave to perform emergency duty or for training to perform emergency duty. There is no limit to duration, timing or frequency of emergency duty leaves while you are actually performing emergency services.

You may elect, but are not required, to substitute accrued Paid Time-Off (PTO) for unpaid volunteer civil service leave. If you intend to perform emergency duty or training during work hours, please alert a representative of HumanGood so that we are aware of the fact that you may

have to take time off to perform emergency duty. In the event you need to take time off for emergency duty, please alert your supervisor before leaving the Company premises.

3.20 BEREAVEMENT LEAVE

Regular full-time and regular part-time team members may receive up to five (5) days of paid leave in the event of the death of an immediate family member. Bereavement pay is calculated based on the base pay rate at the time of absence.

Team Members requesting bereavement leave should notify their supervisor and/or your local Human Resources representative immediately. Bereavement leave will normally be granted unless there are unusual business needs or staffing requirements. Team members may, with their supervisors' approval, use any available Paid Time-Off (PTO) for additional time off as necessary. The team member must provide verification of their need for bereavement leave by identifying the name and the relationship of the relative.

For the purpose of paid bereavement leave HumanGood defines "immediate family member" as the team member's current spouse, registered domestic partner, child, parent, step-child, step-parent, legal guardian, brother, sister, grandparent, grandchild, mother-in-law and father-in-law.

Bereavement pay is not authorized for sister-in-law, brother-in-law, son-in-law, daughter-in-law as well as aunts, uncles, or other distant relatives. However, in the event of a death of a distant relative, the team member will receive priority consideration for PTO.

SECTION 4: PAY

4.1 TIME REPORTING

Accurately recording time worked is the responsibility of every nonexempt team member. Federal, state and applicable local laws require HumanGood to keep an accurate record of time worked to calculate team member pay and benefits. Time worked is all the time spent on-the-job performing assigned duties. Under no circumstances should a team member perform work on behalf of HumanGood without either clocking in or reporting their time worked through other provided means.

Nonexempt team members are required to record accurately the time they begin and end their work, and the beginning and ending time of each meal period. Team members must record the beginning and ending time of any split shift or departure from work for personal reasons. Absences and overtime must be accurately identified on your time record. HumanGood's designated timekeeping system is the appropriate method for accurate reporting of time. The timekeeping system records time by the minute.

HumanGood forbids altering, removing, falsifying, destroying, and/or tampering with time records, or recording time on another team member's time record. Your supervisor will review and approve your time record before submitting it for payroll processing. If corrections or modifications need to be made to the time record, both you and the supervisor must verify the accuracy of the change. You are responsible for submitting punch correction requests to your

supervisor through the timekeeping system, or in writing when the timekeeping system is unavailable. Your supervisor is responsible for ensuring all requests for time record edits, additions and deletions are documented and include an accurate description of the reason for the change and evidence of your and your supervisor's approval of the change.

Exempt team members must report full days of absence from work using Personal Time Off (PTO) or historical forms of sick leave. Deductions from an exempt team member's pay will only be made as provided by applicable law. If an exempt team member believes unlawful deductions have been made from their salary, or if time off was taken but their pay and/or PTO balance was not affected, they should notify Human Resources immediately so that an investigation can be conducted.

Nonexempt team members are prohibited from working "off the clock" for any reason. If any supervisor or manager directs any team member to do so, the team member should contact human resources immediately.

Team members who fail to record their time accurately or otherwise violate this policy will be subject to corrective action, up to and including termination. The following circumstances are considered violations of this policy:

- Failing to enter or submit time;
- Entering or submitting time late;
- Working unapproved overtime; and
- Falsifying time records.
- Accessing work emails, online training platforms, or engaging in work through any and all means, in person or electronically while not clocked in or tracking hours for pay purposes is strictly prohibited for non-exempt team members.

The following access is not considered hours worked when done voluntarily and not directed by a member of management:

- Using HumanGood internet, app or web-based programs for personal use such as but not limited to checking pay statements, engaging on social media, reviewing your benefits, applying for a position or web surfing.
- Answering a request through an application or via text message to pick up a work shift is not considered hours of work. HumanGood team members are NOT required to check a schedule daily through an electronic medium, schedules are posted in advance and changes to the schedule once posted will be communicated to the team member.

Before any nonexempt team member performs additional work outside of their regularly scheduled hours, the team member must obtain authorization from their supervisor approving the additional hours, including working during lunch, coming in early or staying beyond your scheduled shift.

Additional time worked outside of the team member's work schedule will be paid, however, failure to obtain authorization prior to working additional hours will be subject to corrective action for this policy violation.

Any supervisor or manager who directs a team member not to report hours worked accurately or who fails to pay the team member for hours worked, including earned overtime, regardless of whether the extra time worked was authorized, will be subject to discipline, up to, and including termination of employment.

Missed Punches

If you are a nonexempt team member and you forget your badge, you should punch in at the time clock using the function keys and your badge number, or by web-stamping at a computer or kiosk. Team members who are off-site on Company business and are unable to clock in and out will not be penalized for missed punches for that day, if it is approved in advance by their supervisor. You must document the date and exact start and stop times that would normally be captured by in and out punches in the automated timekeeping system.

Team members are responsible for entering all punch correction requests through the timekeeping system and notifying their supervisor immediately. The Time Card Edit Form may be used when the timekeeping system is unavailable. Time record edits must include an explanation of the reason the punch was missed and the date and exact time of the missed punch.

Team members who fail to clock in or out four (4) or more times in a four (4)-week period will be considered to have misused the timekeeping system and failed to follow Company policy, and may be subject to disciplinary action, up to and including termination.

4.2 MEAL & REST PERIODS

HumanGood complies with federal, and any applicable state and local legal requirements concerning meal and rest breaks. HumanGood recognizes that team members perform at their best when they have the rest and nourishment they need. This policy explains when HumanGood expects team members to take meal and rest breaks.

Meal Breaks

HumanGood provides at least a 30-minute meal break to team members who work more than five hours (unless the sixth hour would complete your workday, and you and your manager agree, in writing, to waive the meal period), and a second 30-minute meal break to team members who work more than 10 hours in a workday, unless they have elected to waive a meal break in accordance with HumanGood's policy and state law. Bona fide meal periods may be scheduled from 30 minutes up to 1 hour; breaks scheduled longer than one hour by the employer will be considered split shifts. Team members are required to clock out and in for their meal breaks. Team members are relieved of their duties during meal breaks and are allowed to leave the premises, thus team members are prohibited from working during their unpaid meal period. Should a team member's meal break be interrupted, the team member should notify their supervisor before the end of their shift.

HumanGood provides meal breaks according to the following schedule:

Duration of Shift In Hours	# Meal Breaks	Comments
0 to \leq 5.0	0	A team member who does not work more than five hours in a workday is not provided with a meal break.
$>$ 5.0 to \leq 10.0	1	A team member who works more than five hours in a workday, but who does not work more than 10 hours in a workday, is provided with a 30-minute meal break that is available before the end of the fifth hour of work, subject to any meal period waiver in effect.
$>$ 10.0	2	A team member who works more than 10 hours in a workday is provided with a second 30-minute meal break that is available before the end of the 10th hour of work, subject to any meal period waiver in effect. The meal period waiver will be invalidated if the team member works more than 12 hours.

HumanGood does not pay nonexempt team members for meal breaks, so nonexempt team members are required to accurately record the beginning and ending of their meal periods on their time record. (Pennsylvania team members that are not leaving community premises are exempt from clocking meal breaks until new clocks are installed, team member must still accurately keep track of their time and notify management if their break was longer or shorter than 30 minutes).

Rest Breaks

Team members are authorized and permitted to take a 10-minute paid rest break for every four hours worked, or major fraction thereof (i e., more than two hours). HumanGood authorizes and permits rest breaks according to the following schedule:

Duration of Shift In Hours	# Rest Breaks	Comments
0 to $<$ 3.5	0	A nonexempt team member who works less than three and one-half hours in a workday is not entitled to a rest break.
\geq 3.5 to \leq 6	1	A nonexempt team member who works three and one-half hours or more in a workday, but who does not work more than six hours in a workday, is entitled to one 10-minute rest break.
$>$ 6.0 to \leq 10.0	2	A nonexempt team member who works more than six hours in a workday, but who does not work more than 10 hours in a workday, is entitled to two 10-minute rest breaks.
$>$ 10.0 to \leq 14.0	3	A nonexempt team member who works more than 10 hours in a workday, but who does not work more than 14 hours in a workday, is entitled to three 10-minute rest breaks.

Whenever practicable, rest breaks should be taken near the middle of each four-hour work period. Team members may not accumulate rest breaks or use rest breaks as a basis for starting work late, leaving work early or extending a meal break. Because rest breaks are paid, nonexempt team members should not clock out for rest breaks.

Team members engaged in direct care or safety of a resident may be required to remain on the premises and maintain general supervision of residents during rest periods if the team member is in sole charge of the residents. Another rest period will be authorized and permitted when the team member is affirmatively required to interrupt their break to respond to the needs of residents.

Any nonexempt team member who is not provided with a timely, uninterrupted and at least 30-minute meal break, or who is not authorized and permitted to take a rest break according to this policy, is responsible for notifying their supervisor in advance, when possible, and, if not, no later than the same workday. Any team member who believes their ability to take the required meal and/or rest period(s) has been interfered with must immediately notify their supervisor or Human Resources.

Discipline

Any team member, supervisor or manager who fails to observe meal and rest break policies will be subject to discipline, up to and including termination of employment. Violations of this policy should be reported to any manager or Human Resources. Every report will be fully investigated, and corrective action will be taken if appropriate.

In addition, HumanGood will not allow any form of retaliation against individuals who report alleged violations of this policy or who cooperate in HumanGood's investigation of such reports. Any form of retaliation in violation of this policy will result in disciplinary action, up to and including termination.

4.3 OVERTIME

As necessary, nonexempt team members may be required to work overtime. However, HumanGood's policy is to minimize the need for overtime. Therefore, team members must obtain their manager's approval before working any overtime. Team members who work overtime without approval may be subject to disciplinary action. HumanGood will try to distribute overtime evenly and accommodate individual schedules. HumanGood provides pay for all overtime hours worked by nonexempt team members in accordance with applicable law. For purposes of calculating overtime, the workweek begins on Sunday at 12:00:00 a.m. and ends on Saturday at 11:59:59 p.m. The workday begins at 12:00:00 a.m. and ends at 11:59:59 p.m.

Non-exempt team members will be paid overtime based on hours actually worked. Exempt team members are not entitled to overtime pay or any other fringe benefit based on hours worked.

Paid time off, Sick Leave, Holiday, Leave of Absence, Funeral, Jury Duty, Witness, and Military Leave) is considered nonproductive time and is not counted toward the computation of overtime;

only productive hours worked count toward overtime. Time off in lieu of overtime pay is not permitted.

Exempt team members are not entitled to overtime pay or any other fringe benefit based on hours worked.

Overtime will be paid in accordance with applicable state and federal laws.

4.4 TRAVEL TIME PAY & EXPENSES

HumanGood recognizes there are times when team members need to travel to complete their job duties.

Exempt team members are fully compensated for any business-related travel with their normal salaries. Nonexempt team members will be paid for compensable travel time in accordance with applicable laws at their regular hourly rate of pay. Except for routine travel between home and your normal work location(s), most travel time will be considered work time for non-exempt team members.

HumanGood also reimburses team members for reasonable business travel expenses incurred while on assignments away from the normal work location. All business travel must be approved in advance by the team member's Department Manager.

When approved, actual incurred costs, including costs for travel, meals, lodging, and other expenses incurred for the purpose of carrying HumanGood business will be reimbursed by the Company. Team members are expected review the company travel expense policy located on myhumangood.org and limit expenses to reasonable amounts.

With prior approval and at the team member's own expense, a family member or friend may accompany team members on business travel, when the presence of a companion will not interfere with successful completion of business objectives. Generally, team members are also permitted to combine personal travel with business travel, as long as time away from work is approved in advance. All expenses arising from such non-business travel are the responsibility of the team member. Team Members must keep accurate records of travel time and report their time to their supervisor within 24 hours of travel time and no later than the end of a pay period.

When travel is completed, team members must submit completed travel expense reports and accompanying receipts within thirty (30) days.

Abuse of the business travel expenses policy, including falsifying expense reports to reflect costs not incurred by the team member or including costs incurred while not carrying out HumanGood business, is a serious violation of this policy and will result in disciplinary action, up to and including termination of employment.

4.5 PER DIEM / RELIEF OR STANDBY

Per Diem, also referred to as Relief or Standby, status asks that a team member be available to work when HumanGood has business needs. Team members who are on Per Diem status and are called in to work will be compensated at their regular rate of pay once they arrive to work and begin working.

HumanGood understands that Per Diem team members may have other commitments and often other employment, however, in order to ensure that HumanGood only calls team members when they are available to work, all Per Diem team members must provide their availability to their supervisor on a regular basis. Any Per Diem team member that fails to provide availability for a period of ninety (90) days, except for extreme circumstances and pre-planned seasonal employment such as students, will be terminated for job abandonment.

For a team member to keep their employment status as Per Diem, the team member must not refuse to work for more than three (3) consecutive requests unless extreme circumstances interfere with the team member's ability to work (extreme circumstances are family emergencies, illness, etc.). Any Per Diem team member who refuses work 3 consecutive times or more, may be subject to disciplinary action up to and including termination of employment.

4.6 CALL BACK PAY

To service the needs of the residents, for emergencies or any other assignments deemed necessary by management for the safe operations of the business, team members may be requested to come back to work.

If a nonexempt team member is called to work, or called back to work after working a regularly scheduled shift, he or she will receive a minimum of two (2) hours pay if he or she reports to work at the time requested and is available to work. When a call-back results in overtime, the team member will be paid the applicable overtime rate of pay a team member is not entitled to call-back pay when he or she receives advance notice that he or she will be required to work beyond the normal workday or workweek.

This policy does not apply when emergencies such as threats to team members or property, power failure, or interruptions caused by an Act of God make it impossible to start or continue with work, or when HumanGood notifies the team member before reporting to work that no work is available. A team member may be scheduled in advance for a meeting or for a single hour to perform routine COVID-19 screening.

4.7 PAY PERIOD & PAY DAYS

Pay periods are two weeks in duration beginning on the designated Sunday at 12:00 a.m. and ending on the second Saturday of the two-week period at 11:59 p.m., with paychecks being issued on the following Friday. (HumanGood Pennsylvania are two weeks in duration beginning on the designated Sunday at 12:00 a.m. and ending on the second Saturday of the two-week period at 11:59 p.m., with paychecks being issued on the following Thursday.)

When a payday falls on a holiday, team members receive pay on the last workday before the regularly scheduled payday. Each paycheck includes earnings for all work performed through the end of the previous payroll period. Overtime and/or payroll corrections will be completed by the following scheduled payday.

When a work-day falls between the end of one pay period and the beginning of another, hours are paid in the pay period they are worked.

4.8 DIRECT DEPOSIT & PAY CARDS

As an alternative to receiving a paper check, team members may choose to receive pay by direct deposit into their bank account or by pay card. Team members choosing these options must complete the requisite authorization forms.

Team members receiving pay by direct deposit or pay card can view an itemized statement of their wages each payday through the Human Resources Information System team member self-service. Team members can set up direct deposit and update their mailing address through the same system.

Team members are responsible for updating their mailing address and relevant information in the Human Resources Information System, and for making any other changes that may impact receipt of their paycheck.

4.9 PAY CORRECTIONS

HumanGood takes reasonable steps to ensure that team members receive the correct amount of pay in each paycheck for all hours worked and that team members are paid promptly on the scheduled payday.

In the unlikely event there is an error in pay (underpayments, overpayments, or improper/unauthorized deductions), the team member must promptly bring the discrepancy to their supervisor. The supervisor will advise Human Resources so that an investigation and, if necessary, a correction can be made as quickly as possible.

In circumstances where a team member receives an inadvertent overpayment of wages, the team member is required to repay the overpayment, and HumanGood will request that the team member authorize a deduction from the team member's earnings by signing and returning a repayment agreement in accordance with applicable laws. The team member will be notified in writing of the overpayment, the total amount to be deducted from the team member's earnings, and the number of pay periods over which the deduction(s) will occur. A copy of the executed repayment agreement will be provided to the team member. Any team member that refuses to repay verified overpayments they have received will have their at-will employment terminated.

SECTION 5: YOUR BENEFITS

5.1 TEAM MEMBER BENEFITS

HumanGood’s flexible, innovative benefits programs are designed to meet the needs of our diverse and growing community of team members and their dependents. The Company is committed to helping team members lead healthy, productive, and balanced lives – inside and outside of work. In addition to providing a broad array of programs in health care, life insurance, disability and retirement, HumanGood also offers programs that enhance the work experience and quality of life. The Company’s benefit plans and services are provided through leading health care, insurance and financial institutions with first-rate reputations and proven records of accomplishment.

A wide range of benefits are available to eligible team members. Benefit eligibility depends on a variety of factors. Some programs (such as Social Security, Workers’ Compensation, state disability, and unemployment insurance) are legally mandated and cover all team members as prescribed by law. Other benefit programs, not required by law, are consistently and fairly offered to team members based on participation criteria and team member classifications determined by the Company.

Human Resources provides team members a list of the benefit programs for which they are eligible. Benefit information is also available on the HumanGood intranet. All team member benefit programs at HumanGood are administered by the Company or its designated administrators. HumanGood reserves the exclusive authority and discretion to determine all issues of eligibility and questions of interpretation and administration of each benefit program.

The terms of HumanGood’s benefit plans (including any applicable 401(k)/Medical/Life Insurance) are provided solely and exclusively in the plans’ governing documents and Summary Plan Description (“SPD”). More in-depth information about benefit programs can also be found on the benefits website and in plan booklets. This Team Member Handbook does not govern these plans. Please review the applicable SPD for any questions regarding these plans. If there are any discrepancies between what is contained in the applicable SPD and this Team Member Handbook and/or oral representations made by Human Resources, the SPD controls.

As provided in the plan documents, HumanGood reserves the sole right to change, amend, or discontinue any benefit provisions or its sponsorship of any plan at any time, including its contributions, if any. The Company’s right to make these changes is not limited by a team member’s length of service, or by a team member’s reliance on the availability of this benefit in deciding whether to accept, continue or retire from employment with the Company.

Team members who wish to look over the official plan documents can make an appointment with Human Resources. Most benefits information is available Worklife Tab on myhumangood.org.

5.2 EDUCATIONAL ASSISTANCE

HumanGood recognizes that the skills and knowledge of its employees are critical to the success of the organization. The educational assistance program encourages personal development through

formal education so that employees can maintain and improve job-related skills or enhance their ability to compete for reasonably attainable jobs within the Company.

HumanGood provides educational assistance to all regular full-time eligible employees who have completed one (1) year of service in an eligible employment classification. To maintain eligibility, employees must remain on the active payroll and be performing their job satisfactorily through completion of each course.

Individual courses that are part of a degree, licensing, or certification program must be related to the employee's current job duties or a foreseeable-future position in the organization to be eligible for educational assistance. English as a second language is the only approved individual course that is not required to be part of degree, licensing, or certification program. HumanGood has the sole discretion to determine whether a course relates to an employee's current job duties or a foreseeable-future position. Employees can contact Human Resources for information about application, guidelines and financial amounts available for assistance.

While educational assistance is expected to enhance employee performance and professional abilities, HumanGood cannot guarantee that participation in formal education will entitle the employee to career advancement, a different job assignment, or pay increases. The Company provides educational assistance to employees with the expectation that the Company's financial investment will be returned through enhanced job performance.

Retention is a condition in order to receive educational assistance. If a team member terminates from HumanGood's employment within one (1) year of the last educational assistance payment, the amount of educational assistance paid in the previous twelve (12) months must be repaid. Accordingly, the employee must repay one hundred percent (100%) of the educational assistance payments made in the twelve (12) months preceding the last payment. Employees should be aware that education reimbursements may have personal tax implications.

Specific details can be found in the Educational Assistance Program Policy and Educational Assistance Reimbursement Request & Repayment Agreement.

5.3 LITERACY EDUCATION ASSISTANCE

HumanGood will make reasonable accommodations for any team member who reveals a literacy problem and requests the Company assist the team member in enrolling in an adult literacy program, unless undue hardship to the Company would result. HumanGood will also assist team members who wish to seek literacy education training by providing team members with the location of local literacy programs.

HumanGood will take reasonable steps to safeguard the privacy of any team member who identifies himself or herself as an individual with a literacy problem. A team member who wishes to identify himself or herself as such an individual can contact Human Resources directly. Further, individuals who are performing satisfactorily will not be subject to termination of employment because they have failed to disclose literacy problems.

While HumanGood generally encourages team members to improve their literacy skills, the Company will not reimburse team members for the costs incurred in attending a literacy program. Team members may use Paid Time-Off (PTO) to attend literacy classes.

5.4 BENEFITS CONTINUATION (COBRA)

Under the Consolidated Omnibus Budget Reconciliation Act (COBRA), a covered group health plan must offer qualified beneficiaries who would otherwise lose coverage under the plan as a result of a qualifying event an opportunity to choose to continue the coverage, at the beneficiary's expense, being received immediately before the qualifying event. Information about COBRA will be provided to qualified beneficiaries upon a qualifying event as required by law.

SECTION 6: HEALTH AND SAFETY

6.1 SAFETY & SECURITY

HumanGood is firmly committed to maintaining a safe and healthy working environment. All team members of HumanGood are expected to be safety-conscious at all times. All unsafe conditions or hazards should be corrected immediately. Report all unsafe conditions or hazards to your supervisor or Human Resources immediately, even if you believe you have corrected the problem. If you suspect a concealed danger is present on HumanGood premises, or in a product, facility, piece of equipment, process or business practice for which the Company is responsible, bring it to the attention of your supervisor or Human Resources immediately. Supervisors should arrange for the correction of any unsafe condition or concealed danger and immediately contact Human Resources regarding the problem.

Team Members are required to utilize the safety equipment provided by HumanGood when performing tasks that necessitate the use of such safety equipment, without exception. Failure to do so is considered insubordination and will subject the team member to discipline, up to and including termination of employment. If you are unsure whether you should be wearing safety equipment for a particular task, ask your supervisor.

To protect the property and ensure the safety of all team members, customers, residents and the Company, HumanGood reserves the right to conduct personal searches consistent with applicable law, including inspection of personal property, and to inspect any packages, parcels, purses, handbags, brief cases, lunch boxes, vehicles, or any other possessions or articles carried to and from Company property.

Security

HumanGood is committed to providing a workplace that promotes safety and security for our team members, residents, and guests. The Company also stresses the importance of serving residents and guests in a courteous and efficient manner. In order to accomplish these objectives and safeguard the safety of residents, team members and guests, we have installed security cameras in a number of areas. Team members should understand these security measures assist us to monitor areas within our properties and work locations. It is our sincere hope that this will enable us to protect the interests of team members, residents, guests, and the Company.

All team members are responsible for helping to maintain a secure workplace. Be aware of persons loitering for no apparent reason. If you are leaving late at night or are in any other situation that presents security concerns or where you do not feel comfortable, please seek the assistance of your supervisor or other team members. Report any suspicious persons or activities to your supervisor. Secure your desk or work area at the end of the day or when called away from your work area for an extended length of time, and do not leave valuable and/or personal articles that may be accessible in or around your work area. Please report any problems with HumanGood's security systems to your supervisor.

6.2 WORKERS' COMPENSATION INSURANCE

At no cost to you, you are protected by Workers' Compensation Insurance while an employee at HumanGood. The policy covers you in case of occupational injury or illness. Employees make no contribution for this coverage. The Company pays the entire cost.

If you are injured on the job, notify your supervisor or Human Resources immediately, regardless of how minor the injury. If neither a supervisor nor Human Resources are available, you should contact Medcor at 1-800-775-5866. HumanGood Pennsylvania Life Plan Community team members are to contact their supervisor or Human Resources to report an injury; they may also contact PMA Insurance at 888.476.2669; Affordable Housing team members contact Lackawanna Insurance Group at 1-888-280-5225) Failure to timely report your injury can result in delayed or denied benefits, and is a violation of the legal requirements surrounding Workers' Compensation Insurance and Company policy. Failure to report such injury in a timely manner, or managerial team members discouraging reporting of injuries are both considered in violation of policy and may receive disciplinary action up to and including termination.

When applicable, Family/Medical Leave will run concurrent with any time off for workers' compensation.

SECTION 7: CORPORATE AND CODE OF CONDUCT

7.1 ETHICS

HumanGood promotes ethical behavior of our team members as it relates to work, residents, and personal conduct. All persons who work in the organization share in the responsibility of observing a code of ethics, which requires, in general, the welfare of HumanGood residents to be the team member's prime concern. This code of ethics requires truthfulness, honesty and personal integrity.

In general, the following rules apply to team members of the Company:

- Team members are expected to conduct both their personal and professional lives in a manner consistent with the responsible image the Company wants to project to residents, visitors and the community.

- HumanGood is proud of the reputation its team members have developed for courtesy, friendliness and quality resident care and service. Team members must conduct themselves in a manner that will maintain this reputation.
- There are times when a peer, friend, family member or neighbor of a team member lives at a HumanGood community or may temporarily use the services of our Company, such as rehabilitation or skilled nursing. In these circumstances, the personal relationship may remain of the nature it was before the resident’s move-in, assuming it is in the resident’s best interest and as approved by the Executive Director and a Vice President of Operations.

In addition, establishing a personal relationship with a resident outside a preexisting relationship is forbidden. A “personal relationship” is defined as a friendship that develops beyond the team member’s professional duties, up to and including a business or romantic relationship. The mixing of professional and personal relations is forbidden to avoid a conflict of interest. Employees are responsible for establishing and maintaining the boundaries of a professional relationship. The following behaviors should be avoided to maintain a professional working relationship and protect the resident:

- Time spent with a resident beyond what is needed to perform job duties;
- Responding to personal overtures made by the resident;
- Sharing personal problems with a resident;
- Frequently thinking about a resident outside of the context of job duties;
- Being defensive or making excuses when someone comments on or questions your interaction with a resident;
- Being hesitant (except for reasons of HIPAA privacy) or embarrassed to discuss the relationship between you and the resident; and/or
- Providing the resident with a home phone number or email address unless it is required in the context of performing job duties.

A romantic or business relationship between a resident and a team member is forbidden because it may be perceived as exploitation or abuse, which we are responsible for prohibiting. HumanGood’s job is to protect our residents from what might be currently or later claimed to be abuse. Because there is a possibility of cognitive decline in our residents that could be exploited, employees must refrain from such conduct even if a resident considers it acceptable.

Similarly, team members are not allowed to be professionally involved in the care process of their own family member. Team members may, however, be allowed to be involved in the care process of a peer, friend or neighbor. The Executive Director will evaluate each situation on an individual basis and make a final determination in this regard.

HumanGood constantly seeks to prevent abuse of residents by team members and others. If an employee desires to become personally involved with a resident, the team member is required to notify the Executive Director in writing prior to such action specifying the name of the resident and the nature of the relationship intended. The Executive Director, at their option, may choose to notify the ombudsperson, other appropriate authorities and family members of the intended relationship and to seek their opinion and intervention if appropriate. The Executive Director, in consultation with the HumanGood's Community Support Center, will determine the impact on the team member's employment in accordance with the intent of this policy. The team member may be asked to apply for an open position at another community or HumanGood may ask the team member to resign from employment with the Company. Failure to abide by HumanGood's ethics policy may result in disciplinary action, up to and including termination of employment.

7.2 VISITORS IN THE WORKPLACE

In order to provide for the safety and security of employees and the communities at HumanGood, only authorized visitors are allowed in the workplace. Restricting unauthorized visitors helps maintain safety standards, protects against theft, ensures security of equipment, protects confidential information, safeguards employee and resident welfare, and avoids potential distractions and disturbances. Employees are discouraged from having family or friends visit them at work. In cases of emergency, employees will be called to meet any visitor outside their work area.

All visitors must enter the Company at the reception area. Authorized visitors will receive directions or be escorted to their destination. Employees are responsible for the conduct and safety of their visitors.

If an unauthorized individual is observed on the Company's premises, employees must immediately notify their supervisor or, if necessary, direct the individual to the reception area.

Because of safety and work disruption issues, HumanGood prohibits the presence of children in the workplace for other than official HumanGood activities involving children, such as holiday parties and "Take Your Child to Work Day". Even under these circumstances, parents must supervise children closely. Employees with dependent children are expected to make regular arrangements for proper care of their children while they are at work. For purposes of this policy, "children" refers to those under the age of eighteen (18). In consideration for the general well-being, health and safety of all employees and residents, HumanGood does not allow pets in the workplace, unless the animal is a service animal and there is a validated service need coordinated through Human Resources.

Individuals who have discontinued employment with the Company may be authorized by the community Executive Director or Administrator to visit the community under the visitor policy and procedure of the community. HumanGood reserves the right to deny any individual access to Company property.

7.3 CORPORATE COMPLIANCE

HumanGood has established its Community Support Center Compliance Program to ensure the services the Company renders to others are delivered in a proper, ethical, and legal manner. In order to meet this goal, all employees are expected to follow the standards outlined below:

Conflict of Interest – Company employees are expected to refrain from engaging in any outside activities that might be in direct conflict with their duties for HumanGood or the Company’s business interests. (See the Conflicts of Interest Policy.)

Inducements & Self-Referrals – HumanGood employees may not participate in payments or inducements to healthcare providers, suppliers or customers for obtaining favored treatment on behalf of the Company.

Fraudulent Billing Practices – HumanGood employees may not participate in practices that bill for service or supplies not needed or not provided. Miscoding of billing information to secure information to secure higher reimbursement is prohibited.

Billing Issues – HumanGood will endeavor to make sure that bills for patient and resident care are accurate and reflect the services provided.

Resident’s Rights – HumanGood residents are to be free from discrimination, abuse, and inappropriate restraints. The Company will use its best efforts to ensure that residents have personal privacy and that the confidentiality of resident records and health information is protected.

Quality of Care – HumanGood staff strives to provide adequate training, support, and staffing so the patients and residents at the Company communities are able to achieve their highest practicable, physical, mental and psychological well-being.

Employees may confidentially contact the Community Support Center Compliance Officer to report any violations of the Community Support Center Compliance policy. HumanGood does not tolerate retaliation towards an employee who has raised a concern in good faith about a right granted by state or federal law or certain administrative guidelines. Employees who believe they have been retaliated against for making a good-faith complaint regarding violations of this policy should follow the procedure outlined in the Anti-Harassment and Anti-Discrimination Policy.

7.4 DEFICIT REDUCTION ACT – FALSE CLAIMS

HumanGood is committed to preventing health care fraud and abuse in compliance with applicable state and federal laws. Employees who have information related to the improper receipt of funds from the government may report this information to Human Resources or the appropriate governmental agency. HumanGood prohibits retaliation against any employee for reporting such information in good faith. Employees who believe they have been retaliated against for making a good-faith complaint regarding violations of this policy should follow the procedure outlined in the Anti-Harassment and Anti-Discrimination Policy.

7.5 HEALTH INSURANCE PORTABILITY & ACCOUNTABILITY ACT (HIPAA)

The Health Insurance Portability and Accountability Act (“HIPAA”) requires healthcare providers to maintain reasonable and appropriate administrative and physical safeguards to ensure the integrity and confidentiality of protected health information of patients, residents and clients, and to protect against any reasonably anticipated threats or hazards to the security of the information and unauthorized uses or disclosures of such information. Protected health information includes any information about the provision of healthcare, including the payment of such healthcare, to an individual. As such, all information concerning the finances, protected health information, and personal matters of residents must be held in strict confidence. Team members should not discuss or transmit information about residents or residents’ finances, protected health information, and/or personal matters with individuals not associated with HumanGood and/or the resident’s care. Nor should team members discuss or transmit information about residents or residents’ finances, protected health information, and/or personal matters when off duty, with other team members (unless as required by the team member’s job duties), or with non-team members. To the extent that team members must discuss the finances, protected health information, and/or personal matters with other team members of the Company or with others associated with the care of residents, only the minimum amount of information necessary should be disclosed. The Company maintains extensive policies and procedures defining how both privacy and security of health information will be maintained. Authorized team members may access such policies to learn more information about their responsibilities under HIPAA. HIPAA imposes civil and criminal penalties on a person who knowingly obtains or discloses individually identifiable health information under certain circumstances. Team members are prohibited from posting any patient-related information, including pictures or photos, on the internet, blogs, social networking accounts or similar sites or services.

APPENDIX A: State-Law Supplements

INTRODUCTION TO APPENDIX

This Appendix to the HumanGood Team Member Handbook is a summary of state-specific policies applicable to team members who reside and work in certain states. This Appendix is intended only to highlight various state-specific laws as well as additional eligibility requirements, obligations, procedures or relevant information that may be applicable.

This Appendix addresses only those areas in which state law requires changes and/or additions to the Company Team Member Handbook. All sections of the Team Member Handbook not expressly replaced by this Appendix remain applicable to you. The Team Member Handbook and this Appendix should be read together and interpreted in a manner that allows the Company to comply with its applicable legal obligations. This Appendix does not constitute a contract or enforceable promise of any kind, and nothing in this Appendix shall be interpreted to modify your at-will relationship with the Company.

If you work in one of the states identified in this Appendix, please review the applicable section of this Appendix carefully and contact local management or Human Resources for further details should you have any questions.

ARIZONA SUPPLEMENT

Paid Sick Leave (Temporary, Part Time, and Per Diem Team Members Only)

Beginning on the first day of their employment, Temporary, Part Time, and Per Diem team members will accrue one hour of paid sick leave (“PSL”) for every 30 hours worked, up to a maximum of 40 hours per year. Beginning on their 90th day of employment, Temporary, Part Time, and Per Diem team members may use up to 40 hours of accrued PSL per year.

Accrued PSL can be used to care for your own or a family member’s mental or physical illness, injury, or health condition; for absences related to domestic or sexual violence, abuse, or stalking; and under certain circumstances arising from a public health emergency.

For the purposes of this policy, “family members” include biological, adopted, or foster children; stepchildren; legal wards; the children of your domestic partner; people for whom you stand or stood in loco parentis; biological, adoptive, or foster parents; stepparents; your legal guardians; the legal guardians of your spouse or domestic partner; people who stood in loco parentis for you or your spouse or domestic partner; your spouse or registered domestic partner; grandparents; grandchildren; siblings; siblings of your spouse or domestic partner, where there is a biological, adoptive, foster, or step relationship; and other people who are related to you by blood or affinity and whose close association with them is the equivalent of a family relationship.

Team Members who wish to use PSL must submit a request to their supervisor. When the need for leave is foreseeable, team members must make a good-faith effort to provide advance notice and make a reasonable effort to schedule leave in a way that doesn't significantly disrupt employer operations. When the need for leave is not foreseeable, team members must provide notice as soon as practicable. If available, accrued PSL will be applied to any unscheduled absences or tardiness.

Any team member who uses PSL for three or more consecutive workdays may be required to submit reasonable documentation to verify that this leave was used for a permitted reason.

Unused accrued PSL can be carried over to the following year. Accrued PSL will not be paid out upon termination of employment.

Safety and Security for Arizona Team Members

In compliance with the Arizona Division of Occupational Safety and Health (ADOSH) and to promote the concept of a safe workplace HumanGood will comply with the Arizona Occupational Safety and Health Act of 1972 (Act), which provides safety and health protection for team members in Arizona. The Act requires each employer to furnish team members with a place of employment free from recognized hazards that might cause serious injury or death.

CALIFORNIA SUPPLEMENT

A. California Meal and Rest Periods

In addition to the meal and rest periods enumerated in the HumanGood Team Member Handbook, if a California team member is unable to have a full, uninterrupted 30-minute meal period due to a supervisory request to return to work, then the entire meal period is paid and the team member will be given a one (1) hour missed/short meal adjustment on their next paycheck.

B. California Overtime Calculations

In addition to the overtime provisions enumerated in the HumanGood Team Member Handbook, overtime shall be paid to non-exempt, hourly team members for any hours worked over eight hours in a single day, and double time (two times the hourly rate) for any time worked over twelve (12) hours in a single day or more than eight (8) hours on their seventh consecutive day of work.

California Reporting Time Pay

If an team member is required to report to work and does report, but is not put to work or is furnished with less than half of their usual scheduled shift, the team member will be paid for half the usual or scheduled day's work, but in no event for less than two hours nor more than four hours, at their regular rate of pay.

California Family Rights Act (CFRA)

Except as otherwise described in this policy, a leave of absence qualified under the CFRA is essentially identical to the leave under the federal FMLA. For eligible team members, CFRA provides for up to 12 weeks of unpaid leave in a 12-month period for the birth of a child for purposes of bonding with a new child; for placement of a child in the team member's family for adoption or foster care; for the serious health condition of the team member's child, parent, spouse, domestic partner, or the person for whom an team member is acting in loco parentis; and for the team member's own serious health condition.

Most leaves of absence under the CFRA may run concurrently with leave under the FMLA. However, unlike FMLA, CFRA permits registered domestic partners to be considered as part of the team member's immediate family and as such, team members may be eligible for up to 12 workweeks to care for their registered domestic partner who has a serious health condition under CFRA, in addition to any FMLA leave benefits for which they may be eligible for other qualifying reasons.

Any leave taken for the birth, adoption, or foster care placement of a child does not have to be taken in one continuous period of time. CFRA leave taken for the birth or placement of a child will be granted in minimum amounts of two weeks. However, the Company will grant a request for a CFRA leave (for birth/placement of a child) of less than two weeks' duration on any two occasions. Any leave taken must be concluded within one year (12 months) of the birth or placement of the child with the team member.

CFRA leave does not run concurrently with FMLA when pregnancy disability of the team member is the FMLA qualifying event. Unlike FMLA, the CFRA does not regard pregnancy or related conditions of childbirth to be a serious health condition, because California provides for a separate Pregnancy Disability Leave (PDL). Therefore, in California, an eligible team member may be placed on federal FMLA leave for pregnancy disability, which runs concurrently with their PDL. Once the PDL ends, the team member may apply for new parent leave under the CFRA guidelines and receive additional protected leave of up to 12 workweeks of unpaid time off, provided the team member has such time remaining available under the CFRA.

A father or other parent who wishes to take leave to bond with a new child is eligible for up to 12 workweeks of unpaid CFRA leave. There is no requirement that the parents be married to each other or that the parents reside together.

California Kin Care

California laws requires we allow California team members to utilize up to one half (1/2) of their annual Paid Time-Off (PTO) accrual and/or Extended Sick Leave (ESL) accrual for the following purposes:

- Diagnosis, care, or treatment of an existing health condition of, or preventive care for, an team member or an team member's family member.
- For an team member who is a victim of domestic violence, sexual assault, or stalking.

Family members under Kin Care means any of the following: a child (including an adopted or foster child, stepchild, legal ward, or a child to whom the team member stands in loco parentis), regardless of age or dependency status; a biological, adoptive, or foster parent, stepparent, or legal guardian of an team member or the team member's spouse or registered domestic partner, or a person who stood in loco parentis when the team member was a minor child; a spouse; a registered domestic partner; a grandparent; a grandchild; or a sibling.

California Paid Family Leave

Paid Family Leave (PFL) is a California state-sponsored insurance program within the State Disability Insurance (SDI) program. It provides partial wage replacement for up to six (6) weeks in any twelve (12)-month period while an team member is absent from work to care for a seriously ill child, parent, spouse, parent-in-law, grandparent, grandchild, sibling or registered domestic partner, or for the birth, adoption, or foster care placement of a new child of the team member or the team member's registered domestic partner. There is a seven (7)-day waiting period for benefits each time a claim is made. Benefits are payable for any day on which the team member is unable to perform their regular customary work due to an absence. Team Members are not eligible for benefits on any day that another family member is able and available for the same period of time to provide the required care. Benefits will not be payable if the team member is receiving unemployment compensation or SDI payments.

Team Members requesting time off to care for one of the covered categories described above will be granted leave based on available Paid Time Off (PTO) balance. Team Members granted PFL

must use up to two (2) weeks or ten (10) days of accrued but unused PTO before qualifying for PFL and then may utilize the kin care portion of their Extended Sick Leave (ESL) when applicable. If an team member elects to integrate accrued PTO with their PFL, the PFL payments will be integrated with any PTO and eligible kin care ESL payments so that an team member does not receive more than 100% of regular base pay for any normal pay period. The PFL program does not require the Company to grant a leave of absence, change its leave policies or provide job protection; it is merely a program whereby team members may receive partial wage replacement in the event the Company grants a PFL leave. If a leave is granted, the Company cannot guarantee reinstatement upon return unless it is taken concurrently with any FMLA or CFRA leave to which the team member may be entitled.

If an team member requires a leave for any of the reasons described above, they should consult with their local Human Resources representative about the Company leave guidelines.

The Employment Development Department (EDD) administers the PFL program. Questions about this program, including obtaining a claim form, should be directed to EDD by telephone at 1-877-238-4373 or TTY (teletypewriter for deaf, hearing-impaired and speech-impaired persons) at 1-800-445-1312.

San Francisco Paid Parental Leave (San Francisco Team Members Only)

For team members who work in San Francisco, HumanGood pays the difference between your weekly benefit from the California Paid Family Leave (PFL) program and 100% of your normal gross weekly wages (up to a cap) during your eight (8)-week PFL period. In order to receive this Supplemental Compensation, HumanGood team members are required to use their applicable accrued PTO balance in excess of seventy-two (72) hours to cover the cost of the required Supplemental Compensation in accordance with the San Francisco Paid Parental Leave. For more information contact your local Human Resources representative or visit www.sfgov.org/pplo or call (415) 554-4190.

California Organ Donor & Bone Marrow Donor Leave

Eligible team members who undergo a medically necessary procedure to donate an organ to another person will be provided with up to 30 workdays off in any one-year period, without a loss in pay. Eligible team members who undergo a medically necessary procedure to donate bone marrow to another person will be provided with up to 5 workdays off in any one-year period, without a loss in pay. For purposes of this policy, a “one-year period” is 12 consecutive months from the date the team member begins their leave. Team Members may take leave in one or more periods, as long as the leave does not exceed 30 days in any one-year period for organ donation or 5 days in any one-year period for bone-marrow donation.

Team Members are eligible for leave if they have worked for the Company for at least 90 continuous days prior to the start of their leave.

Team Members who seek leave under this policy must provide written verification detailing the purpose and length of leave, including the medical necessity for the donation.

Team Members must use all available accrued sick, or paid time off (PTO) concurrently with this leave for up to two weeks of the 30-workday leave period. If an team member does not have enough accrued sick, or PTO time to cover the two-week period, then any remaining days of leave will be paid by the Company, up to 30 workdays. Use of this leave will not be counted against any available leave under the federal Family and Medical Leave Act (FMLA) or the California Family Rights Act (CFRA), if applicable. Leave under this policy is also not considered a break in service for purposes of, salary adjustments, sick leave, PTO, annual leave or seniority.

While on organ donor leave or bone marrow donor leave, the Company will maintain all group health insurance benefits as if the team member was still at work. In most circumstances, upon return from this leave, an team member will be reinstated to their original job or to an equivalent job with equivalent pay, benefits and other employment terms and conditions. However, an team member has no greater right to reinstatement than if they did not take a leave. For example, if an team member on organ donor leave or bone marrow donor leave would have been laid off had the team member not taken a leave, or if the team member's job is eliminated during the leave and no equivalent or comparable job is available, then the team member would not be entitled to reinstatement.

The Company will not retaliate or tolerate retaliation against any team member for requesting or taking organ donor leave or bone marrow donor leave in accordance with this policy.

California Disability Insurance

All California team members are eligible for disability insurance benefits when an illness, injury or pregnancy-related disability prevents them from working and they meet all the eligibility requirements.

The benefits are calculated as a percentage of your salary up to a weekly maximum as specified by law, for up to fifty-two (52) weeks.

Team Members who apply for this benefit must provide written notice of disability, including a doctor's certificate stating the nature of the disability and your expected date of return to work.

You are responsible for filing your claim and other forms promptly and accurately with the Employment Development Department. A claim form may be obtained from the Employment Development Department by telephone, letter or in person.

California Pregnancy Disability Leave

Team Members are entitled to take leave if they are disabled by pregnancy, childbirth or a related medical condition. Leave may include, but is not limited to, additional or more frequent breaks, time for prenatal or postnatal medical appointments, doctor-ordered bed rest, severe morning sickness, gestational diabetes, pregnancy-induced hypertension, preeclampsia, recovery from childbirth or loss or end of pregnancy, and/or post-partum depression. The amount of leave needed is determined by your health care provider's recommendation.

Team Members who are disabled by pregnancy, childbirth or a related medical condition are also eligible to transfer to a less strenuous or hazardous position or to less strenuous or hazardous duties, if such a transfer is medically advisable and can be reasonably accommodated. Where transfers are made based on the team member's health needs, the team member will receive the pay that accompanies the alternative position.

Procedures for Requesting Leave: Team Members should make requests for PDL to a manager at least thirty (30) days in advance of foreseeable events and as soon as possible for unforeseeable events.

A health care provider's statement must be submitted verifying the need for PDL and stating:

- (1) The date on which the team member became disabled due to pregnancy, childbirth or related medical condition, or the date on which the need for a transfer became medically advisable;
- (2) The probable duration of the period or periods of disability or the need for transfer; and
- (3) A statement that, due to the disability, the team member is unable to perform one or more of the essential functions of her position without undue risk to herself, the successful completion of her pregnancy, or to other persons, or that the transfer is medically advisable.

Re-certification may be required if the team member requests an extension beyond the original certification. Any changes in this information contained in the health care provider's statement should be promptly reported to a manager.

Length of Leave: Full-time team members are normally granted unpaid leave for the period of the disability, up to a maximum of four (4) months (17 1/3 weeks). Part-time team members are granted unpaid leave on a pro-rata basis.

PDL does not need to be taken in one (1) continuous period of time but can be taken on an as-needed basis. In other words, leave may be taken intermittently or on a reduced work schedule when determined medically advisable by the team member's health care provider. The smallest increment of time that can be used for such leave is one (1) hour.

Compensation During PDL: PDL is unpaid leave. However, an team member may use Paid Time-Off (PTO) and/or ESL for unpaid PDL. During periods the team member is not receiving any wage replacement benefits through programs such as state disability insurance, the Company may require the team member to use Extended Sick Leave (ESL). Substituted paid leave time will be counted toward the four (4)-month entitlement.

Benefits During PDL: Team Members on leave will not continue to accrue PTO and will not be paid for holidays during PDL. However, team members using PTO for pay during the PDL will accrue PTO on a pro-rata basis and will receive holiday pay.

During an approved pregnancy disability leave, HumanGood will continue its contributions for your health care coverage during the duration of your leave. You must continue to make any premium payments for health care coverage for yourself or your dependents that you are now required to make, if you want the coverage to continue during your leave. Team Members will normally be restored to their original or equivalent position with equivalent pay, benefits, and other employment terms when they return from leave. Your use of leave will not result in the loss of benefits accrued prior to the start of your leave.

Interaction with Other Leaves: If the team member is eligible for leave under the FMLA, the PDL will run concurrently with FMLA leave. However, an team member may still be eligible for child bonding time under the CFRA even if she has exhausted all of her FMLA leave entitlement. Please contact Human Resources with any additional questions.

Return to Work: During a pregnancy disability leave, team members may be required to contact their supervisor periodically to report on their status and intention to return to work. So that an team member's return to work can be properly scheduled, an team member on PDL is requested to provide her supervisor with at least two (2) weeks' advance notice of the date she intends to return to work. Team Members who are granted leaves for pregnancy disability will be returned to their same or similar position to the extent required by state law.

Team Members returning from PDL must submit a health care provider's verification of their fitness to return to work.

If the PDL expires and the team member fails to return to work or request an extension of the leave without contacting her manager, HumanGood will assume that she does not plan to return and that she has ended her employment.

California Lactation Accommodation

In addition to the lactation accommodations provided for in Section 4.4 of the Team Member Handbook, California team members will be provided with a lactation space in close proximity to where breastfeeding team members work, provide a place to sit and a surface for a pump, provide electrical outlets, and be located near running water and a refrigerator to store pumped breast milk.

California Rehabilitation Leave

The Company is committed to providing assistance to our team members. Any team member who wishes to voluntarily enter and participate in an alcohol and/or drug rehabilitation program may be granted a reasonable accommodation. This accommodation may include time off without pay and/or an adjusted work schedule provided the accommodation does not impose an undue hardship on the Company. In general, it is your responsibility to notify Human Resources of the need for accommodation.

Exempt team members may be provided time off with pay when necessary to comply with state and federal wage and hour laws.

The Company shall take reasonable steps to safeguard the privacy of any team member as to the fact that the team member has enrolled in an alcohol or drug rehabilitation program.

This policy does not prevent the Company from refusing to hire or disciplining, up to and including discharge, an team member who, because of the current use of alcohol or drugs, is unable to perform their duties or cannot perform the duties in a manner that would not endanger their health or safety or the health or safety of others.

Safety and Security for California Team Members

In compliance with California law, and to promote the concept of a safe workplace, HumanGood maintains an Injury and Illness Prevention Program. The Injury and Illness Prevention Program is available for review by team members in the Human Resources office.

California Paid Sick Leave (Temporary, Part Time, and Per Diem Team Members in California Locations other than Oakland or San Francisco Only)

Beginning on their first day of employment, Temporary, Part Time, and Per Diem team members will accrue one hour of paid sick leave (“PSL”) for every 30 hours worked, up to a maximum of 24 hours per year. Beginning on their 90th day of employment, Temporary, Part Time, and Per Diem team members may use up to 24 hours of accrued PSL per year.

Accrued PSL can be used to care for your own or a family member’s existing health conditions or preventive care or for purposes related to your own or a family member’s status as victims of domestic violence, sexual assault, or stalking. PSL must be used in two-hour increments.

For the purposes of this policy, “family members” include biological, adopted, or foster children; stepchildren; legal wards; and children for whom you stand in loco parentis; your or your spouse’s or registered domestic partner’s biological, adoptive, or foster parents, stepparents, and legal guardians; people who stood in loco parentis for you when you were a minor; spouses or registered domestic partners; grandparents; grandchildren; and siblings.

Unused accrued PSL can be carried over to the following year, provided that no team member’s accrued PSL bank may exceed 48 hours.

Oakland Paid Sick Leave (Temporary, Part Time, and Per Diem Team Members in Oakland Only)

Beginning on the first day of their employment, Temporary, Part Time, and Per Diem team members will accrue one hour of paid sick leave (“PSL”) for every 30 hours worked, provided that an team member may not have more than 72 hours of accrued PSL in their bank at any one time. Temporary, Part Time, and Per Diem team members may use accrued PSL beginning on their 90th day of employment.

Accrued PSL can be used to care for your own or a family member’s medical care, treatment, diagnosis, illness, or injury. PSL must be used in one-hour increments.

For the purposes of this policy, “family members” include children (including a child of a domestic partner and a child of a person standing in loco parentis); parents; legal guardians or wards; siblings; grandparents; grandchildren; and spouse or registered domestic partner under any state or local law. Family member also includes relationships resulting from adoption, step-relationships, and foster care.

Moreover, if an team member has no spouse or registered domestic partner, the team member may designate one person for whom the team member may use paid sick leave to provide aid or care. This designation must be on file with the employer before the team member may use paid sick leave for this purpose. The opportunity to designate shall be offered to an team member no later than thirty (30) days after the team member begins to accrue paid sick leave. Team Member will have ten (10) workdays to make the designation. Thereafter, team members may change a designation or make a designation for the first time on annual basis with a window of 10 workdays.

HumanGood may take reasonable measures to verify or document that an team member’s use of PSL is for a permitted purpose.

Unused accrued PSL can be carried over to the following year.

San Francisco Paid Sick Leave (Temporary, Part Time, and Per Diem Team Members in San Francisco Only)

Beginning on the first day of their employment, Temporary, Part Time, and Per Diem team members will accrue one hour of paid sick leave (“PSL”) for every 30 hours worked, provided that an team member may not have more than 72 hours of accrued PSL in their bank at any one time. Temporary, Part Time, and Per Diem team members may use accrued PSL beginning on their 90th day of employment.

Accrued PSL can be used to care for your own or a family member’s medical care, treatment, diagnosis, illness, or injury; for purposes related to domestic violence, sexual assault, or stalking suffered by an team member; and for purposes related to bone marrow donation or organ donation. PSL must be used in a minimum of one-hour increments.

For the purposes of this policy, “family members” include children (including a child of a domestic partner and a child of a person standing in loco parentis); parents (including a person who stood in loco parentis for you as a minor child); legal guardians or wards; siblings; grandparents; grandchildren; and spouse or registered domestic partner under any state or local law. Family member also includes relationships resulting from adoption, step-relationships, and foster care.

Moreover, if an team member has no spouse or registered domestic partner, the team member may designate one person for whom the team member may use paid sick leave to provide aid or care. This designation must be on file with the employer before the team member may use paid sick leave for this purpose. The opportunity to designate shall be offered to an team member no later than thirty (30) days after the team member begins to accrue paid sick leave. Team Member will

have ten (10) workdays to make the designation. Thereafter, team members may change a designation or make a designation for the first time on annual basis with a window of 10 workdays.

HumanGood may take reasonable measures to verify or document that an team member's use of PSL is for a permitted purpose.

Unused accrued PSL can be carried over to the following year.

NEVADA SUPPLEMENT

C. Paid Leave (Temporary, Part Time, and Per Diem Team Members Only)

Beginning on the first day of their employment, Temporary, Part Time, and Per Diem team members will accrue 0.01923 hour of paid leave for each hour of work performed. Beginning on their 90th day of employment, Temporary, Part Time, and Per Diem team members may use up to 40 hours of accrued paid leave per year. Accrued paid leave can be used for any purpose but must be used in minimum increments of 4 hours.

Up to 40 hours of unused accrued paid leave can be carried over to the following year. Accrued paid leave under this policy will not be paid out upon termination of employment.

D. Safety and Security for Nevada Team Members

In compliance with the Nevada Occupational Safety and Health Act (NOSHA), HumanGood promotes the concept of a safe and healthful workplace for all team members. Pursuant to NOSHA, the Company maintains a written workplace safety program, which can be viewed in the Human Resources office. HumanGood also provides workplace safety and health, including inspections and enforcement training and education.

PENNSYLVANIA SUPPLEMENT

A. Overtime Calculations

In addition to the overtime provisions enumerated in the HumanGood Team Member Handbook, Non-exempt team members will be paid overtime based on hours actually worked and computed using two methods below:

- **40-Hour Workweek:**
All hours worked over forty (40) in a seven (7)-day work week will be paid at time and one half the hourly base rate.
- **8 + 80 Option:**
All hours worked over eight (8) in a day or eighty (80) in a fourteen (14) day pay period are paid at time and one-half the hourly base rate.

Paid time off (Sick Leave, Holiday, Leave of Absence, Bereavement, Jury Duty, Witness, and Military Leave) is considered nonproductive time and is not counted toward the computation of overtime; only productive hours worked count toward overtime. Time off in lieu of overtime pay is not permitted.

B. Philadelphia Paid Sick Leave

HumanGood team members working in our communities in the City of Philadelphia to the extent required by the Philadelphia Promoting Healthy Families and Workplaces Law regarding sick leave.

Team members who do not qualify under the Paid Time Off policy who work in a HumanGood community in the City of Philadelphia for forty (40) or more hours per year shall be entitled to accrue one (1) hour of Sick per forty (40) hours worked, to a maximum of forty (40) hours per year. Sick leave accrued under this provision may be carried over from year to year, not to exceed forty (40) hours. Furthermore, for team members working in a HumanGood community in the City of Philadelphia, to the extent the Philadelphia Promoting Healthy Families and Workplaces Ordinance (as amended) (“Law”) provides for more generous accrual or retention of a Sick leave or PTO and/or fewer restrictions on the use of Sick leave than this Policy, the terms of the Law shall prevail.

WASHINGTON SUPPLEMENT

A. Washington Family Leave Act (WFLA)

Team Members who qualify for leave under the federal FMLA are entitled to time off for disability due to pregnancy and childbirth in addition to the twelve (12) weeks of FMLA leave. The team member’s healthcare provider shall determine the amount of time off for pregnancy disability. The WFLA does not run during pregnancy disability leave under the FMLA. In a case when an team member needs leave to care for a registered domestic partner with a serious health condition, the team member can use up to 12 weeks of WFLA for this purpose. Only the WFLA will run, and the team member will still have 12 weeks of FMLA available for FMLA qualifying purposes.

B. Washington Family Care Act (WFCA)

Team Members may use their Paid Time-Off (PTO) and/or Extended Sick Leave (ESL) to care for certain sick family members. Family members under the WFCA are defined as the team member’s spouse, child (including biological, adopted, foster, and stepchild), registered domestic partner, parent, parent-in-law, grandparent and adult child incapable of self-care.

C. Washington Paid Family and Medical Leave

Eligible team members will be paid a portion of their wages for up to 12 weeks if they miss work for the birth of a child, foster placement, the adoption of a younger child, or to care for themselves or a family member stricken with a serious illness or injury, or for the need to prepare for certain military related events. “Family member” includes spouses and domestic partners, children (including biological, adopted, foster, or stepchild), parents and legal guardians (or spouse’s

parents), grandchildren, grandparents (or spouse's grandparents), and siblings. Team Members who have family and medical events in the same year may receive up to 16 weeks of paid leave during a 52-week period. An additional two weeks of leave can be used if team members have a serious health condition related to pregnancy, for a combined total of 18 weeks.

This statewide insurance program is funded by premiums paid by both team members and employers and is administered by the Employment Security Department. Please refer to the Employment Security Department's website at <https://paidleave.wa.gov/> for additional information. HumanGood will not discriminate or retaliate against any team member for requesting or taking paid family and medical leave.

In addition, an team member will have the choice to receive a supplemental benefit payment from HumanGood when an team member is receiving money from the Washington State insurance fund so that an team member's total benefit (from the insurance fund and the Company) is equal to an team member's regular rate of pay. This supplemental benefit will cause an team member to draw down an team member's accrued PTO and any other eligible paid leave.

Even though an team member's accrued paid leave will be drawn down at an equal amount to what an team member chooses to receive as a supplemental benefit, an team member should not report this payment to the Washington State Employment Security Department as wages because it is a supplemental benefit.

D. Washington Pregnancy Disability Leave

Team Members are entitled to take leave if they are disabled by pregnancy, childbirth or a related medical condition. Leave may include, but is not limited to, additional or more frequent breaks, time for prenatal or postnatal medical appointments, doctor-ordered bed rest, severe morning sickness, gestational diabetes, pregnancy-induced hypertension, preeclampsia, recovery from childbirth or loss or end of pregnancy, and/or post-partum depression. The amount of leave needed is determined by your health care provider's recommendation.

Team Members who are disabled by pregnancy, childbirth or a related medical condition are also eligible to transfer to a less strenuous or hazardous position or to less strenuous or hazardous duties, if such a transfer is medically advisable and can be reasonably accommodated. Where transfers are made based on the team member's health needs, the team member will receive the pay that accompanies the alternative position.

Procedures for Requesting Leave: Team Members should make requests for PDL to a manager at least thirty (30) days in advance of foreseeable events and as soon as possible for unforeseeable events.

A health care provider's statement must be submitted verifying the need for PDL and stating:

- (1) The date on which the team member became disabled due to pregnancy, childbirth or related medical condition, or the date on which the need for a transfer became medically advisable;
- (2) The probable duration of the period or periods of disability or the need for transfer; and

- (3) A statement that, due to the disability, the team member is unable to perform one or more of the essential functions of her position without undue risk to herself, the successful completion of her pregnancy, or to other persons, or that the transfer is medically advisable.

Re-certification may be required if the team member requests an extension beyond the original certification. Any changes in this information contained in the health care provider's statement should be promptly reported to a manager.

Length of Leave: Full-time team members in Washington are permitted under the Washington Family Leave Act to take time off until a health care provider certifies the team member is able to return to work, which may extend beyond four (4) months.

PDL does not need to be taken in one (1) continuous period of time but can be taken on an as-needed basis. In other words, leave may be taken intermittently or on a reduced work schedule when determined medically advisable by the team member's health care provider. The smallest increment of time that can be used for such leave is one (1) hour.

Compensation During PDL: PDL is unpaid leave. However, an team member may use Paid Time-Off (PTO) and/or ESL for unpaid PDL. During periods the team member is not receiving any wage replacement benefits through programs such as state disability insurance, the Company may require the team member to use Extended Sick Leave (ESL).

Benefits During PDL: Team Members on leave will not continue to accrue PTO and will not be paid for holidays during PDL. However, team members using PTO for pay during the PDL will accrue PTO on a pro-rata basis and will receive holiday pay.

During an approved pregnancy disability leave, HumanGood will continue its contributions for your health care coverage during the duration of your leave. You must continue to make any premium payments for health care coverage for yourself or your dependents that you are now required to make, if you want the coverage to continue during your leave. Team Members will normally be restored to their original or equivalent position with equivalent pay, benefits, and other employment terms when they return from leave. Your use of leave will not result in the loss of benefits accrued prior to the start of your leave.

Interaction with Other Leaves: Washington PDL does not run concurrently with FMLA leave. Therefore, Washington PDL may be taken in addition to any eligible FMLA leave entitlement.

Return to Work: During a pregnancy disability leave, team members may be required to contact their supervisor periodically to report on their status and intention to return to work. So that an team member's return to work can be properly scheduled, an team member on PDL is requested to provide her supervisor with at least two (2) weeks' advance notice of the date she intends to return to work. Team Members who are granted leaves for pregnancy disability will be returned to their same or similar position to the extent required by state law.

Team Members returning from PDL must submit a health care provider's verification of their fitness to return to work.

If the PDL expires and the team member fails to return to work or request an extension of the leave without contacting her manager, HumanGood will assume that she does not plan to return and that she has ended her employment.

E. Washington Lactation Accommodation

Team Members may receive lactation accommodations for up to two years postpartum.

F. Safety and Security for Washington Team Members

In compliance with the Washington Industrial Safety and Health Act (WISHA), HumanGood promotes the concept of a safe and healthful workplace for all team members. The Company provides workplace safety and health, including inspections and enforcement training and education.

G. Paid Sick Leave (Temporary, Part Time, and Per Diem Team Members Only)

Beginning on the first day of their employment, Temporary, Part Time, and Per Diem team members will accrue one hour of paid sick leave ("PSL") for every 40 hours worked, up to a maximum of 40 hours per year. Beginning on their 90th day of employment, Temporary, Part Time, and Per Diem team members may use up to 40 hours of accrued PSL per year.

Accrued PSL can be used to care for your own or a family member's mental or physical illness, injury, or health condition; when the workplace or a child's place of care is closed for health-related reasons; or for absences that qualify for crime victim leave. PSL must be used in minimum increments of 1 hour.

For the purposes of this policy, "family members" include biological, adopted, or foster children; stepchildren; children for whom team members stand in loco parentis or are legal guardians or de facto parents, regardless of their age or dependency status; biological, adoptive, de facto, or foster parents; stepparents; legal guardians of team members or their spouse or registered domestic partner; people who stood in loco parentis for team members when they were minors; spouses or registered domestic partners; grandparents; grandchildren; and siblings.

Any team member who uses PSL for three or more consecutive workdays may be required to submit reasonable documentation to verify that the leave was used for a permitted reason.

Up to 40 hours of unused accrued PSL can be carried over to the following year.

SECTION 999.5(d)(5)(E)

6) Employment Policies and Procedures

ACCESS TO ELECTRONIC HEALTH RECORD- REGULATORY AGENCIES	Effective Date	April 20, 2020
	Revision Dates	9/18/20
	Departments Approving	Legal
	Departments Affected	All

Introduction and Background

HumanGood is committed to cooperating and providing regulators with requested information necessary to perform their role.

Policy

HumanGood will provide access to resident records to regulators as required by statute, regulation, or other applicable law.

The form of access will vary depending upon regulator need or request. This form may consist of:

- Printed copies of records
- Faxed copies of records
- On site access to paper documents
- On site access to HumanGood Electronic Health Record System hardware with appropriate login information
- Encrypted email
- Encrypted devices such as thumb drives or other hardware sent to regulator

HumanGood strives to maintain the safety of highly sensitive information under HIPAA guidelines, therefore, access by regulators to the medical record via the internet or on an unencrypted device will only be allowed if other forms of access are unsuitable. This access will only exist temporarily during the pandemic emergency.

If such access is required by regulation or statute, HumanGood IT department will assist in setting up a secure temporary connection protecting the data transmission.

Definitions

Regulator: individuals properly identified as working for a local, state or federal regulatory agency (such as CMS, Public Health, State Department of Health, State Department of Social Services) or other regulating bodies who by regulation, statute, or other applicable law are

required to be given access to medical records in the course of their work conducting a survey or investigation.

HumanGood
CONFIDENTIALITY AGREEMENT FOR
COMMITTEE PARTICIPANTS

HumanGood recognizes that the confidentiality of all committee discussions, records, and related activities must be maintained for effective and efficient committee conversations and activities. It is the policy of HumanGood that any employee who participates in committee activities must keep confidential any information to which they are exposed.

The term ‘Confidential Information’ includes both written and oral communication subject to California Health & Safety Code 1370 or any other law or regulation that provides confidentiality to information disclosed at, or prepared for use at, any meeting of a HumanGood medical staff, peer review, quality assurance, performance improvement, safety, ethics, grievance, appeals, utilization, risk management, legal affairs or compliance committee meeting, or any other HumanGood committee or meeting that is confidential or protected by law that results in the knowledge or possession of Confidential Information.

By signing below, I understand and agree to follow the confidentiality policy of HumanGood and will hold in strictest confidence any Confidential Information that I may come into contact with while participating on any HumanGood committee

Unless otherwise directed by an executive staff member of HumanGood, I agree that if I obtain Confidential Information, I will keep it confidential, and disclose it only to those who are actively participating in the activities described above, or who are authorized to receive such information.

If I am asked or become legally required to disclose any Confidential Information that I might have knowledge of or possess, whether by oral questions, interrogatories, requests for documents or information, subpoena, regulatory investigation, or otherwise, I will provide HumanGood with written notice within five (5) business days of my receipt of such a request or requirement, so that HumanGood may seek a protective order or other appropriate remedy and/or waive compliance with the provisions of this Agreement. I also agree that I will reveal only the Confidential Information that I am, in the opinion of my counsel or the counsel of HumanGood, legally required to disclose. Furthermore, I will use my best efforts to obtain reliable assurance that confidential treatment will be given to all Confidential Information that I might be required to disclose.

Any provision of this Agreement that is prohibited or unenforceable in any jurisdiction shall be ineffective to the extent of such prohibitions or unenforceability without invalidating the remaining provisions hereof or affecting the validity or enforceability of such provisions in any other jurisdiction.

If I am uncertain whether any specific information is Confidential Information as defined in this agreement, I agree to consult with the HumanGood General Counsel before disclosing any such information.

I understand that if I fail to comply with this agreement, I will be subject to legal action and/or, if I am a HumanGood employee, disciplinary action up to and including termination of employment from HumanGood.

This Agreement will remain in effect in the event my employment or association with HumanGood terminates for any reason. In such circumstances, I will return any Confidential Information in my possession to an appropriate representative of HumanGood and I will not remove or take possession of any such information upon my departure, nor will I divulge any Confidential Information to any person at any time after my employment or association with HumanGood ends.

TEAM MEMBER HEALTH REPORTING AGREEMENT

Este formulario debe completarse al menos una vez cada 12 meses.

El propósito de este acuerdo es garantizar que los miembros del equipo de HumanGood estén informados de nuestra póliza Health Reporting (Reporte de Salud), y notificar a su supervisor cuando experimente cualquiera de las condiciones enumeradas, para que HumanGood pueda tomar los pasos apropiados para prevenir la transmisión de una enfermedad contagiosa.

Reconozco que entiendo el propósito de esta póliza, y acuerdo informar a mi supervisor:

SÍNTOMAS Y CONDICIONES FUTURAS:

** IMPORTANTE: no es necesario informar síntomas, como diarrea, asociados con condiciones médicas crónicas o enfermedades*

1. Diarrea
2. Vómitos
3. Ictericia (coloración amarillenta de la piel y / u ojos)
4. Dolor de garganta con fiebre
5. Cortes o heridas infectadas, o lesiones que contienen pus en la mano, muñeca, una parte del cuerpo expuesta u otra parte del cuerpo y los cortes, heridas o lesiones no están cubiertos adecuadamente

DIAGNOSTICO MEDICO FUTURO:

1. Diagnóstico de enfermedad con Norovirus, Fiebre Tifoidea (Salmonella Typhi), Shigelosis, Salmonelosis, E. coli O157: H7 u otra infección por Escherichia coli enterohemorrágica (EHEC) / E. coli (Stx) productora de toxina Shiga (Stx), Infección por Hepatitis A o (solo California) Amebiasis
2. Cualquier diagnóstico de enfermedad transmitida por alimentos.

FUTURAS EXPOSICIONES DE ALTO RIESGO:

1. Exposición o sospecha de un brote confirmado de enfermedad transmisible
2. Un miembro del hogar diagnosticado con una enfermedad transmisible
3. Un miembro del hogar que asiste o trabaja en un entorno donde hay sufrido un brote confirmado de una enfermedad transmisible

He leído (o me lo han explicado) y entiendo mis responsabilidades bajo este acuerdo para cumplir con:

1. Reportar los requerimientos especificados anteriormente que involucran síntomas, condiciones, diagnósticos y exposiciones de alto riesgo
2. Restricciones o exclusiones laborales que se me imponen
3. Buenas prácticas de higiene

TEAM MEMBER HEALTH REPORTING AGREEMENT

This form must be completed at least once every 12 months.

The purpose of this agreement is to ensure that HumanGood team members are aware of our Health Reporting Policy and notify their supervisor when they experience any of the conditions listed, so management can take appropriate steps to prevent the transmission of a contagious illness.

I acknowledge that I understand the purpose of this policy. I agree to report to my supervisor:

FUTURE SYMPTOMS AND CONDITIONS:

**IMPORTANT: It is not necessary to report symptoms, such as diarrhea, associated with chronic medical conditions or illnesses*

1. Diarrhea
2. Vomiting
3. Jaundice (yellowing of the skin and/or eyes)
4. Sore throat with fever
5. Infected cuts or wounds, or lesions containing pus on the hand, wrist, an exposed body part, or other body part and the cuts, wounds or lesions are not properly covered

FUTURE MEDICAL DIAGNOSIS:

1. Diagnosis of being ill with Norovirus, Influenza, Coronavirus, Typhoid Fever (Salmonella Typhi), Shigellosis, Salmonellosis, E. coli O157:H7 or other Enterohemorrhagic Escherichia coli (EHEC) / Shiga-toxin (Stx)-producing E. coli (STEC) infection, Hepatitis A infection or (California only) Amebiasis
2. Any diagnosis of foodborne illness

FUTURE HIGH-RISK EXPOSURES:

1. Exposure to or suspicion of causing any confirmed outbreak of transmissible illness
2. A household member diagnosed with a transmissible illness
3. A household member attending or working in a setting experiencing a confirmed outbreak of transmissible illness

I have read (or had explained to me) and understand my responsibilities under this agreement to comply with:

1. Reporting requirements specified above involving symptoms, conditions, diagnoses and high-risk exposures
2. Work restrictions or exclusions that are imposed upon me
3. Good hygienic practices

Connect	Effective Date	07/31/2017
	Revision Dates	01/29/2021
	Departments Approving	HR
	Departments Affected	ALL

A. Purpose

- CONNECT is an important part of the HumanGood culture and how HumanGood does business. CONNECT provides learning and growth opportunities and helps team members to connect with each other every day and to understand and apply the HumanGood Experience culture and purpose.

B. Persons Affected

All HumanGood and affiliate team members.

C. Policy

All team members who have been trained in the HumanGood Experience are expected to follow the procedures as outlined below.

D. Definitions

- **Location** – used interchangeably to refer to a community (e.g., CCRC, Affordable Housing, HumanGood owned or managed), offices (e.g., Home Offices in Glendale and Pleasanton) or designated department with responsibility for the activity described
- **Team member** – all employees and supervisors
- **Facilitator** – the person responsible for the activity described at your location
- **Persons served** – refers to the person(s) we provide services to (e.g., residents, family members, guests, customers or fellow team members)
- **Designated area** – room, office or desk at your community or location that has been identified for the specific activity (e.g., where to go to obtain or drop off forms, funds, etc.)
- **CONNECT terms:**

- **CONNECT** – a brief stand-up style meeting conducted daily for each shift within each department at every location
 - *Human Good Experience* – contains the Topic and Discussion Starters, relevant quotes, HumanGood Experience stories, and safety tips.
 - *What's Going On?* – contains location specific announcements, New Team Members, Guests, etc., New Residents and/or Resident Transitions, Activities, Events, Expected Guests, and Special Announcements.
 - *Celebrations* – contains HumanTouch Recognitions, Birthdays (Residents & Team Members), and Service Anniversaries.

E. Procedures

CONNECT:

1. CONNECT lasts about 10-15 minutes. They are typically conducted standing up.
2. CONNECT occurs 365 days a year at each community, for each department, except holidays. For Virtual Community Support Center team members, a joint Connect will occur Wednesday at 10:00 a.m. via Zoom with an Executive Team member available to address all offices.
3. Every team member attends a CONNECT during their work day, preferably at the start. For locations with multiple shifts, a CONNECT is conducted at the beginning of each shift.
4. CONNECT may be led by any trained individual but Directors, Managers and Leads should lead the way initially, then gradually allowing others to grow and engage with fellow team members through the HumanGood Experience.
5. Local Human Resources will be responsible for coordinating the CONNECT newsletter for their location.
6. The Facilitator reviews the CONNECT newsletter prior to CONNECT.
7. Supervisors introduce new team members at their first department CONNECT. Their supervisor should ask the team member how they'd like to be introduced (e.g., what kind of information they'd like to share, how they like to be acknowledged, etc.).

CONNECT Newsletter:

1. Human Resources will be responsible for coordinating the CONNECT Newsletter for their location. The designee is responsible for:

- Obtaining all of the CONNECT newsletters for the current week by no later than Friday of the previous week. The newsletters will be available on the Shares drive at the following location:
S:\Home Office\Human Resources\Public\CONNECT Newsletters
- Collecting location-specific information for *What's Going On* and *Celebrations*, including new team members/residents, activities/events, anniversaries, birthdays, and any special announcements.
- Entering the location-specific information in the appropriate sections.
- Printing and distributing the CONNECT newsletter to the facilitators.
- Posting the CONNECT newsletter in the team member break room, employee bulletin board, or other central location accessible by all team members.

Educational Assistance Program	Document No	HR - 2
	Effective Date	1 September 2014
	Revision Date	25 June 2021
	Revision No.	1
	Page No.	6
	Approval: Troy Keach, VP, Human Resources	

A. Purpose

HumanGood’s Educational Assistance Program (“EdAP”) provides tax-free (excludable from the team member’s wages) financial repayment to team members who pursue professional growth and development through higher education. Higher education includes graduate, undergraduate, and certification level programs at accredited institutions. We recognize the skills and knowledge of our team members are critical to the success of the organization. The EdAP program encourages personal development through formal education so team members can maintain and improve job and career skills or improve their ability to compete for reasonably attainable jobs within the company. The degree or certification program must be related to the team member’s job duties or a foreseeable-future position in the organization to be eligible for educational assistance.

While HumanGood expects educational assistance to strengthen team member performance and professional abilities, HumanGood cannot guarantee that pursuing higher education will result in a pay increase, a different job assignment, or career advancement. HumanGood provides educational assistance to team members with the expectation the company’s financial investment will be returned through enhanced job performance.

HumanGood intends for this educational assistance program to be qualified pursuant to the Internal Revenue Code (IRC) Section 127. It complies with existing IRS law and takes advantage of favorable changes in IRS regulations that broaden the scope of tax-free educational assistance. Section 127 Qualified Educational Assistance Program allows team members to receive up to \$5,250 in employer-provided tax-free tuition assistance for graduate, undergraduate, and certification level education.

B. Revision/Review History

Date	Rev. No.	Change	Section
9/1/2014	Original	N/A	N/A
9/1/2017	Revised	Fiscal year	D

C. Eligibility

- Regular full-time (Greater than 30 hours per week) team members who have completed one year of service.
- Regular part-time (Less than 30 hours per week) team members who have completed two years of service.
- Per Diem and On Call Team Members are not eligible to participate.
- Team members must be on active payroll from the date of enrollment through the date the reimbursement request is submitted.
- Team members must be in a satisfactory performance status for at least 12 months prior to enrollment. Satisfactory performance is defined as a meets on current performance review and free from any documented disciplinary action.

HumanGood commits to provide equal employment and advancement opportunities to all individuals. We will continue to recruit, employ, train, promote and compensate our team members without regard to race, color, sex, gender identity, religion, marital status, registered domestic partner status, age, national origin or ancestry, physical or mental disability, medical condition including genetic characteristics or information, sexual orientation, veteran status, or any other characteristic made unlawful by applicable federal, state, or local laws. We also prohibit discrimination based on the perception that anyone has any of those characteristics, or is associated with a person who has or is perceived as having any of those characteristics. EdAP may also not discriminate in favor of highly-compensated team members.

D. Policy

Approved Courses and Institutions

The EdAP Administrator determines course eligibility for reimbursement under EdAP. Courses approved will include those offered by colleges and universities having full accreditation, any recognized secondary school, and organizations offering job related certificate or diploma programs or other institutions offering a high school diploma or G.E.D., certificate, or organizations as approved by management.

Certificate programs and degree programs offered by accredited institutions are approved on the basis that they are related to the team member's present job, to a reasonable next-step promotion, or to the team member's future career development within HumanGood. English as a second language from an approved institution is an approved course.

Educational funds are reimbursed after satisfactory completion of the course. Satisfactory completion is defined by the attending institution as a passing grade or a "pass" or "credit" in a pass/fail or credit/non-credit system or certificate program completion.

At no point should any HumanGood supervisor/manager/director or HR office pay for, use corporate funds or enter into any agreement to pay for educational assistance through any means other than this approved program. This does not apply to training programs that would not be eligible under the educational assistance program, such as training courses or seminars. Community funds specifically designated toward educational expenses may be an exception. Any and all funds given in excess of this program and/or administered through HumanGood must be reported to the Educational Assistance Administrator and may be subjected to taxation.

Authorized Amounts*

- Graduate and Undergraduate Degree Programs: \$5,250 per calendar year is available for approved degree programs at accredited colleges and universities.
 - Secondary Schools, Certification, and License Programs: \$2,250. Must be related to gaining business-related certifications, licenses, accreditations, diplomas, or other qualified programs (for example, PHR, SPHR, CNA, NHA certifications, ServSafe Food Handler certificate/GED prep).
 - English as Second Language (ESL): Team members may be approved for up to \$300.00 a year in educational assistance funds for ESL.
- * All amounts listed are based on annual Fiscal year (1 Jan to 31 Dec)

Eligible Expenses

The following expenses may be covered under the EdAP if they are related to an approved course and funds are available. These items must be required for a business-related undergraduate or graduate course in an accredited college or university and these reimbursement requests are included in calculating the usage of the total authorized amount. Fees already paid by financial aid dollars will not be reimbursed.

- Tuition fees
- Registration fees
- Student Identification Card fees
- Required lab fees
- Required health fees
- Required textbooks
- Required supplies that are not retained after the course is completed
- Tests required for first time license or certification (taken after preparation course only)

Ineligible Expenses

The following expenses are not covered under the EdAP and are the sole responsibility of the Team Member (they may not be included in any reimbursement requests).

- Tools or supplies (other than textbooks) the team member may keep after completing a course.
- Meals, lodging, and transportation (including parking and mileage).
- Education involving sports, games, or hobbies, unless such education involves the business of HumanGood or is required as part of a degree program.
- Processing or financing fees for tuition deferral.
- Postage, shipping, and handling of educational materials, textbooks, or supplies.
- Classes, workshops, conferences, and seminars of forty (40) hours or less, unless part of an accredited educational program leading to a degree, license, or certification.
- Non-accredited training programs, seminars, and association conferences, which are normally budgeted by HumanGood communities and departments.
- Fingerprinting for licenses
- Any fees already paid by other financial aid programs

E. Definitions

EdAP - Educational Assistance Program

F. Responsibilities

Team Member

1. It is the Team Member's responsibility to obtain Education Assistance approval before the start of the courses or program.
2. Team Members are expected to determine the extent to which they can adequately manage their regular work schedule in addition to classes.
3. Review the policy and procedures outlined below and thoroughly complete the [Educational Assistance Reimbursement Request](#) and Repayment Agreement. Ensure that all supporting documents are included with the Reimbursement Request.

Supervisor

1. The supervisor will verify team member eligibility and determine if educational assistance funds are available as soon as possible and notify team member.
2. Review the team member's Educational Assistance Plan Reimbursement Request & Repayment Agreement, ensuring the package is complete with all supporting documents included.

Educational Plan Administrator

1. Approve all educational institutions and courses for participation in the educational assistance plan.
2. Manage the educational assistance funds and validate the availability of funds.
3. Review and process all educational assistance plan documents.
4. Approve and process all check requests and ensure all educational assistance expenses are charged to the Corporate Educational Assistance Fund.
5. Process and enforce all repayment agreements.

G. Procedures

The team member should first discuss educational objectives with their supervisor or the Human Resources Director for guidance in meeting specific interests and career goals.

1. Prior to applying for educational assistance, the team member is encouraged to examine and apply for any other form of educational assistance for which she or he may otherwise be eligible (local community budget, scholarships, grants, state aid, or military service benefits). HumanGood will supplement these payments not to exceed the cost of the course, up to the dollar amount limits contained in this policy.

2. Prior to registering for a course, the team member should review this policy and then complete as much as possible in Page 2 and 3 of the "[Educational Assistance Reimbursement Request](#)" and submit to their supervisor with estimated costs for review. The supervisor will verify team member eligibility to participate and will contact the Educational Assistance Plan Administrator at (818) 638-4573 or at Education@humangood.org regarding eligibility and funding.
3. Upon completion of the course, no later than 90 days from the completion date, the team member must submit the fully completed and signed Educational Assistance Reimbursement Request & Repayment Agreement along with all supporting documentation and receipts to her/his supervisor. Delays in submitting claims or incomplete submissions may cause a denial based on funding, claims submitted beyond 90 days from completion date will not be honored.
4. The complete package will then be reviewed and signed by the team member's supervisor or HR Director and forwarded to the Glendale Home Office Educational Assistance Plan Administrator, 516 Burchett St Glendale, CA 91203, or sent electronically to Education@humangood.org.
5. The Educational Assistance Plan Administrator will review the application to reconfirm eligibility and fund availability. Approved reimbursement checks will be forwarded to the community HR Director or team member.

Termination of Employment

All team members accepting funds will be held accountable under the terms and conditions described in the Educational Assistance Repayment Agreement that is required as part of the Educational Assistance Reimbursement Request.

Repayment Obligation:

If I voluntarily separate my employment with HumanGood, or if I am terminated by HumanGood for cause (violation of policy), prior to the expiration of one (1) year from the date of the last educational payment made to me or on my behalf under the Plan, 100% of the educational payments made to me or on my behalf within the twelve (12) months preceding my termination date shall be due and payable by me to HumanGood upon termination. I authorize Human Good to deduct any funds owed from my final paycheck and agree that any additional funds will be paid by me within thirty (30) days of my termination date.

Taxes

Rare circumstances which require additional education in order to complete your essential functions may be excluded from taxes. VP of Human Resources is the only approver for such kind of instances.

Instruction regarding this can be found in IRS Private Letter Ruling (PLR 200337004) that states that amounts above the Internal Revenue Code Section 127 limitation could be excluded under Code Section 132(d) as a working condition fringe, if the applicable requirements were met.

A working condition fringe benefit is defined under Internal Revenue Code (Code) Section 132(d), which provides the following, "...the term "working condition fringe" means any

property or services provided to an employee of the employer to the extent that, if the employee paid for such property or services, such payment would be allowable as a deduction under section 162 or 167....”

While Code Section 132(d) refers to property or services, the regulations also refer to a cash reimbursement (Treas. Reg. § 1.132-5(a) (1) (v)), which states:

“A cash payment made by an employer to an employee will not qualify as a working condition fringe unless the employer requires the employee to –

(A) Use the payment for expenses in connection with a specific or pre-arranged activity or undertaking, for which a deduction is allowable under section 162 or 167,

(B) Verify that the payment is actually used for such expenses, and

(C) Return to the employer any part of the payment not so used.”

With regards to an allowable deduction under 162, Treas. Reg. § 1.162-5(a) provides that to be deductible, expenses must be for education that maintains or improves the taxpayer’s skills or that meets legal or employer requirements for the taxpayer to maintain his or her employment, status or pay level. Nondeductible expenses include those for education to meet an employer’s minimum requirements for a position or those that qualify the taxpayer for a new trade or business. This determination will depend on the specific facts of each case, and the taxpayer will bear the burden of proof. Accordingly, it is hard to answer this question, given that it is so fact specific.

The regulations under Treas. Reg. § 1.162-5(b)(2) contain the following language about minimum requirements, “...The fact that an individual is already performing service in an employment status does not establish that he has met the minimum educational requirements for qualification in that employment. Once an individual has met the minimum educational requirements for qualification in his employment or other trade or business (as in effect when he enters the employment or trade or business), he shall be treated as continuing to meet those requirements even though they are changed.”

All questions related to this policy should be sent directed the Glendale Home Office Educational Assistance Plan Administrator at (818) 638-4573 or via mail 516 Burchett St Glendale, CA 91203, or electronically at Education@humangood.org.

Training Requirements	Effective Date	01/10/2017
	Revision Dates	Original 45
	Departments Approving	HR
Departments Affected	ALL	

A. Purpose

Every year HumanGood establishes training requirements to comply with applicable laws and to respond to business needs identified by the Company. HumanGood selects courses to educate the workforce to promote a professional work environment that demonstrates respect and dignity for all individuals, and is free from harassment, discrimination or retaliation. The required courses also educate team members on the laws protecting seniors in HumanGood care. Online courses allow team members to complete training at their own pace while complying with the mandates of various regulatory agencies.

B. Person Affected

HumanGood team members (see Section D for definitions), including all employment types, except temporary contractor.

C. Policy

All HumanGood team members must complete the required training online in the Training Requirements document and any other training required by regulations applicable to their specific job duties or directed by their community or work location. Completion of the training requirements is a condition of continued employment. Newly hired team members and those promoted to a management position will be offered additional training per their new role.

A Correction Notice may be given to team members who have not completed their training requirements. HumanGood may involuntarily end employment of team members who have not completed their training requirements by the designated deadlines.

D. Definitions

- D.1 Team Member – An employee of HumanGood
- D.2 Training Requirement is a document that outlines training requirements for the fiscal year (see Section F.1 on how to access document).
- D.3 myHumanGood.org is the HumanGood team member intranet

- D.4 HumanGood/Relias is an online learning system that provides clinical, regulatory, computer, management and other training.

E. Responsibilities

- E.1 HumanGood team members are responsible for completing required training by the established deadlines.
- E.2 Supervisors and HR Directors are responsible to monitor completion of all training requirements by their team members. The most senior manager at each business site is responsible to communicate this policy and to ensure all training requirements are complete and administered. Failure to comply with training requirements is a violation of Section 5.1 PROHIBITED CONDUCT AND DISCIPLINARY ACTION in the employee handbook.

F. Procedures

- F.1 At the start of each fiscal year (January 1), or upon hire, supervisors and HR Directors are responsible for reviewing the Training Requirements and identifying all required courses applicable to themselves and their team members. The requirements are accessible on my.HumanGood.org at the following locations.

<https://intranet.humangood.org/content/INTRANET/My-Worklife/Training.php>

- F.2 To check team members' completion of required courses, supervisors and HR Directors can run the Training Dashboard report directly from Relias report section. The Training Dashboard Guide provides instruction on running the reports.

<http://humangood.training.reliaslearning.com/Reports>

- F.3 For training questions or problems, enter a Track-It work order, by going to <http://helpdesk> and doing the following:

- Under type, select Payroll/HR/HRIS
- Under subtype, select Training
- Under category, select either Course Questions, Training Requirements or User Account Issues

Or, email training questions to TrainingQuestions@HumanGood.org.

Telework and Alternative Workplace Arrangements	Effective Date	01/10/2017
	Revision Dates	10/01/2017
		03/22/2020
		03/02/2021
	Departments Approving	HR & IT
Departments Affected	ALL	

Introduction and Background

Purpose

This sets forth HumanGood policies and procedures on alternate workplace arrangements (telework). Telework provides Team Members with the opportunity to perform their work at locations other than the traditional office setting. It may include home-based telework, community-based tele-center, mobile and virtual offices. This policy also defines the requirements and procedures for team members to temporarily telework during a crisis where the assigned work location is unavailable.

Persons Affected

ALL HumanGood Team Members deemed eligible for telework and approved by their supervisor.

Summary of Policy and Procedure

Established policies procedures and associated required agreements and checklists in order for a team member to use an alternate worksite or telework.

Policy

- 1) Telework may benefit HumanGood and team members by providing an alternative work situation, which may improve services to residents, improve productivity, help recruit and retain personnel, reduce our environmental impact and improve the quality of life of participants. Telework may also be used to keep community support services functioning during a crisis where normal office operations are not available.
- 2) Team members who meet the criteria for telework may participate in telework arrangements in accordance with our policy. Participation in a telework arrangement is subject to supervisory approval. Whenever appropriate, management may consider establishing telework arrangements to meet its needs as well as those of team members. Team member participation in a telework arrangement is voluntary. Telework provides managers, supervisors, and team members with alternatives to the traditional worksite while still accomplishing work objectives. Telework may be used as a reasonable accommodation for

team members with qualifying disabilities under the Americans with Disabilities Act. However, each telework arrangement must meet the minimum requirements as specified in this policy.

- 3) The primary intent of the program is to support the mission of the office in an alternative work setting. Telework must not be used as an alternative to or in lieu of dependent care and personal responsibilities. The team member may not engage in any non HumanGood work-related activities during core hours on telework days.
- 4) It is recommended that each supervisor conduct a periodic review of the telework arrangements to determine the impact on work operations.
- 5) If management determines that a telework arrangement is not meeting the operational needs of the organization, the arrangement will be modified no sooner than one week after the team member is notified. Supervisor modification or termination of the arrangement requires one calendar week notice except where:
 - a) work-related circumstances require otherwise, e.g., emergency situation, the conclusion of a crisis telework agreement,
 - b) management determines that the teleworker is not meeting performance criteria,
 - c) the team member breached information security protocol, or
 - d) non-exempt (Hourly) team member worked overtime without prior advanced approval.
- 6) CSC Team members that are on an approved telework agreements are eligible for reimbursement based on their teleworking situation. All team members will fall into one of the following categories and are only entitled to reimbursement when an office is not provided by the company. For example, team members that are on partial telework agreements such as telework every Friday from home, however there is a workspace available at a company provided office is not entitled to a telework reimbursement, for their telework is for their convenience.
 - a) **CSC Teleworkers who don't travel frequently.** CSC teleworking team members who don't travel regularly for work and are not required to be available nights and weekends will be eligible for reimbursement of \$50 monthly.
 - b) **CSC Teleworkers who travel frequently including Department Heads.** Team members who require frequent travel will be eligible for cell phone reimbursement and home office reimbursement expenses for a total of \$65 a month.
 - c) **CSC Team members who have a regular office.** Team members who are not required to telework and have an office at a CSC are not eligible for reimbursement.

- d) **Emergency Teleworkers.** Team members who have an office at a CSC but are denied access due to COVID are eligible for reimbursement of \$50 monthly.
- e) Team members eligible for reimbursement under the above criteria will be automatically reimbursed on a monthly basis, and will not be required to submit receipts. Team members whose expenses exceed the automatic reimbursement amounts specified above may request additional reimbursement pursuant to HumanGood's expense reimbursement policy and must submit receipts documenting their expenses. Please review the new HR-21 Cell Phone policy for more information on cell phone.

Definitions

- 1) Home-based/Work-at-Home Telework means allowing team members to use information technology and communication packages to work one or more days in the workweek at the team member's place of residence.
- 2) Mobile/virtual office means a location or environment, which may include customer sites, hotels, cars, or at home, where a team member performs work through the use of portable information technology and communication packages.
- 3) Official duty station means the official duty station for a team member's position of record as indicated on the most recent notification of personnel action (UltiPro).
- 4) Telework means working from an alternative worksite, rather than the traditional office. This may be a team member's home or another chosen telework location. Telecommuting, work-at-home, and telework all refer to paid employment away from the traditional office. The terms telecommuting and teleworking are synonymous.
- 5) Crisis Telework means teleworking due to a crisis where the company has determined it is best for the team member to not report to their normal work station. During crisis telework the team member may not have all the appropriate materials, supplies or office set up. During crisis telework the team member may telework for a short period of time, usually 30 days or less without being able to successfully certify using the Telework Safety Self-Certification. At any time if the team member feels that the crisis telework is unsafe and putting them at risk the team member must immediately notify their supervisor or human resources immediately. Successful crisis teleworking does not imply that a normal telework arrangement will be authorized. Crisis telework has a separate Crisis Telework Agreement provide in this policy.

Process for Establishing a Telework Arrangement

- 1) The team member completes the Telework Proposal, which describes how the proposed arrangement would work and submits it to the immediate supervisor.

- 2) The immediate supervisor makes a preliminary determination as to position and team member suitability for telework.
- 3) The immediate supervisor agrees/disagrees to the team member's participation and approves/disapproves the Telework Proposal noting any modifications to the proposal.
- 4) The immediate supervisor and team member review this policy and Information Security Mobile Device and Teleworking Policy and Standards, develop a telework agreement which lists all terms and conditions for the telework arrangement and completes the Remote Access Users Agreement.
- 5) If this is a work-at-home Telework Proposal, the team member must complete a Telework Self-Certification Safety Checklist, and submit it to the immediate supervisor.
- 6) Team member Completes Telework Training via online Seminar or in Relias
- 7) Telework Pack Contents: The telework proposal, a telework agreement, telework Self-certification safety checklist and the remote access user agreement; the packet is submitted to the designated management official or his/her designee within the chain of command for approval by signing the Telework Proposal and submitting to Human Resources for final review and approval.
- 8) If a telework arrangement is denied, the Telework Proposal form must annotate the reason why the request was denied. The decision to deny the telework agreement is not subject to any formal appeal procedure.
- 9) If a telework arrangement is approved, the team member and immediate supervisor sign the telework agreement.

Process for Establishing a Crisis Telework Arrangement

- 1) Supervisor determines positions and confirms team member's at-home capabilities for telework; team members not able to telework during a crisis may not be able to work and should contact their Human Resources representative.
- 2) Supervisor coordinates telework and equipment requirements with IT. In the case a computer is needed but not enough company computers are available, a personal computer may be used to access company information through HumanGood controlled access as defined in 'Mobile Device & Teleworking Standard'.
- 3) Team members that do not have a company issued phone or are not on the company phone stipend program but required by supervisor to be reachable through phone can use personal phone for business use (business related phone expense may be reimbursed).

- 4) Team member reviews Telework Policy, Information Security Mobile Device and Teleworking – Policy and Standards and completes Crisis Telework Packet (Crisis Telework Agreement, Remote User Agreement, Safety Certification).
- 5) Team member may start teleworking once the Crisis Telework Packet is complete and approved.
- 6) Team member Completes Telework Training via online Seminar or in Relias
- 7) Entire CRISIS TELEWORK PACKET is forwarded to the local Human Resources representative and filed in Team Member's personnel file, based on the crisis and printer/scanner availability, electronic approvals and signatures may be email until the crisis allows for completing said documentation.

Responsibilities

- 1) Supervisors are responsible for implementing telework programs and approving or discontinuing telework arrangements for team members under their supervision. The approval of telework arrangements must be coordinated with Human Resources and Information Technology.
- 2) Supervisors are responsible for determining position and team member suitability for a telework arrangement and coordinating with the Information Technology department. They must also ensure adequate coverage during public business hours, that operations continue to be carried out in an efficient and economical manner, and that participating and non-participating team members are treated equitably.
- 3) Team members are responsible for maintaining productivity and for fulfilling their obligation to account for a full day's work.
- 4) Team members are responsible for completing the appropriate telework packet and all items identified in the packet:
 - a) Telework Packet– Used for normal telework requests
 - b) Crisis Telework Packet – Used for expeditious transition to telework when directed based on a management identified crisis.

Participation in a telework arrangement is voluntary. Position suitability and availability of staff and resources are considerations for management when determining team member participation.

- 1) Telework is a voluntary work arrangement that can be terminated by the team member or supervisor at any time with appropriate notice, normally seven-day notice. In the event of a change in supervisor, the supervisor shall evaluate the need to continue the telework

arrangement and inform the team member of their decision to continue or terminate the arrangement.

- 2) Team members selected for telework arrangements must meet and continue to meet performance expectations and have a minimum performance rating "meets expectations". They should have a history of being reliable, responsible, and able to work independently. Both full-time and part-time team members may participate in a telework arrangement. Telework is not available for trainee positions.
- 3) The supervisor is responsible for determining how many days per week are appropriate for a telework arrangement. Each arrangement to telework is to be considered individually.
- 4) The supervisor should discuss the requirements and expectations of the telework arrangement with the team member prior to recommending approval of a telework agreement.
- 5) All teleworkers and their immediate supervisors must take the required training designed to provide the team member and supervisor with a smooth transition to telework. Statistical studies show that participants who receive training have a much better chance at succeeding.

Position Suitability

- 1) Management officials are responsible for determining which positions are appropriate for telework arrangements.
- 2) Position suitability should be reviewed by management officials based on the functions and duties of the position rather than the title. Tasks that can be performed away from the traditional office are generally more suited for a telework arrangement. In some instances, duties performed in the traditional office location could be separated from the team member's duties and performed at the alternate worksite. This approach to "job reengineering" can assist in providing appropriate avenues toward telework. Guidelines for position suitability include but are not limited to:
 - a) Work activities must be portable and can be performed effectively outside the traditional office location;
 - b) Job tasks are quantifiable or primarily project-oriented;
 - c) Contact with other team members, the supervisor or manager, and serviced clientele is predictable and normally scheduled;
 - d) The computer technology needed to perform work off-site is currently available;
 - e) Team members may be linked electronically to the traditional office location by computer and internet connection or may simply take work to the alternative worksite, requiring no computer;

- f) Privacy Act materials, evidence, or sensitive documents (hard copy or electronic) may be accessed remotely provided that the team member agrees to protect records from unauthorized disclosure or damage and will comply with the requirements of the Privacy Act of 1974, the Health Insurance Portability and Accountability Act of 1996 (HIPPA) and all other applicable law and regulations.

Minimum Participant Criteria

- 1) The team member's position must be suitable to telework.
- 2) All appropriate forms must be completed and contain approval signatures and returned to HR prior to initiating Telework.
- 3) The telework arrangement must not adversely affect HumanGood's mission and functions. If, at any time, it is determined that an arrangement is having an adverse impact on work operations or performance, the supervisor or the team member may terminate the arrangement with a seven-day notice.

Information Security

Team members are informed that periodic remote computer surveillance may be conducted to ensure information security policy compliance. If HumanGood information security policies, procedures and guidelines are not followed, telework must be terminated. Prior notice to the team member is not required for enforcement and reporting of security violations.

The information security requirements are listed on 'Mobile device & Teleworking Standards'. Below are the highlights:

- 1) All remote access to HumanGood information or information assets created or used in support of HumanGood business is HumanGood information and requires management approval
- 2) All devices used for telework are required to use an approved method of encryption to protect data in transit and at rest.
- 3) Mobile devices storing or accessing HumanGood information must employ password controls and inactivity timeouts
- 4) Users are expressly forbidden from storing HumanGood data on devices that are not issued or managed by HumanGood
- 5) Computer and mobile device with HumanGood data that are lost, stolen or have been compromised must be reported immediately to the Client Service Desk and the VP of information security

Privacy and Compliance Considerations

- 1) Resident information or documents must be secured at all times and HIPAA (Health Insurance Portability and Accountability Act) compliance is more challenging during remote work. All sensitive information must be secured at all times, remote workers should not print company information outside of HumanGood facility unless authorized to do so per job responsibility, printed materials must be held in a secure place. The team member must also comply with all legal requirements (for example, Privacy Act of 1974, HIPAA). Prior notice to the team member is not required to terminate telework arrangements due to security violations.
- 2) If any legal requirements (for example, Privacy Act of 1974, HIPAA) or HumanGood office policies and procedures change the team member, upon proper notice, agrees to comply with the changed requirements. Failure to so agree constitutes a basis for termination of the team member's participation in the program.

Performance Evaluation

The performance of a team member on a telework arrangement should be evaluated based on the applicable performance standards for his or her position or for that portion of the overall performance plan which applies. Supervisors and team members should fully discuss performance expectations in the initial phase of the process of establishing a telework arrangement to assure expectations are fully understood. Performance should be measured on achieved results. Periodic reviews between the supervisor and the team member are encouraged.

Time and Attendance Accounting

The team member's time and attendance will be recorded as performing official duties at the official duty station or alternative worksite, as applicable. To verify attendance at the alternative worksite, supervisors may periodically contact the team member and/or permit team member self-certification, or require the team member to be logged onto a web based group chat feature so the team member and the supervisor have immediate access, as if in a normal office setting. To help ensure that Team members on telework arrangements work as scheduled, supervisors should focus on the completion of work products as applicable.

Work Schedule

Based on work requirements, supervisors may arrange telework schedules to allow team members to work on a telework arrangement one day per pay period, one day per week, or as often as five days per week. Normally, the supervisor may change telework schedules only with notice to the team member in advance of the applicable administrative workweek. Work unit supervisors may also approve alternative work schedules for team members on telework arrangements when doing so is consistent with work requirements. Supervisor modification or termination of the arrangement requires a weeks' notice except where:

- 1) work-related circumstances require otherwise, e.g., emergency situation,
- 2) management determines that the teleworker is not meeting performance criteria,

- 3) the team member breached information security protocol, or
- 4) the team member works overtime without prior advanced approval.

Time Off

All current attendance policies and regulations apply to team members on telework arrangements.

Emergency Closing/Group Dismissal

On a day when a team member is scheduled to work at the Alternative Worksite and their official duty station facility is closed for all or part of a day, the following rules apply:

- 1) **Full Day Closing.** The team member is not *required* to perform work at the alternate work site (AWS). However, if the team member *voluntarily* chooses to perform any work at the AWS, the team member is not entitled to additional compensation such as overtime, compensatory time, or credit hours.
- 2) **Late Arrivals and Early Dismissals.** On days when a late arrival or early dismissal occurs, the team member is required to perform their full work schedule if located at home.
- 3) On a case-by-case basis, a supervisor may excuse a telework team member from duty during an emergency if the emergency adversely affects the telework site (e.g., disruption of electricity, loss of heat, etc.).

Pay

All entitlements for pay, including locality-based comparability pay, special salary rates, and travel benefits will be based on the team member's official duty station.

The Alternative Worksite

- 1) The alternative worksite must be suited to conducting business.
- 2) Before a work-at-home Telework Proposal and Work Agreement are approved; the team member must complete a Telework Self-Certification Safety Checklist, and submit it to the immediate supervisor unless completing during an identified crisis.
- 3) The supervisor and team member should identify resources needed to facilitate the work assignment, assuring all property and equipment needs are satisfied in accordance with the telework agreement.

Equipment and Support Service

- 1) HumanGood will provide one standard set of peripherals such as monitor, keyboards, mice, and other accessories to each team member who is issued a computer. This will be located at the employee's primary (> 50%) workspace. Other locations will be considered temporary for the employee and not be outfitted with a full set of equipment or will be shared "hotel" space. Refer to 'Endpoint device policy' for details.
- 2) HumanGood may issue and/or pay for additional equipment, software, equipment maintenance, and repair based on business needs to support a work-at-home arrangement. This may include but is not limited to pen, paper, computers, computer peripherals, phones, printers, and scanners, as well as Internet security appliances. The decision to purchase or provide issued equipment and pay for their associated expenses is discretionary on the part of management.
- 3) Team members will incur the cost of utilities associated with working-at-home including costs of the internet, additional electrical outlets, and telephone lines. In some limited situations, HumanGood may pay for telephone through 'phone stipend program'.
- 4) During temporary work-at-home situations (e.g. Crisis telework arrangement), equipment may be moved from the office to the home environment rather than the company purchasing additional equipment.
- 5) Any Office Furniture or Office Technology equipment provided by the company must be tracked and accounted by the supervisor using UltiPro. In the UltiPro system under the Company Property tab, simply add property using the dropdown tabs. Any receipts for property should be placed in the documents section of UltiPro under the "Other" category.
- 6) All IT support and additional equipment/software request must contact HumanGood 24x7 Client Service Desk. A ticket will be created to track the progress. If additional equipment/software is needed, management approval is required.

Liability and Workers' Compensation

Team members on telework arrangements are covered under applicable Federal and State Workers' Compensation Laws. As with injuries which occur in the traditional office setting, for injuries that occur during telework arrangements, supervisors may only attest to what they reasonably know. In all situations, team members are responsible for informing their immediate supervisor of an injury at the earliest time possible. If an accident occurs, normal Workers' Compensation reporting protocols will apply.

Evaluation

It is recommended that telework arrangements be evaluated periodically to determine the impact on work.

Termination

The telework arrangement must meet the operational needs of the HumanGood mission. If not, the supervisor may terminate the arrangement after meeting any applicable notice requirements. Since telework is a voluntary work arrangement, the team member may terminate it at any time with appropriate notice, at least one week.

TELEWORK SELF-CERTIFICATION SAFETY CHECKLIST

1. NAME OF TEAM MEMBER:	2. NAME OF SUPERVISOR:
3. Home Address:	4. Assigned Duty Station:
5. Primary Phone:	6. Alternate Phone

The following checklist is designed to assess the overall safety of your home office. Please answer each question, sign and date. You must also have your supervisor sign and date after you have completed this form. (Circle Yes or No for every question)

7A. OFFICE ENVIRONMENT

1. Are temperature, noise, ventilation and lighting levels adequate for maintaining your normal level of job? Performance?	Yes or No
2. Are all stairs with four or more steps equipped with handrails?	Yes or No
3. Are all circuit breakers and/or fuses in the electrical panel labeled and do all circuit breakers clearly indicate if they are in the open or closed position?	Yes or No
4. Is all electrical equipment free of recognized hazards that would cause physical harm? (frayed wires, bare conductors, loose wires, wires running through walls, exposed wires to the ceiling, extension cords under carpets)	Yes or No
5. Are aisles, doorways, and comets free of obstructions to permit visibility and movement?	Yes or No
6. Are file cabinets and storage closets arranged so drawers and doors do not open into walkways?	Yes or No
7. Do chairs have any loose casters (wheels) and are the rungs and legs of the chairs sturdy?	Yes or No
8. Are the phone lines, electrical cords, and extension wires secured under a desk or alongside a baseboard?	Yes or No
9. Is the office space neat, clean, and free of excessive amounts of combustibles?	Yes or No
10. Are floors surfaces clean, dry, level and free of worn or fray seams?	Yes or No
11. Is there enough light for reading?	Yes or No

7B. COMPUTER WORKSTATION

1. Is the chair adjustable and support your back?	Yes or No
2. Are your feet on the floor or fully supported by a footrest?	Yes or No
3. Are you satisfied with the placement of your monitor and keyboard?	Yes or No
4. Is it easy to read the text on the screen?	Yes or No
5. Do you need a document holder?	Yes or No
6. Is there sufficient leg room?	Yes or No
7. Is there space to rest your arms and wrists while typing?	Yes or No
8. Have you reviewed the ergonomic diagram attached and believe you are adequately supported at your home desk?	Yes or No

I have thoroughly reviewed the checklist and believe my home or alternate workstation is safe to work at. If there are any safety issues I will bring it up to my supervisor immediately. I also understand that as a worksite my employer or their designated representative has the authority to examine my work station to ensure it is safe.

TELEWORK AGREEMENT

The following constitutes an agreement between HumanGood and _____ to the terms and conditions of this alternative workplace arrangement. This is neither a contract nor intended to create any contractual obligations between the parties.

1. Voluntary Participation. The team member voluntarily agrees to work at the agency-approved alternative workplace indicated below and to follow all applicable policies and procedures. The team member recognizes the telework arrangement is not a team member benefit but an additional method the agency may approve to accomplish work.

2. Trial Period. The team member and management agree to try out the arrangement for at least one month unless unforeseen difficulties require earlier termination.

3. Salary and Benefits. Management agrees that a telework arrangement is not a basis for changing the team member's salary and benefits.

4. Duty Station and Alternative Worksite. The team member and management agree that the team member's official duty station is (list duty station for regular office) and that the team member's approved alternative worksite is (specify location, street address, etc.). The team member understands that all pay, leave, and travel entitlements are based on the official duty station. If the team member elects to reside in a higher cost of labor market, the geographically based pay will be based on the assigned Community Support Center. If the team member elects to live in a lower cost of labor market, the agency may use the lower cost geographical area for determining the team members pay band. With reasonable notice to the team member, management has the right to change the days spent at the official duty station or alternative worksite.

5. Official Duties. The Team member agrees to only perform official duties when on duty at the regular office or alternative worksite. The Team member agrees not to conduct personal business while in official duty status at the alternative worksite, for example, caring for dependents.

6. Work Schedule and Tour of Duty. Management and the Team member agree that the Team member's official tour of duty will be (specify days, hours, and location).

7. Time and Attendance. The Team member's time and attendance will be recorded as performing official duties at the official duty station or alternative worksite, as applicable.

8. Time Off. The Team member agrees to follow established office procedures for requesting and obtaining approval of PTO, Annual Leave or Sick Time as applicable.

9. Overtime. The Team member agrees to work overtime only when ordered and approved by the supervisor in advance and understands that working overtime without such approval may result in termination of the telework arrangement and/or other disciplinary action.

10. Equipment/Supplies. The Team member agrees to protect any HumanGood-owned equipment and to use it only for business purposes. Management agrees to provide any HumanGood-owned equipment issued to the telework team member and conduct service and maintenance of the equipment at a HumanGood CSC or community. The team member agrees to install HumanGood-owned equipment and install, service, and maintain any personal equipment used. Management agrees to reimburse the team member for essential business-related expenses and optionally offer a phone stipend.

11. Liability & Injury Compensation. The Team member understands that HumanGood will not be liable for damages to a team member's personal or real property while the team member is working at the approved alternative worksite, except by Federal and State Workers' Compensation Laws. The Team member agrees to notify the supervisor immediately of any accident or injury that occurs at the alternative worksite and to complete any required forms.

12. Work Area (work-at-home only). The team member agrees to provide a distraction-free worksite adequate for the performance of official duties, and sign the Self-Certification Safety checklist.

13. Worksite Inspection. The team member agrees to permit HumanGood to inspect the alternative worksite during the team member's normal working hours to ensure proper maintenance of HumanGood-owned property and conformance with safety standards. HumanGood will give the team member reasonable notice of a planned inspection.

14. Alternative Worksite Costs. The Team member agrees that HumanGood will not be responsible for any operating costs that are associated with the Team member using his or her home as an alternative worksite, for example, internet fees, home maintenance or utilities. The team member understands that he or she does not relinquish any entitlement to reimbursement for authorized expenses incurred while performing official duties, as provided for by statute or law.

15. Work Assignments/Performance. The team member agrees to complete all assigned work according to procedures mutually agreed upon by the team member and the supervisor. The team member's performance will be evaluated against standards contained in performance plans, job descriptions, employee handbook and supervisor provided guidance.

16. Cancellation. The team member may cancel participation in the telework arrangement at any time with appropriate notice, at least one week. Supervisor modification or termination of the arrangement requires a weeks' notice except where (1) work-related circumstances require otherwise, e.g. emergency situation, (2) management determines that the teleworker is not meeting performance criteria, (3) the Team member breached information security protocol, or (4) the team member works overtime without prior advanced approval. The decision to cancel the telework arrangement is not subject to any formal appeal procedure. Management agrees to allow the team member to resume his or her regular work schedule at the official duty station if the telework arrangement is canceled.

17. Disclosure. The team member agrees to protect HumanGood information/records from unauthorized disclosure.

18. Standards of Conduct. The team member agrees that he or she is bound by HumanGood standards of conduct while working at the alternative worksite.

19. Training. I have completed the assigned telework training. (In development, may be completed later)

20. Agreement. This agreement is not intended to alter the employment at-will relationship in any way. Accordingly, unless an employee has a valid written and signed contract of employment stating otherwise, employment is at-will and can be terminated by the employee or by the employer at any time. Nothing in this agreement precludes management from taking any appropriate disciplinary or adverse action against a team member who fails to comply with the provisions of the agreement. Agreement is not valid until signed/approved by all three parties.

APPENDIX B. CRISIS TELEWORK PACKET

Items 1-3 must be complete and signed prior to a Team member Teleworking	Initials	Date
1. Supervisor determines positions and confirms team member's at-home capabilities for telework, team members not able to telework during a crisis may not be able to work, contact HR.		
2. Supervisor coordinates telework and equipment requirements with IT.		
3. Team member Completes CRISIS TELEWORK PACKET (Crisis Telework Agreement, Remote User Agreement, Safety Certification)		
4. Team member may start telework at this time		
5. 1 st day of telework Team member reviews Telework Policy and the Information Security Mobile Device and Teleworking Policy & Standards		
6. Team member Completes Telework Training via online Seminar or in Relias		
7. Entire CRISIS TELEWORK PACKET is filed in Team Member's personnel file.		

CRISIS TELEWORK AGREEMENT

The following constitutes an agreement between HumanGood and _____ to the terms and conditions of this alternative workplace arrangement. This is neither a contract nor intended to create any contractual obligations between the parties.

- 1. Voluntary Participation.** The team member voluntarily agrees to work at the agency-approved alternative workplace indicated below and to follow all applicable policies and procedures. The team member recognizes the telework arrangement is not a team member benefit but an additional method the agency may approve to accomplish work. Team members that do not agree to participate in a crisis telework may be unable to work.
- 2. Period.** The time period of the crisis will dictate the length of time of the agreement, it is up to the discretion of the employer.
- 3. Salary and Benefits.** Management agrees that a telework arrangement is not a basis for changing the team member's salary and benefits.
- 4. Duty Station and Alternative Worksite.** The team member and management agree that the team member's official duty station will remain the assigned Community Support Center unless a more permanent arrangement is made post crisis.
- 5. Official Duties.** The Team member agrees to only perform official duties when on duty at the regular office or alternative worksite. The Team member agrees not to conduct personal business while in official duty status at the alternative worksite, for example, caring for dependents. During a crisis where childcare responsibilities may be thrust upon the team member due to school or daycare closures, the team member should work with the supervisor to adjust and flex hours as appropriate in order to meet family and work responsibilities.
- 6. Work Schedule and Tour of Duty.** Crisis telework schedule will remain the same as the work schedule before the crisis unless a separate arrangement is made with the supervisor.
- 7. Time and Attendance.** The Team member's time and attendance will be recorded as performing official duties at the official duty station or alternative worksite, as applicable.
- 8. Time Off.** The Team member agrees to follow established office procedures for requesting and obtaining approval of PTO, Annual Leave or Sick Time as applicable.
- 9. Overtime.** The Team member agrees to work overtime only when ordered and approved by the supervisor in advance and understands that working overtime without such approval may result in discipline.
- 10. Equipment/Supplies.** The Team member agrees to protect any HumanGood-owned equipment and to use it only for official purposes. Management agrees to provide any HumanGood-owned equipment issued to the telework team member and conduct service and maintenance of the equipment at a HumanGood CSC or community. The team member agrees to

install HumanGood-owned equipment and install, service, and maintain any personal equipment used. Management agrees to provide the team member with necessary office supplies and to reimburse the team member for essential business-related expenses and optionally offer a phone stipend.

11. Liability & Injury Compensation. The Team member understands that HumanGood will not be liable for damages to a team member's personal or real property while the team member is working at the approved alternative worksite, except by Federal and State Workers' Compensation Laws. The Team member agrees to notify the supervisor immediately of any accident or injury that occurs at the alternative worksite and to complete any required forms.

12. Work Area (work-at-home only). The team member agrees to provide a distraction-free worksite adequate for the performance of official duties, and sign the Self-Certification Safety checklist.

13. Worksite Inspection. The team member agrees to permit HumanGood to inspect the alternative worksite during the team member's normal working hours to ensure proper maintenance of HumanGood-owned property and conformance with safety standards. HumanGood will give the team member reasonable notice of a planned inspection.

14. Alternative Worksite Costs. The Team member agrees that HumanGood will not be responsible for any operating costs that are associated with the Team member using his or her home as an alternative worksite, for example, internet fees, home maintenance or utilities. The team member understands that he or she does not relinquish any entitlement to reimbursement for authorized expenses incurred while performing official duties, as provided for by statute or law.

15. Work Assignments/Performance. The team member agrees to complete all assigned work according to procedures mutually agreed upon by the team member and the supervisor. The team member's performance will be evaluated against standards contained in performance plans, job descriptions, employee handbook and supervisor provided guidance.

16. Cancellation. Management may end the crisis telework arrangement at any time, with a three-day notice. The team member may cancel participation in the crisis telework arrangement at any time with the same three-day notice. Team members unable to telework during a crisis where a suitable HumanGood office is not available may be denied work.

17. Disclosure. The team member agrees to protect HumanGood information/records from unauthorized disclosure.

21. Standards of Conduct. The team member agrees that he or she is bound by HumanGood standards of conduct while working at the alternative worksite.

22. Training. Team member will review the telework policy and complete the telework training as soon as practical, but within 1 week of signing this agreement.

23. Agreement. This agreement is not intended to alter the employment at-will relationship in any way. Accordingly, unless an employee has a valid written and signed contract of employment stating otherwise, employment is at-will and can be terminated by the employee or by the employer at any time. Nothing in this agreement precludes management from taking any appropriate disciplinary or adverse action against a team member who fails to comply with the provisions of the agreement. Agreement is not valid until signed/approved by all three parties.

Policy

HumanGood would like for the attire that team members wear to work to complement a workplace environment which is professionally operated, efficient, orderly, innovative and pleasant. Enforcement of this policy is the responsibility of supervisory personnel. HumanGood reserves the right to change, extend, revise, revoke, or continue this policy at its discretion. This policy is intended to elaborate and augment section 5.3 Dress Code and Other Personal Standards of the HumanGood Employee Handbook. Any requests for assistance in administering or interpreting this dress code policy should be directed to HumanGood’s Community Support Center Human Resources. This policy augments

Neat and Well-Groomed - During working hours, team members should appear neat and professional at all times. Team members are expected to be suitably attired and well groomed, and to ensure that their clothing is clean, ironed, and not torn, ripped, or stained.

Prohibited Attire - Some attire is unacceptable for work at any time. The following list provides some examples, although it is not a complete list:

- Any clothing, jewelry, or tattoos that contain an offensive word, message or slogan or picture directed a race, sexual orientation, gender, age, religion, disability, or is otherwise considered to be offensive or harassing in some way, is not permitted. However, team members are not prohibited from wearing clothing containing messages or slogans in connection with protected concerted activity and protest of team member wages, hours and working conditions.
- Cut offs or shorts
- Gym wear or beach wear
- Clothing that reveals the team member's underwear
- Spandex or Lycra (As the only outer garment)
- Tube tops, halter tops, or shirts with spaghetti straps
- Evening wear
- Sweatshirts or sweatpants

- Miniskirts
- Sandals or flip-flops
- Bandanas
- Any clothing that reveals the team member's stomach, full back, cleavage or chest, or otherwise revealing attire

Special Accommodations - Every effort will be made to reasonably accommodate team members with a disability or with religious beliefs that may make it difficult for that team member to comply fully with the dress code policy. Team members should contact their supervisor to request such a reasonable accommodation. Supervisors will work the team members to develop a reasonable accommodation to meet the team member's specific needs and ensure such accommodations are documented and filed with Human Resources, while complying to the greatest extent possible with the general policy of HumanGood

Job Specific Concerns - This dress code policy is a general guideline, but team members should take into consideration any job specific safety concerns or requirements. Team members who regularly lift machinery or heavy materials should not wear dangling clothing or jewelry that may get caught in machinery and should wear comfortable, slip-resistant, close-toed shoes at all time. Team members who are working in the health industry or with food may also have follow further health requirements like wearing hairnets or gloves when performing specific tasks.

NLRA Activity - When applicable protected concerted activity covered by the NLRA or the particular collective bargaining agreement is not prohibited by this policy.

Disciplinary Measures - Most of this dress code is left to the team member's personal discretion but supervisors have the right to determine the appropriateness of clothing. Generally, if any team member has any doubt about something, the team member should either not wear the clothing, or should speak to a supervisor before wearing it. Any team member who violates this policy for the first time will be warned, counseled, and sent home to change clothing. Non-exempt team members will have this time charged to their accrued personal days. Subsequent violations of this policy may lead to increased discipline, up to, and including, termination.

Individual Business Units Dress Codes are detailed in the following attachments:

- Attachment 1 – Affordable Housing
- Attachment 2 – Community Support Center
- Attachment 3 – Dining Departments
- Attachment 4 – Life Plan Communities

Attachment 1 – Affordable Housing

Affordable Housing Communities objective in establishing a business casual dress code in order to allow our Team Members to work comfortably in the workplace. Yet, we still need our Team Members to project a professional image for our residents, applicants, and community visitors. Business casual dress is the standard for this dress code for office Team Members. Office Team Members are typically the Administrator, Assistant Administrator, Receptionist, Occupancy Specialist, Service Coordinator, etc. Because all casual clothing is not suitable for the office, these guidelines will help you determine what is appropriate to wear to work. Clothing that works well for the beach, yard work, dance clubs, exercise sessions, and sports contests may not be appropriate for a professional appearance at work. Low cut shirts and clothing that reveals your back, chest, stomach or underwear is not appropriate for a place of business. In a business casual work environment, clothing should be clean and free of wrinkles. Torn, dirty, or frayed clothing is unacceptable, all seams must be finished. Any clothing that has words, terms, or pictures that may be offensive to other Team Members or Residents is unacceptable. Clothing that has the company logo is encouraged.

Business Casual Overview. The list is not all inclusive and subject to management's interpretation. The list describes what is generally acceptable or unacceptable business casual attire. No dress code can cover all contingencies so Team Members must exert a certain amount of judgment in their choice of clothing to wear to work. If you experience uncertainty about acceptable, professional business casual attire for work, please consult with your supervisor or your Human Resources staff.

Slacks, Pants, and Suit Pants

Slacks that are similar to Dockers and other makers of cotton or synthetic material pants, wool pants, flannel pants, dressy capris, and nice looking dress synthetic pants are acceptable. Inappropriate slacks or pants include jeans, sweatpants, exercise pants, Bermuda shorts, short shorts, shorts, bib overalls, leggings, and any spandex or other form-fitting pants such as those worn for biking.

Skirts, Dresses, and Skirted Suits

Casual dresses and skirts, and skirts that are split at or below the knee are acceptable. Dress and skirt length should be at a length at which you can sit comfortably in public. Short, tight skirts that ride up the thigh are inappropriate for work. Mini-skirts, skorts, sun dresses, beach dresses, and spaghetti-strap dresses are inappropriate for the office.

Shirts, Tops, Blouses, and Jackets

Casual shirts with a collar, dress shirts, sweaters, tops, golf-type shirts, and turtlenecks are acceptable attire for work. Most suit jackets or sport jackets are also acceptable attire for the office, if they violate none of the listed guidelines. Inappropriate attire for work includes tank

tops; midriff tops; shirts with potentially offensive words, terms, logos, pictures, cartoons, or slogans; halter-tops; tops with bare shoulders; sweatshirts, and t-shirts unless worn under another blouse, shirt, jacket, or dress.

Shoes and Footwear

Conservative walking shoes, loafers, clogs, boots, flats, dress heels, and leather deck-type shoes are acceptable for work. Flashy athletic shoes, thongs, flip-flops, slippers, and any shoe with more than 3” heels are not acceptable. Open toe shoes may be worn in the office and common areas of the community with the following exceptions: Closed toe and closed heel shoes are required in vacant apartments, landscaping, maintenance shops, or other areas where open toe shoes may be dangerous. It is suggested that if you wear open toe shoes to work that you have a pair of closed toe shoes in your desk for the occasions where you must enter the areas described above.

Jewelry, Makeup, Perfume, and Cologne

Should be in good taste, with limited visible body piercing. Remember, that some Team Members are allergic to the chemicals in perfumes and make-up, so wear these substances with restraint. Visible tattoos must be covered while at work.

Hats and Head Covering

Hats are not appropriate in the office. Head Covers that are required for religious purposes or to honor cultural tradition are allowed.

Nametags

All Team Members must wear a nametag while at work. Should a nametag become lost or misplaced a temporary nametag that features the property logo must be worn.

Casual Fridays and Themed Days

At the discretion of the Administrator and Property Supervisor, communities may observe Casual Fridays. On these days, Office Team members may wear jeans that are conservative in style. Jeans should not have excessive designs, rips and must be neat and ironed. When jeans are worn, they MUST be accompanied with an Affordable Housing logo shirt or a dress shirt and nametag. Care should be made that Team Members look “dressy” while wearing jeans. Affordable Housing Communities encourages a fun work environment and permits at the discretion of the Community Administrator and Property Supervisor that certain days be declared as themed days. In this case all Community Team Members are encouraged to participate in wearing themed clothing. Again care must be taken to ensure a professional appearance including the wearing of nametags. In both of these examples a sign should be posted that the office is celebrating a casual day or a themed day.

Affordable Housing Maintenance Team

Affordable Housing Communities' objective in establishing a dress code for the Maintenance Team is to allow our Team Members to work comfortably in the workplace while ensuring Team Member safety. Yet, we still need our Team Members to project a professional image for our residents, applicants, and community visitors. Maintenance Uniforms are the standard for this dress code for Maintenance Team Members. Maintenance Team Members are typically the Maintenance Supervisor, Maintenance Technician, Maintenance Associate, Janitor or Custodian, Groundskeeper, Transportation Driver, etc. All communities will provide a uniform for Maintenance Team Members that include Shirts, pants and a jacket. Maintenance Uniforms should be wrinkle free. Torn, dirty, or frayed clothing is unacceptable. All seams must be finished. Any clothing that has words, terms, or pictures that may be offensive to other Team Members or residents is unacceptable.

Shoes and Footwear

Conservative athletic or walking shoes, loafers, clogs, sneakers, boots and leather deck-type shoes are acceptable for work. Flashy athletic shoes, thongs, flip-flops, slippers, and any shoe with an open toe are not acceptable for maintenance staff. Closed toe and closed heel shoes are required of the maintenance staff.

Jewelry, Makeup, Perfume, and Cologne

Should be in good taste, with limited visible body piercing. Maintenance Team Members must refrain from wearing large earrings or jewelry in order to work safely and to avoid accidents. Remember, that some Team Members are allergic to the chemicals in perfumes and make-up, so wear these substances with restraint. Visible tattoos must be covered while at work.

Hats and Head Covering

Hats may be worn that have the Affordable Housing Communities logo only. Head Covers that are required for religious purposes or to honor cultural tradition are allowed.

Nametags

All Team Members must wear a nametag while at work. Should a nametag become lost or misplaced a temporary nametag that features the company logo must be worn.

Casual Fridays and Themed Days

At the discretion of the Administrator and Property Supervisor, communities may observe Casual Fridays. On these days, Maintenance Team members may wear jeans that are not too fashion forward and are conservative in style. Jeans should not have excessive designs, rips and must be neat and ironed. When jeans are worn, they MUST be accompanied with a Affordable Housing Communities shirt or your uniform shirt and nametag. Care should be made that Team Members look professional while wearing jeans. Affordable Housing Communities encourages a fun work environment and permits at the discretion of the Community Administrator and Property Supervisor that certain days be declared as themed. In this case all Community Team

Members are encouraged to participate in wearing themed clothing. Again care must be taken to ensure a professional appearance including the wearing of nametags. In both of these examples a sign should be posted that the office is celebrating a casual day or a themed day.

Attachment 2 – Community Support Center Members

HumanGood’s objective in establishing a Community Support Center workplace dress code is to allow our Team Members to work comfortably in the workplace while still projecting a modern workplace image. HumanGood’s new casual attire is the standard dress code for office Team Members except when engaging in Community Visits or when we have Community Support Center Guests, then typical business or business casual attire is required. HumanGood casual attire is more relaxed than business casual, for example, you are allowed to wear jeans, sundresses without spaghetti straps and HumanGood T-Shirts.

Community Support Center team members often visit the communities where they’re seen as the leadership of HumanGood. We also have times where we have Community Support Center visits from residents, board members, community leadership, and industry leaders. Therefore Community Support Center Team Members must dress in the appropriate business casual or business attire when visiting the communities or when we are receiving guests at the Community Support Center. Advance notice will be given via email if the Community Support Center is required to wear business casual or business attire. .

This dress code policy must also be followed when engaging in video conference calls or Zoom meetings from a telework site; you must present yourself as if you are at the location you are zooming with. Therefore business casual is appropriate if zooming (teleconferencing) with Communities, Board Members or Residents; HumanGood casual is appropriate if zooming with the Community Support Center team members.

HumanGood Casual

Because all casual clothing is not suitable for the office, these guidelines will help you determine what is appropriate to wear to work. Clothing that works well for the beach, yard work, dance clubs, exercise sessions, and sporting contests may not be appropriate for a professional appearance at work. Low cut shirts and clothing that reveals your back, chest, stomach or underwear is not appropriate for a place of business. In a workplace environment, clothing should be clean and free of wrinkles. Torn, dirty, or frayed clothing is unacceptable, all seams must be finished. Any clothing that has words, terms, or pictures that may be offensive to other Team Members or Residents is unacceptable. Clothing that has the company logo is encouraged.

Slacks, Pants, and Suit Pants

Slacks that are similar to Dockers and other makers of cotton or synthetic material pants, wool pants, flannel pants, dressy capris, and nice looking dress synthetic pants or jeans that do not have any holes or tears are acceptable. Inappropriate slacks (excessively form fitting) or sweatpants, exercise pants, any Bermuda shorts, shorts, bib overalls, leggings, and any spandex or other form-fitting pants such as those worn for biking. Yoga pants or leggings can be worn, under a suitable dress or outfit that covers the same areas a conservative skirt would cover.

Skirts, Dresses, and Skirted Suits

Casual dresses and skirts, and skirts that are split at or below the knee are acceptable. Dress and skirt length should be at a length at which you can sit comfortably in public. Short, tight skirts that ride up the thigh are inappropriate for work. Mini-skirts, skorts, or any dress that has spaghetti-straps or no-straps are inappropriate for the office.

Shirts, Tops, Blouses, and Jackets

Casual shirts with a collar, dress shirts, sweaters, tops, golf-type shirts, turtlenecks and HumanGood T-Shirts are acceptable attire for work. Most suit jackets or sport jackets are also acceptable attire for the office. Inappropriate attire for work includes tank tops; midriff tops; shirts with potentially offensive words, terms, logos, pictures, cartoons, or slogans; halter-tops; sweatshirts.

Shoes and Footwear

Conservative walking shoes, loafers, clogs, boots, flats, dress heels, and leather deck-type shoes are acceptable for work. Flashy athletic shoes, thongs, flip-flops, slippers, and any shoe with more than 3” heels are not acceptable.

Jewelry, Makeup, Perfume, and Cologne

Should be in good taste, with limited visible body piercing. Remember, that some Team Members are allergic to the chemicals in perfumes and make-up, so wear these substances with restraint. Visible tattoos must be covered while at work.

Hats and Head Covering

Hats are not appropriate in the office except for Casual Attire and Theme Days. Head Covers that are required for religious purposes or to honor cultural tradition are allowed.

Nametags

All Team Members must wear a nametag while in a community or when guests are visiting.

Casual Attire & Themed Days

Casual attire days are only approved for theme days or events, except for those pre-approved theme days, sports jersey's and head gear are not authorized.

Attachment 3 – Dining Department

Dress Standard:

- Appearance - Shirt should be clean, wrinkle free, and tucked in
- Hair - Long hair pulled back in a ponytail or bun and no artificial eyelashes
- Nails - Short and trimmed and no artificial nails
- Accessories - No excessive jewelry or perfumes

Wait Staff Dress Code:

- Issued shirt
- Issued name badge
- Issued apron
- Safety/Slip-Resistant shoes
- Full Length Black slacks and blackbelt (if necessary)

Culinary Staff Dress Code:

- Issued Chefs coat or utility shirt
- Issued name badge
- Issued apron
- Issued head wear or hairnet
- Issued Beard-Net must be worn if facial hair is present
- Safety/Slip Resistant shoes
- Full Length Black slacks and blackbelt (if necessary)

**Attachment 4 - Life Plan Communities
(Contact Local LPC HR)**

HumanGood would like for the attire that team members wear to work to complement a workplace environment which is professionally operated, efficient, orderly, innovative and pleasant. Enforcement of this policy is the responsibility of supervisory personnel. HumanGood reserves the right to change, extend, revise, revoke, or continue this policy at its discretion.

General Requirements – The requirements below apply to all LPCs unless specifically addressed in department-specific dress code requirements below.

Nametags

All Team Members must wear their name badge while at work on the upper shoulder so that it is easily visible at all times. Should a nametag become lost or misplaced a temporary nametag must be worn. Team members should contact their HR department or appropriate party to order a new name badge immediately upon realizing they have lost their name badge.

Neat and Well-Groomed

During working hours, team members should appear neat and professional at all times. Team members are expected to be suitably attired and well groomed, and to ensure that their clothing is clean, ironed, and not torn, ripped, or stained. See below for additional grooming guidelines:

- Team members are expected to maintain appropriate and professional hairstyles. Hair must be clean, combed and neatly trimmed or arranged; unkempt hair is not permissible regardless of length; Hair must be properly restrained for its length and job assignment. Hair coloring should be within the range of natural hair colors. Small variations on natural hair colors are acceptable (i.e. brown hair that shines red) Bright hair colors are not acceptable.
- Beards, mustaches and sideburns must be clean and trimmed at all times
- Team members are expected to maintain appropriate and professional nail length and color. Certain positions have additional requirements due to food safety and infection control concerns. Team members must follow the guidelines given by their manager regarding nail requirements.
- Personal hygiene is essential; therefore, it is necessary that all team members maintain a clean, presentable appearance. Personal hygiene includes a regular bath/shower, use of deodorant, and appropriate oral hygiene.
- Strong odors caused by perfumes, scented hair sprays, and after shave lotions are to be used in moderation out of concern and comfort of our residents and others.
- Tattoos should be covered whenever possible. Team members with tattoos that are exposed outside of clothing should consult with the local HR department or their supervisor to find out community-specific rules. Rules about tattoos may differ by community due to varying resident population preferences. Refer to the community and department specific guidelines below for more information.

Prohibited Attire

Some attire is unacceptable for work at any time. The following list provides some examples, although it is not a complete list:

- Any clothing, jewelry, or tattoos that contain an offensive word, message or slogan or picture directed at a race, sexual orientation, gender, age, religion, disability, or is otherwise considered to be offensive or harassing in some way, is not permitted. However, team members are not prohibited from wearing clothing containing messages or slogans in connection with protected concerted activity and protest of team member wages, hours and working conditions.
- Cut offs or shorts, Non-business style capri pants (*Management reserves the right to modify the exception to shorts during extreme heat conditions)
- Gym wear or beach wear
- Exercise wear is not permitted, unless specific job duties require it. (For example, a Fitness Assistant may wear exercise clothing to conduct classes.) Spandex or lycra clothing must be covered by an additional layer of clothing.
- Clothing that reveals the team member's underwear or undergarments
- Tube tops, halter tops, spaghetti strap tops, or off the shoulder tops (these types of tops may be appropriate with a cardigan, sweater or jacket over the top to cover)
- Sweatshirts, hoodies or sweatpants that do not have the company logo.
- Miniskirts
- Flip flops (Please refer to community policy on open toed shoes, dressy sandals. Rubber thong flip-flops are not appropriate for work at any time except for water exercise instructors)
- Any clothing that reveals the team member's stomach, full back, cleavage or chest, or otherwise any other revealing attire
- Jeans except as allowed by department or as allowed on “Jean Fridays” or other special themed days per direction of community leadership.
- Robes, slippers, pajama or evening wear.
- No bandanas are allowed
- Ear buds, air pods, headphones or any other musical device

Jewelry, Makeup, Perfume, Accessories and Cologne

- Sunglasses are not permitted to be worn indoors.
- Makeup should be in good taste and professional for the work environment.
- Jewelry should be in good taste, with limited visible body piercing. In health care and food service positions, additional requirements may apply.
- Remember, that some Team Members are allergic to the chemicals in perfumes and colognes, so wear these substances with restraint.
- Based upon job assignment, long necklaces and earrings may interfere with safety in the work environment and should be avoided.

Hats and Head Coverings

- Hats and baseball caps are not appropriate in the office.
- Bandanas are not appropriate or permitted while at work
- Head Covers that are required for religious purposes or to honor cultural tradition are allowed

Special Casual Days or Themed Days

- HumanGood encourages a fun work environment and permits at the discretion of the Executive Director and community leadership team that certain days be declared as themed days. In this case, all Community Team Members are encouraged to participate in wearing themed clothing.
- Name badges still need to be worn on special/themed days.
- Care must be taken to ensure a professional and appropriate appearance on these days
- Communication should be posted in a public area/easily accessible area that the office is celebrating a casual or special themed day
- For jean permitted days, team members may wear jeans that are conservative in style. Jeans should not have excessive designs, rips and must be neat and ironed.

NLRA Activity

- When applicable protected concerted activity covered by the NLRA or the particular collective bargaining agreement is not prohibited by this policy.

Special Accommodations

- Every effort will be made to reasonably accommodate team members with a disability or with religious beliefs that may make it difficult for that team member to comply fully with the dress code policy.
- Team members needing a change in uniform or dress code modification due to pregnancy should contact their supervisor or the Human Resources department to make a request for special arrangement.
- Team members should contact their supervisor to request such a reasonable accommodation. Supervisors will work team members to develop a reasonable accommodation to meet the team member's specific needs and ensure such accommodations are documented and filed with Human Resources, while complying to the greatest extent possible with the general policy of HumanGood.

Job Specific/Safety Concerns

- This dress code policy is a general guideline, but team members should take into consideration any job specific safety concerns or requirements when getting dressed to come to work.

- Team members who regularly lift machinery or heavy materials should not wear dangling clothing or jewelry that may get caught in machinery and should wear comfortable, slip-resistant, closed toe shoes at all time.
- Team members who are working in the health industry or with food may also have follow further health requirements like wearing hairnets or gloves when performing specific tasks.

Disciplinary Measures

- Any team member who violates this policy may be coached/counseled or given disciplinary action if they have previously been made aware or warned. Subsequent violations of this policy may lead to increased discipline, up to, and including, termination.
- Team members may be sent home to change. Non-exempt team members will have this time charged to their accrued personal days or unpaid if no personal time is available for use.
- If any team member has any doubt about something, the team member should either not wear the clothing, or should speak to a supervisor before wearing it.

Business Casual Overview (for department managers, administrative and Sales staff unless otherwise noted in department specific requirements for community location)

HumanGood Continuing Care Retirement Communities objective in establishing a business casual dress code in order to allow our Team Members to work comfortably in the workplace. Yet, we still need our Team Members to project a professional image for our residents, applicants, and community visitors. Business casual dress is the standard for this dress code for office Team Members. Office Team Members are typically the Administrator, Assistant Administrator, Receptionist, Occupancy Specialist, Service Coordinator, etc.

Because all casual clothing is not suitable for the office, these guidelines will help you determine what is appropriate to wear to work. Clothing that works well for the beach, yard work, dance clubs, exercise sessions, and sports contests may not be appropriate for a professional appearance at work. Low cut shirts and clothing that reveals your back, chest, stomach or underwear is not appropriate for a place of business. In a business casual work environment, clothing should be clean and free of wrinkles. Torn, dirty, or frayed clothing is unacceptable, all seams must be finished. Any clothing that has words, terms, or pictures that may be offensive to other Team Members or Residents is unacceptable. Clothing that has the company logo is encouraged.

The list is not all inclusive and subject to management's interpretation. The list describes what is generally acceptable or unacceptable business casual attire. No dress code can cover all contingencies so Team Members must exert a certain amount of judgment in their choice of

clothing to wear to work. If you experience uncertainty about acceptable, professional business casual attire for work, please consult with your supervisor or your Human Resources staff.

Slacks, Pants, Suit Pants

- Slacks that are similar to Dockers and other makers of cotton or synthetic material pants, wool pants, flannel pants, dressy capris, and nice looking dress synthetic pants or jeans that do not have any holes or tears are acceptable.
- Jeans, sweatpants, exercise pants, Bermuda shorts, short shorts, shorts, bib overalls, leggings, and any spandex or other form-fitting pants such as those worn for biking are not acceptable.
- Yoga pants or leggings can be worn, under a suitable dress or outfit that covers the same areas a conservative skirt would cover.
- Pants must be a full dress-pant length. Capris, jeans, painter pants, and low-slung pants are not allowed. Dockers in appropriate neutral colors are allowed. Shorts, culottes and gauchos are never acceptable.

Skirts, Dresses, and Skirted Suits

- Casual dresses and skirts, and skirts that are split at or below the knee are acceptable.
- Dress and skirt length should be at a length at which you can sit comfortably in public.
- Mini-skirts, skorts, sun dresses, beach dresses, and spaghetti-strap dresses are inappropriate for the office. Short, tight skirts that ride up the thigh are also inappropriate for work.
- Dresses that leave shoulders uncovered must be accompanied by a cardigan, sweater or jacket in order to be considered appropriate.

Shirts, Tops, Blouses and Jackets

- Casual shirts with a collar, dress shirts, sweaters, tops, golf-type shirts, turtlenecks and HumanGood branded t-shirts are acceptable attire for work. Most suit jackets or sport jackets are also acceptable attire for the office, if they violate none of the listed guidelines.
- Inappropriate attire for work includes tank tops; midriff tops; shirts with potentially offensive words, terms, logos, pictures, cartoons, or slogans; halter-tops; tops with bare shoulders; sweatshirts, and t-shirts unless worn under another blouse, shirt or jacket.
- Dresses or tops with spaghetti straps must be covered by a jacket or blouse.
- Clothing should be modest, not tight-fitting, revealing or see-through (including lace)
- Tops must be long enough to avoid any midriff or stomach exposure and should not be too low cut causing showing of cleavage or inappropriate exposure of any kind.
- T-shirts/t-shirt material or tank tops are not acceptable, unless worn underneath a uniform top. If worn underneath a uniform, the t-shirt should not be visible and should be free of logos or advertisements.

Shoes and Footwear

- Rubber beach thong sandals/flip flops are never appropriate for the workplace
- Shoes are to be neat, clean and in good repair. Heels should not be more than three inches high.
- Conservative walking shoes, loafers, clogs, boots, flats, dress heels, and leather deck-type shoes are acceptable for work.
- Flashy athletic shoes, thongs, flip-flops, slippers, and any shoe with more than 3” heels are not acceptable.
- All footwear is expected to be appropriate to the team member’s position. Please see community/departmental guidelines below for more information specific to your position.
- Although open toed shoes may be worn in certain positions as allowed by the community-specific dress code guidelines, closed toe shoes must always be worn in any area where open toed shoes may pose a safety risk.

Weather & Other Emergencies	Effective Date	2-5-2021
	Revision Dates	
	Departments Approving	OPS & HR
	Departments Affected	ALL

INTRODUCTION and BACKGROUND

The safety of our residents and the success of our operations during weather emergencies, power outages, and or other unforeseen emergencies depend upon the reliability, strong commitment and cooperation of all of our employees. HumanGood does not close during periods of extreme inclement weather or during power outages or other emergencies. All communities remain open in order to provide the needed care and services to our residents and to support those who deliver the care and services.

During these periods of inclement or severe weather, and during other emergency conditions, every effort must be made by all employees to safely report to work and to remain at work for their full shift, and potentially beyond.

POLICY

The Vice President of Operations has the sole discretion to determine if weather conditions or other emergent conditions are severe enough to deviate from absence and payroll policies. In these cases, the Vice President of Operations will announce that “Severe Emergency Conditions” are in effect.

It is the responsibility of the Executive Directors, Administrators, Directors and Managers to communicate this policy to all team member and to communicate the details of any announcement of “Severe Emergency Conditions”.

PROCEDURES

1. In the event the Vice President of Operations declares that “Severe Emergency Conditions” are in effect, team members who report to work late due to the severe emergency conditions, but arrive within an “acceptable arrival time” will not be docked for lost time and will be paid for his or her regularly scheduled hours for the day.
 - a. In such instances, the Vice President of Operations will designate the maximum amount of tardiness (i.e. the “acceptable arrival time”) for which employees may be

compensated. Generally, two hours will be the maximum time of tardiness for which employees will be compensated.

- b. Team members who report to work by the allowable arrival time will be excused for any tardiness.
2. A team member who arrives to work after the “acceptable arrival time” will be required to use Paid Time Off (PTO) for periods of tardiness beyond the “acceptable arrival time”. In the event the team member does not have any PTO in his or her bank, the team member will not be paid for the period of tardiness beyond the acceptable arrival time.
3. Due to the nature of our operations and our commitment to provide uninterrupted care and service to our residents, our communities and offices will remain open during emergent conditions. However, recognizing that team members may request to leave work early when a severe storm or other emergent conditions may impact their ability to travel home safely, requests for early departure will be considered. Team members requesting to leave early must seek approval from his or her supervisor. The supervisor in turn, will get approval to allow team members to leave early as follows:
 - a. In our Life Plan Communities, the supervisor must gain approval from the Executive Director, prior to allowing team members to leave the building.
 - b. In our Affordable Housing communities, approval by Administrator is required.
 - c. At the Community Support Centers, approval by the Vice President of Human Resources is required.
4. Should team members be given permission to leave early during emergent conditions, they will be required to use PTO to compensate him or her for the unworked portion of the work day. In the event a team member does not have sufficient PTO to cover the unworked portion of the day, the team member will not be paid for the unworked portion of the day.
5. Team members may volunteer to work beyond his or her regular day or may offer to work on a non-scheduled work day to assist during the emergency. A supervisor, manager, Administrator or Executive Director must approve any additional work hours prior to allowing the team member to work. Team members must be paid for extra work time in accordance with HumanGood’s established pay practices.
6. Team members may be temporarily reassigned to work in a department or unit, which is understaffed, or in need of special assistance.
7. Team members may be asked to report to work earlier than regularly scheduled or be required to stay beyond their regular workday in order to maintain acceptable staffing levels.
8. Special transportation arrangements may be available to assist team members who do not have alternate means of transportation for work. Team members are expected to contact the community at which they work as early as is practicable to request transportation assistance.

9. In the event a team member made a good faith effort to come to work and was unable to do so during “Severe Emergency Conditions”, the Administrator, Executive Director, or appropriate VP of the area may authorize the use of paid time off. In these instances, the absence will not be held against the team member for performance evaluation purposes.
 - a. Patterns of absence or tardiness during inclement weather may be reviewed with the team member.

10. Team members calling out due to sickness may be asked to document his or her illness by providing a doctor’s note and/or other certification of illness.

Team Member Crisis Fund	Effective Date	01/15/2015
	Revision Dates	04/24/2018
		07/25/2018
		08/29/2019
		03/19/2020
	Departments Approving	HR & Foundation
Departments Affected	All	

Introduction and Background

To support team members, residents and residents’ families in charitable giving for the benefit of team members in crisis, The Foundation has instituted the Team Member Crisis Fund (TMCF).

The TMCF fund provides immediate short term financial assistance to qualifying team members in need. By donating to the Fund, donors can feel confident their entire financial gift goes directly to team members in need of emergency shelter, food, clothing, funeral expenses and other qualifying expenses. The TMCF is a 501(c)(3) non-profit fund managed by the Foundation and administered by an established committee. The Team Member Crisis Fund relies on denotations to help carry out its mission.

Policy

Team Members may make charitable contributions to support fellow team members in crisis. Contributions can be made through payroll deductions, or a donation of PTO or Vacation hours. The payroll deduction may be a one-time donation, or for a definite or indefinite number of pay periods as defined by the Team Member. The PTO/Vacation donation can be made once per 12 month period at a time chosen by the Team Member. The team member must maintain an 80 hour balance after the donation. Residents and residents’ families may donate to the TMCF through the Foundations. Funds will be approved for distribution to qualified team members in need by the TMCF committee.

The TMCF requires the team member in need to meet specific criteria to qualify for aid through this program. The TMCF targets team members who cannot pay basic living expenses as direct result of an unforeseen circumstance such as death, natural disaster, fire, illness or injury. The TMCF may also assist when financial hardship results from the unexpected unemployment of a team member’s second job (not a HumanGood job) or spouse because of lay-off or company closure, or if a home rented by the associate is unexpectedly sold or foreclosed because of no fault of their own. The maximum grant amounts are defined and set every quarter by the TMCF Committee based in the TMCF budget and other financial criteria

The chart below determines if a hardship qualifies for a TCMF grant. The circumstance below covers the team member and legal dependents ONLY. Parents, grandparents and siblings do not fall in this category. If a team member’s situation is not in this chart, they may still apply for a TCMF grant; however they may not be able to receive aid. Assistance is based on available funds.

All HumanGood Employers are Equal Opportunity Employers. Complying with the American with Disabilities Act, HumanGood employers will provide reasonable accommodations to qualified individuals with disabilities and encourages both prospective team members and incumbents to discuss potential accommodations with the appropriate HumanGood Employer. The TCMF Committee intends to apply this policy on a non-discretionary, equitable basis consistent with our mission, values, policies and applicable laws. The TCMF Committee will endeavor to make informed and reasonable decisions concerning its charitable distributions, but must rely on the accuracy and integrity of the information provided by the team members seeking assistance.

<i>ELIGIBLE CIRCUMSTANCES</i>	<i>ELIGIBLE EXPENSES</i>
<p>ILLNESS OR INJURY (recent illness or injury of the team member, spouse or legal dependent, generally within the prior 2-3months)</p>	<ul style="list-style-type: none"> • Past due rent or mortgage • Past due property taxes • Past due basic utilities • Necessary home modifications
<p>DEATH (covers deceased team member, legal dependents, immediate family members)</p>	<ul style="list-style-type: none"> • Essential funeral expenses • Past due rent or mortgage • Past due property taxes • Past due basic utilities
<p>NATURAL DISASTER OR FIRE (i.e., hurricane, tornado, flood, ice/wind storm affecting the team member’s primary residence)</p>	<ul style="list-style-type: none"> • Security deposit to move into a new residence • Utility deposit to connect basic utilizes at a new residence • Uninsured/underinsured necessary home repairs • Home owners insurance deductibles • Past due rent or mortgage • Past due property taxes • Past due basic utilities • Childcare • Food* • Clothing**
<p>UNEMPLOYMENT</p>	<ul style="list-style-type: none"> • Past due rent or mortgage • Past due property taxes • Past due basic utilities

(Loss of spouse or domestic partner’s job or the team member’s 2 nd job because of lay-off or company closure within past 12 months.)	<ul style="list-style-type: none"> • Childcare • Food* • Clothing**
<p>UNINHABITABLE OR CONDEMNED HOUSING</p> <p>(rental residence is condemned or deemed uninhabitable because of unsafe living conditions, rodent/insect infestation)</p>	<ul style="list-style-type: none"> • Security deposit to move into a new residence • Utility deposit to connect basic utilizes at a new residence
<p>UNFORSEEN SALE OR FORECLOSURE OF A LEASED PROPERTY</p> <p>(for team members who rent from a private landlord ONLY; foreclosure of a personal home doesn’t fit under this circumstance)</p>	<ul style="list-style-type: none"> • Security deposit to move into a new residence • Utility deposit to connect basic utilizes at a new residence

*Covered only after demonstrated need; maximum amount is \$1,000

**Food and clothing may be considered under all eligible circumstances; however, eligibility for this expense will be determined on case by case basis.

Eligibility

Individuals eligible to receive disbursements from TMCF must be actively employed or on an approved leave of absence by a HumanGood Employer. Eligible individuals include the team member, the spouse or registered domestic partner of the team member and legal dependents.

Responsibilities

The Foundation: will maintain and manage the 501 (c)(3) non-profit fund and administer funds based on the TMCF Committee approvals.

Team Member Crisis Fund Committee: An established committee comprised of volunteer team members and/or residents. The majority of the committee members cannot be team members that are in a position to exercise a substantial influence over the affairs of the company. The TMCF Committee will review all applicants and manage administration of the TMCF program. The Committee will ensure all completed applications are reviewed and accepted or declined within 24 hours of receipt. A minimum of two committee members is required to authorize the release of funds. The committee will meet quarterly to review all processes and procedures related to TMCF, to include setting authorized fund amounts. The committee will maintain records showing the assistance provided, criteria paying out aid, date, place, and number of people assisted.

Community HR, Executive Directors and Administrators: Promote the use of the funds and help team members with the application process. Ensure no other financial assistance funds are

executed unless approved by the CSC and in accordance with policy, procedures and applicable laws.

Supervisor: Supervisors will have no input into the TMCF approval process. Request for assistance will not be considered in any employment decisions.

CSC Human Resources: Ensure an application system is available for team members to apply for assistance. Promote the use of the application system by establishing appropriate web information, links and fliers. Each year review the policy and the committee minutes to ensure the committee is applying this policy on a non-discretionary, equitable basis, aligned with our mission, values, policies and applicable laws.

Residents: Residents are only authorized to assist Team Members in crisis through this established TMCF. Dispersing funds through another means venue may be in violation of violate IRS Tax Code and the Gifts, Tips and Financial Dealings with Resident policy.

Procedures

Donations:

1. Team Member will complete the Team Member Crisis Fund Donation Form and submit to the local HR Representative.
2. The HR Representative will submit a Trackit to initiate the donation.
3. Donation processing:
 - a. One-time and on-going funds will appear as a post-tax payroll deductions on regular paychecks as a Foundation Donation,
 - b. PTO/Vacation donations will be processed with a PTO/Vacation payout for the designated number of hours, taxes will be applied, and the net amount will be deducted as a post-tax Foundation Donation.
4. Team Members wishing to discontinue their on-going donations should submit TrackIt.

Team Members requesting fund will:

1. Complete the application in its entirety
2. Submit the application to your local human resources office or submit the application by
 - a. E-Mail: crisisfund@humangood.org
 - b. FAX: 925.924.7232; or
 - c. Mail: Team Member Crisis Fund Administrator
1900 Huntington Drive
Duarte, CA 91010
3. Attached relevant supporting documentation:
Copies of bills, past due rent/mortgage statements or eviction notices, past due basic utilities, injury or illness documentation, death certificates, fire or police reports, (2) reports
4. Identify how requested funds should be sent.

Dispersing Funds

A minimum of 2(two) Team Member Crisis Fund Committee members will approve dispersing Team member Crisis Funds held and, managed by the Foundation.

Collecting and Fund Raising

CSC Payroll will establish payroll deduction method for Team Members to donate funds or PTO hours to the TMCF.

The Foundation will establish a, method for residents and family members to donate to the TMCF.

Bonus & Coverage Policy		01/01/2019
	Revision Dates	11/27/2019

Departments Affected	All	

Introduction and Background

The HumanGood Bonus Policy is designed to illustrate standard practices and procedures for all Bonus payments to ensure they comply with the applicable federal, state and local pay laws and ordinances.

To the extent that the information contained herein is or becomes inconsistent with applicable laws (such as the enactment of new laws after this policy is implemented), it is HumanGood’s policy to follow the law. HumanGood also reserves the right to update and amend this policy as required.

Summary of Policy and Procedure

This policy addresses all forms of bonus compensation paid to all employees paid through HumanGood payroll system. The policy elaborates and augments the HumanGood Employee Handbook bonus practices, provides greater depth and is intended to ensure that the appropriate bonus practices are available to ensure HumanGood can properly financially reward work while complying with applicable federal, state and local pay laws and ordinances. It is also the intent of the policy to identify standard procedures to ensure all of HumanGood administers this policy consistently.

Policy

HumanGood’s policy is to pay bonuses to Team Members only under approved bonus programs as established under applicable local, state and federal labor laws.

Definitions

Bonus: Bonuses are a form of variable pay. They can either be based on general performance or specific performance. Bonuses are determined based upon a number of factors, including but not limited to, an employee’s individual performance as well as the company’s overall performance. Simply because an employee is eligible for a bonus does not mean that he or she will receive one. Approved and documented performance criteria laid out in the particular bonus program must be met in order for a bonus payment to be issued.

Exempt Employee: Exempt Team Members whose job assignments meet specific exemption tests established by the Federal Fair Labor Standards Act (FLSA) and applicable state wage and hour laws and who are exempt from minimum wage and overtime pay requirements. Exempt Team Members are compensated on salary basis.

Non-Exempt Employee: Non-Exempt Team Members whose job positions do not meet FLSA exemption criteria or applicable state wages and hour exemption tests and who are not exempt from minimum wage and overtime pay requirements. Accordingly, non-exempt Team Members are required to accurately report their time (see Section 4.2 of this Handbook). Non-exempt Team Members are eligible to receive overtime pay for hours worked in excess of eight hours in any workday and 40 hours in a workweek (or applicable state requirement if different). Non-exempt Team Members are also entitled to unpaid meal and paid rest breaks in accordance to state law (see Section 4.3 of this Handbook)

Bonus Practices

HumanGood uses multiple types of bonuses to incentivize and reward performance. To be eligible to receive a bonus, a team member must be employed on the date the bonus is distributed.

All general performance or specific performance bonuses are pro-rated for any period of time that a Team Member is not employed during the bonus period. For example, a Team Member who commences employment on July 1st will be eligible for 50 percent of his or her bonus for a full year. Team Members will not be credited with time for periods of unpaid leave, although they will remain eligible for bonuses on a pro-rated basis. For example, a Team Member who takes 12 weeks of unpaid leave under the Family and Medical Leave Act (FMLA) may be eligible to receive pro rata percent of his or her full bonus. Any exception to bonus proration must be specifically outlined in a Bonus Plan approved in advance by the Human Resources Vice President.

Simply because a Team Member is eligible for a bonus does not guarantee that he or she will receive a one. Bonuses are determined based upon a number of factors, including but not limited to, an employee's individual performance as well as the company's overall performance, these indicators and factors are identified in the HumanGood Bonus Plan Document.

Bonuses paid at HumanGood fall into two categories, Discretionary and Non- Discretionary bonuses.

Discretionary Bonus: A one-time event that is approved at the time the bonus is requested and paid; further, each event sets no precedent. These bonus payments must be made through HumanGood payroll. In the case of gift cards or any non-cash payments, the taxable value must be recorded through payroll and must be pre-approved. It can apply to an individual or a group and will require appropriate justification from the requestor and appropriate approval, depending

on the financial impact of that bonus. Discretionary bonuses or sums paid as gifts at holiday or other special occasions, such as a reward for exceptional service (which are not measured by or dependent upon hours worked, productions or efficiency) are not included for purposes of determining the regular rate of pay. **A discretionary bonus is a form of variable pay which is made at the sole discretion of the employer, and there should not be expectations by the team member. The amount, the requirements, and the timing are not disclosed in advance.** The employer determines after the fact that there is a reason for awarding a bonus, such as reaching company and/or financial goals, or chooses to reward an individual team member for exceptional performance.

Current Discretionary bonuses authorized at HumanGood include; Spot Bonus (e.g. TM of the quarter), Holiday Gifts, Human Good Awards, Referrals, Retentions and Sign-On bonuses.

Non-Discretionary Bonus: A non-discretionary bonus or incentive payment has predetermined criteria and standards, as well as an understood plan or policy for determining and allocating rewards. These requirements are determined at the outset of the payment period. Team members can reasonably expect to be paid the payment if the standards are met and they are employed at the scheduled pay out time. Bonuses may be paid upon exit of employment if the bonus criteria has been met, some bonuses require the team member to be employed at the time the payment is awarded. This type of payment is made routinely—usually on a set schedule. They typically include payments for meeting financial goals, non-financial performance factors, etc. These types of payments must be included in the regular rate of pay and calculation of overtime. **Non-Discretionary bonus plans must be documented in advance or at the beginning of the eligibility period (for example, no later than March 31st for an annual bonus Jan-Dec) and pre-approved by HumanGood CSC Human Resources and appropriate Vice President of Operations, Senior VP, Executive VP, COO or Chief Financial Officer.**

Coverage Bonus (Non-Discretionary): At times team members are required to work in a higher-level position or at other communities during long term absences. Team members working in higher level roles or at other communities are eligible for a bonus based on the time covering and performing exemplary service. In order to ensure consistency please use the chart below to ensure bonus payments are consistent. If team members work less than a week, please prorate based on the appropriate daily amounts listed. Corporate and regional staff may be eligible for a spot bonus for exemplary service, however, corporate and regional staff are expected to fill in at the community level when required so therefore not eligible for the coverage bonus. Team members covering positions they supervise or lower level positions are not eligible for a coverage bonus but may be eligible for a discretionary bonus based on exemplary work performed. If a team member is performing at a higher level for more than a pay period, they should be temporarily promoted in the company's HRIS system and these amounts below should be the amount their base pay is increased by.

Job	Weekly Bonus
Executive Director, CCRC	\$641
Health Services Admin	\$588
Director Nursing	\$504
Director Nursing, Asst	\$426
Dir Staff Development	\$426
Nurse Supervisor RN	\$426
Physical Therapy Supervis	\$426
Director Wellness Program	\$359
Charge Nurse RN	\$359
MDS Coordinator	\$359
Occupational Therapist	\$359
Physical Therapist	\$359
Dir of Building & Grounds	\$359
Director of Hospitality	\$316
Human Resources Generalis	\$316
Director Assisted Living	\$316
Nurse Supervisor LVN/LPN	\$316
Registered Nurse	\$316
Assistant Administrator	\$316
Post-Acute Liaison	\$316
All other leadership positions	\$272

Sales Bonus: Sales Bonuses are a form of Non-Discretionary Bonus. Sales team members are eligible for monthly, quarterly and/or year-end bonuses based upon individual compensation plans established prior to the start of each fiscal year or at their hire date if hired during the year, based upon the Sales Bonus Plan.

HumanGood Employee Handbook

Performance Management	Effective Date	01/11/2017
	Revision Dates	08/01/2020
		02/06/2021
	Departments Approving	HR
	Departments Affected	ALL

A. Purpose

The purpose of this policy is to establish standardized performance management procedures at HumanGood. HumanGood is invested in growing our Team Members’ professional skills and career opportunities. A critical part of this development plan is for HumanGood to have a fair and equitable performance management program. Performance Management is more than an annual event. Leaders are expected to continue performance conversations throughout the year through (but not limited to) 90-Day Review, Quarterly Check-Ins, regular one on ones, the annual performance appraisal and corrective measures as required.

B. Person Affected

All HumanGood team members including all employment types (who are actively employed by HumanGood), except temporary or contractors.

C. Policy

HumanGood supervisors and managers are expected to regularly communicate with each team member regarding their performance. HumanGood does not believe annual performance reviews are sufficient for recognizing successes or for coaching to improve performance. HumanGood managers and supervisors must regularly communicate with their team members and at a minimum ensure quarterly Check-In meetings. This includes clearly defining performance standards and objectives with the team member, as well as objectively monitoring and evaluating their accomplishments and developmental needs on a regular basis, Team Members must demonstrate the HumanGood experience behaviors through performance in primary duties and truly living the HumanGood brand.

HumanGood is on a calendar year performance cycle where all team members eligible for an annual review receive their annual review in December of every year. Team Members hired January through August will receive a 90-day review and a year-end review. The year-end review rating will be used for their annual rating for annual merit increase purposes, which may be pro-rated. Team members hired in September will only receive a 90-day review and that rating will be used for their annual rating for annual

merit increase purposes, which may be pro-rated. Team Members hired or promoted October 1st or later in the year should receive a 90-day review by their appropriate 90th day and are not subject to the year-end review or eligible for the annual merit increase. Although we continually strive to reward good performance, HumanGood does not guarantee any Team Member an annual increase.

New team members and those new in position will receive an introductory review (non-merit based) by their 90th day of employment or in their new position.

Any team member whose performance is deemed “Unsatisfactory” or “Needs Improvement”, during any point of their employment, should receive a documented Record of Conference notification or be placed on a performance improvement plan in order to allow the team member the opportunity to improve.

D. Definitions

- **Record of Conference** – A record of conference is a performance management tool that a leader will use to document unsatisfactory performance or behavior of a team member. A leader will use a record of conference when the team member displays behaviors that are out of alignment with HumanGood culture or is not performing his or her role to expectations. A leader who decides to use a record of conference should be using this tool as a way to document the behavior or performance issue so that the team member is aware and actively trying to improve.
- **Leadership Performance Review** – Annual appraisal form for anyone who supervises HumanGood Team Members. Leadership team members are able to complete the self-appraisal section on the form and send to their supervisor, but it is not required.
- **Leadership:** A manager or supervisor that has direct supervision over other team members or corporate level programs. In their absence the 2nd level supervisor is responsible.
- **Performance Improvement Plan (PIP)** – A Performance Improvement Plan or a PIP is a performance based corrective action. Usually a PIP will have a very specific and measurable performance improvement goal with a clear timeline. Typical timelines are 30, 60, or 90 days, but can be longer. When a leader decides to use a PIP for performance management, the team member is informed that he or she is not meeting a performance standard. The leader will provide the team member with a clear and measurable performance expectation as outlined in the document. The timeline is critical to using a PIP as the failure to meet this standard in the prescribed timeline may lead to separation of employment.
- **Quarterly Check-In Meetings** - Meetings to provide and adjust goals as required, provide meaningful feedback, address problems quickly, keep the lines of communication open and recognize team member successes. A minimum of

three Check-In meetings in a year, with the final meeting including the annual appraisal, for a minimum of four meetings a year.

- **Rating Scale** – Identified and explained on forms.
- **Team Member** – An employee of HumanGood, including all employment types (FT, PT, Per Diem), except temporary or contractors.
- **Team Member Performance Review** – Annual appraisal form for all individual contributors.
- **Team Member Self Evaluation** – Form that a team member may (but highly encouraged), complete and provide to their supervisor prior to the actual appraisal being given in order for their input to be considered. Self-appraisals are filed with the actual review form in the team member's personnel file.

E. Responsibilities

Community Support Center Human Resources – Manage the program, update as necessary, provide forms, tools, and systems to ensure the performance management program is in the best interest of the team members, HumanGood and those we serve.

Business Unit or Community Human Resources – Gather and input all performance review evaluation ratings into UltiPro. **Review performance reviews to ensure fairness, quality and professionalism (ratings should be distributed on a bell curve, “Meets Expectations” should be the majority of team members).** Assist managers and supervisors with all performance processes as required.

Managers & Supervisors – Set reasonable and measurable goals and establish expectations regarding performance and behavior standards. Provide regular feedback, coach and counsel all direct reports. Complete introductory 90-day reviews for new team members prior to the 90th day. Coordinate and document quarterly Check-In meetings at a minimum; more frequent reviews may be accomplished. Review any self-evaluation provided by the team member, draft and deliver annual performance reviews in accordance with the annual performance calendar. Address team member conduct and performance in a timely professional manner. Develop performance improvement plans (PIP) when required and ensure weekly performance discussion are happening with any team members on a PIP. Providing feedback and annual performance reviews is a key job functions for managers and supervisors. Failure to accomplish this process will be reflected in the supervisor or managers own performance evaluation.

F. Procedures

New Hire or New in Position

All new team members and those recently promoted or assigned to a new position will be informed by their supervisor on the performance management process. They will be

provided a copy of 90-day introductory review and the appropriate annual self-evaluation form for the annual review. They will also be provided a copy of their current job description and thoroughly informed of all expectations in order meet standards and have their employment extended beyond the 90-day introductory period. Prior to the 90th day of employment the supervisor will complete the introductory review and notify Human Resources if employment should continue employment with HumanGood.

ANNUAL PERFORMANCE REVIEW PROCESS

The annual review process starts January of every year or upon hire, or upon promotion or reassignment to a new position. At that time team members will be given clear expectations and goals for the year, a copy of the job description if not previously given and the first of the four Check-In meetings should take place. Note: from time to time, key job functions may change within a position. It is up to the supervisor to work with Human Resources to ensure any measurable change in a job function is reflected in the job description. During the next two quarters Check-In meetings will occur, the meetings are tracked but written documentation is optional. The fourth quarter Check-In meeting is the annual review that should be given in December of every year or no later than the dates identified on the performance management calendar that is issued annually.

The annual review process is a four-phase program that ensures all stakeholders have the ability to contribute:

PHASE 1 – TEAM MEMBER SELF EVALUATION (OPTIONAL): Team member self-evaluation provides an opportunity for team members to assess their own performance, document their accomplishments and strengths; identify areas for process improvement, professional growth, and constructive suggestions for their supervisor. It is an excellent tool for evaluating our individual ability to live up to the HumanGood brand by reviewing your own ability to display the HumanGood Behaviors that support our core dimensions as well as our skills in job specific areas. Self-Evaluations are voluntary but highly encouraged; the self-assessment step engages the team member in an interactive exchange by providing input to their supervisor before the evaluation discussion.

PHASE 2 - TEAM MEMBER PERFORMANCE REVIEW: After the team member completes the self-assessment, the supervisor reviews the team member's self-assessment and drafts the team member performance review. If the team member elects to not provide a self-evaluation, the supervisor should move forward and not consider the election not to provide a self-evaluation in the ratings, some team members find it difficult to rate their own behaviors and that is not an essential function of their position. After drafting the review, it is recommended that the second-level manager and/or Human Resources representative review and comment *before* the review discussion with the team member. Contact your local Human Resources representative if you need assistance writing a performance review.

PHASE 3 - PERFORMANCE REVIEW DISCUSSION WITH TEAM MEMBER: The supervisor and team member have the appraisal discussion in person in a private location away from noise and interruptions; this may be accomplished via Video Conferencing for those that are geographically separated, but should never be done simply via telephone. The appraisal discussion should include each topic listed on the *Performance Review*, attaching any supporting documentation, and the team member will acknowledge receipt of the form. While pay is tied to performance, pay should not be the focus of the performance review discussion, pay discussions are discouraged as part of this process.

PHASE 4 - PERFORMANCE REVIEW – FILE: A permanent copy of the appraisal will be maintained in the individual’s personnel file, copies may be printed upon request.

PERFORMANCE IMPROVEMENT PROGRAM

Supplementing the HumanGood Annual Performance Review Process is the Performance Improvement Program. The intent of the Performance Improvement Program is to give team members the opportunity to improve their performance, change their behaviors or cease their inappropriate conduct.

HumanGood is an at-will employer and all team members may have their at-will employment terminated at any time with or without cause. A manager’s goal in using the performance improvement program is to provide the appropriate level of coaching, counseling, or training in order to help facilitate a change in the team member’s performance or behaviors. None of these steps are required and HumanGood does not have a progressive discipline policy. While some performance deficiencies and/or behaviors may be addressed multiple times prior to employment being terminated, other issues, especially those that are criminal in nature, resident abuse, harassment or safety issues, or other zero tolerance violations may result in immediate discharge.

In some cases, issues outside of the workplace can affect your work performance, HumanGood will offer benefitted team members or remind them of the Employee Assistance Program (EAP). EAP is a voluntary, confidential service that provides assistance in dealing with problems that are affecting personal, work or family areas. The EAP is a benefit provided by HumanGood and there is no cost to the team member or their dependents. When a team member or dependent contacts the EAP for services, information about the contact is not disclosed to anyone, including HumanGood (there are rare exceptions to confidentiality in which mandatory reporting laws apply). With “self-referrals” to the EAP, HumanGood does not receive any information about the individuals who are using the program.

If a team member is referred to the EAP as a formal management referral in order to continue employment, the team member will be asked by the EAP counselor to sign a limited release so that “compliance information” only can be reported back to Corporate

Human Resources, who will then disseminate appropriate information on a limited basis. No personal information is disclosed to HumanGood by the EAP.

We feel it is very important for team members to know where they stand, and to know what is expected. Often, counseling sessions take the form of “on-the-spot” coaching or informal discussions, other times a Record of Conference may be issued, and during certain performance challenges a team member may be placed on a Performance Improvement Plan and in rare instances a final written warning with an unpaid decision making leave. No matter what correction method is used, these are not punitive in nature and are only used in an attempt to correct behavior or improve performance. **Performance Improvement Plans are for performance issues that will require time for the team member to meet standards; they are not to be used for conduct issues or violations of policy.**

Performance Improvement Plan (PIP) – The PIP is designed to facilitate a constructive discussion between a team member and his or her supervisor and to clarify the work performance to be improved. It is implemented, at the discretion of the supervisor, when it becomes necessary to help a team member improve his or her performance. When a supervisor identifies shortcomings that may be improved with a PIP, or when a team member receives an annual review of Unsatisfactory or Needs Improvement, a PIP or Record of Conference must be on file.

In all cases, it is recommended that the supervisor’s supervisor and the Human Resources department review the plan. This will ensure consistent and fair treatment of team members across the company.

The supervisor, with input from the team member, develops an improvement plan; the purpose of the activities outlined is to help the team member to attain the desired level of performance. The supervisor will monitor and provide feedback to the team member regarding his or her performance on the PIP and may take additional Record of Conferences if warranted. The length of time a team member may be placed on a PIP is based on the number of items that must be improved; the timeframe required to make such improvements and may be based on the tenure of the team member. Standard PIPs range from 30 to 90 days, during that timeframe the supervisor should meet with the team member bi-weekly at a minimum to discuss progress or setbacks.

At a minimum, the supervisor should review the following five items with the team member when using the document.

1. State performance to be improved; be specific and cite examples.
2. State the level of work performance expectation and that it must be performed on a consistent basis.
3. Identify and specify the support, resources or training you will provide to assist the team member.

4. Communicate your plan for providing feedback to the team member. Specify meeting times, with whom and how often. Specify the measurements you will consider in evaluating progress.
5. Specify possible consequences if performance standards are not met.

RECORD OF CONFERENCE

Record of Conference – A Record of Conference is a simple document to record the fact that a meeting took place with a team member to let them know that there must be a correction in their performance or their conduct. The notice identifies the STANDARD not being met, cites specifics around the PROBLEM BEHAVIOR, the DESIRED OUTCOME. In the event the team member doesn't improve their performance or change their behavior the notice identifies the CONSEQUENCES up to and including termination.

HumanGood does not have a requirement for, nor do we agree with step or progressive discipline. The Record of Conference allows the author to identify the level of the correction notice. A simple counseling can happen and the supervisor checks the "Documented Coaching Session" block which illustrates that a corrective event took place via a discussion on this date. Although it does not require a team member's signature, such a notice should always be discussed with the team member prior to being placed in the personnel file.

If "WRITTEN WARNING" is checked the performance is at such an unacceptable level or the conduct is inappropriate enough that the supervisor believes a written warning is required to notify the team member, so the team member can take the appropriate measures to correct the behavior.

A "FINAL WRITTEN WARNING and potential DECISION-MAKING SUSPENSION" is used to signify to the team member that their employment will be terminated if this performance or conduct is not immediately changed. The decision-making suspension is an unpaid day off so the team member can decide if HumanGood is the employer for them. Upon returning from the DECISION-MAKING SUSPENSION, the team member will be asked, or must state their intentions going forward. HumanGood will also share with team member their decision of whether or not we believe HumanGood is a good fit for the team members and or expectations of team member moving forward.

In order to solve a performance or conduct situation there needs to be meaningful communication and commitment from management/supervisory staff and the team member. The goal of the documented forms is to coach, counsel, correct, foster and develop team members. These warnings are giving in sincerity that the team member will change or improve. HumanGood is an at-will employer so if your manager is going through these steps it is with the intent to preserve the Team Member's employment and

improve the situation; this is not a progressive discipline program or steps towards termination.

Background and Pre-Screening	Effective Date	1/1/2019
	Revision Dates	1/1/2021
		2/6/2021
	Departments Approving	HR
	Departments Affected	All

Policy

Due to the nature of our business at HumanGood and certain state and local regulatory requirements, all Team Members are required to “agree to” and “comply with” drug and health screening, background testing and various professional license review and documentation, “post job offer and prior to the first day on the job”.

The purpose of this Policy is to outline the HumanGood post offer / pre-employment Team Member requirements and annual / ongoing requirements. These requirements include Drug Testing, Criminal Background Reports, Health Screening or Job Function Physicals and Licensing Requirements for “all Team Members”. “All Team Members” applies to Corporate Units, Dining Partners, Affordable Housing, and LPC Team Members. We will also address Non-Team Members (Contractors and Volunteers) where applicable. Our Policy also addresses Annual / Ongoing requirements as required.

Specific requirements cover;

- New Hire Drug Testing
- Background Reports
- State Required Fingerprint and Background Clearance
- Health Screening (Physicals)
- TB Testing
- COVID Screening
- All LPC team members must be COVID screened in accordance with all applicable federal, state and county ordinances.
- Position License Requirements (review, collection and update)
- Other Annual Update Requirements

After offer, Team Members that have passed the required Drug Testing and Criminal Background and are also assigned to work in Life Plan Communities must have Health Screening, a current TB Test and required Professional Licenses Verified (if applicable). Any clinical non-LPC position(s)

that require clinical or state licenses must also have a required license(s) verified. License copies will be maintained in individual personnel files and MUST BE recorded in the HRIS system by Human Resources for tracking and audit.

General Requirements:

- **Community Support Center Staff:**
 - Drug Testing
 - HumanGood “employment criminal background”
 - Corporate Staff with Line Responsibility to LPCs may require fingerprint, health and TB Testing
- **Affordable Housing Staff**
 - Drug Testing
 - HumanGood “employment criminal background”
- **LPC Staff**
 - Drug Testing
 - HumanGood “employment criminal background for (ED, Sales, Admissions, Billing)”
 - State Required Fingerprint and State Background (All)
 - Health and TB Testing
 - Basic job Function Physicals
 - License verification

- I. **New Hire Drug Testing:** Upon acceptance of our job offer, Human Resources will instruct the new hire to schedule the appropriate drug test online. All new hires are required to ensure the test is taken within 72 hours from the time the Team Member accepts the position with HumanGood. This includes Team Members that are employees of our embedded Dining Partners who work on our community campuses. This also includes volunteers that work more than 10 hours per week or more than 3 consecutive weeks. Volunteers under 18 years of age will be asked to get parental release for the drug testing. If a volunteer has a significant break in service, 6 months, they should be retested.

HumanGood strictly prohibits the use, sale, attempted sale, conveyance, distribution, manufacture, purchase, attempted purchase, possession, cultivation and/or transfer of illegal drugs or other unlawful intoxicants at any time, and in any amount or any manner, regardless of occasion. "Illegal drugs" means all drugs whose use or possession is regulated or prohibited by federal, state or local law. These include prescription medication that is used in a manner inconsistent with the prescription or for which the individual does not have a valid prescription. HumanGood treats medical marijuana the same as any other prescription drug unless state or federal requirements differ.

All Team Members, Dining Partners and Volunteers that regularly work in the Community and have contact with Residents described above will undergo a required 5 panel drug testing immediately following offer (within 72 hours). Additional panels may

be required for LPC Team Members that drive residents. This requirement is outlined in our Drivers' policy.

Candidates who refuse to submit to a drug test or who fail to show up for a drug test within the specified time frame (72 hours from offer) will no longer be considered for employment.

DOT Cannabis and THC (Tetrahydrocannabinol) Testing

Marijuana and THC testing are required for team members whose job functions include driving commercial motor vehicles and are subject to the rules and regulations of the Department of Transportation (DOT). These team members will be subject to post-offer/pre-employment as well as random drug testing in compliance with DOT drug and alcohol testing rules and applicable law.

For applicants and team members that reside in a state where cannabis is legal and are not in jobs subject to testing requirements under the federal Department of Transportation standards, positive results for cannabis and THC will not be considered failure of a drug screen for purposes of post-offer, pre-employment drug testing. Positive results for cannabis and THC upon reasonable suspicion testing or work-related injury testing will be considered failure of a drug screen.

- II. **Background Reports:** When applicants accept an offer through the Applicant Tracking system, this triggers a background screening release signature process and a process that will conduct the screening. Background for employment focuses on convictions only.
 - **CSC Staff**
 - Trigger drug test & background check process through the Corporate Provider
 - **Affordable Housing Staff**
 - Trigger drug test & background check process through the Corporate Provider
 - **LPC and Staff**
 - Utilize the local vendor for pre-employment screenings
 - OR
 - Trigger drug test & background check process through the Corporate Provider if local vendor relationship is not available

Applicants may be rejected for criminal history following an individualized assessment as to whether the conviction has a “direct and adverse relationship” with the specific job duties of the position. At a minimum, HumanGood will consider the nature and severity of the offense, how long it’s been since the applicant committed the offense and served

his or her sentence, and the nature of the job the applicant is applying for. State approving agencies may also deem someone unfit to work with seniors based on their established criteria.

All Team Members (CSC, LPC, or Affordable Housing), Dining Partners and LPC volunteers 18 or over that are expected to work more than 3 consecutive weeks, will also undergo a required criminal background screening. **Note:** Volunteers are NEVER ALONE with Residents.

Any questions regarding approval / denial of a particular finding will be reviewed by the Vice President of Human Resources.

Requirements for handling Background Screening Reports of Team Members that may be rejected for employment by HumanGood for issues above (Note: if the new TM is rejected by the state, the FCRA process does not apply as the reason is “rejected by the state agency”):

The “employment criminal background and credit reports” conducted by HumanGood fall under the FCRA (Fair Credit Reporting Act) umbrella.

Step 1: Before making an unfavorable employment decision, send a pre-adverse action disclosure.

This is a preliminary notice to an applicant indicating information contained in his/her background screening report, if accurate, may cause employment to be denied. The notice must contain the name and address of the person to whom such information is being reported. It also explains what course of action the applicant can take if s/he believes the background screening results are incorrect. The Team Member will have the opportunity to dispute and correct any inaccuracies with the furnishers of the consumer report information.

The document must include:

- copy of the applicant’s background screening results and
- a copy of the FTC’s “Summary of Your Rights Under the FCRA” document with the adverse action disclosure.
- Name, address and phone number of the consumer reporting agency who supplied the report
- Statement about the applicant’s right to dispute the accuracy or completeness of his/her background screening
- results and his/her right to obtain a free background screening report from the consumer reporting agency upon request within 60 days

Step 2: After 5 days, if no protest regarding the data report is provided, send an adverse action notice that the Team Member has been rejected.

III. State Required Fingerprint and Background requirements (e.g. LiveScan and DOJ for CA):

Idaho: Idaho Administrative Code IDAPA 16.05.06

California: H&S 1569.17,

Washington: WAC 388-78A-2466,

Nevada: NRS 449.123

Pennsylvania: Protective Services Act. (101 renumbered from 1 Dec. 18, 1996, P.L.1125, No.169)

All LPC Team Members, Team Members, Dining Partners and Volunteers that work more than 10 hours per week or more than three consecutive weeks, require state fingerprint and background clearance except Arizona. Arizona has slightly different rules for individuals required background clearance;

Arizona: A.R.S. § 36-411

Examples of people who must be fingerprinted under A.R.S. § 36-411 (E), except if directly contracted by a resident, include (see attachment DEPARTMENT OF HEALTH SERVICES PUBLIC HEALTH LICENSING SERVICES #SP-026-PHL-OAD):

- Registered nurses, practical nurses, nursing assistants, and caregivers employed by the facility
- Physical therapists, respiratory therapists, occupational therapists, and speech therapists and therapy staff
- Massage therapists
- Social workers
- Activity staff in nursing care institutions
- Persons having a contract with the facility to provide direct care, such as registered nurses, practical nurses, nursing assistants, caregivers, physical therapists, respiratory therapists, occupational therapists, speech therapists, therapy staff, and massage therapists

Examples of people who are not required to be fingerprinted under A.R.S. § 36-411 (E), except if providing direct care, include:

- Van drivers
- Clergy

- Housekeepers/maintenance staff/groundskeepers/ laundry staff
- Dietitians/dietary staff
- Beauticians
- Administrators/managers
- Activity staff in assisted living facilities and adult day health care centers

Examples of other people for whom a residential care institution or nursing care institution is not required to maintain documentation of fingerprint clearance under A.R.S. § 36-411 (E) include:

- Persons having a contract with a resident or the resident’s family to provide direct care to the resident
- Volunteers who provide services under the direct visual supervision of an owner or employee with valid fingerprint clearance
- Therapists and therapy staff contracted by the resident
- Hospice nurses, employees, and volunteers
- Individuals providing home health services

Summary

After submittal of the fingerprints to the various states that require finger printing, the applicant may not start work until their State Background has cleared unless the state allows work while in the interim such as Pennsylvania. If there is an issue with the background, the state may require an “Exception”, which will require a more detailed review of issues uncovered during their review, some states may allow an identified candidate to work supervised during the exception process. This is an interactive process between the individual and the state.

Generally if a LPC Applicant requires any state “Exception”, the job offer will be withdrawn. Applicants may re-apply to openings after the Exception is granted.

IV. LPC Health and TB Screening at hire and ongoing health requirements.

Health Screening

As part of the hire process and ongoing requirements for LPCs (state requirements), post offer and pre-hire, Applicants will undergo a Health Evaluation and in some cases a physical examination regarding basic job requirements. This may be conducted by an occupational clinic or Medical Director (Best Practice). All Health Screenings must be reviewed and signed by the LPC Medical Director. In States where this is an annual requirement, California and Washington, the same process and sign off will occur. Arizona and Nevada only have the Health Evaluation at hire.

In California – this regulated Health Evaluation requirement is mandated for the health centers/SNFs. The requirement for all Health Screenings to be signed by the Medical Director is not mandated or always required or practical for new hires of RCFE/Senior living. However, all new or annual exams conducted should be signed by the Medical Director for all TMs as a best practice for all LPC TMs.

Applicants should not start work without completing the Health Screening and TB testing and obtain approval by the Medical Director.

Physicals

Basic Job function Physicals are required based upon the individual job descriptions requiring specific physical skills. Current positions are those that have demanding physical requirements and those that assist and move residents.

- All Nurses
- All Caregivers (CNA, Resident Assistants, Certified Caregivers, Home Care Aides)
- Drivers
- All Maintenance Staff (Techs, Janitors, Handyman, Groundskeeper)
- All Activity Positions (Director, Coordinators, Assistants)
- Physical Therapists

TB Screening

All LPC Team Members are also required to undergo a TB test at hire and annually.

Every Team Member or volunteer that works on a LPC Campus should be tested for TB. Corporate Team Members that “regularly” visit Communities must also be tested. “Regularly” could be as little as two one day visits per quarter. This generally occurs when you are assigned to a specific LPC.

Post job offer and after acceptance, a **two-step TST** should be administered to new employees who have never been tested or if more than 12 months have elapsed since the last documented negative TST. This requires that the first TST, if interpreted as negative, be followed by a second TST administered one to three weeks after the first.

After an applicant has tested negative in step one of the test, they may report to work. The step two must be administered timely to confirm a negative test. Timely is one to three weeks. (see the chart below). Corporate Team Members may start to work, but before visiting Communities, should be tested timely.

This method of screening is recommended because the immune response of persons previously infected with MTB may wane (decline) over time and the second TST acts as an

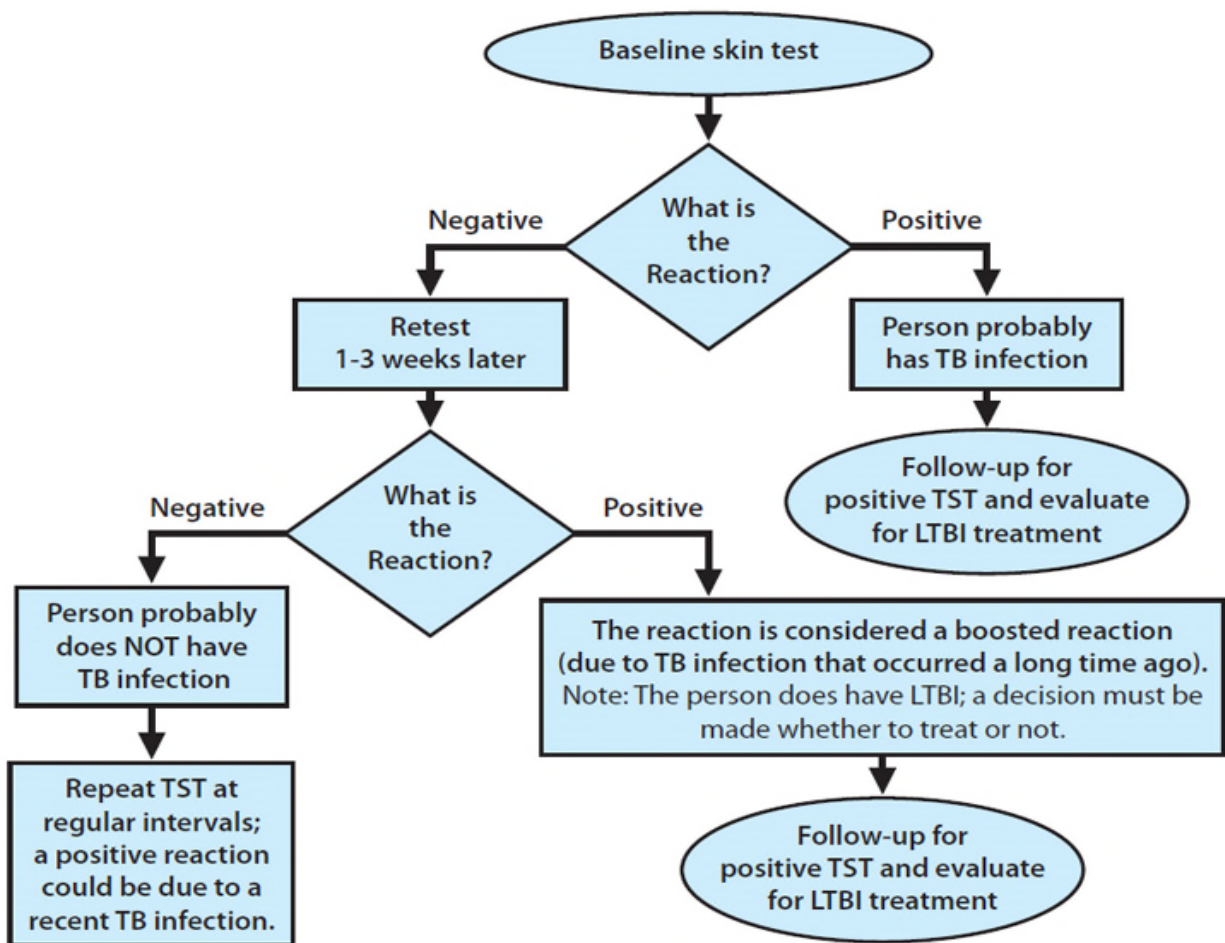

immune system "booster." The two-step procedure reduces the likelihood of mistaking a positive TST reaction for new TB infection (conversion).

Because a boosted reaction can persist for many months, persons who have documentation of a single negative TST within the previous 12 months only need a single TST. The documentation of the prior testing should be placed in the Team Member personnel PHI file.

Note: If determined by the professional administering testin, in conjunction with the Medical Director, a blood test or current chest X-ray may be used for TB testing.

The Standard Employee PPD Screening Record should be completed and maintained in the file of the Team Member or other individual's file that may be working on Campus and require testing. This form is attached as Exhibit I.

TB Testing:

TST procedures Annual

All Team Members, volunteers, etc. must have an annual TB test. The testing must be done prior to twelve months from the last test.

- If you are within the 12 month cut off, only step one is required.
- If you fall outside the 12 month window, both steps must be completed. There is no grace period from the recorded date.

The Community Medical Director will determine if the job offer should be withdrawn based upon any TB Testing.

COVID Screening

All LPC team members must be COVID screened in accordance with all applicable federal, state and county ordinances.

V. Professional Licensing and Education Requirements

Professional Licensing:

When an applicant is offered a position that requires a Nursing Home Administrator Certificate, RCFE License or similar Community Manager License Requirements, Nursing License, Certified Nursing Assistant, etc. or other required licenses such as a Driver's license or Commercial Driver's License, these must be verified and documented before starting work.

If a position requires a specific license and the new hire does not have a valid active license, the job offer will be withdrawn. Applicants may re-apply for open positions once they have the appropriate credentials.

License examples are;

- Nursing Home Administrator
- Nursing Home Administrator Preceptor Certification
- Residential Care Facilities for the Elderly
- Registered Nursing
 - Other special nursing credentials
- LVN / LPN Credentials
- Certified Nursing Assistant
- Certified Care Giver
- Medical Technicians

- Commercial Driver's License
- Dietary Services Supervisors Credentials
 - Certified Dietary Manager
 - Registered Dietician

This review also supports requirements to produce documents for Assisted Living Surveys and Health Services surveys. No Team Member will work in any position that requires a specific license without an appropriate current license.

If your license expires, you will immediately be placed on unpaid administrative leave. Your employment may also be terminated, based on the ability of the department to wait until the license has been renewed. Any exceptions to this policy must be approved by the Vice President, Human Resources.

Ongoing or annual license requirements or state require health screening or testing for current Team Members must be current as required, or Team Members may not continue working.

Education requirements may be listed on job descriptions and postings. Most critical positions that require specific associates or college degrees are supported by some type of Professional License. Although HumanGood does not verify education requirements, if during your employment you are found to not have the required license or degree, you will be terminated for falsifying the job application.

Tracking Documentation

Information that requires tracking should be entered into HRIS system, so this information is retrievable and can be monitored for required follow-up. The system should contain Received, License / Certification, Number, Type, Provider, Renewal.

Examples recorded and tracked in the HRIS system are as follows:

- TB Test
- COVID Test
- Physical Exam
- CPR Training
- NHA License
- RN License
- LPN License
- CNA License
- Care Giver License
- RCFE License
- Driver's License

It is extremely important that we know the data has been collected, when we received and when it might expire.

Human Resources should do an annual audit to determine that the data has been recorded in the HRIS system.

Questions regarding this Policy should be directed to Human Resources.

Washington Paid Sick Leave Policy	Effective Date	01/01/2018
	Revision Dates	01/01/2018
		02/01/2019
		02/06/2021
	Departments Approving	HR
Departments Affected	HG Washington- Beacon Development Group	

Introduction and Background

Purpose

This sets forth HumanGood policies and procedures regarding the state of Washington’s Paid Sick Leave. Established January 1st, 2018.

Persons Affected

All HumanGood Team members working in the state of Washington.

Summary of Policy and Procedure

Starting on January 1, 2018, HumanGood will provide paid sick leave to all eligible employees (referred to by HumanGood as “Team Members”) pursuant to Washington state law. Generally, this includes all non-exempt (hourly) employees, including part-time and temporary employees. HumanGood will pay sick leave at the Team Member’s normal hourly compensation, excluding tips, services charges, and overtime rates, where applicable. Paid sick leave hours will not count towards the calculation of overtime.

If you are a Team Member who is eligible to receive and is receiving Paid Time Off (“PTO”) from HumanGood, you will not accrue additional paid sick leave. Instead, Team Members with PTO should use their PTO for all purposes set forth under this paid sick leave policy. However, Washington Team Member using PTO for sick leave should refer to all sections of this policy except the accrual section.

Responsibilities

- 1) Supervisors are responsible for reviewing and approving Sick Leave in accordance with Washington State Laws and HumanGood policies.
- 2) Team members are responsible for identifying leave requests under Washington State Sick leave as Sick Leave.
- 3) Human Resources is responsible for informing all team members currently employed and all new team members at time of hire regarding all rules and procedures regarding sick leave usage. Human Resources must all ensure that all team members are provided and sign the Washington Employee Paid Sick Leave Notification (Attachment 1).

Authorized Uses For Paid Sick Leave

Sick leave under this policy can be taken for the Team Member's absence resulting from the Team Member's mental or physical illness, injury, or health condition, to accommodate the Team Member's need for medical diagnosis, care, or treatment of a mental or physical illness, injury, or health condition, or a Team Member's need for medical care. This includes preventative care such as medical, dental, or optical appointments and/or treatment.

Sick leave may also be taken to allow a Team Member to provide care for a family member with a mental or physical illness, injury, or health condition, to care for a family member who needs medical diagnosis, care, or treatment of a mental or physical illness, injury, or health condition, or to care for a family member who needs preventative medical care. A family member under this policy includes the Team Member's child (including biological, adopted, foster, step child, or a child to whom the Team Member stands in loco parentis, is a legal guardian, or is a de factor parent, regardless of age or dependency status), parent (including a biological, adoptive, de factor, foster, step parent, or legal guardian of a Team Member or the Team Member's spouse or registered domestic partner, or a person who stood in loco parentis when the Team Member was a minor child), spouse, registered domestic partner, grandparent, grandchild, or sibling.

Sick leave may also be taken under this policy when the Team Member's place of business has been closed by order of a public official for any health-related reason or when a Team Member's child's school or place of care has been closed for such a reason.

Sick leave may be taken when a Team Member is qualified to be absent for any reason under the domestic violence leave act. Authorized use under this section includes:

- Seeking legal or law enforcement assistance or remedies to ensure the health and safety of Team Member's and their family members including, but not limited to, preparing for, or participating in, any civil or criminal legal proceeding related to or derived from domestic violence, sexual assault, or stalking
- Seeking treatment by a health care provider for physical or mental injuries caused by domestic violence, sexual assault, or stalking

- Attending health care treatment for a victim who is the Team Member's family member
- Obtaining, or assisting the Team Member's family member(s) in obtaining, services from: a domestic violence shelter, a rape crisis center, or a social services program for relief from domestic violence, sexual assault, or stalking
- To obtain, or assist a family member in obtaining, mental health counseling related to an incident of domestic violence, sexual assault or stalking in which the Team Member or the Team Member's family member was a victim of domestic violence, sexual assault or stalking
- Participating, for the Team Member or for the Team Member's family member(s) in: safety planning or temporary or permanent relocation, or other actions to increase the safety from future incidents of domestic violence, sexual assault, or stalking.

Accrual of Paid Sick Leave

Commencing on January 1, 2018 or on the first date after commencing employment (whichever is later), eligible Team Members who are not eligible for PTO under HumanGood's PTO policy shall accrue paid sick leave at a rate of 1 hour for every 30 hours worked. HumanGood Team Members receiving PTO should refer to HumanGood's PTO policy as set forth in the Handbook for details on the amounts of PTO that will be accrued. Team Members do not accrue sick leave during vacation, paid time off, other time off of work, or while using paid sick leave. There is no cap on the number of paid sick leave hours that may be accrued in a year.

The paid sick leave will be placed into a sick leave bank. At the end of the calendar year, up to 40 hours of any accrued, unused paid sick leave will be rolled over into the next calendar year. No more than 40 hours of unused paid sick leave will roll over. Thus, any unused, accrued paid sick leave in excess of 40 hours will drop out of the Team Member's paid sick leave bank at the end of the calendar year.

Sick pay will not be paid out upon termination of employment.

If a Team Member who separates from employment with HumanGood is rehired within twelve months of separation, the previously accrued and unused paid sick leave will be reinstated and the previous period of employment shall be counted for purposes of determining the Team Member's eligibility to use paid sick leave.

Use of Paid Sick Leave And Requirement to Provide Reasonable Notice

Team Members under this policy can begin to use their accrued paid sick leave after 90 days of employment. Team Members may not use paid sick leave before it has been accrued. Team Members are allowed to use paid sick leave in the same increments of time as payroll is paid at

each location. Team Members must submit a Team Member Notice for Use of Paid Sick Leave form.

Please Note: Verification is required if a Team Member uses paid sick leave for three (3) or more consecutive days on which the Team Member was required to work. See below.

Team Members must provide reasonable advance notice of an absence from work for the use of paid sick leave to care for yourself or a family member. Please provide such reasonable notice to your local Human Resources representative.

When the need for paid sick leave under this policy is foreseeable, Team Members must request the sick leave from his or her supervisor at least ten (10) days in advance, or as early as possible, before the first day the paid sick leave is used. If possible, the notification should include the expected duration of the absence.

When the need for paid sick leave under this policy is unforeseeable, the Team Member must provide notice to his or her supervisor as soon as possible before the required start of his/her shift, but no later than one (1) hour before the Team Member's required start time. In the event the Team Member cannot provide notice to his/her supervisor, a person may provide notice to the supervisor on his/her behalf. If possible, the notification should include the expected duration of the absence.

Paid sick leave will be paid no later than the payday for the pay period in which the paid sick leave was used, unless verification is required. If verification is required, the paid sick leave will be paid during the payday for the pay period during which the verification is provided to HumanGood. However, HumanGood may withhold paid sick leave if it proves the Team Member was using his/her paid sick leave for an unauthorized event or purpose.

Verification Required For Use After Three Or More Consecutive Days

Team Members who take paid sick leave for three or more consecutive days that he/she is/was required to work may be asked to provide verification that a Team Member's use of the paid sick leave is for an authorized use under this policy. Such verification may be from a health care provider, and it need not specify the nature of the medical condition at issue. HumanGood will maintain the confidentiality of any information received in accordance with all applicable laws. The Team Member must provide the verification within ten (10) calendar days following the first day upon which the Team Member uses paid sick leave.

If HumanGood makes such a request for verification, the Team Member has the right to assert that the verification requirement results in an unreasonable burden or expense on the Team Member. If the Team Member asserts that the requirement for verification will result in an unreasonable burden or expense, the Team Member may provide an oral or written explanation to your local Human Resources representative within five (5) calendar days after the request for verification. The explanation must state: (a) that the Team Member's use of paid sick leave was

for an authorized purpose under the law; and (b) how the employer's verification requirement creates an unreasonable burden or expense on the Team Member. Within ten (10) calendar days after your Human Resources representative receives the Team Member's explanation, HumanGood will provide a response and if applicable, will identify and provide alternatives for the Team Member to meet the employer's verification requirement in a manner which does not result in an unreasonable burden or expense on the Team Member.

If, upon receipt of the Team Member's explanation, HumanGood and the Team Member disagree about whether the verification requirement results in an unreasonable burden or expense on the Team Member, HumanGood and the Team Member may consult with Washington's Department of Labor and Industries or the Team Member may file a complaint.

Retaliation Is Prohibited

Retaliation against any Team Member for lawfully exercising his/her rights to take paid time off under this policy is prohibited. Any Team Member who has concerns about retaliation should speak with Human Resources.

If a Team Member is not satisfied with the Human Resources response, we encourage the Team Member to contact Corporate Human Resources or the Corporate Compliance Hotline.

Home Office Human Resources, Pleasanton Ca. 925-924-7150

or

Compliance Officer at 1-888-740-4636 or send an email to
CorporateCompliance@HumanGood.org.

If a Team Member is still not satisfied with HumanGood's response, the Team Member may contact the Washington State Department of Labor & Industries.

Frequently Asked Questions Washington Paid Sick Leave

1. How do I qualify to accrue paid sick leave?

Casual, on-call, and temporary team members: You qualify to accrue paid sick leave if you work in Washington for HumanGood on or after January 1, 2018 and you are not otherwise covered by HumanGood's PTO program.

2. Who will experience a change to sick leave accruals — and who will not?

- *No Change:* Full-time and part-time benefits-eligible team members will see no change to accrued time off. That's because you already receive accruals through HumanGood's PTO program that are equal to or better than what's required under the new Washington law.
- *Will Change:* Casual, on-call, and temporary team members *will be* eligible to start accruing sick leave under the new Washington law. Starting on January 1, 2018, you will accrue one hour of sick leave for every 30 hours you work for HumanGood in Washington. Again, HumanGood's policy is more generous than required by the Washington state law.

3. What do I need to do?

- *Full-time and part-time benefits-eligible team members:* **Review and sign the *Washington Employee Paid Sick Leave Notification*.**
- *Casual, on-call and temporary team members:* **Review and sign the *Washington Employee Paid Sick Leave Notification*** and be sure to review your paycheck statements for sick leave accruals.

3. If I qualify, how much paid sick leave am I entitled to use?

Starting January 1, 2018, team members eligible for Washington paid sick leave who have worked for HumanGood for at least 90 days can begin to use accrued paid sick leave. Up to 40 hours of unused sick leave may be carried over from one year to the next.

4. How will I know how much sick leave I have accrued?

Starting in the first paycheck for the January 1, 2018 pay period, you will be able to review your accrued sick leave on your paycheck statements. You will also be able to review the amount you have used and the amount you have available for use.

5. What can I use sick leave for?

You can take paid sick leave for you or a family member for diagnosis, care, or treatment of an existing health condition, for preventative care, or for specified purposes (as identified in HumanGood's Washington paid sick leave policy), if you are a victim of domestic violence, sexual assault, or stalking, or if there is a public health emergency. Family members include the team member's parent, stepparent, or legal guardian, child, spouse, registered domestic partner, grandparent, grandchild, sibling, or the child or parent of the team member's spouse or registered domestic partner. Preventive care would include annual physicals or flu shots.

6. If I leave my job, can I cash out my unused sick days?

No. However, if you leave your job and get rehired by HumanGood within 12 months, previously accrued and unused paid sick days will be reinstated.

7. What if I have additional questions?

Please contact your local HR Representatives.

Copy of the Washington State Legislature RCW

RCW [49.46.020](#)

Minimum hourly wage—Paid sick leave.

(1)(a) Beginning January 1, 2017, and until January 1, 2018, every employer shall pay to each of his or her employees who has reached the age of eighteen years wages at a rate of not less than eleven dollars per hour.

(b) Beginning January 1, 2018, and until January 1, 2019, every employer shall pay to each of his or her employees who has reached the age of eighteen years wages at a rate of not less than eleven dollars and fifty cents per hour.

(c) Beginning January 1, 2019, and until January 1, 2020, every employer shall pay to each of his or her employees who has reached the age of eighteen years wages at a rate of not less than twelve dollars per hour.

(d) Beginning January 1, 2020, and until January 1, 2021, every employer shall pay to each of his or her employees who has reached the age of eighteen years wages at a rate of not less than thirteen dollars and fifty cents per hour.

(2)(a) Beginning on January 1, 2021, and each following January 1st as set forth under (b) of this subsection, every employer shall pay to each of his or her employees who has reached the age of eighteen years wages at a rate of not less than the amount established under (b) of this subsection.

(b) On September 30, 2020, and on each following September 30th, the department of labor and industries shall calculate an adjusted minimum wage rate to maintain employee purchasing power by increasing the current year's minimum wage rate by the rate of inflation. The adjusted minimum wage rate shall be calculated to the nearest cent using the consumer price index for urban wage earners and clerical workers, CPI-W, or a successor index, for the twelve months prior to each September 1st as calculated by the United States department of labor. Each adjusted minimum wage rate calculated under this subsection (2)(b) takes effect on the following January 1st.

(3) An employer must pay to its employees: (a) All tips and gratuities; and (b) all service charges as defined under RCW [49.46.160](#) except those that, pursuant to RCW [49.46.160](#), are itemized as not being payable to the employee or employees servicing the customer. Tips and service charges paid to an employee are in addition to, and may not count towards, the employee's hourly minimum wage.

(4) Beginning January 1, 2018, except as provided in RCW [49.46.180](#), every employer must provide to each of its employees paid sick leave as provided in RCW [49.46.200](#) and [49.46.210](#).

(5) The director shall by regulation establish the minimum wage for employees under the age of eighteen years.

Personnel Records Policy and Procedure	Effective Date	03/08/2018
	Revision Dates	02/06/2021
	Departments Approving	HR
Departments Affected	ALL	

Introduction and Background

Purpose

The purpose of this document is to outline the policy and procedure for creating and maintaining personnel records for team members. HumanGood and Affiliates will comply with state and federal regulations regarding records retention, as well as document employment and employer decisions relative to salary, performance and training.

Persons Affected

All current and former team members employed by HumanGood employers

Policy

The employee’s official personnel file is a compilation of communications and documents containing employment details and all HRIS records for a team member. The personnel file serves as the historical record of information pertaining to a team member from their initial employment application through their separation from HumanGood. Along with the personnel file, other confidential personnel records should be retained in compliance with state and federal laws. Physical personnel records are to be securely maintained in each community location or designated office and should not be taken outside the assigned location without the prior knowledge and approval of the highest ranking executive at that community location.

Definitions

- 1) **HumanGood Employers:** All affiliated employers identified in the employee handbook.
- 2) **California Labor Code 1198.5:** Provides that current and former employees, or a representative, have the right to inspect and receive a copy of the personnel files and records that relate to the employee’s performance or to any grievance concerning the employee.

- 3) **Community/Local Human Resources:** The individual that is responsible for the human resources function in the community.
- 4) **Division of Labor Standards Enforcement - California (DLSE):** Also known as the Labor Commissioner's office was established to adjudicate wage claims, investigate discrimination and public works complaints, and enforce Labor Code statutes and Industrial Welfare Commission orders.
- 5) **Personnel Records defined under DLSE:** Categories of records that are generally considered to be "personnel records" are those that are used or have been used to determine an employee's qualifications for promotion, additional compensation, or disciplinary action, including termination.
- 6) **Revised Code of Washington (RCW):** The RCW is the compilation of all permanent laws now in force.
- 7) **Supervisor/Manager:** The individual to whom the team member reports.
- 8) **Team member:** A team member is an employee of a HumanGood Affiliate company. The term "team member" and "employee" are used interchangeably.
- 9) **Washington Administrative Code (WAC):** The WAC codifies the regulations and arranges them by subject or agency.

Responsibilities

- 1) Local HR is responsible for creating, maintaining and securing team member personnel records in compliance with HumanGood's policies and procedures.
- 2) HRIS system administrators must ensure electronic folder permissions are correctly identified and issued.
- 3) Supervisors are responsible for forwarding all personnel information to HR and properly uploading electronically documents into the ULTIPTRO electronic documents system.

Procedures

Personnel File Contents

- 1) Only job-related information will be contained in the personnel file. Contents of each personnel file should include basic identifying information (e.g., name, address, job title), employment applications or other hiring-related documents, payroll authorization forms, position descriptions, compensation records, wage theft protection act notice, wage

attachment or garnishment, performance evaluations and information about other employment actions (e.g., promotions, education and training, corrective actions) and other job-related information. Team members should be aware of information placed in their personnel file.

2) ***Some examples of information that should NOT be kept in the personnel file or available to supervisors via electronic systems or folders (not an exhaustive list).***

- i) Form I-9 (Refer below for proper maintenance of I-9 forms)
- ii) EEOC and DFEH charges of discrimination
- iii) Workers’ compensation information (see below)
- iv) Medical information or certifications
- v) Physical exam reports
- vi) FMLA information
- vii) Benefit enrollment forms and beneficiary information
